multiplying its long-term median value by each of its two corresponding variability factors. If a pollutant had its own pair of variability factors, these were utilized rather than the pollutant group variability factors. With the exception of mercury, all priority pollutant four-day monthly average and daily maximum limitations were rounded up to the nearest 5 parts per billion. Mercury was rounded up to the nearest one-half part per billion. After rounding, if the four-day monthly average equaled the daily maximum value, then only the daily maximum limitation was listed.

In the case of nitrobenzene for Option II and III, the Agency deleted one of three plants from the calculation because its treatment system for nitrobenzene was considered to be out of control due to chemical spills. For bis(2-chloroisopropyl)ether, data were not available for an appropriate Option II and III treatment system. Therefore, the Agency has selected a treatability level for bis(2-chloroisopropyl)ether of 10 ppb based on the performance of steam stripping. The treatability level was determined using the methodology described later in this section for establishing in-plant, pre-biological limitations.

Since insufficient data were available to determine BAT Option I Halogenated Methane and Chlorinated C2 and C4 pollutant variability factors, the Chloroalkyl Ether variability factor was applied to these pollutants. (The term chlorinated C2 refers to a priority pollutant class of compounds with two carbon atoms. Likewise, C3 and C4 refers to pollutant classes with 3 and 4 carbon atoms respectively.) For BAT Option II, the average of the Halogenated Methane and Chlorinated C2 pollutant groups was applied to the Chlorinated C3 and C4 and Chloroalkyl Ether pollutants. For BAT Option III, the average of the Halogenated Methane and Chlorinated C2, and C3 pollutant groups was applied to Chlorinated C4 and Chloroalkyl Ether groups as well. Since insufficient data were available to determined variability factors for acrylonitrile (miscellaneous pollutant group) the average of the organic pollutant groups was applied to acrylonitrile.

EPA intends to promulgate daily maximum and monthly average limitations for the OCPSF industry. 40 CFR 122.45(d) provides that effluent limitations and standards in permits shall, unless impracticable, be expressed as maximum daily and average monthly discharge limitations. For purposes of estimating compliance monitoring costs that would be incurred to comply and demonstrate compliance with these regulations, EPA has assumed that, on average, small plants would monitor twice monthly and large plants would monitor four times monthly.

Sampling and analyzing for metals is considerably less expensive than for organics. Consequently, it is reasonable to monitor for metals more frequently than for organics. Accordingly, EPA has established 10-day monthly averages for metals in many recently promulgated effluent guidelines. Although the metals limitations set forth in this notice are based on a daily maximum and a monthly average based on four observations per month, EPA is considering setting monthly average limitations based on 10 observations per month for metals in the final regulation. If the Agency establishes 10-day monthly averages, it would utilize the modified delta-lognormal distribution, described earlier, to conduct on analogous assessment of 10-day averages rather than 4-day averages. EPA solicits comments on this approach.

The BAT effluent limitations for Options I, II, and III are presented in Tables D–1 through D–3, respectively. (Since different plant-pollutant combinations are assigned to each technology option, some pollutants are not regulated under every option.) EPA estimates that BAT limitations will result in annual incremental removals (beyond that acheived by BPT) of negligible amounts of priority pollutants for Option I, 260,00 pounds of toxic organics and 524,000 pounds of toxic metals for Option II, and 281,000 pounds of toxic organics and 526,000 pounds of toxic metals for Option III.

As noted earlier, a large portion of volatile and semivolatile organic toxic pollutants are emitted by biological treatment systems into the surrounding air. This transfer of pollutants from water to air takes place at some current treatment systems and at BAT Option I but would be greatly reduced by the use of appropriate in-plant technology as contemplated by Options II and III. Thus, the wastewater organic toxic pollutant removals presented above are somewhat misleading since they present only the removals of the pollutants from the wastewater and do not account for the transfer of these pollutants into the air in the current and BAT Option I loadings. Similarly, the removal estimates do not include the reduction of air emissions of volatile and semivolatile pollutants by using Option II in-plant steam stripping technology.

For example, in considering the current annual volatile pollutant loadings for direct dischargers, the Agency estimates that 33.7 of the 82.7 million pounds generated in the raw waste actually enter biological treatment systems. (This assumes that the volatile pollutants are evenly distributed among direct dischargers and that in-plant steam stripping and solvent recovery treatment systems currently being used totally remove the volatile pollutants. Therefore, 40.8 percent of the raw waste enters the biological treatment systems.) If only one-quarter of the volatile pollutants are stripped into the surrounding air from the aeration basins of biological treatment systems, then about 8.4 million pounds of volatile compounds enter the environment as air pollutants through current in-place treatment and through BPT treatment. The actual stripping rates through open biological treatment systems are pollutant specific and range from approximately zero percent stripped for highly water-soluble, chemically-reactive compounds such as acrylonitrile, up to over 50 percent stripped for compounds such as 1,2-dichloroethane, 1,1,1-trichloroethane, tetrachloroethylene, and 1,2-dichloropropane. Likewise, the prevalent removal mechanism in open biological treatment systems for benzene, carbon tetrachloride, and toluene is air stripping.

With these considerations in mind, the Agency has calculated the full benefits afforded by Option II in removing toxic pollutants from all environmental media. The BAT Option II limitations are estimated to result in annual incremental removals from air and water media (beyond that achieved by BPT) of 8.7 million pounds of toxic organic pollutants rather than 260,000 pounds. The Agency is conducting a volatile and semivolatile pollutant-by-pollutant assessment to establish more accurate estimates of the volatilization rates in open biological treatment systems and solicits additional data and information regarding air emissions of toxic pollutants from open wastewater treatment systems. As discussed later in this section, the Agency is considering establishing in-plant, pre-biological limitations to ensure control of these compounds.

The estimated capital and operation and maintenance costs and the preliminary economic impact analysis for BAT are summarized in section V(C) of this Notice.

As mentioned previously in this section, although Option I is based on the performance of the technology

installed to comply with BPT effluent limitations and therefore, had no

In-Plant, Pre-Biological Limitations

EPA is seriously considering promulgating in addition to the end-of-pipe limitations set forth above, in-plant, pre-biological limitations for a set of 20 volatile and semi-volatile organic pollutants. The purpose of these supplementary limitations would be to assure that these pollutants are not simply transferred to the air rather than treated by the wastewater treatment system.

As noted above, available information strongly indicates that biological treatment systems fail to treat substantial portions of volatile and semi-volatile pollutants but rather transfer them to the air. Section 304(b) of the Act requires EPA to consider non-water quality environmental impacts in establishing BAT limitations. Clearly, Congress was concerned that wastewater not be cleaned up at the expense of other environmental media. Therefore, it is appropriate to address in these regulations the substantial impacts that may result from volatile air emissions at OCPSF biological treatment plants.

In Options II and III, EPA has established a technological basis for controlling volatile and semi-volatile pollutants in a manner that also minimizes adverse impacts on air quality. In estimating compliance costs for Options II and III, EPA assumed that in-plant controls such as steam stripping would be used to treat volatile and semi-volatile pollutants, leaving only the residual levels after in-plant controls to be further removed from the wastewater by the end-of-pipe system. If plants install such in-plant controls, then the contemplated air-emission-reduction would be achieved.

However, as indicated by the data used to generate the Option I limitations, open biological treatment systems remove some volatile and semi-volatile pollutants from wasterwater without substantial in-plant controls. It may thus be possible for example, for some plants to achieve Option II limitations without using the contemplated Option II in-plant controls. Air emissions could potentially be substantial, then, even if EPA promulgates end-of-pipe limitations under Option II or III.

For this reason, EPA believes that, to promulgate effluent limitations that reflect the best available technology for removing pollutants from wastewater while minimizing adverse impacts to the air, it may be necessary to establish in-plant limitations. In this case, EPA would establish limitations to be achieved prior to any biological treatment system and would require that control authorities require compliance monitoring prior to the biological system.

EPA is concerned that the in-plant limitations may not result in a significant reduction of air emissions. This may occur if sources choose to use in-plant control techniques other than steam stripping which meet the BAT limitations but do not result in any significant reduction of air emissions. Should this be the case and the level of air emissions warrant, EPA has other authority such as the Clean Air Act with which to address any problems.

Under the Clean Air Act EPA would be concerned about wastewater systems as sources of air toxic compounds as well as sources of volatile organic compounds which contribute to ozone formation. EPA Clean Air Act (CAA) authority to deal with air emissions problems includes: new source performance standards (CAA section 111); hazardous air pollutant emissions standards (CAA section 112); and provisions requiring attainment and maintenance of national ambient air quality standards (CAA sections 109, 110).

Comment is invited on the issue of whether sources will choose to use in-plant controls other than steam stripping, including the critical factors which may affect such a choice, e.g., control costs, product recovery credits, waste disposal, and potential air pollution controls.

EPA would establish such in-plant limitations based upon the available in-plant steam stripping performance data. For the steam stripping assessment, the organic priority pollutants were divided into three groups (high, medium, and low) based on their Henry's Law Constants. For aqueous mixtures, the distribution of a pollutant between the vapor phase and water can be expressed by Henry's Law. Compounds with high vapor pressures (high Henry's Law Constants) are easily stripped. By assuming that compounds in each group behave similarly, group median effluent values were calculated—a median of nondetect represents the high stripping group; 11.7 ppb, for the medium stripping group; and 1418 ppb, for the low stripping group.

The BAT in-plant limitations for Options II and III are listed in Table D-4. Based upon available information, the Agency believes that at least 20 percent of the influent mass of these compounds are air-stripped to the atmosphere in open biological systems. The Agency is conducting a volatile and semivolatile pollutant-by-pollutant assessment to establish more accurate determinations of which compounds are significantly stripped from wastewater treatment systems. The Agency solicits comments,

data, and information related to this issue.

26. m-Dichlorobenzene	11.7	25	50
27. p-Dichlorobenzene	11.7	25	50

EPA assigns no incremental pollutant removals or costs to this regulatory approach. The approach is designed simply to assure that the technologies contemplated by Options II and III are applied to minimize adverse air impacts as well as remove toxic pollutants from the wastewater. Consequently, the removals and costs calculated for Options II and III already account for this regulatory approach. EPA welcomes comments on the above analysis.

E. Technology Basis for NSPS Options and Effluent Standards

The best available demonstrated technology provides the basis of NSPS. At new manufacturing plants, the opportunity exists to design the best and most efficient processes and wastewater treatment facilities. Therefore, EPA considers the best demonstrated process changes, in-plant controls, and end-of-pipe treatment technologies that reduce pollution to the maximum extent feasible.

The Agency is considering all three BPT and all three BAT technology options as the basis for NSPS. Priority pollutants considered for control by NSPS include those listed for each BAT option. BOD and TSS which are controlled by the BPT technology options, are considered for control by NSPS. The reader is therefore referred to Section IV(C), Tables C–1 to C–3 and section VI(D), Tables D–1 to D–4.

The technologies used to control conventional and priority pollutants at existing plants are fully applicable to new plants. EPA has not identified any technologies or combinations of technologies that are demonstrated for new sources that are different from those being considered to establish BPT and BAT limitations for existing sources.

F. Technology Basis and Standards for PSES

As discussed in section IV(D) for the BAT effluent limitations, the selection of a particular set for PSES treatment technologies is also plant-specific for indirect dischargers in the OCPSF industry. As with the direct dischargers subject to BAT effluent limitations, treatment technologies applicable to indirect dischargers subject to PSES can consist of in-plant control or treatment of specific (or combined) wastestreams by a number of physical/chemical methods sometimes in combination with biological treatment of combined wastestreams where effluent levels from in-plant control technologies still pass through, interfere with or inhibit publicly-owned treatment works. In-plant control and biological treatment technologies utilized by indirect dischargers are the same as those employed by direct dischargers as discussed in section IV(D) of this Notice.

Prior to proposal, sufficient priority pollutant removal data for in-plant control technologies which could be utilized to calculate PSES limitations for indirect discharges were not available since previous sampling efforts focused on complete end-of-pipe treatment systems rather than on individual technology components. However, as discussed in section III of this Notice, EPA initiated a new sampling program after proposal at 12 OCPSF facilities to collect toxic pollutant removal data for selected in-plant control technologies as well as end-of-pipe technologies which could be applied to indirect discharges. Data are available for certain in-plant controls as well as applicable end-of-pipe technologies for EPA to establish PSES limitations for certain toxic pollutants which pass through the POTW or interfere with the POTW operation.

As in the case for the BAT effluent limitations (see section IV(D) of this notice), EPA considered both concentration-based and mass-based PSES effluent limitations and for the same reasons mentioned previously, decided to establish concentration-based PSES effluent limitations.

Similarly, EPA considered whether the industry should be subcategorized for PSES purposes and, for the same reasons described above for BAT, decided to establish one set of PSES limitations which are applicable to all plants.

As in the proposal, EPA is continuing to consider setting PSES equal to BAT. Therefore, the PSES options span the entire range of BAT Options I–III. Similarly, EPA is considering establishing in-plant, prebiological PSES where necessary to avoid adverse air impacts.

As in the proposal, PSES will differ from BAT only with respect to the set of pollutants regulated. EPA is considering two major options for selecting pollutants to be regulated:

PSES Option I—Establish PSES limitations for pollutants failing EPA's standard pass-through analysis.

PSES Option II—Add to Option I a set of volatile and semi-volatile organic toxic pollutants based on POTW interference as well as pass-through.

EPA's general pass-through analysis for pretreatment standard setting purposes is to compare, on a pollutant-by-pollutant basis, the percentage of a pollutant removed by well-operated POTWs (those meeting secondary treatment requirements) with the percentage removed by direct dischargers complying with BAT. If BAT removes more of a pollutant than POTWs remove, the pollutant is deemed to pass through POTWs and a PSES limitation is established for the pollutant.

In the proposal, EPA slightly modified its procedure for assessing pass through. Cognizant of the analytical variability typical of organic toxic pollutants in POTWs and OCPSF plants, EPA determined that pass through occurs only if BAT removes at least 5 percent more than a well-operated POTW removes. This approach is additionally supported by the fact that POTW influent organic toxic pollutant concentrations are typically much lower than industry treatment system influent concentrations; many POTW effluent samples are below detection, precluding a complete accounting of all pollutants removed by the POTW. The Agency has therefore retained this approach in this notice. Table E–1 lists all pollutants that pass through using the 5 percent criterion. For illustrative purposes only, Table E–1 sets forth the limitations that would apply if EPA adopts BAT Option II. If a different BAT option is selected, PSES will be revised accordingly.

EPA is considering modifying the 5 percent approach to be 10 percent, using

the same general reasons as used to justify the 5 percent approach. Pollutants that would not be regulated at PSES Option I if this approach were adopted are highlighted (#) in Table E–1. The majority of these pollutants would be recaptured for regulation if EPA adopts PSES Option II. (See pollutants marked by asterisks in Table E–2.) The PSES Option II standards are also based on BAT Option II for illustrative purposes only. EPA requests comments on this approach.

EPA also solicits comments on its approach for determining pass through in the absence of adequate POTW data to compare POTW removals to BAT removals. In the proposal and in this notice, EPA has determined that pollutants pass through in such situations. The pollutants without adequate POTW removal data are highlighted (*) in Table E–1. However, the Agency believes that some of these pollutants may not warrant pretreatment standards based on pass through considerations. For example, EPA may not establish PSES for acrylonitrile, a chemically-reactive, unstable compound which may not pass through POTWs. Furthermore, the Agency believes that decisions, related to whether these pollutants actually pass through POTWs, can be made regarding some of these compounds based on POTW and/or direct discharge biological treatment removal data for chemically similar compounds. The Agency solicits comments and data regarding the efficacy of this approach.

Under PSES Option II, EPA would additionally regulate some volatile and semivolatile organic toxic pollutants (see Table E–2). These pollutants interfere with the normal operation of POTWs by presenting safety hazards due to volatilization of toxic organics in POTW's headworks. While the severity of such hazards may depend on a variety of factors, the potential for harm is considerable. For example, one State that has a large number of OCPSF plants submitted a comment on the proposal that attributed POTW employee deaths to the volatilization in POTW sewers of organic pollutants discharged by industrial contributors.

In addition to interference problems, EPA believes that the pollutants added in PSES Option II pass through POTWs. These pollutants, as discussed with respect to BAT in section IV(D) of this notice, volatilize to the atmosphere from biological treatment systems. Since POTWs are biological systems, large proportions of volatile and semi-volatile pollutants are removed from wastewaters entering POTWs by air stripping rather than treatment. Thus, the standard pass-through analysis comparing POTW and BAT removals is inappropriate here. For the same reason that EPA is considering establishing in-plant BAT limitations, EPA is also considering adopting PSES Option II to ensure that pollutants not adequately treated by biological treatment are properly pretreated. Thus PSES Option II is supported by considerations of pass through as well as interference.

If priority pollutant PSES are established on the basis of interference alone, the Agency would consider adopting a provision similar to that established for sulfides in the Leather Tanning and Finishing Industry Regulation (47 FR 52848; November 23, 1982). Such a provision would allow a POTW not to set pretreatment standards for volatile compounds if the POTW certifies that the discharge of these compounds do not interfere with POTW operation.

In its initial cost estimation activities for PSES for this notice, the Agency had based PSES costs on the installation of only in-plant control technologies such as steam stripping, activated carbon, and chemical precipitation. This was done based on the receipt of preliminary sampling data which indicated that pollutant removals for in-plant controls approximated pollutant removals obtained by BAT treatment systems. However, upon receipt of the entire toxic pollutant data base, it became apparent that for 13 of the 58 PSES Option II priority pollutants, demonstrated physical/chemical effluent concentrations were essentially higher than BAT treatment effluent concentrations. Additional treatment would be necessary to achieve BAT-level PSES for these 13 pollutants.

In an attempt to estimate the actual costs which will be incurred for compliance with the PSES effluent limitations and the associated economic impacts, the Agency has selected a random sample of 30 indirect dischargers. Each plant's estimated raw waste toxic pollutant loading was examined to determine the pollutants which would require additional treatment because the plant's effluent levels were greater than the PSES Option II effluent limitations. Since PSES II regulates more pollutants than PSES I, the use of PSES Option II provides the most conservative approach which would yield the highest potential costs and impacts. The costing scenario included in-plant treatment costs as well as costs for certain additional treatment technologies for the 13 pollutants—eight organic toxic pollutants, four toxic pollutant heavy metals and cyanide. For 5 of the 30 plants, biological treatment (activated sludge) was costed in addition to the appropriate in-plant controls because at least one of the eight organic toxic pollutants or cyanide appeared in the plant's effluent at greater than BAT effluent levels. Multi-media filtration was costed in addition to chemical precipitation for 19 plants because at least one of the four toxic pollutant heavy metals appeared above the BAT effluent levels. The average cost increases in adding the technologies for the 13 pollutants across the 30 plant sample are 226 percent for land costs, 56 percent for capital equipment, and 11 percent for operation and maintenance costs. Sludge costs are not projected to increase. These increases were applied for all plants. The estimated PSES costs and the preliminary economic impact analyses are presented in section V(D) of this notice.

For the organic toxic pollutants and cyanide, biological treatment plus in-plant controls forms the principal technology basis for BAT Option II and therefore, should accurately reflect the costs necessary to attain PSES. The addition of multi-media filtration after chemical precipitation is a proven method of reducing heavy metals concentrations in the metal finishing, inorganic chemicals and other industries which generate heavy metals in their raw wastewaters. Data from the metal finishing industry show incremental percent removals with the addition of filtration of 44 percent for total chromium, 55 percent for total copper, 32 percent for total lead, 42 percent for total nickel and 55 percent for total zinc. Therefore, the Agency feels that the costing of filtration is an adequate cost estimation technology which can lower the in-plant control effluent values for chemical precipitation to within an acceptable range of the BAT effluent levels.

For all other pollutants, as noted, EPA's costing procedures assumed that in-plant treatment would be sufficient to achieve compliance with PSES limitations. The treatment capability of steam stripping has already been discussed with respect to BAT in section IV(D) of this notice. For the activated carbon assessment, the organic priority pollutants were divided into three groups (high, medium, and low) based on their in-plant carbon usage rates—pounds of pollutant adsorbed per pound of carbon. By assuming that compounds in each group behave similarly, group median effluent values were calculated for costing purposes—a median of

nondetect represents both the high and medium adsorption groups since data

additional PSES Option III might be to

TABLE E–1.—OPTION I PSES STANDARDS (PARTS PER BILLION)—Continued

TABLE E–3. PSES STANDARDS (PARTS PER

H. Engineering Costing Methodology

nondetect represents both the high and medium adsorption groups since data was available for the medium group only and a median of 175 ppb represents the low adsorption group.

For the 52 organic toxic pollutants regulated at PSES Option II, the steam stripping and activated carbon assessment demonstrates that these controls alone can achieve the same or lower long-term concentrations for 33 organics, essentially the same concentrations (within 2 ppb) for 11 others (benzene, carbon tetrachloride, 1,1,1-trichloroethane, chloroform, 1,1-dichloroethylene, 1,2-trans-dichloroethylene, dichlorobromomethane, tetrachloroethylene, toluene, trichloroethylene, and vinyl chloride), and higher concentrations (ranging from 125 to 1,418 ppb) for the remaining 8 organics (2,4-dimethylphenol, 2-chlorophenol, 2,4-dinitrophenol, and 5 polyaromatics—benzo(a)anthracene, benzo(a)pyrene, 3,4-benzofluoranthene, chrysene, and pyrene). In the case of the polyaromatics, biological treatment may provide more cost-effective control than steam stripping or activated carbon (depending on the specific compound or combination of compounds in the wastewater)—at least one indirect discharge facility for which EPA has toxic pollutant data has installed biological treatment to achieve long-term effluent concentrations at or near the analytical method detection levels.

For cyanide and the 5 toxic pollutant metals regulated at PSES Option II, OCPSF physical/chemical performance data is available only for arsenic and zinc. Data for chemical precipitation demonstrates that physical/chemical treatment alone can achieve lower concentrations for arsenic than BAT control; however, for zinc, chemical precipitation performance is 39 ppb higher than the BAT long-term average.

EPA has not separately costed PSES Option I. Because fewer pollutants are regulated at Option I, EPA anticipates that Option I would result in the removal of fewer pollutants but cost less than Option II.

PSES Option II (assuming that BAT Option II is selected as the appropriate technology level), is anticipated to result in annual incremental removals (beyond current removals) of 100 million pounds of toxic organics and 5.7 million pounds of toxic metals.

Although the Agency is giving its most serious consideration to PSES Options I and II (each of which sets PSES equal to BAT for all pollutants regulated), an additional PSES Option III might be to set PSES at levels achievable by physical/chemical treatment alone. Under this option, PSES would equal BAT for most pollutants but would be higher (less stringent) for the 13 priority pollutants discussed above. Table E-3 sets forth the standards that would apply to these 13 pollutants. Estimated costs for PSES Option III are presented below in section V(E) of this notice. EPA solicits comments on this option.

The long-term averages for benzo(a) anthracene, chrysene and pyrene in Table E-3 are based on the steam stripping median value for the low Henry's Law constant pollutant group. For benzo(a)pyrene, 3,4-benzofluoranthene, 2,4-dimethylphenol, 2,4-dinitrophenol and 2-chlorophenol, the long-term averages are based on the in-plant carbon adsorption median value of the low carbon usage rate pollutant group. The zinc long-term average is based on the OCPSF industry chemical precipitation data. The long-term averages for lead, mercury, selenium and cyanide are based on chemical precipitation performance information from the inorganic chemicals, paint and ink, and steam electric power generating industries. The corresponding variability factors for the low Henry's Law Constant steam stripping systems are OCPSF industry averages transfered from 2,4,6-trichlorophenol and pentachlorophenol. The carbon adsorption variability factors for the low carbon usage group are transferred from nitrobenzene. The OCPSF industry zinc chemical precipitation variability factors were used for zinc, whereas averages for arsenic, chromium, copper and zinc were transferred to lead, mercury, selenium and cyanide.

G. Technology Basis and Standards for PSNS

The Agency is required to establish pretreatment standards for new sources (PSNS). These standards are intended to prevent the discharges of pollutants which pass through, interfere with or are otherwise incompatible with POTWs. New indirect dischargers, like new direct dischargers, have the opportunity to incorporate the best available demonstrated technologies including process changes, in-plant control measures, and end-of-pipe treatment, and to use plant site selection to ensure adequate treatment system installation.

Both PSES regulatory options are being considered for the basis of PSNS. The priority pollutants selected for regulation by PSNS will be the same as those selected for PSES. For the reasons discussed in the previous section, EPA has determined that these pollutants may pass through, interfere with or otherwise be incompatible with the POTW. The pretreatment standards selected as the basis for PSNS are also the same as those selected for PSES because EPA has not identified any technologies or combination of technologies that are demonstrated for new sources that are different from those being considered to establish PSES. These standards are the same as NSPS except that pollutants regulated by NSPS that do not pass through or interfere with POTWs are not regulated by PSNS.

H. Engineering Costing Methodology

The development of effluent limitations guidelines includes the identification of technologies available for the reduction of pollutant loadings in the OCPSF industry, quantifying the reduction of pollutants by a technology or group of technologies, and identifying the costs associated with the application of each technology or group of technologies. The results of these analyses are then used to determine the options that can be considered for regulation.

The engineering costing methodology has been revised since proposal. The Catalytic Costing Model was abandoned because the Agency's reassessment identified numerous technical deficiencies and problems related to several design modules, including activated sludge, chemical precipitation and activated carbon. The current OCPSF regulatory approach involves concentration-based effluent limitations. This approach reduced the value of the Catalytic Model in that it eliminated the need to determine treatment costs on an individual product/process basis. In addition, the Catalytic Model estimates the cost of building entirely new treatment systems. Actually, most in-place systems will simply be upgraded or expanded to achieve lower concentration limits. CAPDET, when modified to reflect industrial wastewater characteristics, is a better costing tool to estimate the cost of system upgrades. The use of a computer based design and costing model, such as the Catalytic Model, was determined to be unnecessary. Since current effluent quality is known for many of the plants to be costed and the technologies to upgrade the plant have been identified, a simpler approach can be used.

In order to assist in developing these cost methodologies, actual industry cost data were required to calibrate predictive cost models and benchmark the resulting cost algorithms. This information was obtained from the OCPSF industry using the statutory authority provided by Section 308 of the Clean Water Act. The Section 308 data collection effort included a Supplemental Questionnaire which was sent to 84 selected OCPSF manufacturers. This supplemental questionnaire requested detailed cost information regarding capital and operating costs for specific treatment unit operations. A total of 67 questionnaires were completed and returned. Some cost information was obtained for 48 biological treatment systems, 23 steam strippers, 13 metals

removal systems, 2 ion exchange units, 5 solvent extraction systems, 6 activated

*C had filtration systems rather than polishing ponds costed for solids

and 73 percent lower than industry supplied cost information. However, the

Organics, Commodity Organics, Bulk Organics and Speciality Organics.

processes not specifically covered by the Master Process File, but

A. All plants in the industry were

removal systems, 2 ion exchange units, 5 solvent extraction systems, 6 activated carbon systems, 4 polishing ponds and 1 filtration system. In order to derive costs associated with selected technology options, cost curves were developed for steam stripping, in-plant and end-of-pipe carbon adsorption, coagulation/flocculation, chemically assisted clarification, filtration, polishing ponds, contract hauling, sludge disposal (incineration), and monitoring. In addition, a cost model was developed for biological treatment upgrades, and CAPDET was used to cost activated sludge systems. The detailed development of the costs for each of these technologies is available in the public reading room.

Several general principles characterize the derivation of the cost curves. All costs are derived in 1982 dollars. Where data were collected for other years, they were corrected to 1982 dollars using the ENR index. Actual plant cost data were used, where possible, to derive the cost curves. Where they were not sufficient, the data that was available was used to benchmark the cost curves derived. CAPDET was used to derive costs or cost curves for biological treatment, biological treatment upgrades, activated carbon and filtration. The resultant cost curves were benchmarked with actual plant data. The design bases for filtration were based upon industry practice. The design bases for activated carbon were based on industry practice, and included priority pollutant removal data. Polishing ponds, coagulation/flocculation, chemically assisted clarification, contract hauling, sludge disposal (incineration) and monitoring costs were based on manufacturer quotations. Steam stripping costs are based on plant data.

Temperature Effects

In order to accommodate the ambient temperature effects on biological treatment processes, temperature correction factors were established for each state. These values are based upon the states actual minimum monthly average ambient temperature as reported by the National Ocean and Atmospheric Administration. A temperature correction factor was used to adjust the biological treatment system upgrade costs. In addition, minimum wastewater temperatrues were established on a state-by-state basis for use in the CAPDET Model.

Warm ambient temperatures can cause solids control problems due to algae blooms in polishing ponds. Therefore, plants in states with average maximum monthly temperatures over 25°C had filtration systems rather than polishing ponds costed for solids control.

Low Flow Facilities

For plants with total OCPSF process wastewater flows of 500 gallons per day or less, contract hauling disposal costs were estimated in lieu of process wastewater treatments costs. For the purposes of estimating the contract hauling costs on a national basis, the process wastewater was assumed to be hazardous and the hauling distance was assumed to be 500 miles in radius from the plant site to the hazardous waste treatment/disposal facility.

Land Costs

The cost of land is a key element in establishing total costs of alternative effluent guidelines and standards. Therefore, each technology assessed has been assigned land requirements. Since land costs may vary widely from place to place, it is difficult to obtain a nationwide average figure. However, based on an industrial real estate market survey report (prepared by the Society of Industrial Realtors in 1983), the average land costs for suburban sites of each state were obtained. Average state land costs were utilized in developing wastewater treatment land costs.

Benchmark Assessment

Wherever sufficient industry engineering cost data were available, benchmark analyses were prepared for the treatment techology alternatives utilized in the engineering design and costing analysis for the OCPSF industry. Some individual plant comparisons were significantly different than the Agency's estimates due to site specific design factors which may relate to such items as selected materials of construction or planned excess design capacity. However in most cases, the Agency's estimates were, on average, similar to industry supplied costs information. For example, the Agency's steam stripping capital and operation and maintenance costs were on average, only 6 and 2 percent lower, respectively, than industry-supplied cost data. For chemical precipitation/clarification systems, the Agency's capital cost estimates were, on average, 102 percent higher than industry data. The Agency's chemically assisted clarification and tertiary filtration capital costs were, on average, 36 percent higher and 17 percent lower, respectively, than industrys' costs.

In the case of the activated sludge biological treatment capital and operation and maintenance costs, the Agency's estimates were, on average, 10 and 73 percent lower than industry supplied cost information. However, the Agency questions the accuracy and validity of O&M cost data provided by several of the 11 plants that submitted O&M cost information. For example, three 1.5 million-gallon-per-day activated sludge treatment systems reported requirements for 2, 8 and 31 operating labor personnel. The Agency believes that no more than 3 to 4 people should be required to operate this size system. By comparing industry's reported labor costs to the reported labor hours, industry's labor rates ranged from $10.39 to $69.52 with an average of $25.46 per hour. The Agency used an Operator Class II hourly rate of $9.94 for estimating operation costs and $17.76 per hour for maintenance labor. Other differences may be traced to variations in local power costs or for cases where capital improvements may be reported as O&M maintenance materials and labor costs.

Sufficient industry data were not available to conduct capital and O&M benchmark analyses for activated carbon or to conduct O&M assessments for chemical precipitation/clarification, chemically assisted clarification, and tertiary filtration systems. The Agency solicits detailed design descriptions, capital and O&M costs, and performance data for activated sludge, biological system up-grades, chemically assisted clarification, polishing ponds, tertiary filtration, steam stripping, in-plant and end-of-pipe activated carbon, chemical precipitation/clarification and in-plant filtration wastewater treatment systems.

Costing Procedures

The engineering costing methodology developed costs on a plant-by-plant model basis for selected BPT options for BOD_5 and TSS, and developed costs on a wastewater stream basis for selected BAT and PSES options for priority pollutants.

BPT Costing: Plant-by-plant BPT costs were developed based on reported BOD_5 and TSS effluent concentrations and selected costing targets. The three sets of BOD/TSS long-term average targets for "plastics" plants are 10/15, 15/30, and 20/50 mg/l. These apply to facilities classified under the first four subcategories—Rayon Fibers, Other Man-Made Fibers, Thermosets, and Thermoplastics. The BOD_5/TSS long-term average targets for "organics" plants are 20/20, 45/45, 70/70, and 100/100 mg/l. These apply to facilities classified under the remaining subcategories—Thermoplastics and Organics, Commodity Organics, Bulk Organics and Speciality Organics.

Plants not having effluent BOD_5 or TSS data were costed using the median effluent values for all direct discharge plants in each cost group. These median effluent values were calculated for each cost group using data obtained from the 308 questionnaires.

The actual treatment system unit operations that were costed for each plant depended on the difference between the plant's reported current BOD_5 and TSS discharge data and the corresponding effluent costing targets. If the current discharge exceeded the target levels used for costing purposes, the Agency determined the treatment units that would be needed to achieve the target levels and calculated the cost of the treatment. The detailed procedure used for selecting technologies for costing are in the cost documentation report, which is located in the EPA public reading room.

For systems requiring full scale activated sludge treatment and/or second stage activated sludge, the CAPDET computer program was utilized. CAPDET default values were adjusted to reflect OCPSF wastewater characteristics. For example, average K-rates (biokinetic rate constants) and mixed liquor volatile suspended solids (MLVSS) for the plastics and organics groups were calculated using actual data taken from the 308 questionnaires and were used for those plastics and organics plants requiring full scale or second stage activated sludge treatment. For the organics plants' activated sludge systems, the K-rates ranged from 0.042 to 10.15 with an average of 3.200 inverse days; MLVSS ranged from 450 to 5,500 with an average of 3,700 mg/l. For the plastics plants' activated sludge systems, the K-rates ranged from 0.214 to 9.969 with an average of 2.301 inverse days; MLVSS ranged from 2,400 to 4,500 with an average of 3105 mg/l.

BAT Costing: The technology options considered for BAT include: (1) no additional treatment beyond BPT, (2) BPT plus appropriate in-plant physical chemical treatment for the removal of individual toxic pollutants, and (3) BPT plus in-plant controls and end-of-pipe activated carbon treatment.

EPA verification and EPA/CMA field sampling data, as well as Section 308 questionnaire data, were used where available for determining the toxics present in the plant's process wastewater. For plants with no current toxic pollutant data, estimates were obtained by matching each plant's product/processes with those contained in the verification sampling Master Process File. For those product/processes not specifically covered by the Master Process File, two approaches were followed: (1) Average toxic pollutant data from the Master Process File for a product, were used where applicable; or (2) Where product specific toxic pollutant data were unavailable, plants were assigned toxic pollutant data based on subcategory or costing group averages.

Based on the toxic pollutants present, the appropriate in-plant treatment technology was selected. Each pollutant had to be above a preselected trigger value before in-plant treatment would be required. No in-plant treatment technology was costed if it was already in-place. Steam stripping was costed for the removal of volatile organic pollutants. Activated carbon was used for semi-volatile organic pollutants. Both of these technologies are demonstrated technologies and have proven records in terms of removing priority pollutants from wastewaters in the OCPSF industry. Chemical precipitation was costed for metals removal.

For plants with product/process flows less than 500 gallons per day, only contract hauling was costed. Zero discharge wastestreams such as wastestreams which are disposed of by deep well disposal, incineration, land disposal, surface impoundment, were not included in the BAT analysis.

NSPS Costing: EPA used its BPT costing methods to cost entirely new treatment systems for new sources based on model flow sizes for each subcategory. BAT costs are used to estimate costs for new sources to control priority pollutant discharges.

PSES Costing: The procedures used to cost each plant were generally similar to the BAT method for costing appropriate treatment technologies. Section IV(F) of this notice discussed the PSES costing procedure in detail.

RCRA Baseline Costs for Surface Impoundments: In November 1984, Congress enacted the Hazardous and Solid Waste Act (Pub. L. 98–616) which among other things imposed new requirements on surface impoundments that treat, store and dispose of hazardous wastes. As a result of this new legislation, OCPSF manufacturing facilities were reviewed to determine what RCRA costs would be incurred. Plants without "Aggressive Biological Treatment" as described in the RCRA amendments (which exempts surface impoundments with such treatment from certain requirements) were included in the study.

EPA established the following criteria for the selection and inclusion of OCPSF facilities in the RCRA baseline costing analysis:

A. All plants in the industry were assigned a one-time site inspection cost which has an annual cost of less than $3,000.

B. All plants having aerobic and/or anaerobic lagoons were evaluated and assigned costs for installation of liners (high density polyethylene) and monitoring wells.

C. For facilities with primary clarification and/or equalization, EPA:

1. Randomly selected one-third of all direct and indirect discharge OCPSF facilities (which approximates the number of plants which have primary clarifiers and equalization basins which are not concrete structures or already double-lined) and determined monitoring costs, and

2. Randomly selected 15 percent of the above facilities (which approximates the number of plants which installed monitoring wells and determined that possible groundwater contamination is or could occur) and determined liner costs.

EPA's evaluation and subsequent costing analysis of the OCPSF facilities incurring liner costs were based on the assumption that that these facilities had detention times and depths similar to that of aerobic lagoons. The cost and preliminary economic impacts are discussed in section V(G) of this notice.

I. Conventional Pollutant Loadings

Conventional polluant loadings for BOD_5 and TSS were calculated on a plant-by-plant model basis for each of the BPT effluent targets which were costed (see section IV(C)) and for each plant's current BOD_5 and TSS effluent quality. BPT target loadings were calculated for each plant, depending on whether that plant was costed for that particular target (i.e., if a plant is already achieving a particular effluent target, a loading was not calculated for that target) by multiplying the BOD_5 and TSS effluent targets by the plant's process wastewater flow and a conversion factor. Current BOD_5 and TSS effluent loadings were calculated using actual BOD_5 and TSS concentration values for direct dischargers and multiplying these numbers by each plant's process wastewater flow and a conversion factor. For plants without either BOD_5 and TSS effluent values, median effluent concentrations for each plant's assigned subcategory were substituted for actual BOD_5 and TSS effluent data and current loadings were calculated as above.

The current in-place treatment BOD and TSS annual loadings are 49.9 and 103.8 million pounds per year, respectively. The annual BOD and TSS

BPT loadings, based on the Option I costing targets listed in Table C–4 of section IV(C), are 21.8 and 20.6 million

concentration of the pollutant in the process wastewater was actually 300

overestimate metal toxic pollutant loadings.

BPT, BAT and Current Waste Load Calculation

and operating rate data by product/process. The Agency has calculated

and Organic Pigments (Lakes and Toners); SIC 2869, Industrial Organic

BPT loadings, based on the Option I costing targets listed in Table C–4 of section IV(C), are 21.8 and 29.6 million pounds per year, respectively. The annual BOD and TSS BPT loadings, based on the Option II costing targets, are 21.7 and 29.4 million pounds per year, respectively. As noted in section IV(C), the Option III loadings are bracketed by Options I and II. Refined calculations based upon the actually developed limitations will reveal more substantial differences among the three options.

J. Toxic Pollutant Loadings

At the time of proposal, the Agency overstimated the annual discharges of toxic pollutants. Industry comments objected to these overestimates, argued that toxic pollutant discharges by the OCPSF industry are low, and questioned the need to establish BAT limitations on a wide range of toxic pollutants. These commenters suggested that the Agency rely on the NPDES permit application Form 2C toxic pollutant data for determining toxic pollutant loadings. They maintained that available NPDES permit application Form 2C data constitute the most appropriate and extensive data base for predicting the extent of occurrence of priority pollutants in the OCPSF industry. They argued that the Form 2C data submitted by trade association member companies indicate that only a few priority pollutants are detected in treated discharges and concluded that existing treatment systems, installed principally for the control of conventional pollutants, do an excellent job of controlling priority pollutant discharges. The Agency disagrees with these comments and, for the reasons discussed below, believes that OCPSF industries currently discharge significant amounts of toxic pollutants for which regulation beyond BPT is warranted.

Since the OCPSF regulations apply to process wastewater only, the Agency determined the relative contributions of process and nonprocess wastewater at the effluent sample sites. These data were used to calculate plant-by-plant "dilution factors" for use in adjusting or assessing analytical data at effluent sampling locations. This information was used to determine if reported section 308 and Form 2C final effluent concentration data could be used to adequately characterize actual process wastewater pollutant parameter concentrations. For example, if a pollutant was reported as 30 ppb at the final effluent sampling location with 1 MGD of process wastewater flow and 9 MGD of noncontaminated nonprocess cooling water flow, then the concentration of the pollutant in the process wastewater was actually 300 ppb. Similarly, if the same plant reported that another pollutant was not detected at the same sampling location and the analytical method detection limit was 10 ppb, then the other pollutant concentration in the process wastewater could be as high as 90 ppb without being detected in the diluted final effluent.

One-hundred-six plants reported Form 2C toxic pollutant data in the 1983 Section 308 Questionnaire. Of these, 70 plants diluted the process wastewater before the effluent Form 2C sampling point. The following table relates the number of plants with Form 2C data to the range of dilution at the effluent sampling point.

TABLE J–1.—RANGE OF PERCENT DILUTION FOR PLANTS WITH FORM 2C DATA

Range of dilution in percent	Number of plants with form 2C data (percent)
0	36(34)
>0 to 25	20(19)
>25 to 100	20(19)
>100 to 500	17(16)
>500 to 6,054	13(12)
Total	106(100)

The Agency was able to identify 13 facilities that reported measured toxic pollutant concentrations of treated process wastewater both before and after dilution with nonprocess wasterwater. In general, analyzing the diluted effluents yielded underestimated or undetected values for organic toxic pollutants that were measured in the undiluted process wastewater. However, this was not generally the case for cyanide and toxic pollutant metals such as cadmium, chromium, and lead. These compounds are commonly found in cooling water additives that may be utilized to inhibit biological growth or the formation of rust and scale in cooling equipment. The presence of a portion of these metals in the diluted effluent seems to be caused by the nonprocess cooling water. Therefore, the assumption that the nonprocess dilution wastewater is relatively clean seems to apply to the organic toxic pollutants but not necessarily to all of the toxic metal parameters.

Therefore, use of unqualified Form 2C data does not provide an adequate assessment of process wastewater toxic pollutant constituents and concentrations. Use of Form 2C data tends to underestimate organic toxic pollutant loadings in process wastewater and may actually overestimate metal toxic pollutant loadings.

The Agency developed a methodology to estimate industry toxic pollutant loadings which incorporates Form 2C data where appropriate as well as other available toxic pollutant analytical data.

The Agency has estimated raw and current effluent as well as projected BPT, BAT, and PSES effluent priority pollutant waste loadings for the OCPSF industries. These loadings have been calculated on a plant-by-plant model basis using both industry generated data (i.e. 1983 "308" Questionnaires data) as well as analytical data acquired by the Agency in various sampling studies. These loadings demonstrate that significant discharges of conventional and toxic pollutants currently occur and that the options for treating these discharges remove successively larger amounts of these pollutants.

Raw Waste Loads

The Agency used multiple sources of data and modeling techniques to determine, for the purpose of calculating loadings, which toxic pollutants are likely to be present at individual facilities as well as the corresponding raw waste loads as follows:

1. Where 308 toxic pollutant data were available, these data were used to calculate raw waste loads for those toxic pollutants.

2. Where the combined raw wastewaters of a plant had been sampled in either Phase I or Phase II Screening Studies, those toxic pollutant concentration data were used to calculate the raw waste loads from these plants after editing for analytical false positive values.

3. Raw waste loads were calculated using Master Process File toxic pollutant concentration data for product/process covered by the MPF. Where a product/process waste load could not be calculated at a plant, product specific waste loads were calculated using the "Product Averaged Master Process File."

4. For plants producing products that could not be calculated by the above methods, generic process raw waste loads were calculated using the "generic Process Average Master Process File."

Because the generic process method necessarily generated extraneous pollutants, raw waste loads from these plants were extensively reviewed; those pollutants that the Agency believes to be inconsistent with process chemistry practiced at a plant were deleted from the raw waste load file. The edited file was used for purposes of calculating loadings and costs.

BPT, BAT and Current Waste Load Calculation

BPT, BAT, and current waste load of individual plants were calculated for those toxic pollutants found in the raw waste load as follows:

1. Average toxic pollutant concentrations were calculated using the sampling data base (i.e., verification data, CMA 5-Plant, and new sampling data). Separate toxic pollutant concentrations were calculated by subcategory for both BPT and BAT plants (i.e. those plants currently meeting proposed BPT and BAT criteria, respectively).

2. For plants not in compliance with the toxic pollutant costing targets or BPT costing targets, it was assumed that the installation of BPT would treat a proportion of the toxic pollutants. This allowed EPA to project toxic pollutant loadings at BPT and then at BAT, in accordance with the extent to which additional BPT treatment would be required to meet BOD and TSS limits. Pollutant concentrations were adjusted for those plants which incurred BPT costs by the ratio of actual BOD to the target BOD for that subcategory (20 mg/l for rayon, other fibers, thermosets, and thermoplastics only: 45 mg/l for thermoplastics and organics, commodity organics, bulk organics, and specialty organics). Plants that did not incur BPT costs were assigned BPT toxic pollutant concentrations by subcategory. Plants that did not incur either BPT or BAT costs were assigned BAT toxic pollutant concentrations.

3. Effluent concentrations of toxic pollutants as derived above were multiplied by total process flow to calculate current waste load.

PSES, Waste Load Calculations

PSES waste loads were calculated in a manner analogous to current waste loads. If a plant was costed for PSES treatment, then toxic pollutant concentrations were considered to be equal to raw waste toxic pollutant concentrations. If a plant was not costed for PSES, then toxic pollutant concentrations were assumed to be equal to "current" toxic pollutant concentrations. Effluent concentrations of toxic pollutants as derived above were multiplied by total process flow to calculate PSES load.

Annualized Waste Load

Product/process flow data provided by the OCPSF industries in the 1983 "308" questionnaire are reported in millions of gallons per day when operating. The industry has also provided total annual production data and operating rate data by product/process. The Agency has calculated operating days for each product/process at each plant by dividing the annual product/process production by the product/process operating rate. Multiplication of daily product/process waste load by product/process operating days yields annualized product/process waste loads. Toxic pollutant waste loads from individual product/processes at a plant are than summed to yield total waste load for individual plants.

The projected direct and indirect discharge annual priority pollutant waste loadings are presented in Tables J–2 and J–3, respectively. As noted before, the BPT toxic pollutant loadings are based on one set of composite BOD targets rather than on each BPT option. Furthermore, the Agency believes that there would be negligible differences between the projected BPT composite and the BAT Option I priority pollutant loadings. The PSES loadings most closely correspond to PSES Option II, however, the estimates include incidental removals of pollutants which were determined not to pass through or interfere with POTW operations.

TABLE J–2.—DIRECT DISCHARGE—ANNUAL PRIORITY POLLUTANT LOADINGS

[1,000 lb per year]

	Volatiles	Semivolatiles	Metals and CN	Total
Raw waste	92,746	39,079	35,491	157,316
Current	248	208	730	1,186
BPT/BAT-I	218	180	628	1,026
BAT-II	59	80	104	243
BAT-III	56	62	102	220

TABLE J–3.—INDIRECT DISCHARGE—ANNUAL PRIORITY POLLUTANT LOADINGS

[1,000 lb per year]

	Volatiles	Semivolatiles	Metals and CN	Total
Raw waste	12,655	192,316	28,796	233,767
Current	4,313	96,180	6,309	106,802
PSES-II	133	44	588	765

K. Applicability and Definition of the Regulated OCPSF Industry

The Agency has received many requests for information on which facilities are covered by the OCPSF category regulations. The discussion below addresses this issue. EPA intends to include the essential points of this discussion in the Applicability Section of the final regulations.

The Agency has defined the Organic Chemicals Manufacturing industries to include all facilities within specific SIC codes: SIC 2865, Cyclic (Coal Tar) Crudes, and Cyclic Intermediates, Dyes, and Organic Pigments (Lakes and Toners); SIC 2869, Industrial Organic Chemicals Not Elsewhere Classified and SIC 2911, Liquified Refinery Gasses (including other aliphatics) made from purchased refinery products and other Finished Petroleum Products (aromatics) made from purchased refinery products. Likewise, the Agency has defined the Plastics/Synthetic Fibers industry to include all facilities within specific SIC codes: SIC 2821, Plastics Materials, Synthetic Resins, and Nonvulcanizable Elastomers; SIC 2823, Cellulosic Man-Made Fibers; and SIC 2824, Synthetic Organic Fibers, Except Cellulosic.

For some petroleum refineries and pharmaceutical manufacturers, process wastewater from some synthetic organic chemical products are specifically regulated under the Petrochemical and Integrated Subcategories of the Petroleum Refining Point Source Category (40 CFR 419, Subparts C and E) or the Chemical Synthesis Products Subcategory of the Pharmaceuticals Manufacturing Point Source Category (40 CFR 439, Subpart C). The petroleum refineries and pharmaceutical manufacturers that produce organic chemical products that generate process wastewaters treated in combination with petroleum refinery or pharmaceutical manufacturing wastewaters, respectively, should consider any such organic chemical products as non-OCPSF products. However, if petroleum refineries or pharmaceutical manufacturers produce organic chemical products that generate process wastewaters that are treated in a separate wastewater treatment system, then these facilities should consider any such organic chemical product as an OCPSF product.

The Agency has grouped the OCPSF industries into categories based on the products or product groups produced at a plant. These product groups are:

- Thermoplastic resins (Census product code 28213);
- Thermosetting resins (Census product code 28214);
- Rayon fibers (Census product code 2823);
- Other fibers (Census product code 2823 and 2824); and
- Organic chemicals (Census product code 2865, 2869, and 2911).

The organic chemicals group has been further divided into three groups of chemicals or chemical groups depending upon the total 1980 production volume of a chemical. These subgroups are:

- Commodity Chemicals—organic chemicals produced in amounts greater than one billion pounds per year. This

list includes 37 products or product groups.

- Bulk Chemicals—organic chemicals

It should be emphasized that the placement of products and product groups shown in Tables K–1 through K–6

Cellulose Sponge
*Ethylene-Methacrylic Acid Copolymers
*Ethylene-Vinyl Acetate Copolymers

Styrene Polymeric Residue
*Styrene-Acrylic Copolymer Resins
*Styrene-Acrylonitrile-Acrylates Copolymers
*Alkylates
*Alpha-Olefins
Butane (all forms)*
Pine Oil
Polyoxybutylene Glycol

list includes 37 products or product groups.

• Bulk Chemicals—organic chemicals produced in amounts less than one billion pounds per year but more than 40 million pounds per year. This list comprises 221 products or product groups.

• Specialty Chemicals—all organic chemicals not defined as Commodity or Bulk Chemicals.

Organic chemical compounds that are produced solely by extraction from natural materials (e.g., plant and animal sources) or by fermentation processes are *not* considered to be OCPSF products. Thus, ethanol derived from natural sources (SIC 28095112) is *not* considered to be an OCPSF industry product; ethanol produced synthetically (hydration of ethene) *is* an OCPSF industry product. Similarly, cellophane (SIC 3079) which is produced by extrusion of viscose (chemically derived from the natural polymer cellulose) is being considered by the Agency to be an OCPSF industry product. (Both rayon and cellophane are manufactured by similar process, differing only in the extruded form. Therefore, cellophane manufacture will be included in the rayon subcategory for BPT.) The Agency solicits comments on this issue.

Certain products of SIC groups other than 2865, 2969, 2821, 2823, and 2824 are considered to be OCPSF products. Benzene, toluene, and mixed xylenes manufactured from purchased refinery products in SIC 29110582 (in contrast to benzene, toluene, and mixed xylenes manufactured in refineries—SIC 29110558) are considered to be OCPSF products. Similar considerations apply to aliphatic hydrocarbons manufactured from purchased refinery products—SIC 29116324.

Based on the information submitted to EPA as a result of the 1983 "308" Questionnaire, the Agency has compiled lists of chemicals and chemical groups by the industry segments discussed above. These industrial segments are integral parts of establishing and defining subcategories. Table K–1 lists rayon products. Table K–2 lists other fiber products and product groups. Thermosetting resin products and product groups are listed in Table K–3. Thermoplastic resin products and product groups are listed in Table K–4. Table K–5 lists commodity organic chemicals and chemical groups. Bulk organic chemicals and chemical groups are listed in Table K–6. The remaining organic chemicals and chemical groups not listed in Tables K–5 and K–6 are defined as specialty organic chemicals.

It should be emphasized that the placement of products and product groups shown in Tables K–1 through K–6 is not expected to be static: as production methods and processes change over time, specific chemicals and chemical groups may (and are expected to) also change. Furthermore, closely related chemical products may in some cases be in different subcategories because of production volume. For example, at present, benzene, toluene, and xylene are defined as commodity chemicals; BTX (a product which is a mixture of benzene, toluene, and xylene) is defined as a bulk chemical product. Therefore, Tables K–1 through K–6 should be seen as guidance. The formal definitions of the BPT subcategories should be referred to for precise determination of a plant's subcategory.

L. Options for Identifying Plant-Specific BAT and PSES Toxic Pollutant Monitoring Requirements

Industry has for many years discussed the complexity of the OCPSF industry and the desirability of plant-specific permits or control requirements instead of national regulations (effluent limitations and standards). What follows is a preliminary monitoring program which would provide permitting and control authorities with accurate information on the toxic pollutants generated at an OCPSF plant. This information could then be used in one of several ways to develop tailored permitting requirements, as will be discussed further below.

Based on the efficacy of BPT systems for removal of residual toxic organics and the present utilization of Part 2–C data from NPDES permit applications for the Organic Chemicals Industry, the Agency believes that as much attention should be focused on reducing influent levels of toxic organic pollutants to biological treatment systems as on reducing the effluent levels. Based on economic and treatability considerations, focusing on influent to biological systems is an optimal approach. This method promotes in-plant controls and modifications which are typically far less costly than increasing the capacity of a biological system and, in the case of the OCPSF industry, highly effective in the control of toxic organics. As has become apparent from the data collected, with the exception of a few polluants such as the chlorophenols and chloroalkyl ethers, a BPT biological system will remove organic pollutants from wastewaters as long as the influent level is beneath a specific threshold and the influent levels have been stabilized through equalization.

Although treatment efficiencies are uniform throughout the industry, the specific toxics generated vary greatly among OCPSF plants. In order to properly implement the OCPSF effluent guidelines and mitigate the cost of regulating toxics, the following monitoring procedure has been developed.

For each BPT subcategory, EPA has developed a list of toxic pollutants that are likely to be present in the process wastewater (see Tables L–1 through L–8). These lists are based on the site-specific data collected for the OCPSF regulation, other industry data, and process chemistry. Thus for any OCPSF plant, an initial list of potential priority pollutants of concern can be generated based on the plants OCPSF subcategory and product mix.

To better define the pollutants of concern at a particular plant, EPA is considering requiring the collection, analysis, and reporting of six monthly samples at the influent to biological treatment (free of dilution by noncontact cooling water, scrubber blowdown, stormwater, other nonprocess wastewater, and process wastewater that are not derived from OCPSF production and are substantially free of BOD). The toxic pollutants to be analyzed are those listed in Tables L–1 through L–8 for the various subcategories of the OCPSF industry. If a pollutant appeared one or more times above 100 μ/l in the influent or was reported with a detection limit over 100 μ/l, it would be a pollutant of concern.

In addition, a one-time scan of all regulated pollutants would be conducted, again at the biological influent free of dilution. Any pollutant appearing above 100 μ/l or reported with a detection limit over 100 μ/l would be a pollutant of concern.

EPA is considering, and solicits comments on, several regulatory options for using the list of pollutants of concern to minimize unnecessary monitoring and reporting burdens on industry. The Agency may promulgate any of these options, or a variation or combination of them.

These include:

(1) Limiting all pollutants covered by the regulation in the permit and as a pretreatment standard, but requiring frequent monitoring only for pollutants of concern. Other pollutants would be monitored for compliance only occassionally (e.g., once or twice per year).

(2) Limiting only pollutants of concern in the permit and as a pretreatment standard and monitoring only for those pollutants. (New discharges of other pollutants for direct dischargers would be identified only as required by the notification requirements of 40 CFR 122.41(1) and 122.42(a)).

(3) Limiting only pollutants of concern in the permit and as a pretreatment standard but monitoring occasionally (e.g., once or twice per year) for other pollutants covered by the BAT regulation to detect process or other changes that result in the discharge of different pollutants. (Such pollutants could then be addressed by a direct discharge permit modification setting limits for the pollutants. See 40 CFR 122.44(e).)

The Agency solicits comments on these options and other possible options, including different approaches for plants falling into more than one OCPSF subcategory. Commenters should specifically comment on whether a specific option is more appropriate for existing or new sources or direct or indirect discharges.

The Agency estimates that $10,170 is the upper bound cost for conducting the analyses discussed above. This assumes

$1,695 per sample based on using isotope dilution GC–MS methods 1624 and 1625 for volatile and semivolatile organic priority pollutants and assuming an average need for six dilutions for one or more fractions, as well as provide methods for the priority pollutant metals and cyanide. No costs were assumed for the 16 pesticide and 7 PCB priority pollutants, asbestos, and dioxin since these pollutants likely will be excluded from national regulation under the terms of Paragraph 8 of the NRDC Settlement Agreement. The total application cost is calculated by multiplying the once-per-month sample cost by 6 months.

A review of the lists of potential toxic pollutants for each subcategory in Tables L–1 through L–8 indicates that the rayon, other man-made fibers, thermosetting resins, and thermoplastics-only facilities are likely to have much lower application monitoring costs than plants within other subcategories.

If the Agency selects the six month monitoring approach for establishing control requirements, the application information collection requirements will be submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 *et seq.* These requirements would not be effective without OMB's approval. If OMB's approval is not obtained until after promulgation, then a technical amendment to that effect would be published in the **Federal Register**.

V. Preliminary Data Analysis—Economic

This notice also makes available for comment the results of additional economic analysis. These results are summarized below and are discussed in detail in the *Economic Impact Analysis of Effluent Limitations and Standards for Notice of Data Availability for the Organic Chemicals, Plastics, and Synthetic Fibers Industry.* This report incorporates EPA's consideration of public comments, the collection efforts for economic and financial data, and the preliminary revisions to the estimated compliance costs based on the technical reanalysis discussed in Section IV, and the preliminary economic impacts.

A. The Revised Economic Impact Methadology

Based on comments received at proposal and the survey collection efforts, EPA has substantially revised the economic impact methodology. The economic analysis at proposal was driven by a product/process supply-demand analysis. This analysis fit well into the proposed subcategorization scheme based on generic product/processes. EPA now plans to use a plant-by-plant analysis as the prime analysis to estimate economic impacts. Three factors have led to this change: the substantial adverse public comments on the plant closure analysis at proposal, the availability of new plant-specific economic and financial data from the new survey, and the newly revised subcategorization scheme presented in this notice.

The revised economic analysis also reflects a change in the baseline year from 1985 to 1988. Three factors influenced this change. First, promulgation of these rules is expected in 1988, making a compliance date of 1988 realistic. Second, while the economic data collected from plants are based on 1982, this year was bad economically for the industry and not representative of likely future conditions. Based on the cyclical pattern of economic activity in this industry and projected macroeconomic conditions, 1988 is projected to be a more representative year for the industry than 1982. Third, the compliance costs are estimated based on production and wastewater flows from 1980, a better year for the industry. Using 1982 data would overestimate the economic impact of these rules; using 1988 mitigates the potential of this happening.

The primary economic analysis is a discounted cash flow (DCF) analysis for estimating plant closures. Employment and production impacts are estimated from the DCF analysis. A DCF analysis compares expected net revenues over a ten year period to the value of liquidating plant assets today and investing the proceeds elsewhere. Numerous other analyses are also conducted: changes in plant profitability, increases to costs of production, liquidity analysis, firm-level analysis and a foreign trade assessment of production at risk. The product/process supply-demand analysis is used to profile industry conditions for the baseline.

EPA is also revising its analysis of the relative impacts among small and large businesses. No substantial economic impacts were projected at proposal; however, EPA is evaluating small business impacts by examining the relative impact between small and large facilities.

B. BPT

For BPT Option 1 (Biological Only), the Agency estimates that capital investment costs will total $277 million and total annualized costs $131 million for 304 affected direct dischargers (1982 dollars). Four plants are expected to close. Additionally, organics and plastics production lines at six other facilities are expected to shut down. The total expected employment loss at the ten affected plants equals 251 jobs, or 0.1 percent of industry employment.

For BPT Option II (Biological Treatment With and Without Polishing Ponds), EPA estimates that capital investment costs will total $294 million and total annualized costs, $139 million. Four plants are expected to close and the organics and plastics production lines at six additional facilities are expected to shut down. The total expected employment loss equals 251 jobs. (0.1 percent of industry employment). Separate impacts for Option III have not been estimated for this notice but are expected to be the same as those estimated for Option II.

C. BAT

Those direct dischargers that are required to install biological treatment to meet BPT limitations (for conventional pollutants) are not expected to incur any incremental costs under BAT Option I. A small number of direct dischargers will be able to meet the conventional pollutant limitations without installing biological or post-biological treatment. Less than 20 percent of the direct dischargers would need to install in-process treatment controls in order to meet priority pollutant limitations based on BPT/BAT Option I technology. The costs for these plants to meet BAT Option I limitations are now included under BAT Option II. Thus, the estimated costs of compliance and resulting economic impacts for BAT Option I are expected to be between those estimated for BPT Option II and BAT Option III.

The incremental compliance costs beyond BPT for BAT Option II are expected to equal $607 million in capital investment and $415 million in total annualized costs. Eleven additional plants are projected to close under BAT. In addition, the organics and plastics production lines at eleven other facilities are expected to shut down. The expected employment loss (incremental to BPT losses) is 3,966 jobs at the 22 affected plants, or 2.1 percent of industry employment.

For BAT Option III, the incremental capital investment costs beyond BPT Option II are expected to equal $1,437 million and total annualized costs, $677 million. Twenty plants beyond those closing at BPT are expected to close and the organics and plastics production lines at 19 other facilities are expected to shut down. The employment loss (incremental to BPT losses) at the 39 affected plants is estimated at 9,906 jobs, or 5.3 percent of industry employment.

D. PSES

The costs and impacts for PSES Option I are expected to be lower than for PSES Option II.

For PSES Option III, capital investment costs are expected to total $189 million and total annualized costs $135 million for 404 affected indirect dischargers. Sixteen plants are projected to close. In addition, organics and plastics production lines at 28 other facilities would be expected to shut down. The total expected employment loss at the 44 affected plants would equal 1,073 jobs, or 0.6 percent of industry employment.

For PSES II (which includes in-process treatment and either biological treatment or filtration for additional control of specific pollutants) EPA estimates that capital investment costs will total $304 million and total annual costs, $166 million. These capital and annual costs are 61 percent and 23 percent higher, respectively than the costs estimated for physical/chemical treatment alone (i.e., for PSES Option III). Nineteen plants are expected to close and the organic chemicals and plastics production lines at 37 other facilities are expected to shut down. The projected total employment loss at the 56 affected indirect dischargers equals 1,595 jobs, or 0.8 percent of industry employment.

E. PSNS and NSPS

For control of priority and nonconventional pollutants, the treatment options for direct and indirect new sources are identical to those being considered for existing sources. EPA anticipates that a more stringent requirement for new sources may be selected and, therefore, some incremental costs will be incurred above the costs existing sources are expected to face.

For the control of conventional pollutants in NSPS, EPA is considering the same three technology bases as for the BPT regulations; however BPT Option III (Biological Treatment Plus Filtration) is likely to be selected for NSPS, and thus require more stringent controls than for existing dischargers.

For all subcategories except Other Man-Made Fibers, EPA expects that limitations for Biological Treatment Plus Filtration will be more than those for BPT options I and II. The Agency has evaluated the impact of incremental costs of compliance with this NSPS option for model plants in each subcategory. The incremental costs to the model plants' estimated sales are very small, ranging from 0.07 to 0.5 percent of sales. The expected reductions in profitability range from 1.6 to 16.0 percent. The largest reductions would be incurred by producers in the Rayon Subcategory, followed by producers in the Specialty Organics subcategory.

For the control of priority pollutants in NSPS, EPA is considering the same technology bases as for existing sources; however, BAT Option III is more likely to be chosen for NSPS. The Agency have evaluated the impact of incremental costs of compliance with this NSPS option (assuming that existing direct dischargers will meet BAT Option II). (If NSPS equals BAT, significant barriers to entry would not be likely. Therefore, this analysis focuses on the case where NSPS is more stringent than BAT.) Because of the wide variety of products and processes in the industry, the

analysis is based on the incremental effects on existing dischargers.

EPA has evaluated the impacts of without significant production of organic chemicals.

some plants now close in the baseline analysis of RCRA instead of closing as a

analysis is based on the incremental effects on existing dischargers.

EPA has evaluated the range of incremental profitability and liquidity reductions associated with going from BAT Option II to BAT Option III for direct dischargers. This analysis can describe the range of differential impacts that would be caused if the final selected new source option is based on BAT Option III.

The additional costs associated with BAT Option III have a wide range of effects on plant profitability. The additional cost of BAT Option III over expenditures for BAT Option II causes a median plant profit reduction of 15 percent. However, the range of profit reduction is zero to 79 percent for the tenth and ninetieth percentiles, respectively.

The results of the liquidity reduction analysis are somewhat similar. The incremental liquidity reductions in going from BAT Option II to BAT Option III range from a low of zero percent (10th percentile) to a high of 58 percent (90th percentile). The median liquidity reduction is nine percent. The range of values for the incremental liquidity measure does not appear to be correlated with the liquidity impacts at BAT Option II.

F. Regulatory Flexibility Analysis

Pub. L. 96–354 requires that a Regulatory Flexibility Analysis be prepared for regulations that are proposed after January 1, 1981 that have a significant impact on a substantial number of small entities. The analysis may be done in conjunction with, or as a part of, any other analysis conducted by the Agency. A preliminary small business analysis is included in the draft economic impact analysis accompanying this notice.

The Agency is redefining its definition of small businesses for this regulation. At proposal, the Agency set a definition of facilities with less than 50 employees. The new definition identifies as small those plants with annual OCPSF sales of less than $5 million. The Agency invites comment on the revised small business definition and the analytical approach used to derive it. (This approach is detailed in the draft report).

The analysis of the relative impacts between small and large plants shows that small plants may be significantly affected by the BPT and PSES regulations. The groups of plants most severely affected are the small organic chemical manufacturers except those falling under the Commodity Organics subcategory, and manufacturers of thermoplastic and thermosetting resins without significant production of organic chemicals.

Therefore, the Agency is considering alternative regulatory approaches for small businesses, primarily within these groups. The alternatives include either less stringent effluent limitations or exemptions entirely from the effluent limitations for small business.

In determining size cutoffs for either alternative, the Agency is examining different measures for small plants. First, the Agency believes that the small business definition of less than $5 million in OCPSF sales currently identifies the sector of small businesses that could be affected. However, in practice, this measure would not be appropriate in the long-term because the value of sales will increase over time because of inflation. Thus, fewer and fewer plants would fall into this category over time, rendering the exemption obsolete. Second, the Agency is considering using tons of OCPSF products manufactured annually as a measure. If this measure were to be used, the Agency would likely define different levels of production for cutoffs among segments of the industry with different unit values of production to ensure that the correct portion of the industry is being protected. A single production cutoff across the whole industry is unlikely. Third, the Agency is considering a wastewater flow size cutoff. The advantages of a flow cutoff are that the information needed by the permit writer to determine the size is readily available. However, as the Agency's work on attempting to set mass-based limitations in the past has shown, there is a generally weak correlation between production and wasterwater flow in this industry. Therefore, the exemption may not affect the particular segment of the industry in need of relief.

The Agency requests comments on the small business definition and whether the Agency should consider alternative regulatory levels for small businesses.

G. RCRA Baseline Analysis

Shortly before publication of this Notice, the economic impact analysis was run including all of the baseline RCRA costs described in section IV(H). (The impacts previously described included only the one time site inspection costs.) Because these costs are included in the baseline—the costs will be incurred regardless of the requirements of this regulation—the incremental closures associated with this effluent guideline have been reanalyzed. The impacts are lower for the effluent guideline when all the baseline costs are included because some plants now close in the baseline analysis of RCRA instead of closing as a result of the regulation.

The total RCRA baseline costs for this industry are projected to be $31 million in capital investment, and $13.8 million in total annualized costs.

At BPT, the six plants projected to close their organics and plastics production lines are the same. At BPT Option I, one plant less is projected to close at this option (three versus the four plants discussed above). At BPT Option II, one additional plant is expected to close, for a total of five plants. The employment impacts including all the RCRA baseline costs are 198 and 397 for BPT Option I and II respectively, compared to the 251 job losses described above.

For the BAT Options, the plant closure estimates are slightly smaller. Under BAT Option II, plant closures drop from 11 to 10, while under BAT Option III, plant closures drop from 20 to 18. Production line closures remain the same at either option. Because the set of plants closing under Options II with the RCRA costs included in the baseline are somewhat larger, the employment losses rise from 3,996 to 4,527 jobs even though one less plant closes. Under BAT Option III, the reduction in plant closures causes a drop in employment losses from 9,906 to 9,707 jobs.

For the PSES Options, the plant closures and employment losses increase slightly with the inclusion of the remaining RCRA baseline costs. Under PSES Option III, one additional plant is expected to close its organics and plastics production lines (29 versus 28) for an incremental employment loss of three jobs (1,076 versus 1,073). Under PSES Option II, the one additional production line closure (38 versus 37) is expected to cause an incremental employment loss of five jobs (1,600 versus 1,595). Plant closures are projected to remain at 16 and 19 plants for PSES Options III and II, respectively.

H. Cost-effectiveness Analysis

EPA has conducted an analysis of the incremental cost per pound-equivalent removed for the technology-based options. A pound-equivalent is calculated by multiplying the number of pounds of pollutants discharged by toxic weighting factor for that pollutant. The weighting factors give relatively more weight to removal of more highly toxic pollutants. Thus, for a given expenditure and pounds removed, the cost per pound-equivalent removed would be lower when a highly toxic pollutant is removed than if a less toxic pollutant is removed.

The methodology used in this analysis, unlike cost-effectiveness analyses for previous effluent guidelines, incorporates into the computations consideration of air emissions of volatile organic chemicals from process wastewaters. Removal of these pollutants is counted towards the cost-effectiveness of the regulation since the treatment technologies remove the substances from wastewaters. Furthermore, the toxic weighting factors (which are generally based solely on aquatic life criteria) also include proxy criteria for toxicity and carcinogenicity effects to humans through inhalation of volatile organic chemicals.

The cost-effectiveness analysis is included in the record of this rulemaking. The Agency invites comments on the analysis, particularly the inclusion of inhalation effeots associated with the volatile organic chemicals.

IV. Executive Order 12291

Executive Order 12291 requires EPA and other agencies to perform regulatory impact analyses of major regulations. Major rules impose an annual cost to the economy of $100 million or more or meet other criteria. Implementation of the proposed regulation for the Organic Chemicals, Plastics and Synthetic Fibers Industry has been projected to cost over $100 million annually and thus is a major rule.

Water quality impacts have been analyzed (using treatment levels in this notice) for 81 direct discharge OCPSF facilities. EPA's published water quality criteria for priority pollutants are used to assess water quality impacts. The analyses project that under existing conditions, over 60 percent of the 81 OCPSF facilities exceed water quality criteria (depending on the criteria used). However, the projected exceedances of Water quality criteria will be reduced by as much as 50 percent (depending on criteria used) by implementing the BAT levels in this notice.

In addition to the water-quality impact analyses at 81 OCPSF facilities, three site-specific assessments of the specific health and environmental benefits that may result from the proposed regulations are currently in progress. The results reported in the March 21, 1983 **Federal Register** for the Kanawha River (West Virginia) and Houston Ship Channel (Texas) case studies will be reexamined to incorporate the new 308 data, the new BPT and BAT options, and ozone reduction benefits from controlling the volatilization of volatile organic chemicals (VOCs) that photochemically react in the troposphere to form ozone (smog). Currently, a third case study on the Delaware River is being conducted. This case study will include recreational and other non-health benefits, health benefits, and potential ozone reduction benefits.

An analysis of the national magnitude and nature of the VOC intermedia transfer problem (removal of VOCs from the receiving water body through biological treatment may result in volatilization into the air from treatment ponds) will be conducted prior to promulgation.

VII. Solicitation of Comments

This notice announces the availability of a substantial body of new data gathered by EPA. EPA has expended considerable resources to collect this data to respond to comments that the data base used at proposal was not adequate to support the proposed regulations. EPA believes that its expanded data set provides an adequate basis for the regulations decribed in this notice. However, EPA continues to solicit data relevant to all aspects of this rulemaking. Such data, is submitted, should be accompanied by sufficiently detailed information to indicate its nature, origin, and quality.

This notice also presents many new analyses and regulatory options. EPA solicits comments on all of these analyses and options. Commenters should be aware that EPA may promulgate regulations that incorporate any of these options, variations on the options, or combinations of the options. Comments should be made with these possibilities in mind.

In addition to the solicitation of comments on technical data and regulatory options discussed throughout this notice, EPA solicits comments on the following economic issues.

(1) The economic impact analysis for this notice does not include baseline effects of CERCLA requirements in evaluating the economic achievability of these rules. EPA invites comments on the effect of the CERCLA taxes on the ability of this industry to afford the effluent guideline rules.

(2) The Agency requests comments on the economic impact analysis methodology. In particular, EPA requests comments on the plant closure analysis.

(3) EPA solicits comments on the financial data used to model the industry. Where the questionnaire data were unavailable, EPA used industry averages to estimate economic impacts. The Agency invites comments, supported by appropriate data.

(4) The Agency also requests comments on the plan to define small businesses as facilities with less than $5 million in annual shipments of OCPSF products—i.e., whether alternative levels or criteria more appropriately define small business in this industry.

(5) EPA asks for comments on the cost-effectiveness analysis for this industry, which incorporates consideration of air emission of volatile organic chemicals.

(6) EPA solicits comments on the foreign trade analysis performed for this analysis. In particular, commenters are requested to provide data on those products which would become less competitive as a result of these rules.

Office of the Secretary

Recordkeeping Guidelines for Occupational Injuries and Illnesses Under the Occupational Safety and Health Act of 1970 and 29 CFR Part 1904; Request for Comment

Background

On July 20, 1984 (49 FR 29484), the Bureau of Labor Statistics (BLS), U.S. Department of Labor, announced in the **Federal Register** in accordance with the Paperwork Reduction Act (44 U.S.C. Chapter 35) that it was proposing a revision in its recordkeeping package for the Log and Summary of Occupational Injuries and Illnesses (OSHA No. 200) and Supplementary Record of Occupational Injuries and Illnesses (OSHA No. 101). The proposal consisted of revised recordkeeping guidelines, Recordkeeping Guidelines for Occupational Injuries and Illnesses, which BLS made available to the public for comment. After reviewing the public comments, the BLS felt that further modifications were needed, and decided to substitute the guidelines which had been in effect since 1978, Report 412–3, "What Every Employer Needs to Know About OSHA Recordkeeping," as interim guidelines for the recordkeeping package. The Office of Management and Budget (OMB) subsequently approved the continued use of the existing log and summary (OSHA No. 200), supplementary record (OSHA No. 101), and Report 412–3, assigning approval number 1220–0029 to each of the forms, and to Report 412–3.

Subsequent Review Completed

BLS evaluated the comments received on the initial draft, and modified the document to address many of the expressed concerns. BLS also utilized input from: the Occupational Safety and Health Administration (OSHA); the Labor Department's Office of the Solicitor (SOL); the National Institute for Occupational Safety and Health, Department of Health and Human Services (NIOSH); and the BLS Business Research Advisory Council and Labor Research Advisory Council Committees on Occupational Safety and Health Statistics. In addition to modifying the detailed recordkeeping guidelines published previously, BLS developed an abbreviated version of the guidelines as a ready reference, and to assist employers with small-sized establishments or firms in low hazard industries.

Comments and Questions:

To facilitate public review both the long and short versions of the BLS recordkeeping guidelines are presented in their entirety in the sections that follow. Written comments or questions concerning either of these documents should be directed to William M. Eisenberg, Office of Occupational Safety and Health Statistics, U.S. Department of Labor, 601 D Street, N.W., Room 4014, Washington, D.C. 20212, telephone (202) 272–3467.

Dates:

Written comments must be submitted no later than October 15, 1985.

Signed at Washington, D.C. this 8th day of July, 1985.

Paul E. Larson,

Departmental Clearance Office.

SECTION I

Recordkeeping Guidelines for Occupation Injuries and Illnesses: Ready Reference

The Occupational Safety and Health Act of 1970 and 29 CFR 1904

U.S. Department of Labor, Bureau of Labor Statistics, 1985

Preface

The information in this pamphlet briefly explains the requirements of the Occupational Safety and Health Act of 1970 and 29 CFR Part 1904 for recording and reporting occupational injuries and illnesses. The Occupational Safety and Health Act of 1970 requires employers to prepare and maintain records of occupational injuries and illnesses. The Act made the Secretary of Labor responsible for the collection, compilation, and analysis of statistics of work-related injuries and illnesses. The Bureau of Labor Statistics (BLS) administers this recordkeeping and reporting system. In most States, a State agency cooperates with BLS in administering these programs.

Records of injuries and illnesses are necessary for carrying out the purposes of the Act. They provide a basis for a statistical program which produces reliable injury and illness data which are used by OSHA in directing the agency's efforts. The records are also helpful to employers and employees in identifying many of the factors which cause injuries or illnesses in the workplace. In addition, OSHA records are designed to assist safety and health compliance officers in making OSHA inspections.

This pamphlet summarizes the OSHA recordkeeping requirements of 29 CFR Part 1904, and provides basic instructions and guidelines to assist employers in fulfilling their recordkeeping and reporting obligations. Many specific standards and regulations of the Occupational Safety and Health Administration (OSHA) have additional requirements for the maintenance and retention of records of medical surveillance, exposure monitoring, inspections, accidents and other activities and incidents relevant to occupational safety and health, and for the reporting of certain information to employees and to OSHA. These additional requirements are not covered in this pamphlet. For information on these requirements, employers should refer directly to the OSHA standards or regulations or contact their OSHA Area Office.

Further information on the requirements outlined in this pamphlet is available in the free detailed report, Recordkeeping Guidelines for Occupational Injuries and Illnesses, which may be obtained by using the order form on the inside of the back cover. Assistance can also be obtained by contacting the BLS regional office for your area. These are also listed on the inside of the back cover.

The following government agencies are involved in OSHA recordkeeping:

A. *The Occupational Safety and Health Administration, U.S. Department of Labor.* The Occupational Safety and Health Administration is responsible for developing, implementing, and enforcing safety and health standards and regulations. OSHA works with employers and employees to foster effective safety and health programs which reduce workplace hazards.

B. *Bureau of Labor Statistics, U.S. Department of Labor.* The Bureau of Labor Statistics is responsible for administering and maintaining the OSHA recordkeeping system, and for collecting, compiling, and analyzing work injury and illness statistics. A list of BLS Regional Offices is provided inside the back cover of this pamphlet.

C. *State Agencies.* Many States cooperate with BLS in administering the OSHA recordkeeping and reporting programs. Some States have their own safety and health laws which may impose different or additional obligations. Employers should consult their State safety and health laws concerning these requirements.

These guidelines were prepared in the Office of Occupational Safety and Health Statistics, by Stephen Newell, under the general direction of William M. Eisenberg, Acting Associate Commissioner.

Glossary of Terms

I. Employers Subject to the Recordkeeping Requirements of the Occupational Safety and Health Act of 1970

The recordkeeping requirements of the Occupational Safety and Health Act of 1970 apply to almost all private sector employers in all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Trust Territories of the Pacific Islands.

A. Employers Who Must Keep OSHA Records

Employers with 11 or more employees in the following industries must keep OSHA records. The industries are identified by name and by the appropriate Standard Industrial Classification (SIC) code.

- Agriculture, forestry, and fishing (SIC's 07–09);
- Oil and gas extraction (SIC 13);
- Construction (SIC's 15–17);
- Manufacturing (SIC's 20–39);
- Transportation and public utilities (SIC's 40–49);
- Wholesale trade (SIC's 50–51);
- Building materials and garden supplies (SIC 52);
- General merchandise and food stores (SIC's 53 and 54);
- Hotels and other lodging places (SIC 70);
- Repair services (SIC's 75 and 76);
- Amusement and recreation services (SIC 79); and
- Health services (SIC 80).

If employers in agriculture, forestry, and fishing; oil and gas extraction; construction; manufacturing; transportation and public utilities; and wholesale trade have more than one establishment with combined employment of 11 or more employees, records must be kept for *each* individual establishment.

B. Employers Who Infrequently Must Keep OSHA Records

Employers in the industries listed below are normally exempt from OSHA recordkeeping. However, each year a small rotating sample of these employers is required to keep records and participate in a mandatory statistical survey of occupational injuries and illnesses. Their participation is necessary to produce national estimates of occupational injuries and illnesses for *all* employers (both exempt and nonexempt) in the private sector. If an employer who is regularly exempt is selected to maintain records and participate in the Annual Survey of Occupational Injuries and Illnesses, he will be notified in advance and supplied with the necessary forms and instructions. Employers who normally do not have to keep OSHA records include:

1. All employers with no more than 10 full- or part-time employers *at any one time* in the previous calendar year.

2. Employers in the following retail trade, finance, insurance and real estate, and services industries (identified by SIC codes):

- Automotive dealers and gasoline service stations (SIC 55);
- Apparel and accessory stores (SIC 56);
- Furniture, home furnishings, and equipment stores (SIC 57);
- Eating and drinking places (SIC 58);
- Miscellaneous retail (SIC 59);
- Banking (SIC 60);
- Credit agencies other than banks (SIC 61);
- Security, commodity brokers, and services (SIC 62);
- Insurance (SIC 63);
- Insurance agents, brokers, and services (SIC 64);
- Real estate (SIC 65);
- Combined real estate, insurance, etc. (SIC 66);
- Holding and other investment offices (SIC 67);
- Personal services (SIC 72);
- Business services (SIC 73);
- Motion pictures (SIC 78);
- Legal services (SIC 81);
- Educational services (SIC 82);
- Social services (SIC 83);
- Museums, botanical, zoological gardens (SIC 84);
- Membership organizations (SIC 86);
- Private households (SIC 88); and
- Miscellaneous services (SIC 89).

Even though recordkeeping requirements are reduced for employers in these industries, they, like nonexempt employers, must comply with OSHA standards, display the OSHA poster, and report to OSHA within 48 hours any accident which results in one or more fatalities or the hospitalization of five of more employees. Also, some State safety and health laws may require regularly exempt employers to keep injury and illness records.

C. Employers and Individuals Who Never Keep OSHA Records

The following employers and individuals do not have to keep OSHA injury and illness records:

- *Self employed individuals;*
- *Partners with no employees;*
- *Employers of domestics* in the employers' private residence for the purposes of housekeeping or child care, or both; and
- *Employers engaged in religious activities* concerning the conduct of religious services or rites. Employees engaged in such activities; include clergy, choir members, organists and other musicians, ushers, and the like. However, records of injuries and illnesses occurring to employees while performing secular activities must be kept. Recordkeeping is also required for employees of private hospitals and certain commercial establishments owned or operated by religious organizations.

State and Local Government Agencies are usually exempt from OSHA recordkeeping. However, in certain States, agencies of State and local governments are required to keep injury and illness records in accordance with State regulations.

D. Employers Subject to Other Federal Safety and Health Regulations

Employers subject to injury and illness recordkeeping requirements of other Federal safety and health regulations are not exempt from OSHA recordkeeping. However, records used to comply with other Federal recordkeeping obligations may also be used to satisfy the OSHA recordkeeping requirements. The forms used must be equivalent to the log and summary (OSHA No. 200) and the supplementary record (OSHA No. 101).

II. OSHA Recordkeeping Forms

Only two forms are used for OSHA recordkeeping. One form, the OSHA No. 200, serves as both the Log of Occupational Injuries and Illnesses, on which the occurrence and extent of cases are recorded during the year; and as the Summary of Occupational Injuries and Illnesses, which is used to summarize the log at the end of the year to satisfy employer posting obligations. The other form, the Supplementary Record of Occupational Injuries and

Illnesses, OSHA No. 101, provides additional information on each of the cases that have been recorded on the

occurred, lists the objects or substances involved, and indicates the nature of the

fixed and nonfixed establishments generally rests on the nature and

or by means of data processing equipment, or both. Two requirements

previously unrecorded cases that are discovered or for cases that initially

whether a case is recordable an employment relationship needs to be

Illnesses, OSHA No. 101, provides additional information on each of the cases that have been recorded on the log.

A. The Log and Summary of Occupational Injuries and Illnesses. OSHA No. 200

The log is used for recording and classifying occupational injuries and illnesses, and for noting the extent of each case. The log shows when the occupational injury or illness occurred, to whom, the regular job of the injured or ill person at the time of the injury or illness exposure, the department in which the person was employed, the kind of injury or illness, how much time was lost, and the final determination of the case. The log consists of three parts: A descriptive section which identifies the employee and briefly describes the injury or illness; a section covering the extent of the injuries recorded: and a section on the type and extent of illnesses.

Usually, the OSHA No. 200 form is used by employers as their record of occupational injuries and illnesses. However, a private form equivalent to the log, such as a computer printout, may be used if it contains as much detail as the OSHA No. 200 and is as readable and comprehensible as the OSHA No. 200 to a person not familiar with the equivalent form. It is important that the columns of the equivalent form have the same identifying number as the corresponding columns of the OSHA No. 200 because the instructions for completing the survey of occupational injuries and illnesses refer to log columns by number. It is advisable that employers have private equivalents of the log form reviewed by BLS to insure compliance with the regulations.

The portion of the OSHA No. 200 to the right of the dotted vertical line is used to summarize injuries and illnesses in an establishment for the calendar year. Every nonexempt employer who is required to keep OSHA records must prepare an annual summary for each establishment based on the information contained in the log for each establishment. The summary is prepared by totaling the column entries on the log (or its equivalent) and signing and dating the certification portion of the form at the bottom of the page.

B. The Supplementary Record of Occupational Injuries and Illnesses. OSHA No. 101

For every injury or illness entered on the log, it is necessary to record additional information on the supplementary record, OSHA No. 101. The supplementary record describes how the accident or illness exposure occurred, lists the objects or substances involved, and indicates the nature of the injury or illness and the part(s) of the body affected.

The OSHA No. 101 is not the only form that can be used to satisfy this requirement. To eliminate duplicate recording, workers' compensation, insurance, or other reports may be used as supplementary records if they contain all of the items on OSHA No. 101. If they do not, the missing items must be added to the substitute or included on a separate attachment.

Completed supplementary records must be present in the establishment within six workdays after the employer has received information that an injury or illness has occurred.

III. Location, Retention, and Maintenance of Records

Ordinarily, injury and illness records must be kept by employers for *each* of their establishments. This chapter describes what is considered to be an establishment for recordkeeping purposes, where the records must be located, how long they must be kept, and how they should be updated.

A. Establishments

If an employer has more than one establishment, a separate set of records must be maintained for each one. The recordkeeping regulations define an establishment as "a single physical location where business is conducted or where services or industrial operations are performed." Examples include a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, or central administrative office.

The regulations specify that distinctly separate activities performed at the same physical location (for example, contract construction activities operated from the same physical location as a lumber yard) shall each be treated as a separate establishment for recordkeeping purposes. Production of dissimilar products; different kinds of operational procedures; different facilities; and separate management, personnel, payroll, or support staff are all indicative of separate activities and separate establishments.

B. Location of Records

Injury and illness records (the log, OSHA No. 200, and the supplementary record, OSHA No. 101) must be kept for every physical location where operations are performed. Under the regulations, the location of these records depends upon whether or not the employees are associated with fixed establishment. The distinction between fixed and nonfixed establishments generally rests on the nature and duration of the operation and not on the type of structure in which the business is located. A nonfixed establishment usually operates at a single location for a relatively short period of time. A fixed establishment remains at a given location on a long-term or permanent basis. Also, fixed establishments are generally places where clerical, administrative, or other business records are kept.

1. *Employees associated with fixed establishments.* Records for these employees should be located as follows:

a. Records for employees working at fixed locations, such as factories, stores, restaurants, warehouses, etc., should be kept at the work location.

b. Records for employees who report to a fixed location but work elsewhere should be kept at the place where the employees report each day. These employees are generally engaged in activities such as agriculture, construction, transportation, etc.

c. Records for employees whose payroll or personnel records are maintained at a fixed location, but who do not report or work at a single establishment, should be maintained at the base from which they are paid or the base of their firm's personnel operations. This category includes generally unsupervised employees such as traveling salespeople, technicians, or engineers.

2. *Employees not associated with fixed establishments.* Some employees are subject to common supervision, but do not report or work at a fixed establishment on a regular basis. These employees are engaged in physically dispersed activities that occur in construction, installation, repair, or service operations. Records for these employees should be located as follows:

a. Records may be kept at the field office or mobile base of operations.

b. Records may also be kept at an established central location. If the records are maintained centrally: (1) The address and telephone number of the place where records are kept must be available at the worksite; and (2) there must be someone available at the central location during normal business hours to provide information from the records.

C. Location Exception for the Log (OSHA No. 200)

Although the supplementary record and the annual summary must be located as outlined in the previous section, it is possible to prepare and maintain the *log* at an alternate location

or by means of data processing equipment, or both. Two requirements must be met: (1) Sufficient information must be available at the alternate location to complete the log within 6 workdays after receipt of information that a recordable case has occurred: and (2) a copy of the log updated to within 45 calendar days must be present at all times in the establishment. This location exception applies only to the log, and not to the other OSHA records. Also, it does not affect the employer's posting obligations.

D. Retention of OSHA Records

The log and summary, OSHA No. 200, and the supplementary record, OSHA No. 101, must be retained in each establishment for 5 calendar years following the end of the year to which they relate. If an establishment changes ownership, the new employer must preserve the records for the remainder of the 5-year period. However, the new employer is not responsible for updating the records of the former owner.

E. Maintenance of the Log (OSHA No. 200)

In addition to keeping the log on a calendar year basis, employers are required to update this form to include newly discovered cases and to reflect changes which occur in recorded cases after the end of the calendar year Maintenance or updating of the log is different from the retention of records discussed in the previous section. Although all OSHA injury and illness records must be retained, only the log must be maintained by the employer.

If during the 5-year retention period, there is a change in the extent or outcome of an injury or illness which affects an entry on a previous year's log, then the first entry should be lined out and a corrected entry made on that log. Also, new entries should be made for previously unrecorded cases that are discovered or for cases that initially weren't recorded but were found to be recordable after the end of the year in which the case occurred. The entire entry should be lined out for recorded cases that are later found nonrecordable.

IV. Deciding Whether a Case Should Be Recorded and How To Classify It

This chapter presents guidelines for determining whether a case must be recorded under the OSHA recordkeeping requirements. These requirements should not be confused with recordkeeping requirements of various workers' compensation systems, internal industrial safety and health monitoring systems, the ANSI Z.16 standards for recording and measuring work injury and illness experience, and private insurance company rating systems. Reporting a case on the OSHA records should not affect recordkeeping determinations under these or other systems. Also,

Recording an injury or illness under the OSHA system does not necessarily imply that management was at fault, that the worker was at fault, that a violation of an OSHA standard has occurred, or that the injury or illness is compensable under workers' compensation or other systems.

A. Employees vs. Other Workers On Site

Employers must mantain injury and illness records for their own employees at each of their establishments, but they are *not* responsible for maintaining records for employees of other firms or for independent contractors, even though these individuals may be working temporarily in their establishment or on one of their jobsites at the time an injury or illness exposure occurs. Therefore, before deciding whether a case is recordable an employment relationship needs to be determined.

Employee status generally exists when the employer supervises not only the output, product, or result to be accomplished by the person's work, but also the details, means, methods, and processes by which the work is accomplished. Independent contractors are not considered employees; they are primarily subject to supervision by the using firm only in regard to the result to be accomplished or end product to be delivered.

Other Factors which should be considered in determining employee status are: (1) Whom the worker considers to be his or her employer; (2) who pays the worker's wages; (3) who withholds the worker's Social Security taxes; (4) who hired the worker; and (5) who has the authority to terminate the worker's employment.

B. Method Used for Case Anolysis

The decisionmaking process consists of five steps:

1. Determine whether a case occurred; that is, whether there was a death, illness, or an injury;

2. Establish that the case was work related; that it resulted from an event or exposure in the work environment;

3. Decide whether the case is an injury or an illness;

4. If the case is an illness, record it and check the appropriate illness category on the log;

5. If the case is an injury, decide if it is recordable based on a finding of medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job.

Chart 1 presents this methodology in graphic form.

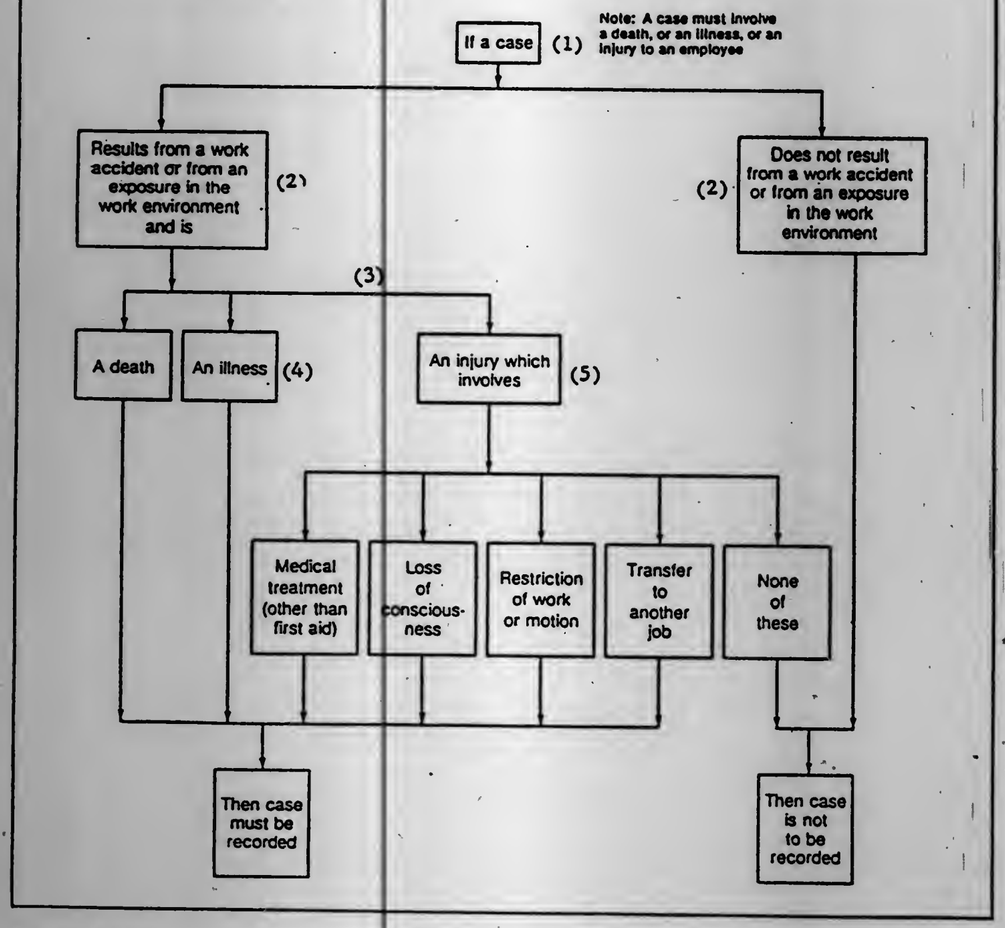
C. Determining Whether a Case Occurred

Act of 1970 requires employers to record only those injuries and illnesses that are

recreational facilities which are *basically apart from the workplace and*

Chart 1. Guide to Recordability of Cases Under the Occupational Safety and Health Act



BILLING CODE 4510-24-C

C. Determining Whether a Case Occurred

The first step in the decisionmaking process is the determination of whether or not an injury or illness has occurred. Employees have nothing to record unless an employee has experienced a work-related injury or illness. In most instances, recognition of these injuries and illnesses is a fairly simple matter. However, some situations have troubled employers over the years. Two of these are:

1. *Hospitalization for observation.* If an employee goes to or is sent to a hospital for a brief period of time for observation, it is not recordable, assuming no medical treatment was given, or no illness was recognized. The determining factor is not that the employee went to the hospital or the length of the stay, but whether the incident is recordable as a work-related illness or as an injury requiring medical treatment or involving loss of consciousness, restriction of work or motion, or transfer to another job.

2. *Differentiating a new case from the recurrence of a previous injury or illness.* Employers are required to make new entries on their OSHA forms for each new recordable injury or illness. However, new entries should not be made for the recurrence of symptoms from previous cases, and it is sometimes difficult to decide whether or not a situation is a new case or a recurrence. The following guidelines address this problem.

a. *Injuries.* The aggravation of a preexisting injury almost always results from some movement by the employee. Consequently, when work related, these new incidents should be recorded as new cases.

b. *Illnesses.* Generally, each occupational illness should be recorded with a separate entry on the OSHA No. 200. However, certain illnesses, such as silicosis, may have prolonged effects which recur over time. The recurrence of these symptoms should not be recorded as new cases on the OSHA forms. The recurrence of symptoms of previous illnesses may require adjustment of entries on the log for previously recorded illnesses to reflect possible changes in the extent or outcome of the particular case.

D. Establishing Work Relationship

The Occupational Safety and Health Act of 1970 requires employers to record only those injuries and illnesses that are work related. *Work relationship is established under the OSHA recordkeeping system when the injury or illness results from an event or exposure in the work environment. The work environment is primarily composed of: (1) The employer's premises, and (2) other locations where employees are engaged in work-related activities or are present as a condition of their employment.* When an employee is off the employer's premises, work relationship must be established; when on the premises, this relationship is presumed. The employer's premises encompass the total establishment, including not only the primary work facility, but also such areas as company storage facilities and restricted company parking lots. In addition to physical locations, equipment or materials used in the course of an employee's work are also considered part of the employee's work environment.

1. *Injuries and illnesses resulting from events or exposures on the employer's premises.* Injuries and illnesses that result from an event or exposure on the employer's premises are generally considered work related. The employer's premises consist of the total establishment. They include the primary work facilities and other areas which are considered part of the employer's general work area.

However, the presumption of work relationship for activities on the employer's premises is rebuttable. Situations where the presumption would not apply include: (1) When a worker is on the employer's premises as a member of the general public and not as an employee, and (2) when employees have symptoms that merely surface on the employer's premises, but are the result of a nonwork-related event or exposure off the premises.

The following subjects warrant special mention:

a. Company restrooms, hallways, and cafeterias are all considered to be *part* of the employer's premises and constitute part of the work environment. Therefore, injuries occurring in these places are generally considered work related.

b. For OSHA recordkeeping purposes, the definition of work premises *excludes* employer controlled ball fields, tennis courts, golf courses, parks, swimming pools, gyms, and other similar recreational facilities which are *basically apart from the workplace and used primarily by employees during off-work hours.* However, recreational facilities located within the work environment are included as part of the work premises. These may include company controlled gymnasiums, handball courts, racketball courts, etc. *that are located within the work facility.*

c. Parking facilities that are generally accessible to both employees and members of the general public are *not* considered part of the employer's work premises. Therefore, injuries to employees on these public parking lots are not recordable unless the employee was engaged in some work-related activity. However, injuries to employees on parking lots restricted to employee and visitor use only would be considered on-premises and hence presumed work related.

2. *Injuries and illnesses resulting from events or exposures off the employers premises.* When an employee is off the employer's premises and suffers an injury or an illness exposure, work relationship must be established; it is not presumed. Injuries and illness exposures off premises are considered work related if the employee is engaged in a work activity or if they occur in the work environment. The work environment in these instances includes locations where employees are engaged in job tasks or work-related activities, or places where employees are present due to the nature of their job or as a condition of their employment.

Employees in travel status are treated somewhat differently than other employees working off premises. An employee in travel status is considered to be in the work environment 24 hours a day. All of the employee's activities required by the trip are considered to be work related. These include such necessary travel-related functions as working, eating, sleeping, and traveling. However, activities unrelated to the normal scope of the trip and solely for the employee's own personal use or enjoyment should not be recorded. Examples of these non-recordable events would be injuries on excursions, such as ski trips, or injuries which occur in public places when the employee is there only for recreational purposes.

Chart 2 provides a guide for establishing the work relationship of cases.

Recording and classifying occupational illnesses is difficult for

E. Distinguishing Between Injuries and Illnesses

Under the OSH Act, all work-related illnesses must be recorded, while injuries are recordable only when they require medical treatment (other than first aid), or involve loss of consciousness, restriction of work or motion, or transfer to another job. The distinction between injuries and illnesses, therefore, has significant recordkeeping implications.

Whether a case involves an injury or illness is determined by the nature of the original event or exposure which caused the case, not by the resulting condition of the affected employee. Injuries are caused by instantaneous exposures in the work environment. Cases resulting from anything other than instantaneous events are considered illnesses. This concept of illnesses includes acute illnesses which result from exposures of relatively short duration.

Some conditions may be classified as either an injury or an illness (but not both), depending upon the nature of the event that produced the condition. For example, a loss of hearing resulting from an explosion (an instantaneous event) is classified as an injury; the same condition arising from exposure to industrial noise over a period of time would be classified as an occupational illness.

F. Recording Occupational Illnesses

Employers are required to record the occurrence of all occupational illnesses, which are defined in the instructions of the log and summary as:

"Any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact."

The instructions also refer to recording illnesses which were "diagnosed or recognized." Illness exposures ultimately result in conditions of a chemical, physical, biological, or psychological nature.

Occupational illnesses must be diagnosed to be recordable. However, they do not necessarily have to be diagnosed by a physician or other medical personnel. Diagnosis may be by a physician, registered nurse, or a person who by training or experience is qualified to make such a determination. Employers, employees, and others may be able to detect some illnesses such as skin diseases or disorders without the benefit of specialized medical training. However, a case more difficult to diagnose, such as silicosis, would require evaluation by properly trained medical personnel.

In addition to recording the occurrence of occupational illnesses, employers are required to record each illness case in 1 of the 7 categories on the front of the log. The back of the log form contains a listing of types of illnesses or disorders and gives examples for each illness category. These are only examples, however, and should not be considered as a complete list of types of illnesses under each category.

Recording and classifying occupational illnesses is difficult for employers, especially the chronic and long term latent illnesses. Many illnesses are not easily detected; and once detected, it is often difficult to determine whether an illness is work-related. Also, employees may not report illnesses because the symptoms may not be readily apparent, or because they do not think their illness is serious or work related.

The following material is provided to assist in detecting occupational illnesses and in establishing their work relationship.

1. *Detection and diagnosis of occupational illnesses.* An occupational illness is defined as any work-related abnormal condition or disorder (other than an occupational injury). Detection of these abnormal conditions or disorders, the first step in recording illnesses, is often difficult. When an occupational illness is suspected, employers may want to consider the following:

a. A routine medical examination of the employee's physiological systems:

- Head and neck;
- Eyes, ears, nose, and throat;
- Endocrine;
- Genitourinary;
- Musculoskeletal;
- Neurological;
- Respiratory;
- Cardiovascular;
- Gastrointestinal.

b. Observation and evaluation of behavior related to emotional status;

c. Specific examination for health effects of suspected or possible disease agents by competent medical personnel;

d. Comparison of date of onset of symptoms with occupational history;

e. Evaluation of results of any past biological or medical monitoring (blood, urine, other sample analysis) and previous physical examinations; and

f. Evaluation of laboratory tests: Routine (complete blood count, blood chemistry profile, urinalysis) and specific tests for suspected disease agents (e.g., blood and urine tests for specific agents, chest or other X-rays, liver function tests, pulmonary function tests.)

2. *Determining whether the illness is occupationally related.* The instructions on the back of the log define occupational illnesses as those "caused by environmental factors associated with employment." In some cases, such as contact dermatitis, the relationship between an illness and work-related exposure is easy to recognize. In other cases, where the occupational cause is not direct and apparent, it may be difficult to determine accurately whether an employee's illness is occupational in nature. In these situations, it may help employers to ask the following questions:

a. Has an illness condition clearly been established?

b. Does it appear that the illness resulted from, or was aggravated by, suspected agents or other conditions in the work environment?

c. Are these suspected agents present (or have they been present) in the work environment?

d. Was the ill employee exposed to these agents in the work environment?

e. Was the exposure to a sufficient degree and/or duration to result in the illness condition?

f. Is the illness attributable to a nonoccupational exposure?

G. Deciding if Work-Related Injuries Are Recordable

Although the OSH Act requires that all work-related deaths and illnesses be recorded, the recording of injuries is limited to certain specific types of cases: Those which require medical treatment or involve loss of consciousness; restriction of work or motion; or transfer to another job. Minor injuries requiring only first aid treatment are *not* recordable.

1. *Medical treatment.* It is important to understand the distinction between medical treatment and first aid treatment since many work-related injuries are recordable only because medical treatment was given.

The regulations and the instructions on the back of the log and summary, OSHA No. 200, define medical treatment as any treatment, other than first aid treatment, administered to injured employees. Essentially, medical treatment involves the provision of medical or surgical care for injuries that are not minor through the application of procedures or systematic therapeutic measures.

The act also specifically states that work-related injuries which involve only first aid treatment need not be recorded. First aid is commonly thought to mean emergency treatment of injuries before regular medical care is available. However, first aid treatment has a different meaning for OSHA recordkeeping purposes. The regulations define first aid treatment as: "any one-time treatment, and any follow-up visit for the purpose of observation, of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care. Such one-time treatment, and follow-up visit for the purpose of observation, is considered first aid even though provided by a physician or registered professional personnel."

The distinction between medical treatment and first aid depends not only on the treatment provided, but also on the severity of the injury being treated. First aid is: (1) Limited to one-time treatment and subsequent observation; *and* (2) involves treatment of only minor injuries, *not* emergency treatment of serious injuries. Injuries are *not* minor if:

a. They can be treated only by a physician or licensed medical personnel;

b. They impair bodily function (i.e., normal use of senses, limbs, etc.)

c. They result in damage or harm to the physical structure of a nonsuperficial nature (e.g., hairline fractures); or

d. They involve complications requiring follow-up medical treatment.

Physicians or registered medical professionals, working under the standing orders of a physician, routinely treat minor injuries. Such treatment may constitute first aid. Also, some visits to a doctor do not involve treatment at all. For example, a visit to a doctor for an examination or other diagnostic procedure to determine whether the employee has an injury does not constitute medical treatment. Conversely, medical treatment can be provided to employees by someone other than a physician or registered medical personnel.

The following classifications list certain procedures as either medical treatment or first aid treatment.

Medical Treatment

The following are generally considered medical treatment. Work-related injuries for which the type of treatment was provided or should have been provided are almost always recordable.

—Treatment of INFECTION
—Application of ANTISPETICS during second or subsequent visits to medical personnel
—Treatment of SECOND OR THIRD DEGREE BURN(S)
—Application of BUTTERFLY ADHESIVE DRESSING(S)
—Application of SUTURES (stitches)
—Removal of FOREIGN BODIES EMBEDDED IN EYE
—Removal of FOREIGN BODIES from wound; if procedure is COMPLICATED because of depth of embedment, size, or location
—Use of PRESCRIPTION MEDICATIONS
—Use of hot or cold SOAKING THERAPY during second or subsequent visit to medical personnel
—Application of hot or cold COMPRESS(ES) during second or subsequent visit to medical personnel
—CUTTING AWAY DEAD SKIN (surgical debridement)
—Application of HEAT THERAPY during second or subsequent visit of medical personnel
—Use of WHIRPOOL BATH THERAPY during second or subsequent visit of medical personnel
—POSITIVE X-RAY DIAGNOSIS (fractures, broken bones, etc.)
—ADMISSION TO A HOSPITAL or equivalent medical facility for treatment or prolonged observation

First Aid Treatment

The following are generally considered first aid treatment (e.g., one-time treatment and subsequent observation of minor injuries) and need not be recorded if the work-related injury does not involve loss of consciousness, restriction of work or mortion, or transfer to another job.

—Application of ANTISEPTICS during first visit to medical personnel
—Treatment of FIRST DEGREE BURN(S)
—Application of BANDAGE(S) during first visit to medical personnel
—Use of ELASTIC BANDAGE(S) during first visit to medical personnel
—Removal of FOREIGN BODIES NOT EMBEDDED IN EYE if only irrigation is required
—Removal of FOREIGN BODIES from wound, if procedure is UNCOMPLICATED, and is, for example, by tweezers or other simple technique
—Use of NONPRESCRIPTION MEDICATIONS
—SOAKING THERAPY ON INITIAL VISIT to medical personnel or removal of bandages by SOAKING
—Application of hot or cold COMPRESS(ES) during first visit to medical personnel
—Application of OINTMENTS to abrasions to prevent drying or cracking
—Application of HEAT THERAPY during first visit to medical personnel
—Use of WHIRLPOOL BATH THERAPY during first visit to medical personnel
—NEGATIVE X-RAY DIAGNOSIS
—BRIEF OBSERVATION of injury during visit to medical personnel

Note.—The administration of a TETANUS SHOT or BOOSTER, by itself, is not considered medical treatment. However, these shots are often given in conjunction with the more serious injuries. Therefore, injuries requiring tetanus shots may be recordable for other reasons.

2. *Loss of consciousness.* If an employee loses consciousness as the result of a work-related injury or illness, the employer must record the case. The focus of these cases is on the employee's inability, need not file a report of its injury and illness experience. Employers should

have been contacted in December 1983). At the time of notification, they are include Department of Labor officials inspecting a workplace or gathering occupational injury and illness statistics

VOL 50 ISS 137 JL 17 1985 UMI

2. *Loss of consciousness.* If an employee loses consciousness as the result of a work-related injury, the case must be recorded no matter what type of treatment was provided. The rationale behind this recording requirement is that loss of consciousness is generally associated with the more serious injuries.

3. *Transfer to another job.* Injuries requiring transfer of the employee to another job are also considered serious enough to be recordable regardless of the type of treatment provided. Transfers are seldom the sole criterion for recordability because injury cases are almost always recordable on other grounds, primarily medical treatment or restriction of work or motion.

4. *Restriction of work or motion.* Restricted work activity occurs when the employee, because of the impact of a job-related injury, is physically or mentally unable to perform all or any part of his or her normal assignment during all or any part of the workday or shift. The emphasis is on the employee's ability to perform normal job duties. Restriction of work or motion may result in either a lost worktime injury or a non-lost worktime injury, depending upon whether the restriction extended beyond the day of injury.

V. Categories For Evaluating the Extent of Recordable Cases

Once the employer decides that a recordable injury or illness has occurred, the case must be evaluated to determine its extent or outcome. There are three categories of recordable cases: Fatalities, lost workday cases, and cases without lost workdays. Every recordable case must be placed in only one of these categories.

A. Fatalities

All work-related fatalities must be recorded, regardless of the time between the injury and the death, or the length of the illness.

B. Lost Workday Cases

Lost workday cases occur when the injured or ill employee experiences either days away from work, days of restricted work activity, or both. In these situations, the injured or ill employee is affected to such an extent that: (1) Days must be taken off from the job for medical treatment or recuperation; or (2) the employee is unable to perform his or her normal job duties over a normal work shift, even though employee may be able to continue working.

1. Lost workday cases involving days away from work are cases resulting in days the employee would have worked but could not because of the job-related injury or illness. The focus of these cases is on the employee's inability, because of injury or illness, to be present in the work environment during his or her normal work shift.

2. Lost workday cases involving days of restricted work activity are those cases where, because of injury or illness, (1) the employee was assigned to another job on a temporary basis, or (2) the employee worked at a permanent job less than full time, or (3) the employee worked at his or her permanently assigned job but could not perform all the duties normally connected with it. Restricted work activity occurs when the employee, because of the job-related injury or illness, is physically or mentally unable to perform all or any part of his or her normal workday or shift. The emphasis is on the employee's inability to perform normal job duties over a normal work shift.

Injuries and illnesses are not considered lost workday cases unless they affect the employee beyond the day of injury or onset of illness. When counting the number of days away from work or days of restricted work activity, do not include the initial day of injury or onset of illness, or any days on which the employee would not have worked even though able to work.

C. Cases Not Resulting in Death or Lost Workdays

These cases consist of the relatively less serious injuries and illnesses which satisfy the criteria for recordability but which do not result in death or require the affected employee to have days away from work or days of restricted work activity beyond the date of injury or onset of illness.

VI. Employer Obligations for Reporting Occupational Injuries and Illnesses

This chapter focuses on the requirements of Section 8(c)(2) of the Occupational Safety and Health Act of 1970 and Title 29, Part 1904, of the Code of Federal Regulations for employers to make reports of occupational injuries and illnesses. It does not include the reporting requirements of other standards or regulations of the Occupational Safety and Health Administration (OSHA) or of any other State or Federal agency.

A. The Annual Survey of Occupational Injuries and Illnesses

The survey is conducted on a sample basis, and firms required to submit reports of their injury and illness experience are contacted by BLS or a participating State agency. A firm not contacted by its State agency or BLS need not file a report of its injury and illness experience. Employers should note, however, that even if they are not selected to participate in the annual survey for a given year, they must still comply with the recordkeeping requirements listed in the preceding chapters as well as with the requirements for reporting fatalities and multiple hospitalization cases provided in the next section of this chapter.

Participants in the annual survey consist of two categories of employers: (1) Employers who maintain OHSA records on a regular basis; and (2) a small, rotating sample of employers who are regularly exempt from OSHA recordkeeping. The survey procedure is different for these two groups of employers.

1. *Participation of firms regularly maintaining OSHA records.* When employers regularly maintaining OSHA records are selected to participate in the Annual Survey of Occupational Injuries and Illnesses, they are mailed the survey questionnaire in February of the year following the reference calendar year of the survey. (A firm selected to participate in the 1984 survey would have been contacted in February of 1985.) The survey form, the Occupational Injuries and Illnesses Survey Questionnaire, OSHA No. 200–S, requests information about the establishment(s) included in the report and the injuries and illnesses experienced during the previous year. Information for the injury and illness portion of the report form usually can be copied directly from the totals on the log and summary, OSHA No. 200, which the employer should have completed and posted in the establishment by the time the questionnaire arrives. The survey form also requests summary information about the type of business activity and number of employees and hours worked at the reporting unit during the reference year.

2. *Participation of normally exempt small employers and employers in low-hazard industries.* A few regularly exempt employers (those with fewer than 11 employees in the previous calendar year and those in designated low-hazard industries) are also required to participate in the annual survey. Their participation is necessary for the production of injury and illness statistics that are comparable in coverage to the statistics published in years prior to the exemptions. These employers are notified prior to the reference calendar year of the survey that they must maintain injury and illness records for the coming year. (A firm selected to participate in the 1984 survey would

have been contacted in December 1983). At the time of notification, they are supplied with the necessary forms and instructions. During the reference calendar year, prenotified employers make entries on the log, OSHA No. 200, but are not required to complete a Supplementary Record of Occupational Injuries and Illnesses, OSHA No. 101, or post the summary of the OSHA No. 200 the following February (like the regularly participating employers).

B. Reporting Fatalities and Multiple Hospitalizations

All employers are required to report accidents resulting in one or more fatalities or the hospitalization of five or more employees.

The report is made to the nearest office of the Area Director of the Occupational Safety and Health Administration, U.S. Department of Labor, unless the State in which the accident occurred is administering an approved State plan under Section 18(B) of the OSH Act. Those 18(B) States designate a State agency to which the report must be made.

The report must contain three pieces of information: (1) Circumstances surrounding the accident(s), (2) number of fatalities, and/or (3) the number of hospitalized injuries. If necessary, the OSHA Area Director may require additional information on the accident.

VII. Access to OSHA Records and Penalties for Failure To Comply With Recordkeeping Obligations

The preceding chapters describe recordkeeping and reporting requirements. This chapter covers subjects related to insuring the integrity of the OSH recordkeeping process—access to OSHA records and penalties for recordkeeping violations.

A. Access to OSHA Records

All OSHA records, which are being kept by employers for the 5-year retention period, should be available for inspection and copying by authorized Federal and State government officials. Employees, former employees, and their representatives are provided access to only the log, OSHA No. 200.

Government officials with access to the OSHA records include: Representatives of the Department of Labor, including OSHA safety and health compilance officers and BLS representatives; representatives of the Department of Health and Human Services while carrying out that department's research responsibilities; and representatives of States accorded jurisdiction for inspections or statistical compliations. "Representatives" may include Department of Labor officials inspecting a workplace or gathering information, officials of the Department of Health and Human Services, or contractors working for the agencies mentioned above, depending on the provisions of the contract under which they work.

Employee access to the log is limited to the records of the establishment in which the employee currently works or formerly worked. All current logs and those being maintained for the 5-year retention period must be made available for inspection and copying by employees, former employees, and their representatives. An employee representative can be a member of a union representing the employee, or any person designated by the employee or former employee. Access to the log is to be provided in a reasonable manner and at a reasonable time. Redress for failure to comply with the access provisions of the regulations can be obtained through a complaint to OSHA.

B. Penalties for Failure To Comply With Recordkeeping Obligations

Employers committing recordkeeping and reporting violations are subject to the same sanctions as employers violating other OSHA requirements such as safety and health standards and regulations.

Glossary of Terms

Annual summary.—Consists of a copy of the occupational injury and illness totals for the year from the OSHA No. 200, and the following information: The calendar year covered; company name; establishment address; certification signature, title, and date.

Annual survey.—Each year, BLS conducts an annual survey of occupational injuries and illnesses to produce national statistics. The OSHA injury and illness records maintained by employers in their establishments serve as the basis for this survey.

Bureau of Labor Statistics (BLS).—The Bureau of Labor Statistics is the agency responsible for administering and maintaining the OSHA recordkeeping system, and for collecting, compiling, and analyzing work injury and illness statistics.

Certification.—The person who supervises the preparation of the Log and Summary of Occupational Injuries and Illnesses, OSHA No. 200, certifies that it is true and complete by signing the last page of, or by appending a statement to that effect to, the annual summary.

Cooperative program.—A program jointly conducted by the States and the Federal Government to collect occupational injury and illness statistics.

Employee.—One who is employed in the business of his or her employer affecting commerce.

Employee representative.—Anyone designated by the employee for the purpose of gaining access to the employer's log of occupational injuries and illnesses.

Employer.—Any person engaged in a business affecting commerce who has employees; this does not include the United States Government or any State or political subdivision of a State.

Establishment.—A single physical location where business is conducted or where services or industrial operations are performed; the place where the employees report for work, operate from, or from which they are paid.

First aid.—Any one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care. Such treatment and observation is considered first aid even though provided by a physician or registered professional personnel.

First report of injury.—A workers' compensation form which may qualify as a substitute for the supplementary record, OSHA No. 101.

Incidence rate.—The number of injuries, illnesses, or lost workdays related to a common exposure base of 100 full-time workers. The common exposure base enables one to make accurate interindustry comparisons, trend analysis over time, or comparisons among firms regardless of size. This rate is calculated as:

$$\frac{N}{EH} \times 200{,}000$$

where:
N=number of injuries and illnesses or lost workdays
EH=total hours worked by all employees during calendar year
200,000=base for 100 full-time equivalent workers (working 40 hours per week 50 weeks per year).

Low-hazard industries.—Selected industries in retail trade; finance, insurance, and real estate; and services which are regularly exempt from OSHA recordkeeping. To be included in this exemption, an industry must fall within an SIC not targeted for general schedule inspections and must have an average lost workday case injury rate for a designated 3-year measurement period at or below 75 percent of the private sector average rate.

Log and Summary (OSHA No. 200).—The OSHA recordkeeping form used to [list injuries and illnesses and to note the

[illegible] ulcers; chemical burns or inflammations; etc.

Column 7b. Dust diseases of the lungs

(2) Lost workday cases, other than fatalities, that result in lost workdays; or

Restriction of work or motion.—Occurs when the employee, because of

Connecticut
Maine

North Dakota
South Dakota

Log and Summary (OSHA No. 200).—The OSHA recordkeeping form used to list injuries and illnesses and to note the extent of each case.

Lost workday cases.—Cases which involve days away from work or days of restricted work activity, or both.

Lost workdays.—The number of workdays (consecutive or not), beyond the day of injury or onset of illness, the employee was away from work or limited to restricted work activity because of an occupational injury or illness.

(1) Lost workdays—away from work.

The number of workdays (consecutive or not) on which the employee would have worked but could not because of occupational injury or illness.

(2) Lost workdays—restricted work activity.

The number of workdays (consecutive or not) on which, because of injury or illness: (1) The employee was assigned to another job on a temporary basis; or (2) the employee worked at a permanent job less than full time; or (3) the employee worked at a permanently assigned job but could not perform all duties normally connected with it.

The number of days away from work or days of restricted work activity does not include the day of injury or onset of illness or any days on which the employee would not have worked even though able to work.

Medical treatment.—Includes treatment of injuries administered by physicians, registered professional personnel, or lay persons. Medical treatment does not include first aid treatment (one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care) even though provided by a physician or registered professional personnel.

Occupational illness.—Any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact, and which can be included in the categories listed below. The following categories should be used by employers to classify recordable occupational illnesses on the log in the columns indicated:

Column 7a. Occupational skin diseases or disorders.

Examples: Contact dermatitis, eczema, or rash caused by primary irritants and sensitizers or poisonous plants; oil acne; chrome ulcers; chemical burns or inflammations; etc.

Column 7b. Dust diseases of the lungs (pneumoconioses).

Examples: Silicosis, asbestosis, coal worker's pneumoconiosis, byssinosis, and other pneumoconioses.

Column 7c. Respiratory conditions due to toxic agents.

Examples: Pneumonitis, pharyngitis, rhinitis or acute congestion due to chemicals, dusts, gases, or fumes, farmer's lung, etc.

Column 7d. Poisoning (systemic effects of toxic materials).

Examples: Poisoning by lead, mercury, cadmium, arsenic, or other metals; poisoning by carbon monoxide, hydrogen sulfide, or other gases; poisoning by benzol, carbon tetrachloride, or other organic solvents; poisoning by insecticide sprays such as parathion, lead arsenate; poisoning by other chemicals such as formaldehyde, plastics, and resins; etc.

Column 7e. Disorders due to physical agents (other than toxic materials).

Examples: Heatstroke, sunstroke, heat exhaustion, and other effects of environmental heat; freezing, frostbite, and effects of exposure to low temperatures; caisson disease; effects of ionizing radiation (isotopes, X-rays, radium); effects of nonionizing radiation (welding flash, ultra-violet rays, microwaves, sunburn); etc.

Column 7f. Disorders associated with repeated trauma.

Examples: Noise-induced hearing loss; synovitis, tenosynovitis, and bursitis; Raynaud's phenomena; and other conditions due to repeated motion, vibration, or pressure.

Column 7g. All other occupational illnesses.

Examples: Anthrax, brucellosis, infectious hepatitis, malignant and benign tumors, food poisoning, histoplasmosis, coccidioidomycosis, etc.

Occupational injury.—Any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from a single instantaneous exposure in the work environment.

Note.—Conditions resulting from bites, such as insect or snake bites, and from one-time exposure to chemicals are considered to be injuries.

Occupational injuries and illnesses; extent and outcome.—All occupational injuries or illnesses result in either:

(1) Fatalities, regardless of the time between the injury and death, or the length of illness; or

(2) Lost workday cases, other than fatalities, that result in lost workdays; or

(3) Nonfatal cases without lost workdays.

Occupational Safety and Health Administration (OSHA).—OSHA is the Federal agency within the Department of Labor responsible for developing, implementing, and enforcing safety and health standards and regulations. OSHA works with employers and employees to foster effective safety and health programs which reduce workplace hazards.

Premises, employer's.—Consist of the employer's total establishment; they include the primary work facility and other areas in the employer's domain such as company storage facilities, cafeterias, restrooms, and restricted company parking lots.

Posting.—The annual summary of occupational injuries and illnesses must be posted at each establishment by February 1 and remain in place until March 1 to provide employees with the record of their establishment's injury and illness experience for the previous calendar year.

Recordable cases.—All work-related deaths and illnesses, and those work-related injuries which result in: Loss of consciousness, restriction of work or motion, transfer to another job, or require medical treatment beyond first aid.

Recordkeeping system.—Refers to the nationwide system for recording and reporting occupational injuries and illnesses mandated by the Occupational Safety and Health Act of 1970 and implemented by Title 29, Code of Federal Regulations, Part 1904. This system is the only source of reliable national statistics on job-related injuries and illnesses occurring in the private sector.

Regularly exempt employers.—Employers regularly exempt from OSHA recordkeeping include: (A) All employers with no more than 10 full- or part-time employees at any one time in the previous calendar year; and (B) all employers in retail trade; finance, insurance, and real estate; and services industries; i.e., SIC's 52–89 (except building materials and garden supplies, SIC 52, general merchandise and food stores, SIC's 53 and 54; hotels and other lodging places, SIC 70; repair services, SIC's 75 and 76; amusement and recreation services, SIC 79; and health services, SIC 80).

Report form.—Refers to survey form OSHA No. 200–S which is completed and returned by the surveyed reporting unit.

Restriction of work or motion.—Occurs when the employee, because of the result of a job-related injury or illness, is physically or mentally unable to perform all or any part of his or her normal assignment during all or any part of the workday or shift.

Small employers.—Employers with no more than 10 employees among all the establishments of their firm at any one time during the previous calendar year.

Standard Industrial Classification (SIC).—A classification system developed by the Office of Management and Budget, Executive Office of the President, for use in the classification of establishments by type of activity in which engaged. Each establishment is assigned an industry code for its major activity which is determined by the product or services rendered. Establishments may be classified in 2–, 3–, or 4-digit industries according to the degree of information available.

State (when mentioned alone).—Refers to a State of the United States, the District of Columbia, and U.S. territories and jurisdictions.

State agency.—State agency administering the OSHA recordkeeping and reporting system. Many States cooperate directly with BLS in administering the OSHA recordkeeping and reporting programs. Some States have their own safety and health laws which may impose different or additional obligations.

Supplementary Record (OSHA No. 101).—The form (or equivalent) on which additional information is recorded for each injury and illness entered on the log.

Title 29 of the Code of Federal Regulations, Parts 1900–1999.—The parts of the Code of Federal Regulations which contain OSHA regulations.

Workers' compensation systems.—State systems that provide medical benefits and/or indemnity compensation to victims of work-related injuries and illnesses.

Work environment.—Consists of the employer's premises and other locations where employees are engaged in work-related activities or are present as a condition of their employment. The work environment includes not only physical locations, but also the equipment or materials used by the employee during the course of his or her work.

SECTION II

Recordkeeping Guidelines for Occupational Injuries and Illnesses

The Occupational Safety and Health Act of 1970 and 29 CFR 1904

U.S. Department of Labor, Bureau of Labor Statistics, 1985

The Occupational Safety and Health (OSH) Act of 1970 requires covered employers to prepare and maintain records of occupational injuries and illnesses. The Bureau of Labor Statistics of the U.S. Department of Labor is responsible for administering the recordkeeping system established by the act. The recordkeeping regulations in 29 CFR 1904 provide specific recording and reporting requirements which comprise the framework of the OSH recording system.

Under this system it is essential that data recorded by employers be uniform

to assure the validity of the statistical data. To assure uniformity, BLS has issued guidelines which provide official

sections of the act or regulations and provides basic concepts of recordability;

refer to "places of employment" and the provision of safe and healthful "working

The term "employee" has been

to assure the validity of the statistical data. To assure uniformity, BLS has issued guidelines which provide official agency interpretations, answers and explanations to questions employers most frequently ask about recordkeeping and reporting of accupational injuries and illnesses. On reviewing the guidelines, the Office of Management and Budget (OMB) has indicated that the guidelines are not regulations, but rather supplemental instructions to the OSHA recordkeeping forms (OSHA Nos. 200, 101, and 200–S). This document replaces all previous editions of the BLS recordkeeping guidelines.

For recordkeeping and reporting questions not covered in this publication, employers may contact the BLS regional office or the participating State agency serving their area. Addresses and telephone numbers for the regional offices are listed on the back cover; those for the State agencies are in appendix D. Recordkeeping forms can be obtained by completing the order form on page 94 and mailing it to the appropriate BLS regional office.

The information included here deals only with the requirements of the Occupational Safety and Health Act of 1970 and Part 1904 of Title 29, Code of Federal Regulations, for recording and reporting occupational injuries and illnesses. Some employers may be subject to additional recordkeeping and reporting requirements not covered in this report. Many specific standards and regulations of the Occupational Safety and Health Administration (OSHA) have additional requirements for the maintenance and retention of records for medical surveillance, exposure monitoring, inspections, and other activities and incidents relevant to occupational safety and health, and for the reporting of certain information to employees and to OSHA. For information on these requirements, which are not covered in this report, employers should refer directly to the OSHA standards or regulations or contact their OSHA regional office.

These guidelines were prepared in the Office of Occupational Safety and Health Statistics, by Stephen Newell, under the general direction of William M. Eisenberg, Acting Associate Commissioner.

User's Guide

This document is formatted to make the information on OSHA recordkeeping easy to access and comprehend. Recordkeeping requirements have been categorized into several major subject areas. Each subject area is divided into two parts: The first reviews relevant sections of the act or regulations and provides basic concepts of recordability; the second provides answers to questions most frequently asked about recording and reporting occupational injuries and illnesses. These questions and answers elaborate on the basic recordkeeping concepts and further define the subject matter in each section.

Chapter I. Provides information which should enable you to determine whether or not your establishment must keep OSHA records.

Chapter II. Describes which forms should be used and how the forms should be completed.

Chapter III. Outlines where the OSHA records must be located, how they should be updated, and the length of time they must be kept.

Chapter IV. Provides a brief description of the types of decisions employers make in the recordkeeping process. Also, this chapter shows how to distinguish between employees, whose injuries employers must record, and other workers at the establishment (such as independent contractors).

Chapter V. If you have any questions concerning whether or not a particular case should be recorded on the log, turn to Chapter V. This chapter provides guidelines for determining the key issues of recordability: which cases are work-related; what constitutes an occupational injury; how to distinguish medical treatment from first aid; criteria for detecting occupational illnesses; etc.

Chapter VI. Provides guidelines for determining the extent or outcome of recordable cases, and for making appropriate entries in columns 1–6 or 8–13 on the OSHA log.

Chapter VII. Describes employer obligations for reporting occupational injuries and illnesses. This reporting may be through the BLS annual survey, or in the case of a fatality or multiple hospitalization, it may be directly to an OSHA area office.

Chapter VIII. Discusses some of the checks and balances built into the system to ensure accurate recording and reporting of occupational injuries and illnesses.

The appendices provide a glossary of terms and sample recordkeeping and reporting forms. Appendix C lists illness conditions that have been associated with exposure in the workplace. Addresses and telephone numbers of participating State agencies and OSHA Regional Offices are listed in appendixes D and E. Appendix F provides capsule guidelines for distinguishing medical treatment from first aid.

Finally, included at the back of this publication is a detailed index which lists particular subjects in alphabetical order along with the page numbers where each topic may be referenced.

Chapter I. Employers Subject to OSHA Recordkeeping Requirements

The coverage of the Occupational Safety and Health Act of 1970 is very extensive. However, the requirements under the act for recording and reporting occupational injuries and illnesses have been modified by regulation to reduce the burden on employers and permit the focusing of safety and health efforts on high-risk industries and establishments. This chapter describes which industries and employers are subject to OSHA recordkeeping and reporting requirements.

A. Coverage of the Occupational Safety and Health Act

The OSHA Act covers nearly all employers in the private sector. Section 2(b) of the act describes its purpose as providing safe and healthful working conditions for "every working man and woman in the Nation." Section 4(a) defines the scope of the act's coverage:

> This Act shall apply with respect to employment performed in a workplace in a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, American Samoa, Guam, the Trust Territory of the Pacific Islands, Wake Island, Outer Continental Shelf Lands, defined in the Outer Continental Shelf Lands Act, Johnson Island, and the Canal Zone.

The act's coverage is defined in terms of two criteria: Work activities and geographic areas. The activities covered relate to "employment performed in a workplace." The boundaries of geographic coverage are limited to the United States and its territories.

The employment described in Section 4(a) is not limited to the execution of specific work assignments. Section 2 of the act addresses injuries and illnesses arising out of "work situations." Sections 2(b) (1), (2), and (4) of the act refer to "places of employment" and the provision of safe and healthful "working conditions." Section 2(b)(7) of the act deals with preventing employee illness as a result of their "work experience." These and other references in the act indicate that its coverage is intended to go beyond specific job tasks to encompass the total work environment. Also, the scope of employments covered is extensive. The act defines an employer in Section 3(5):

> The term "employer" means a person engaged in a business affecting commerce who has employees, but does not include the United States or any State or political subdivision of a State.

(See section E of this chapter for a special discussion of State and local government coverage.)

It should be noted the term "employer" applied to persons engaged in "a business affecting commerce," not just "interstate commerce." Therefore, the coverage of the act is extensive since there are few employers who do not affect commerce.

Part 1975.3(d) of the regulations also interprets the term "business" as:

> . . . any commercial or noncommercial activity affecting commerce and involving the employment of one or more employees. . . .

Part 1975.4(a) states:

> Any employer employing one or more employees would be an "employer engaged in a business affecting commerce who has employees" and, therefore, he is covered by the Act as such.

However, despite the broad coverage afforded by the act, the regulations have excluded the following groups of employers:

1. *Religious establishments.* The performance of, or participation in, religious services does not constitute employment under the act according to Part 1975.4(c) of the regulations. However, churches are considered employers when they employ one or more persons in secular activities.

2. *Employers of household workers.* Those who employ persons for ordinary domestic household tasks are not considered to be employers under Part 1975.6 of the regulations.

A–1. Q. Who is considered to be an employee under the OSH Act?

A. Section 3(6) of the act defines an employee as one who is employed in the business of his employer.

The traditional common law definition of an employer is one who has the right to control and direct his employees, not only regarding the result to be accomplished by the work, but also as to the details and means by which the work objective is accomplished.

The term "employee" has been broadly interpreted under the OSH Act.

Employee status involves a current employment relationship. Under the act, this status is generally limited to situations where the employee receives some sort of compensation (not necessarily money) from the employer for services rendered.

A–2. Q. Are volunteer workers considered employees under the Occupational Safety and Health Act?

A. Volunteer workers may or may not be considered employees under the act; their status would depend upon the facts of the particular situation.

Volunteers are generally not considered employees for recordkeeping purposes if they serve of their own free will and do not receive compensation. Compensation in this context may be wages or salaries, or it may consist solely of nonmoney benefits. The fact that paid workers may normally perform the same duties or functions has no bearing on this determination. Under these criteria, hospital volunteers are usually not considered to be employees for the purposes of the act; volunteer firemen are usually considered to be employees.

A–3. Q. Are people working in sheltered workshops considered employees? What about persons in job training programs?

A. If these workers receive some form of compensation and satisfy the criteria listed in question A–1, they are considered employees under the act.

A–1. Q. Are stockholders in a corporation considered employers?

A. No. The corporation is the employer. On the other hand, stockholders employed by the corporation are employees; these include managers and corporate officers.

A–5. Q. Two partners operate a small electrical contracting firm. They have no employees. Are they covered by the OSH Act?

A. No. Partners are not considered employees. A firm with no employees is not covered by the act and does not have to maintain OSHA records.

A–6. Q. Are activities of self-employed individuals covered by the Occupational Safety and Health Act?

A. No. These activities are not covered because self-employed individuals are not considered employers under the act. Part 1975.4(a) of the regulations limits employer status to those individuals employing one or more employees.

A–7. Q. Does the act cover persons employed by charitable and nonprofit organizations?

A. Yes. Whether or not an

official air space of the United States

and Health Act of 1970. The scope of the

An employer whose establishment is classified in SIC's 52–89 (excluding 52–54, 70

at or below 75 percent of the comparable

inspections and had a lost workday case

A. Yes. Whether or not an organization is operated at a profit is not important since Part 1975.4(b)(4) provides that ". . . any charitable or nonprofit organization which employs one or more employees is covered under the . . . Act. . . ."

A–8. Q. Since the OSH Act governs all establishments engaged in interstate commerce, how are such establishments identified? For example, would a local grain elevator or farm feed and seed retail store be covered?

A. Yes. These operations would be covered. Coverage of the OSH Act is *not* limited to establishments engaged in interstate commerce. The law says "affecting commerce," which is far broader than "engaged in interstate commerce." Section 3(3) of the act broadly defines the term "commerce" as meaning "trade, traffic, commerce, transportation, or communications. . . ." Use of equipment made out-of-State has been deemed sufficient.

A–9. Q. Are farmers covered under the OSH Act?

A. A very broad interpretation has been given to the coverage of the act. Farmers are included, according to Part 1975.4(b)(2) of the regulations, because they affect commerce. However, small farmers (those with fewer than 11 employees) have been exempt from recordkeeping requirements since 1976.

A–10. Q. Are the working family members of farmers or ranchers considered employees? Must the farmer maintain records to cover them?

A. No. Immediate family members of farm employers are not regarded as employees under Part 1975.4(b)(2) of the regulations, even though they may receive compensation. Consequently, OSHA records need not be maintained for them.

A–11. Q. How does the act apply to migrant labor camps? Is it the same as for other areas of the economy?

A. Yes. Migrant labor camps are covered the same as any other segment of the economy. (See question A–5 of chapter IV for an explanation of who must keep the OSHA records for migrant laborers.)

A–12. Q. Do records have to be maintained for employees traveling overseas on business?

A. No. Records need not be kept for these employees when they are outside the geographic scope of coverage prescribed by Section 4(a) of the act—the United States and its territories.

A–13. Q. What about airline employees working aboard airplanes? When are these activities covered?

A. These activities are covered under the act while the airplane is in the official air space of the United States and its territories.

A–14. Q. Are employers required to keep records of injuries and illnesses occurring to employees aboard ships? When are the employees engaged in these activities covered by the OSH Act?

A. The coverage of the Occupational Safety and Health Act is limited to the United States and its territories. Therefore, work activities would be covered aboard ships on inland and intercoastal waterways and up to the boundary of State jurisdiction, which is usually the 3-mile limit. (In Louisiana and Texas, the State boundaries extend 12 miles into the Gulf of Mexico.)

A–15. Q. Are churches or religious organizations required to keep records under the act if they employ persons in secular activities?

A. Yes. The act covers hospitals, schools, commercial establishments, and administrative or office personnel employed by religious organizations. Excluded from coverage are clergy and other participants in religious services.

A–16. Q. Do injury and illness records have to be kept for domestics?

A. No. According to Part 1975.6 of the regulations, employers of domestics in the employers' private residence for the usual purposes of housekeeping or child care, or both, are not required to keep records.

B. Employers Required To Keep OSHA Records

The recordkeeping requirements of the Occupational Safety and Health Act of 1970 apply to most private sector employers. Part 1904.1 of the regulations covers the purpose and scope of the recordkeeping regulations:

These sections provide for recordkeeping and reporting by employers covered under the Act, as necessary or appropriate for enforcement of the Act, for developing information regarding causes and prevention of occupational accidents and illnesses, and for maintaining a program of collection, compilation, and analysis of occupational safety and health statistics.

Initially, the regulations for employer recordkeeping mirrored the broad coverage of the act as described in the preceding section. However, the regulations have been modified to exempt certain employers with historically low rates of injuries and illnesses.

B–1. Q. Must employers keep OSHA injury and illness records if they are not covered by the Occupational Safety and Health Act?

A. No. Employers must maintain OSHA records only if they are within the coverage of the Occupational Safety and Health Act of 1970. The scope of the OSHA recordkeeping regulations presently does not exceed the scope of the OSH Act.

C. Employers Regularly Exempt From OSHA Recordkeeping

Federal regulations have made the following employers regularly exempt from OSHA recordkeeping, i.e., from keeping the log of injuries and illnesses, completing a supplementary record, and filling our and posting an annual summary:

1. *Small employers.* Although subject to the overall coverage of the Occupational Safety and Health Act of 1970, most small employers are not required to keep injury and illness records because of their exemption in 29 CFR 1904.15. (A few States still require all small employers to maintain OSHA records. Check with your State.) This section of the regulations was promulgated to reduce the burden on employers after findings of relatively low levels of hazard in small establishments. Part 1904.15 states:

An employer who had no more than ten (10) employees at any time during the calendar year immediately preceding the current calendar year need not comply with any of the requirements of this part except the following:

(a) Obligation to report under Part 1904.8 concerning fatalities or multiple hospitalization accidents; and

(b) Obligation to maintain a log of occupational injuries and illnesses under Part 1904.2 and to make reports under Section 1904.21 upon being notified in writing by the Bureau of Labor Statistics that the employer has been selected to participate in a statistical survey of occupational injuries and illnesses.

For the purposes of the small employer exemption, the employment figure refers to the calendar year immediately *preceding* the year for which records will be kept. Also, the test for the small employer exemption is the number of employees in the entire *firm*, not the number in an individual establishment. Therefore, a firm with two establishments, each of which had six employees during the previous calendar year, has to keep OSHA injury and illness records during the current year because the total employment of the firm was greater than 10. Partners, self-employed, and family members on a farm are not considered employees.

2. *Employers in low-hazard industries.* In most States, employers in low-hazard industries in retail trade: finance, insurance, and real estate; and services are exempt from OSHA recordkeeping under Part 1904.16 of the regulations:

An employer whose establishment is classified in SIC's 52–89, (excluding 52–54, 70, 75, 76, 79, and 80) need not comply, for such establishment, with any of the requirements of this part except the following:

(a) Obligation to report under Section 1904.8 concerning fatalities or multiple hospitalization accidents; and

(b) Obligation to maintain a log of occupational injuries and illnesses under Section 1904.2 and make reports under Section 1904.21 upon being notified in writing by the Bureau of Labor Statistics that the employer has been selected to participate in a statistical survey of occupational injuries and illnesses.

The Federal exemption applies to all employers in low-hazard industries in States under exclusive Federal jurisdiction. States with approved State plans under Section 18(b) of the act may continue to require employers in these industries to maintain records. The following States and territories currently operate their own OSHA programs under Section 18(b): Alaska, Arizona, California, Connecticut, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, the Virgin Islands, Washington, and Wyoming. In these areas, employers should contact their respective State agency to determine if the low-hazard industry exemption has been adopted. State agency addresses and telephone numbers are listed in appendix D.

The exempt industries are identified and categorized according to the *Standard Industrial Classification Manual (SIC).* They include:

Some retail trade industries (SIC's 55–59) which include establishments engaged in selling merchandise to the general public for personal or household consumption. Some of these retail trades are: automotive dealers, apparel and accessory stores, furniture and home furnishings stores, and eating and drinking places.

All finance, insurance, and real estate industries (SIC's 60–67) including establishments engaged in banking, credit other than banking, security dealings, insurance, and real estate.

Some service industries (SIC's 70–89, except 70, 75, 76, 79, and 80) including establishments with a variety of services for individuals, businesses, government agencies, and other organizations. Some of these service industries are: personal and business services in addition to legal, educational, social, and cultural services, and membership organizations.

In order to be included in this exemption, the major industry group has to meet two criteria: (1) The industry must fall within SIC's not now targeted for general schedule inspections; and (2) for a designated 3-year measurement period, the industry must have had an average lost workday case injury rate at or below 75 percent of the comparable private sector average.

Therefore, building materials and garden supplies (SIC 52); general merchandise and food stores (SIC's 53, 54); hotels and other lodging places (SIC 70); repair services (SIC's 75, 76); amusement and recreation services (SIC 79); and health services (SIC 80) were not included among the industries initially proposed for exemption. These industries, although not targeted for general schedule inspections, have lost workday case injury rate averages above 75 percent of the private sector average for the 3-year period.

C–1. Q. Is the small employer exemption determined by the number of employees currently working in the establishment?

A. No. The small employer exemption focuses on the number of employees working for the entire *firm* at any time during the *previous* calendar year.

C–2. Q. For the purposes of the small employer exemption, how do you distinguish between an establishment and a firm?

A. The distinction between an establishment and a firm refers to the structure of the business. An establishment is a single physical location where business is conducted or where services or industrial operations are performed. A firm consists of the entire business enterprise (the corporation, company, partnership, etc.) and may include one or more establishments.

C–3. Q. How is the number of employees determined for the small employer exemption? Do employers qualify if they had an average of no more than 10 employees during the previous calendar year?

A. No. The average number of employees is not the determining factor. To qualify, employers *must not have had more than 10 employees at any one time* in the previous calendar year.

C–4. Q. Two partners operate an automobile repair shop with nine employees. Does the small employer exemption apply to them?

A. Yes. The partners themselves are employers; therefore, the auto repair shop has only nine employees. As long as the firm has no more than 10 employees at any one time during the previous calendar year, it qualifies for the small employer exemption.

C–5. Q. How were the industries selected for the low-hazard industry exemption?

A. Safety statistics were examined for major industry groups. An industry group was exempted if it was not currently targeted for routine safety inspections and had a lost workday case rate for injuries at or below 75 percent of the private sector average for a designated 3-year period.

C–6. Q. How do employers determine the appropriate SIC code for their establishment to see if they qualify for the exemption of low-hazard industries?

A. First, employers should determine the principal activity of the establishment. If an establishment does more than one kind of business, it is classified in the category that generates the greatest dollar volume. Employers may then refer to the 1972 edition of the *Standard Industrial Classification Manual* (SIC) prepared by the Executive Office of the President, Office of Management and Budget. This publication is usually available in most corporate or public libraries or can be purchased from the Government Printing Office. Employers may also contact their State or BLS regional offices for assistance in making the proper SIC determination. Addresses and telephone numbers for the BLS regional offices are listed on the back cover; those for the State agencies are in appendix D.

C–7. Q. Must employers in the exempted low-hazard industries have written certification from BLS or OSHA that their firm is exempt from OSHA recordkeeping?

A. No. Written certification is not necessary since public notification was made in the **Federal Register**, news releases, etc.

C–8. Q. Does the exemption for low-hazard industries supply to all low-hazard establishments?

A. No. Only establishments in the specified major industry groups are exempt. The fact that an establishment in a high-risk industry has an excellent safety record or that its workers have jobs that seem as safe as those in the exempted industries does not mean that it is exempt.

C–9. Q. How do large employers with multiple establishments handle the exemption of low-hazard activities?

A. Large employers with multiple establishments may find that some of their establishments qualify for exemption while others do not. For exemple, an automobile manufacturer may have assembly plants and retail sales offices. The manufacturing establishments would not be exempt from OSHA recordkeeping; the sales offices would.

C–10. Q. Do recordkeeping exemptions apply uniformly in all States and territories?

A. The exemption for small employers is in effect in all States and territories except Wyoming and the Virgin Islands.

The recordkeeping exemption for low-hazard industries applies to all eligible establishments in the specified industry groups. However, establishments in these industries may be selected to participate each year so that their injury and illness experience can be

government agencies in OSHA recordkeeping and reporting?

A. No. A recordkeeping and reporting system has been developed by the Mine

The recordkeeping exemption for low-hazard industries applies to all eligible workplaces under the jurisdiction of Federal OSHA and to establishments in many States with approved State plans under Section 18(b) of the act. However, some States with approved State plans have not adopted the low-hazard exemption. Employers in States with approved plans should contact their State agency to determine if it has adopted the exemptions. State agency addresses and telephone numbers are listed in appendix D, which also indicates those States with approved plans.

D. Exceptions to Exemption for Small Employers and Employers in Low-Hazard Industries

There are two exceptions to the exemption from OSHA recordkeeping for small employers and employers in low-hazard industries:

1. Although OSHA recordkeeping requirements are normally eliminated for small employers and employers in low-hazard industries, they must still comply with OSHA standards, display the OSHA poster, and report to OSHA within 48 hours any work-related accident which results in a fatality or the hospitalization of five or more employees. (Some States have more stringent catastrophic reporting requirements.)

2. A small percentage of the regularly exempt employers have to maintain records for 1 year if they are selected to participate in the Annual Survey of Occupational Injuries and Illnesses. As stated in Parts 1904.15(b) and 1904.16(b) of the regulations, each year BLS selects a rotating sample of small employers and employers in low-hazard industries to participate in the annual survey. These employers, required by law to participate, are notified prior to the beginning of the reference calendar year that they have been selected. They are required to maintain a log and summary (OSHA No. 200), but do not have to prepare any other OSHA injury and illness records. At the end of the calendar year, they must report their injury and illness experience on the survey questionnaire, the OSHA No. 200–S. They are not required to post a summary of their injury and illness experience at the end of the reference year.

D–1. Q. Why are some regularly exempt small employers and employers in low-hazard industries selected each year to keep records and participate in the Annual Survey of Occupational Injuries and Illnesses?

A. A small sample of these regularly exempt employers is required to participate each year so that their injury and illness experience can be incorporated in the BLS survey data. This is necessary to produce estimates which are comparable in coverage to estimates for pre-exemption years.

D–2. Q. How is the survey sample selected for the regularly exempt firms that will be required to keep records? If a regulary exempt firm is selected to participate 1 year, will it be required to participate every year thereafter?

A. The regularly exempt firms notified in advance that they must participate in the annual survey are selected on a random sample basis. Usually, other firms will be selected to participate in subsequent surveys. In some situations, however, a firm may be asked to participate more than once; i.e., when there are not enough firms in a particular industry or employment-size group to insure adequate coverage from a rotating sample.

E. State and Local Government

All States that operate their own safety and health plans require all employers, including State and local government agencies, to maintain records of injuries and illnesses. Part 1952.4(a) of the regulations provides:

> States must adopt recordkeeping and reporting regulations which are identical to 29 CFR Part 1904 "Recording and Reporting Occupational Injuries and Illnesses" except for Part 1904.13 of this chapter, which provides for variances.

Part 1956.10(i) requires these State and local government employers to maintain records and make reports in conformance with the standards and procedures required of private sector employers under the act. State and local government agencies are usually exempt in States which do not operate their own State plans.

E–1. Q. What is the legal basis for the requirement that certain State and local government agencies are required to participate in the recordkeeping and reporting provisions of the act?

A. Section 18(c)(6) of the Federal OSH Act requires States with approved State plans to have State and local government agencies participate in recordkeeping and reporting activities to the extent permitted by State law. Also, nonplan States may require recordkeeping under their own laws and regulations. Participating States, like private sector employers, may use their own recordkeeping forms as long as they are substantially the same as the Federal forms.

E–2. Q. Which States have plans requiring participation of State and local government agencies in OSHA recordkeeping and reporting?

A. The States and territories listed in section C of this chapter have approved plans requiring State and local government participation. These States are identified in appendix D.

E–3. Q. Must private universities and colleges keep records?

A. Although covered by the act, these institutions normally do not have to keep OSHA records because of the recordkeeping exemption discussed in section D above. However, as with other normally exempt industries, a small sample will have to keep records for 1 year if asked to participate. When this occurs, these private universities and colleges must keep records of injuries and illnesses for their employees; students are not included unless they are employed on a full- or part-time basis. Graduate students with paid teaching and research assignments are covered.

State and local government colleges and universities must keep OSHA records if their State has a plan approved for implementing the provisions of the act.

E–4. Q. Are employees of local school districts covered by the act?

A. These employees are covered only in States which have an approved State plan for implementing the provisions of the act.

F. Applicability of OSHA Recordkeeping Requirements to Employers Subject to Other Federal Safety and Health Regulations

Many employers subject to injury and illness recordkeeping requirements of other Federal safety and health regulations are not exempt from OSHA recordkeeping. However, records used to comply with other Federal recordkeeping obligations may also be used to satisfy the OHSA recordkeeping requirements. The forms and definitions used must be equivalent to the OSHA forms and definitions.

F–1. Q. To what extent are motor carriers covered by OSHA recordkeeping regulations since they are under Department of Transportation safety regulations?

A. Motor carriers must maintain injury and illness records in conformance with or equivalent to the OSHA records required by 29 CFR 1904.

F–2. Q. Is the mining industry, which generally comes under the inspection jurisdiction of the Mine Safety and Health Administration, required to participate in the OSHA recordkeeping program?

A. No. A recordkeeping and reporting system has been developed by the Mine Safety and Health Administration (in cooperation with the Bureau of Labor Statistics) whcih provides information on mining activities equivalent to the OSHA injury and illness statistics.

However, the injury and illness experience of some mining company employees working in establishments not related to mining will be maintained on OSHA records. For example, if a mining company has a company store, and the Mine Safety and Health Administration does not require that injury and illness records be kept for the store, it would fall under OSHA jurisdiction.

F–3. Q. Are railroad employers required to keep records of injuries and illnesses of their employees?

A. Yes. In recent years, the Federal Railroad Administration has adopted the definitions of the OSHA recordkeeping system. Railroad employers report occupational injury and illness data annually to the Federal Railroad Administration, which in turn provides the data to BLS for statistical purposes.

Chapter II. The Mechanics of OSHA Recordkeeping

Only two forms are used for OSHA recordkeeping. One form, the OSHA No. 200, serves two purposes: (1) As the Log of Occupational Injuries and Illnesses on which the occurrence, extent, and outcome of cases are recorded during the year; and (2) as the Summary of Occupational Injuries and Illnesses which is used to summarize the log at the end of the year to satisfy employer posting obligations. The other form, the Supplementary Record of Occupational Injuries and Illnesses, OSHA No. 101, provides additional information on each of the cases that have been recorded on the log. (These forms are provided in appendix B.)

A. The Log of Occupational Injuries and Illnesses, OSHA No. 200

The log is used for recording and classifying recordable occupational injuries and illnesses, and for noting the extent and outcome of each case. The log shows when the occupational injury or illness occurred, to whom, what the injured or ill person's regular job was at the time of the injury or illness exposure, the department in which the person was employed, the kind of injury or illness, how much time was lost, and the final determination of the case.

Part 1904.2 of the *Code of Federal Regulations* (CFR) provides the basic requirements for the Log and Summary of Occupational Injuries and Illnesses:

> (a) Each employer shall except as provided in paragraph (b) of this section. (1) maintain in each establishment a log and summary of all recordable occupational injuries and illnesses for that establishment; and (2) enter each recordable injury and illness on the log and summary as early as practicable but no later than 6 working days after receiving information that a recordable injury or illness has occurred. For this purpose, form OSHA No. 200 or an equivalent which is as readable and comprehensible to a person not familiar with it shall be used. The log and summary shall be completed in the detail provided in the form and instructions on form OSHA No. 200.
>
> (b) Any employer may maintain the log of occupational injuries and illnesses at a place other than the establishment or by means of data-processing equipment, or both. Under the following circumstances:
>
> (1) There is available at the place where the log is maintained sufficient information to complete the log to date within 6 working days after receiving information that a recordable case has occurred as required by paragraph (a) of this section.
>
> (2) At each of the employer's establishments, there is available a copy of the log which reflects separately the injury and illness experience of that establishment complete and current to a date within 45 calendar days.

The log consists of three parts: A descripitve section which identifies the employee and briefly describes the injury or illness; a section covering the extent of the injuries recorded; and a section on the type and extent of illnesses. A complete OSHA No. 200 log form is shown in appendix B.

While most of the columns seem self-explanatory, there are some important requirements to be considered when completing the log. The following information pertains to the descriptive section of the log shown on the following page.

Column A. Enter a number that is unique for each case. This is very important because each case must be identified and examined "separately. The simplest method of numbering may be the best; i.e. 1, 2, 3. Employers may also number cases by month, for example, 7–15 would indicate the 15th case occurring during July.

Column B. For occupational injuries, enter the date of the work accident which resulted in injury. For occupational illnesses, enter date of initial diagnosis of illness, or, if absence from work occurred before diagnosis, enter the first day of absence attributable to the illness which was later diagnosed or recognized. Cases do not necessarily fall consecutively by date, because injuries and illnesses are recorded as an employer learns that a case has occurred.

Column C. Insert 1 of 2 entries: (1) First name, middle initial, and last name; or (2) first initial, middle initial, and last name.

Column D. Specify the injured or ill employee's regular job title even if the employee was working outside his or her regularly assigned occupation at the time of the injury or illness exposure.

Column E. State the department in which the injured or ill person *is regularly employed.* Enter the department in which the injury or illness exposure occurred only if it is the regularly assigned station. If an employee is regularly assigned in the maintenance department, but was injured while working in the shipping department, the correct entry would be "maintenance."

Column F. Briefly describe the nature of the injury or illness and part(s) of the body affected. For example, amputation—finger, is not sufficiently detailed. A correct entry would be amputation—second joint, forefinger, left hand. This tells which hand, which finger, and to what degree. The examples listed in the heading for column *F* on the log form are good indications of how entries should be made.

The injury portion of the log is reproduced on the following page. The following instructions concern entries made in this section.

Column 1. The date of death must be entered if an occupational injury results in a fatality. In some cases, an employee may be injured, but not die until several weeks or months later. It does not matter how much time has elapsed; if the injury was work-related, the entry on the log must be changed to reflect a fatality; the entries in columns 2 through 6 must be lined out, and the date of death entered in column 1.

Column 2. If a case involves lost workdays due to an injury, check this column. Lost workdays include both days away from work and days of restricted work activity, or both. The number of lost workdays should *not* include the day of injury or any days on which the employee would not have worked even though able to work (i.e., weekends, paid holidays, etc.).

Log and Summary of Occupational
Injuries and Illnesses

U.S. Department of Labor

For Calendar Year 19 ______ Page ___ of ___

Form Approved
O.M.B. No. 1220-0029

NOTE: This form is required by Public Law 91-596 and must be kept in the establishment for 5 years. Failure to maintain and post can result in the issuance of citations and assessment of penalties. *(See posting requirements on the other side of form.)*

RECORDABLE CASES: You are required to record information about every occupational death; every nonfatal occupational illness; and those nonfatal occupational injuries which involve one or more of the following: loss of consciousness, restriction of work or motion, transfer to another job, or medical treatment (other than first aid). *(See definitions on the other side of form.)*

Company Name

Establishment Name

Establishment Address

Case or File Number	Date of Injury or Onset of Illness	Employee's Name	Occupation	Department	Description of Injury or Illness	Extent of and Outcome of INJURY: Fatalities — Injury Related	Nonfatal Injuries — Injuries With Lost Workdays				Injuries Without Lost Workdays	Type, Extent of, and Outcome of ILLNESS: Type of Illness — CHECK Only One Column for Each Illness (See other side of form for terminations or permanent transfers.)							Fatalities — Illness Related	Nonfatal Illnesses — Illnesses With Lost Workdays				Illnesses Without Lost Workdays
Enter a nonduplicating number which will facilitate comparisons with supplementary records.	Enter Mo./day.	Enter first name or initial, middle initial, last name.	Enter regular job title, not activity employee was performing when injured or at onset of illness. In the absence of a formal title, enter a brief description of the employee's duties.	Enter department in which the employee is regularly employed or a description of normal workplace to which employee is assigned, even though temporarily working in another department at the time of injury or illness.	Enter a brief description of the injury or illness and indicate the part or parts of body affected. Typical entries for this column might be: Amputation of 1st joint right forefinger; Strain of lower back; Contact dermatitis on both hands; Electrocution—body.	Enter DATE of death. Mo./day/yr.	Enter a CHECK if injury involves days away from work, or days of restricted work activity, or both.	Enter a CHECK if injury involves days away from work.	Enter number of DAYS away from work.	Enter number of DAYS of restricted work activity.	Enter a CHECK if no entry was made in columns 1 or 2 but the injury is recordable as defined above.	Occupational skin diseases or disorders	Dust diseases of the lungs	Respiratory conditions due to toxic agents	Poisoning (systemic effects of toxic materials)	Disorders due to physical agents	Disorders associated with repeated trauma	All other occupational illnesses	Enter DATE of death. Mo./day/yr.	Enter a CHECK if illness involves days away from work, or days of restricted work activity, or both.	Enter a CHECK if illness involves days away from work.	Enter number of DAYS away from work.	Enter number of DAYS of restricted work activity.	Enter a CHECK if no entry was made in columns 8 or 9.

FOLD

Certification of Annual Summary Totals By ______________ Title ______________ Date ______________

OSHA No. 200

POST ONLY THIS PORTION OF THE LAST PAGE NO LATER THAN FEBRUARY 1.

Column 3. Check if the injury involves days away from work.

Column 4. Enter the actual number of days away from work.

Column 5. Enter the actual number of days of restricted work activity.

Column 6. If no entry was made in columns 1 or 2, but the injury is recordable according to the guidelines in this report or the instructions on the OSHA No. 200, a check must be entered to indicate that it was an injury without lost workdays.

Extent of and Outcome of INJURY					
Fatalities	Nonfatal Injuries				
Injury Related	Injuries With Lost Workdays				Injuries Without Lost Workdays
Enter DATE of death. Mo./day/yr.	Enter a CHECK if injury involves days away from work, or days of restricted work activity, or both.	Enter a CHECK if injury involves days away from work.	Enter number of DAYS away from work.	Enter number of DAYS of restricted work activity.	Enter a CHECK if no entry was made in columns 1 or 2 but the injury is recordable as defined above.
(1)	(2)	(3)	(4)	(5)	(6)

The illness portion of the log follows on the next page with instructions relating to the columns in this section.

Column 7. For occupational illnesses, an entry should be placed in one of the columns 7a through 7g, depending upon which column is applicable. It is important to keep in mind that illnesses must be evaluated individually. For example, a sunstroke would require a check in column 7e; eczema or rash would require a check in column 7a, etc. The reserve side of the log form gives examples of cases under each illness category.

Column 8. The date of death must be entered if an occupational illness results in a fatality.

Column 9. Check if the illness involves days away from work or days of restricted work activity, or both.

Column 10. Enter a check if the illness involves days away from work.

Column 11. Enter the actual number of days away from work resulting from the illness.

Column 12. Enter the number of days of restricted work activity resulting from the illness.

Column 13. Enter a check if no entry was made in columns 8 or 9 since the illness did not involve lost workdays.

For illnesses only, when a termination or permanent transfer is involved, place an asterisk (*) to the right of the entry in columns 7a through 7g (type of illness).

A–1. Q. Who must maintain the log?

A. Every employer who is subject to the recordkeeping requirements of the OSH Act must maintain at each establishment a log of all recordable occupational injuries and illnesses which occur at the establishment.

A–2. Q. How must the log be maintained and retained?

A. The log must be maintained on a calendar (not fiscal) year basis. Logs must be kept current and retained for 5 years following the end of the calendar year to which they relate. If there is a change in the extent or outcome of a case entered on the log, the first entry should be lined out and a corrected entry made. An entry may be lined out if a case is later found to be nonrecordable. Entries should be made for previously unrecorded cases that are discovered or found to be recordable after the end of the year in which the case occurred. The new entry should be made on a log for the year in which the case occurred.

A–3. Q. When must an employer make an entry on the log?

A. Normally, an employer must make an entry on the log no later than 6 working days after receiving information that a recordable case has occurred.

However, an exception to this rule exists for those situations where the log is maintained at a place other than the establishment or where it is maintained by means of data processing equipment. These situations require: (1) Sufficient information available at the alternative location to complete the log within 6 working days after receipt of information that a recordable case has occurred: and (2) a copy of the log updated within 45 calendar days to be present at all times in the establishment.

A–4. Q. What form must be used?

A. Usually, the OSHA No. 200 form is used by employers as their record of occupational injuries and illnesses.

Also, a private equivalent to the log, such as a computer printout, may be used if it contains as much detail as the OSHA No. 200 and if it is as readable and comprehensible as the OSHA No. 200 to a person not familiar with the equivalent. It is important that the columns of the equivalent form have the same identifying numbers as the corresponding columns of the OSHA No. 200 because the instructions for completing the survey of occupational injuries and illnesses refer to log columns by number.

It is advisable that employers have private equivalents of the log form reviewed by BLS to insure compliance with the regulation requiring comparability with the OSHA No 200.

Type, Extent of, and Outcome of ILLNESS

Type of Illness							Fatalities	Nonfatal Illnesses

(a)	(b)	(c)	(d)	(e)	(f)	(g)						

ILLNESSES

A–5. Q. Can additional information be included on private equivalents to the log?

A. Yes. Equivalents to the log may contain additional information if they retain the same identifying column numbers as the OSHA No. 200 and are as readable and comprehensible as the OSHA No. 200 to a person not familiar with the equivalent form.

A–6. Q. Is an employer required to have a log for any year in which there were no recordable cases?

A. No. An employer is not required to have a log for any year during which there were no recordable cases. However, the summary portion of the OSHA No. 200 should be completed with zero entries and retained for the 5-year period.

A–7. Q. Can OSHA records be kept on microfiche or magnetic tape?

A. Yes. If the information is always available during working hours and is retrievable upon demand, and if the format used to store the information is equivalent to the format of the OSHA forms.

B. The Summary of Occupational Injuries and Illnesses, OSHA No. 200

The portion of the OSHA No. 200 to the right of the dotted vertical line is used to summarize injuries and illnesses in an establishment for the previous calendar year. Every nonexempt employer who is required to keep OSHA records must prepare an annual summary for each establishment, based on the information contained in the log for each establishment. The summary is prepared by totaling the column entries on the log (or its equivalent) and signing and dating the certification portion of the form at the bottom of the page.

Part 1904.5 of the Code of Federal Regulations states the requirements for the annual summary of occupational injuries and illnesses:

(a) Each employer shall post an annual summary of occupational injuries and illnesses for each establishment. This summary shall consist of a copy of the year's totals from the form OSHA No. 200 and the following information from that form: calendar year covered, company name, establishment address, certification signature, title, and date. . . . If no injuries or illnesses occurred in the year, zeros must be entered on the totals line, and the form must be posted.

(b) The summary shall be completed by February 1, beginning with calendar year 1979.

(c) Each employer, or the officer or employee of the employer who supervises the preparation of the log and summary of occupational injuries and illnesses, shall certify that the annual summary of occupational injuries and illnesses is true and complete.

(d)(1) Each employer shall post a copy of the establishment's summary in each establishment in the same manner that notices are required to be posted under Section 1903.2(a)(1) of this chapter. The summary covering the previous calendar year shall be posted no later than February 1, and shall remain in place until March 1. . . .

(2) A failure to post a copy of the establishment's annual summary may result in the issuance of citations and assessment of penalties pursuant to Sections 9 and 17 of the Act.

Part 1903.2(a) of the regulations governs employer posting obligations. The following requirements pertain to posting the summary:

(a) Such notice or notices shall be posted by the employer in each establishment in a conspicuous place or places where notices to employees are customarily posted. Each employer shall take steps to insure that such notices are not altered, defaced, or covered by other material.

Before preparing the summary which is shown on the next page, the employer should review the log to be sure the entries are correct and current. Each case should be checked to make sure that it is in only one of the "extent" categories on the log (fatalities, lost workday cases, nonfatal cases without lost workdays). Any open case involving a loss of workdays which is continuing at the time the summary is prepared should be completed by estimating the number of future workdays the employee will lose. The estimated number of future lost workdays should be added to the number of workdays already lost, and the combined total entered on the log and included in the summary. (The log should be revised at a later date to reflect the number of days that were actually lost.)

The yearly totals on the log are all that is needed for posting. Employers may prepare the summary in 1 of 2 ways: (1) They can use the last page of the log they have been maintaining during the year by folding the log so that the portion to the left of the dotted line is turned under to conceal the names of the injured or ill employees; or (2) they can use a photocopy or separate form, such as a blank OSHA No. 200.

Completing the summary is a relatively simple procedure. The right hand portion of the log (to the right of the dotted fold line) is used for this purpose. Employers complete the top portion of the page by entering the year to which the records relate, the company name (and the establishment name, if different from the company), and the address. Then the entries in columns 1 through 13 are added vertically and totaled on the bottom line. Note that, although all the column entries for cases and lost workdays must be totaled, employers need not total the asterisks on the log signifying illnesses resulting in termination of employment or permanent transfer, since these are primarily for the information of authorized Federal or State officials. The summary is completed with the signature of the person responsible for the summary information and the date of that person's signature at the bottom of the page.

B–1. Q. What is supposed to be accomplished by posting an annual summary in the workplace?

A. Posting the annual summary: (1) Provides employees with their establishment's record of injuries and illnesses; (2) makes employers and employees more safety conscious; and (3) promotes joint labor-management safety and health efforts.

B–2. Q. What form must be used for the summary?

A. The OSHA No. 200 or a private equivalent may be used. Employers are allowed to use private equivalents if they are readable and comprehensible to persons not familiar with the equivalents. A blank copy of the OSHA No. 200 is often posted beside the equivalent for clear understanding by employees. Copies of the OSHA No. 200 can be obtained from BLS regional offices or from the BLS national office. (See back cover for BLS regional office addresses and telephone numbers.)

B–3. Q. How long must the summary be posted at each establishment?

A. The annual summary is to be posted by February 1 of each year and is to remain in place until March 1. It must be posted at each establishment in a conspicuous place where notices to employees are customarily posted.

B–4. Q. Who is responsible for the preparation of the annual summary?

A. The employer is ultimately responsible for preparation of the annual summary. However, in many instances an employee actually prepares and certifies the annual summary.

OSHA No. 200

POST ONLY THIS PORTION OF THE LAST PAGE NO LATER THAN FEBRUARY 1.

BILLING CODE 4510-24-C

B–5. Q. What is meant by certification of the summary?

A. The summary must be signed and dated by the employer, or whoever is delegated responsibility for completing it, to certify that it is true and complete to the best of that person's knowledge.

B–6. Q. If no recordable cases occurred during a reporting period, must a summary be prepared?

A. Yes. Even though there were no recordable cases during the previous year, the summary portion of the OSHA No. 200 must be completed and posted in each establishment no later than February 1 and remain in place until March 1. Zeros should be entered in all categories on the "totals" line. All summaries must be retained for 5 years following the end of the year to which they relate.

B–7. Q. Can the summary at the end of the year be on a total company basis, or does it have to be completed for each establishment?

A. A summary must be prepared for each establishment and posted in each establishment.

B–8. Q. Must a copy of the annual summary be posted on evey bulletin board, or will the posting of only one copy comply with the requirements of the law?

A. It depends upon the particular establishment. The regulations state that the annual summary is to be posted "at each establishment in a conspicuous place where notices to its employees are posted customarily." In some circumstances, this may require more than one posting.

B–9. Q. How do workers review the annual summary when they don't work at a fixed worksite?

A. During the posting period, employers are required to present or mail a copy of the annual summary to employees with no fixed worksite.

B–10. Q. Is it necessary to post the annual summary if an establishment closes?

A. It is not necessary to post a summary in an establishment which has closed by the time the summary is prepared. The primary purpose of posting is to inform employees of the past year's injury and illness record.

B–11. Q. Must the employer post the annual summary at the jobsite of a seasonal operation if the site is shut down during the posting period?

A. Posting informs the employees of the past year's injury and illness experience for that establishment. Since posting in a vacated establishment would not accomplish this purpose, posting is not required. However, employers in these situations shall present or mail a copy of the annual summary to their permanent employees.

B–12. Q. When will an establishment have to send its annual summary to the Bureau of Labor Statistics?

A. Never. The employer must retain the recordkeeping forms, the log and summary, OSHA No. 200, and the supplementary record, No. 101, in the establishment for 5 years after the reference year of the records. Establishments selected to participate in the statistical survey will receive a survey reporting form in the mail. If an establishment does not receive a form, the employer need only maintain and retain the records according to the regulations.

B–13. Q. How is a lost workday case handled on the summary if it carries over into the next year? What if, for example, an employee is injured in December 1983 and is still out on January 31, 1984?

A. Two important considerations are involved: (1) The same case should not appear in the records for 2 years; and (2) it is important not to lose the count of the actual number of lost workdays, which is a measure of the severity of the case.

The original entry for this case should be on the 1983 log. At the end of calendar year 1983, the employer should estimate the number of workdays the employee is expected to lose in 1984 and add that to the count of workdays lost up to the time of making that estimate. That number should be entered in column 4 or column 11 of the 1983 log, depending on the type of case. When the employee returns to work and is able to perform all the duties of his or her regular job or the count of lost workdays is otherwise ended, the employer should verify the actual count of lost workdays (days away from work and any days of restricted activity) and correct the entry on the 1983 log as necessary. No entries should be made for this case on the 1984 log. Also, the summary for 1983 does not have to be corrected.

C. The Supplementary Record of Occupational Injuries and Illnesses, OSHA No. 101

For every injury or illness entered on the log, it is necessary to record additional information on the supplementary record, OSHA No. 101. The supplementary record describes how the accident or illness exposure occurred, lists the objects or substances involved, and indicates the nature of the injury or illness and the part(s) of the body affected.

Part 1904.4 of the *Code of Federal Regulations* provides the requirements for the supplementary record:

In addition to the log of occupational injuries and illnesses provided for under Section 1904.2, each employer shall have available for inspection at each establishment within 6 working days after receiving information that a recordable case has occurred, a supplementary record for each occupational injury or illness for that establishment. The record shall be completed in the detail prescribed in the instructions accompanying Occupational Safety and Health Administration Form OSHA No. 101. Workmen's compensation insurance or other reports are acceptable alternative records if they contain the information required by Form OSHA No. 101. If no acceptable alternative record is maintained for other purposes, Form OSHA No. 101 shall be used or the necessary information shall be otherwise maintained.

Most items in the supplementary record shown on the next page are self-explanatory. However, the following items are highlighted:

The OSHA case or file number must be the same number used to identify the case or file number in column *A* of the log, OSHA No. 200.

Occupation (item 8) refers to the employee's *regular* job title. If an employee is working in a capacity other than the regular occupation at the time of an injury or illness exposure, item 8 must show the regular job title. This is the same title used in column *D* of the log.

Department (item 9) refers to the department or division in which the employee is *regularly* employed, even if an employee should be temporarily working in another department at the time of the injury or illness exposure. This is the same department named in column *E* of the log.

Premises (item 11) refers to whether the accident or exposure occurred on the employer's premises.

Injury or illness and part(s) of body affected (item 14) should be in agreement with the information entered in column *F* of the log.

C–1. Q. When must a supplementary record be prepared?

A. A supplementary record must be prepared for each case within the same time frame required for entering a case on the log—within 6 workdays after receipt of information that a recordable case has occurred.

C–2. Q. Must all employers complete the OSHA No. 101 or equivalent for any case entered on the log of occupational injuries and illnesses?

A. Yes, all employers regularly keeping OSHA records must complete a supplementary record for each entry on the log, OSHA No. 200.

However, there is one exception to this rule. As noted in section D, chapter

II, a small percentage of firms regularly exempt from OSHA recordkeeping is selected each year to participate in the

they presently use a State workers' compensation form?

injuries. How can we use this in place of OSHA No. 101?

Bureau of Labor Statistics

1985
UMI

II, a small percentage of firms regularly exempt from OSHA recordkeeping is selected each year to participate in the Annual Survey of Occupational Injuries and Illnesses. Those selected are required to maintain a log of occupational injuries and illnesses but are not required to complete any other OSHA records.

C–3. Q. What form must be used as the supplementary record?

A. Either the OSHA No. 101 or any other form which contains the same information may be used. Employers are not required to prepare an OSHA No. 101 if they complete any other form which contains identical information. Many State workers' compensation first report of injury forms contain all the OSHA No. 101 items. In addition, many large employers prepare internal accident report forms which contain all the necessary items.

C–4. Q. Does this mean employers don't need to complete OSHA No. 101 if they presently use a State workers' compensation form?

A. It depends upon the particular workers' compensation form used. Workers' compensation first report of injury forms are acceptable if they contain all the items on the OSHA No. 101 or are supplemented to do so. Employers should be sure that all OSHA No. 101 items are on the first report forms; otherwise, missing items may be entered on a separate attachment. Many States have modified their first report forms to include this information. Employers should consult the State agency which is cooperating in the program with the Bureau of Labor Statistics or the BLS regional or national office to determine whether any items are missing from their State's form. The addresses and telephone numbers of these agencies and offices are listed in the appendix D and on the back cover of this report.

C–5. Q. Our State workers' compensation form lists only disabling injuries. How can we use this in place of OSHA No. 101?

A. If a State requires reports of disabling injuries only, the employer will have to complete additional forms to comply with the OSHA requirements. The OSHA No. 101 or some acceptable substitute such as an insurance form or internal accident report form may be used to record the nondisabling injuries.

C–6. Q. Who evaluates a State's first report of injury form to insure that it satisfies the requirements of the OSHA No. 101?

A. The Bureau of Labor Statistics is available to evaluate State first report of injury forms upon request.

C–7. Q. If a company's injury form, which is generally similar to OSHA No. 101, does not include information such as social security number, sex, etc., must the company apply to BLS for a variance?

BILLING CODE 4510-24-M

Bureau of Labor Statistics
Supplementary Record of
Occupational Injuries and Illnesses

U.S. Department of Labor

This form is required by Public Law 91-596 and must be kept in the establishment for 5 years. Failure to maintain can result in the issuance of citations and assessment of penalties.

Case or File No.

Form Approved
O.M.B. No. 1220-0029

Employer

1. Name
2. Mail address *(No. and street, city or town, State, and zip code)*
3. Location, if different from mail address

Injured or Ill Employee

4. Name *(First, middle, and last)* — Social Security No.
5. Home address *(No. and street, city or town, State, and zip code)*
6. Age — 7. Sex: *(Check one)* Male ☐ Female ☐
8. Occupation *(Enter regular job title, not the specific activity he was performing at time of injury.)*
9. Department *(Enter name of department or division in which the injured person is regularly employed, even though he may have been temporarily working in another department at the time of injury.)*

The Accident or Exposure to Occupational Illness

If accident or exposure occurred on employer's premises, give address of plant or establishment in which it occurred. Do not indicate department or division within the plant or establishment. If accident occurred outside employer's premises at an identifiable address, give that address. If it occurred on a public highway or at any other place which cannot be identified by number and street, please provide place references locating the place of injury as accurately as possible.

10. Place of accident or exposure *(No. and street, city or town, State, and zip code)*
11. Was place of accident or exposure on employer's premises? Yes ☐ No ☐
12. What was the employee doing when injured? *(Be specific. If he was using tools or equipment or handling material, name them and tell what he was doing with them.)*
13. How did the accident occur? *(Describe fully the events which resulted in the injury or occupational illness. Tell what happened and how it happened. Name any objects or substances involved and tell how they were involved. Give full details on all factors which led or contributed to the accident. Use separate sheet for additional space.)*

Occupational Injury or Occupational Illness

14. Describe the injury or illness in detail and indicate the part of body affected. *(E.g., amputation of right index finger at second joint; fracture of ribs; lead poisoning; dermatitis of left hand, etc.)*
15. Name the object or substance which directly injured the employee. *(For example, the machine or thing he struck against or which struck him; the vapor or poison he inhaled or swallowed; the chemical or radiation which irritated his skin; or in cases of strains, hernias, etc., the thing he was lifting, pulling, etc.)*
16. Date of injury or initial diagnosis of occupational illness
17. Did employee die? *(Check one)* Yes ☐ No ☐

18. Name and address of physician
19. If hospitalized, name and address of hospital

Date of report	Prepared by	Official position

OSHA No. 101 (Feb. 1981)

A. No. Also, it is not mandatory that the OSHA form be used as the supplementary record; any other form which contains the same information may be used.

The regulations specify that distinctly separate activities performed at a single physical location be recorded separately. For example, if a manufacturing establishment operates a machine shop, a foundry, and an assembly operation in the same building, the employer must keep separate records for employees working in each of these operations. Similarly, if a lumber company operates a sawmill and a logging operation, separate records must be kept for employees working in each operation. Employees working in distinctly separate activities at a single physical location, such as a maintenance department, must be recorded separately from employees in the operations they support. However, if a number of distinctly separate activities are performed at one location and it is impossible or impractical to keep records for each activity separately, the records should be kept in the manner which most accurately reflects the distribution of injuries and illnesses among the employees. Factors to be considered in this situation include the relative size of the various activities, the degree of employee exposure to hazards in each activity, and the similarity of the hazards in the various activities. Activities which are functionally related and integrated are not indicative of separate activities and separate establishments.

A–10. Q. How are records kept for a

A. No. Also, it is not mandatory that the OSHA form be used as the supplementary record; any other form may be used if it contains all of the OSHA No. 101 items or is supplemented to do so. In this case, a longhand entry concerning the individual's sex, social security number, and other missing information would satisfy the need. An alternative record which does not contain all of the OSHA No. 101 items can be supplemented by adding the missing items.

C–8. Q. Does information on the supplementary record (OSHA No. 101) need to be on one form? What if a company wants to split this information between the mailing department, safety department, and workers' compensation department?

A. Yes. This information must be on one form, either the OSHA No. 101 or a satisfactory substitute. Therefore, the information should not be split between different departments.

Chapter III. Location, Retention, and Maintenance of Records

Ordinarily, injury and illness records must be kept for each establishment covered by the Occupational Safety and Health Act. The regulations require that records be located and maintained at this level to assist government agencies in administering and enforcing the act, to increase employer-employee awareness, and to promote injury and illness prevention. This chapter describes requirements for location of records and employer responsibilities for records retention and maintenance.

A. Establishments Required To Keep and Maintain Records

The establishment is the basic organizational unit in the private sector among different firms and operations in different industries. It is the focus of the requirements for records location and maintenance, since the regulations require that records be kept at the establishment level. Therefore, it is imperative that everyone involved in the recordkeeping process have a clear understanding of what constitutes an establishment for recordkeeping purposes.

Part 1904.12(g)(1) of the regulations provides a concise definition of the term "establishment." An establishment is defined as a single physical location where business is conducted or where services or industrial operations are performed. The examples provided include a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, or central administrative office.

The regulations specify that distinctly separate activities performed at a single physical location (for example, where contract construction activities are operated from the same physical location, as a lumber yard), shall each be treated as a separate establishment for recordkeeping purposes.

A–1. Q. What is the definition of a "single physical location?"

A. While the regulations do not require that worksites be contiguous to comprise a single physical location, these sites should at least be in proximity to one another. This relationship is a matter of degree—depending upon the size and nature of the operations of the unit under consideration.

A–2. Q. Our company has several different operations at several different locations. For unemployment insurance purposes, these units have always been considered one establishment. In addition, we are mailed only one survey form for all these operations when we are selected to participate in the BLS Annual Survey of Occupational Injuries and Illnesses. Must we keep more than one set of injury and illness records for these operations?

A. Yes. The regulations require that injury and illness records be maintained for each establishment, which is defined as a single physical location where business is conducted or where operations are performed. The fact that employers may consolidate records for survey reporting and other purposes does not affect this requirement.

A–3. Q. Even though individual establishments must maintain individual records, may a company file a consolidated report of these operations to the Bureau of Labor Statistics in Washington or to the regional offices? If so, how do employers know which operations to include?

A. Reports of injuries and illnesses need not be filed with BLS unless the company is selected to participate in the BLS annual survey. If a company is selected to participate, it will be mailed a survey form on which to report its occupational injuries and illnesses. The form will identify which establishments are to be included in the report. Sometimes all establishments in a specified area, such as a county, are included; sometimes they are not.

A–4. Q. What is meant by the term, "a distinctly separate activity?"

A. There is no clear-cut definition of what constitutes a "distinctly separate activity." Production of dissimilar products; different kinds of operational procedures; different facilities; and separate management, personnel, payroll, or support staff are all indicative of separate activities and separate establishments.

A–5. Q. How many sets of records must be kept in the following case? At one location, workers in Division A make metal tools, while workers in Division B make wooden chairs.

A. If Divisions A and B are managed independently of each other, then they would be considered separate establishments and each division would keep its own records.

A–6. Q. What about auxiliary operations, such as personnel offices or medical facilities?

A. These may be either separate establishments or subunits, departments, or divisions within an establishment, depending on the nature of operations and degree of autonomy the particular unit has in relation to the main organization. (See question A–4 above.)

A–7. Q. Would a manufacturing operation with a warehouse attached need to keep separate records for the warehouse?

A. Only if the warehouse is a distinctly separate activity. Factors to consider include whether the warehouse is an integral part of the manufacturing operation and whether it stores materials for any operation other than the manufacturing facility. Other factors to evaluate are listed in question A–4.

A–8. Q. Do separate OSHA records have to be kept for trucking operations associated with manufacturing facilities?

A. If a trucking fleet is a distinctly separate activity, it requires separate OSHA records. There are, of course, situations where separate OSHA records for truckdrivers would not be kept. These involve operations with a limited number of trucks under the same supervision as the rest of the facility. In these situations, it is usually difficult to differentiate between truckdrivers and other employees in the employment records. Question A–4 of this section lists other considerations.

A–9. Q. A firm has several operational facilities at several locations, each having its own management. However, all facilities utilize one medical department and one personnel office. Are separate records required for each of these facilities or can one set of records be kept for all the facilities?

A. These facilities constitute separate establishments, and hence require separate records. The regulations require that records be maintained at the establishment level so that both management and employees have information on their injury and illness experience.

A–10. Q. How are records kept for a firm that rotates its employees among several different fixed establishments?

A. Separate records shall be kept for each separate establishment. Each establishment's records should reflect the injuries and illnesses which occurred in that particular establishment. (See chapter VI, question B–21, for recording lost workdays in these situations.)

A–11. Q. Must employers maintain separate records for exposure hours for each establishment in situations where the employees are rotated among the firm's different establishments?

A. Separate records for exposure hours do not necessarily have to be maintained. However, employers should at least be able to provide an estimate of the exposure hours worked at each establishment.

B. Location of Records

Injury and illness records (the log and summary, OSHA No. 200, and the supplementary record, OSHA No. 101) must be kept for every physical location where operations are performed. Under the regulations, the location of the records depends upon whether or not the employees are associated with fixed establishments.

1. *Employees associated with fixed establishments.* Records for these employees should be located as follows:

a. Records for employees working at fixed locations, such as factories, stores, restaurants, warehouses, etc., should be kept at the work location.

b. Records for employees who report to a fixed location but work elsewhere should be kept at the place to which the employees report each day. These employees are generally engaged in activities such as agriculture, construction, transportation, etc.

c. Records for employees whose payroll or personnel records are maintained at a fixed location, but who do not report or work at a single establishment, should be maintained at the base from which they are paid or the base of their firm's personnel operations. This category includes generally unsupervised employees such as traveling salespeople, technicians, or engineers.

2. *Employees not associated with fixed establishments.* Some employees are subject to common supervision, but do not report or work at a fixed establishment on a regular basis. These employees are engaged in physically dispersed activities that occur in construction, installation, repair, or service operations. Records for these employees should be located as follows:

a. Records may be kept at the field office or mobile base of operations.

b. Records may also be kept at an established central location. If the records are kept centrally: (1) The address and telephone number of the place where the records are kept must be available at the worksite; and (2) there must be someone available at the central location during normal business hours to provide information from the records.

B–1. Q. I manage a grocery store that is part of a supermarket chain. May we keep the OSHA records for our employees at our company's central administrative office?

A. No. The OSHA records for these employees should be maintained at the work location to satisfy the requirements of the regulations and to insure maximum effectiveness of the records in injury and illness prevention. However, even though the summary and supplementary records must be kept at the establishment, see the next section for the location exception for the log, OSHA No. 200.

B–2. Q. Our company employs several salesmen who operate within a limited geographic area on a commission basis. Where should the records for these people be located?

A. If these employees do not ordinarily report to a single location and are generally unsupervised in their daily work, the records should be kept at the location from which they are paid or the base of their firm's personnel operations.

If these employees report to a given location each day before beginning their sales activities, the records should be kept at the place to which they report.

B–3 Q. Do construction subcontractors and construction contractors have to keep OSHA records at each individual jobsite, or can the records be located at their regional or central office?

A. Location of the records depends upon the nature of the operation. If the employees report to a given place each day but work elsewhere, OSHA records should be kept at the location where they report. For example, if an employer is a plumbing contractor with trucks going from the shop to different sites each day, the establishment is the shop. This is the location where records must be kept. However, if the employees of a plumbing firm report directly to transient jobsites each day, the firm has discretion regarding where the rocords are kept. Records for employees subject to common supervision who do not report or work at a fixed establishment on a regular basis may be kept at either: (1) The field office or mobile base of operations; or (2) at an established central location, provided the employer satisfies the two requirements listed above for employees not associated with fixed establishments.

B–4. Q. How do you distinguish between fixed and nonfixed establishments for the purpose of determining where OSA records should be kept?

A. The distinction between these two types of establishments generally rests on the nature and duration of the operation and not on the type of structure in which the business is located.

A nonfixed establishment usually operates at a single location for a relatively short period of time. A fixed establishment remains at a given location on a long-term or permanent basis and often involves repetitious activities. Also, fixed establishments are generally places where clerical, administrative, or other business records are kept. For examle, a construction crew repairing a bridge for 2 months is considered working in a nonfixed establishment, while a crew repairing a bridge for a year and half is considered working at a fixed establishment.

C. Location Exception for the Log (OSHA No. 200)

Although the supplementary record and the annual summary must be located as outlined in the previous section, it is possible to prepare and maintain the *log* at an alternate location or by means of data processing equipment, or both. Two requirements must be met: (1) Sufficient information must be available at the alternative location to complete the log within 6 workdays after receipt of information that a recordable case has occurred; and (2) a copy of the log updated to within 45 calendar days must be present at all times in the establishment. This location exception applies only to the log, and not to the other OSHA records. Also, it does not affect the employer's posting obligations.

C–1. Q. Can we maintain the logs for our different facilities in one central administrative office rather than in each individual establishment?

A. Yes. For centralized recordkeeping, the log, OSHA No. 200, may be maintained in some place other than the establishment, such as the central office. If that is done, the requirements listed above must be followed. Note, however, that separate records must be maintained for each establishment.

C–2. Q. To qualify for the location exception for the log, must I use a computer to maintain the records at the alternative location?

A. A computer may be used for this purpose, but it is not mandatory.

D. Retention of OSHA Records

The regulations require that the log and summary, OSHA No. 200, and the

supplementary record, OSHA 101, must be retained in each establishment for 5 calendar years following the end of the

the firm's operations are basically ongoing in nature, the employer is still

responsible for maintaining the previous owner's log.

2. *Deciding if injuries and illnesses occurring to employees are recordable.*

keep the records for the personnel supplied by the service.

regarding his activities relating to this Act as the Secretary, in cooperation with the

supplementary record, OSHA 101, must be retained in each establishment for 5 calendar years following the end of the year to which they relate. This requirement pertains to the log and summary, OSHA No. 200, and to the supplementary record, OSHA No. 101.

D–1. Q. Must a new owner retain the OSHA records of an existing establishment he or she just purchased?

A. When a change in ownership of an establishment occurs, the new owner must retain OSHA injury and illness records of the previous owner for 5 years following the end of the year to which they relate. However, the new owner does not have to update these records.

D–2. Q. Must a construction company retain OSHA records for completed projects, such as completed buildings, bridges, etc., if the company's business continues at another location after the completion?

A. Yes. In these situations, the OSHA records must be retained by the company for the 5-year retention period.

D–3. Q. When a firm goes out of business, does the employer still have to retain the OSHA records?

A. In this situation, the firm ceases to exist at the time the employer closes down operations. The employer no longer has to retain the OSHA records once the firm ceases to exist.

D–4. Q. Must records still be retained if a firm undergoes a fundamental change in business structure, such as changing from a privately owned enterprise to a corporation?

A. Yes. The OSHA records must still be retained since the existence of the establishment remains unchanged.

D–5. Q. What is the employer's responsibility for retention of OSHA records if the establishment goes bankrupt?

A. The employer's responsibility in this situation depends upon the nature of the proceeding in bankruptcy. If the firm undergoes a reorganization in bankruptcy, the employer must retain the OSHA records. If a firm undergoes a bankruptcy that results in liquidation, the employer's responsibility terminates upon liquidation. The difference between these two situations is that, in the former, the establishment continues to exist as an organization entity; in the latter, it does not.

D–6. Q. Does an establishment cease to exist for recordkeeping purposes when it seasonally closes down operations? Do these employers have to retain their OSHA records?

A. Just because a firm temporarily closes down operations on a seasonal or cyclical basis does not mean that it ceases to exist as an establishment. If the firm's operations are basically ongoing in nature, the employer is still required to retain the OSHA records. The retention requirement ceases only when the establishment permanently goes out of business.

D–7. Q. An employer with a number of establishments is dissolving her business. Some establishments are being transferred to another firm; some are being closed. What should be done with the OSHA records?

A. For those establishments in which there is a change of ownership, the occupational injury and illness records should be transferred to the new owner. The new owner must preserve those records for 5 years following the end of the year to which they relate; however, the new owner is not responsible for updating log entries. The new owner will, of course, be responsible for work injury and illness records subsequent to the takeover date.

For those establishments which are discontinued as part of a general dissolution, the obligation to preserve or maintain the injury and illness records is ended. If the employer's business were continuing, the injury and illness records for the discontinued establishments should be transferred to a central office (or another establishment if there is no central office) and maintained for the 5-year retention period.

E. Maintenance of the Log (OSHA No. 200)

In addition to keeping the log on a calendar year basis, employers are required to update this form to reflect changes which occur in recorded cases after the end of the calendar year. Maintenance or updating of the log is different from the retention of records discussed in the previous section. Although all OSHA injury and illness records must be retained, only the log must be maintained by the employer.

If, during the 5-year retention period, there is a change in the extent or outcome of an injury or illness which affects an entry on a previous year's log, then the first entry should be lined out and a corrected entry made on that log. Also, new entries should be made for previously unrecorded cases that are discovered or for cases that initially weren't recorded but were found to be recordable after the end of the year in which the case occurred.

E–1. Q. If a change in the ownership of an establishment occurs, does the new owner have to maintain the previous owner's log?

A. No. Although the new owner must retain the previous owner's OSHA records for 5 years, he or she is not responsible for maintaining the previous owner's log.

E–2. Q. Must the new owner maintain the previous owner's log when a change of ownership occurs during mid-year?

A. No. The new owner should retain the previous owner's records, but he doesn't have to maintain them. Instead he should prepare and maintain OSHA injury and illness records which begin with his assumption of ownership and go through the end of the calendar year.

E–3. Q. If an employer reorganizes the structure of his or her business from a private owned enterprise to a corporation, must he or she still maintain logs for the establishment prior to the reorganization?

A. It depends upon the degree of reorganization and the amount of control the original owner still exercises over the operation. New owners need not maintain a previous employer's records. However, records must still be maintained where a firm merely reorganizes its business structure while continuing under the direction and control of the original owner.

E–4. Q. When a firm goes out of business, does the employer have to maintain the OSHA log?

A. No. Employers no longer have to retain their OSHA records or maintain the OSHA log once the establishment goes out of business.

Chapter IV. Employer Decisionmaking

This chapter covers questions which often arise regarding recordkeeping decisions which must be made at the establishment level. It focuses on the legislative and regulatory assignment of decisionmaking authority to employers, and describes the safeguards built into the system to insure the integrity of the records and the validity of the statistics that the records provide.

A. Types of Decisions Employers Make in the Recordkeeping Process

1. *Distinguishing between employees and other workers on site.* The Occupational Safety and Health Act of 1970 and Part 1904 of the *Code of Federal Regulations* require employers to maintain injury and illness records for their own employees at each of their establishments. Employers are not responsible for maintaining records for employees of other firms or for independent contractors, even though these individuals may be temporarily at work in their establishment or on one of their jobsites at the time an injury or illness exposure occurs. Therefore, before deciding whether a case is recordable, an employment relationship needs to be determined.

2. *Deciding if injuries and illnesses occurring to employees are recordable. Employers decide which cases are to be entered on the OSHA records.* This decision must be made in good faith, according to the requirements of the act and Part 1904 of the regulations. Chapter V of this report provides a detailed description of these recordkeeping requirements and furnishes criteria for determining recordability. It presents an overview of the Department of Labor recordkeeping interpretations and guidelines which have been followed by most employers in making recordkeeping determinations since their original issuance in 1972.

3. *Determining the extent or outcome of recordable cases.* Employers must also determine the extent and outcome of the recordable cases. Part 1904.12(c) of the regulations provides the categories in which recordable cases must be classified. These categories are discussed at length in chapter VI.

A–1. Q. How do you differentiate between employees and independent contractors for recordkeeping purposes?

A. This should be evaluated on a case-by-case basis. Employee status generally exists when the employer supervises not only the output, product, or result to be accomplished by the person's work, but also the details, means, methods, and processes by which the work objective is accomplished.

Independent contractors are primarily subject to supervision by the using firm only in regard to the result to be accomplished or end product to be delivered.

Other factors which should be considered in determining employee status are: (1) Whom the worker considers to be his or her employer; (2) who pays the worker's wages; (3) who withholds the worker's Social Security taxes, (4) who hired the worker; and (5) who has the authority to terminate the worker's employment.

People considered independent contractors for other reasons may be considered employees for OSHA recordkeeping purposes.

A–2. Q. Sometimes, businesses use workers from temporary help supply services on a contract basis. Should the using firm record the injuries and illnesses of these temporary workers, or should the service?

A. If the temporary workers are being supplied for indefinite periods of time, or if they are subject to the supervision of the using firm, the temporary help supply service contractor is acting merely as a personnel department for the using firm, and the using firm must keep the records for the personnel supplied by the service.

If the temporary workers are supplied for short periods, and remain subject primarily to the supervision of the supply service, the records must be kept by the service. (See question A–1 above for other considerations.)

A–3. Q. If an employee working in a plant on a contract basis is injured, is the injury recorded on the plant's records or on the records of the contractor?

A. In most situations, the contractor supervises the employee's general work activities and is responsible for maintaining the employee's injury and illness records.

There are exceptional situations, however, where the contractor has no responsibility for supervision of the employee's day-to-day work activities. In these cases, the using firm assumes responsibility for recording his or her injury and illness experience on its records; hours worked for this group of employees should also be obtained.

A–4. Q. Are independent truckdrivers operating on a contract basis considered employees of the company for which they are hauling?

A. Generally, these workers are not considered employees of the using firm. However, see the preceding questions for other factors to be considered in making this evaluation.

A–5. Q. Who is responsible for maintaining records in migrant labor camps?

A. Employing farmers are responsible for maintaining these records if they exercise supervision over the day-to-day work activities of the migrant laborers.

However, if the migrant workers are supplied to the farmers on a purely contractual basis, the farm labor contractors should maintain OSHA records for the migrant laborers. (See question A–1 above for the other considerations in making this determination.)

B. Decisionmaking Authority for Recordkeeping Determinations

1. *Delegation of authority by the Occupational Safety and Health Act of 1970 and Part 1904 of the Code of Federal Regulations.* Both the recordkeeping portion of the act and Part 1904 of the regulations are explicit in assigning recordkeeping responsibilities to employers. Section 8(c)(1) of the act requires employers to complete and preserve records of occupational injuries and illnesses:

> Each employer shall make, keep and preserve, and make available to the Secretary or the Secretary of Health, Education, and Welfare, such records regarding his activities relating to this Act as the Secretary, in cooperation with the Secretary of Health, Education, and Welfare, may prescribe by regulation as necessary or appropriate for the enforcement of this Act or for developing information regarding the causes and prevention of occupational accidents and illnesses.

In addition, Part 1904.2(a) of the regulations carefully states employer recordkeeping obligations:

> Each employer shall, except as provided in paragraph (b) of this section, (1) maintain in each establishment a log and summary of all recordable occupational injuries and illnesses for that establishment; and (2) enter each recordable injury and illness on the log and summary as early as practicable. . . .

Parts 1904.4 and 1904.5 of the regulations describe employer responsibilities concerning the supplementary record and the annual summary.

2. Requirement of good faith. Although employers ultimately decide if and how a particular case should be recorded, their decision must not be an arbitrary one, but should be made in accordance with the requirements of the act, regulations, the instructions on the forms, and the guidelines in this report. Information from medical, hospital, or supervisors' records should be reviewed along with other pertinent information, and the employee should be interviewed to determine his or her medical condition and ability to perform normal job duties.

3. Checks and balances within the recordkeeping system. The validity of the records is enhanced by the involvement of all participants in the recordkeeping and reporting system. Employers need accurate and meaningful injury and illness information so that they can focus safety and health efforts on high-risk areas and activities to eliminate workplace hazards. Consequently, they should make every effort to accurately record their firm's injury and illness experience. In addition, OSHA periodically reviews workplace records to verify their accuracy. Further, the posting and access provisions in Part 1904 of the regulations allow employees to review the records to insure the validity of recordkeeping determinations. Chapter II of this report discusses the posting requirements; employee access is covered in chapter VIII.

4. Penalties for recordkeeping violations. Part 1904.9(a) provides the penalties for falsification of records or reports. This part incorporates the language of Section 17(g) of the act:

> Whoever knowingly makes any false statement, representation, or certification in any application, record, report, plan or other document filed or required to be maintained pursuant to this Act shall be punished by a fine of not more than $10,000 or by imprisonment for not more than six months, or by both.

Does this cover both the employer and the employee if either knowingly supplies false information?

criteria must be sufficient to meet the needs of safety and health professional

injuries and illnesses are classified as deaths, lost-time cases, or non-lost-time

illness statistics produced by such a system would not accurately reflect

Whoever knowingly makes any false statement, representation, or certification in any application, record, report, plan or other document filed or required to be maintained pursuant to this Act shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment, for not more than 6 months, or both.

Additional information is available on penalties for recordkeeping violations in chapter VIII.

B–1. Q. What entries, if any, need to be made in instances of employer-employee disputes involving State workers' compensation measures to determine the facts related to alleged injuries, illnesses, or deaths?

A. Workers' compensation determinations should not impact the OSHA recordability of cases under OSHA. Some cases may be covered by workers' compensation but are not recordable; others may be OSHA recordable but are not covered by workers' compensation. Cases should be evaluated solely on the basis of OSHA requirements.

B–2. Q. Who decides if an injured employee is capable of working?

A. This decision must be the employer's. There will be a few cases in which the employer and the employer's physician feel certain that an employee is perfectly able to work, but the employee disagrees. If the employer is absolutely certain about the case, it should not be entered on the log, OSHA No. 200. However, if the employer has any doubt about the case, it should be entered on the log and lined out later if it turns out that, in fact, the employee was able to perform his or her job. The employee may file a complaint if he disagrees with the employer's decision.

B–3 Q. Why does the employer always decide what is recordable? Why can't it be the company doctor since the doctor or the medical department usually decides whether an employee is capable of working after an injury?

A. The act says that the employer is responsible for keeping the records. The employer may delegate the responsibility to someone else, or may rely on the determination of a doctor. However, the decision is ultimately the employer's.

B–4. Q. Who has the legal liability for making recordkeeping determinations—the person who signs the forms, the local manager, or the company executive officer?

A. The liability belongs to the employer who is ultimately responsible for recording and reporting. Each of the aforementioned persons is a representative of the employer.

B–5. Q. The act states that whoever supplies false information is subject to penalty. Does this cover both the employer and the employee if either knowingly supplies false information?

A. Most of the penalty provisions in Section 17 of the act apply to "any employer," but the penalty for false statements applies to "whoever knowingly makes any false statement. . . ." This has been interpreted by the Occupational Safety and Health Review Commission to include both employers and employees.

B–6. Q. How are disagreements on recordability or the extent of a case resolved when a dispute arises between an employer and an employee, or between an employer and an OSHA compliance officer?

A. Employers have the final responsibility for making bona fide recordkeeping determinations. However, employers' decisions may be challenged. Persons challenging these decisions may contact OSHA, who, in turn, will contact the employer. If no resolution can be obtained through discussions, the following steps are involved: (1) After examining the records and investigating the work situation, an OSHA compliance officer may request that the employer make changes in his OSHA records; (2) if the employer refuses, the compliance officer may recommend to the OSHA Area Director that a citation be issued; (3) if a citation is issued, the employer has an opportunity for an informal conference with the OSHA Area Director to present his viewpoint (the OSHA Area Director may uphold or reduce the proposed penalty as a result of this conference); (4) if the dispute remains unresolved, the employer can still contest the citation; (5) contested cases are litigated before an administrative law judge of the Occupational Safety and Health Review Commission; and (6) thereafter are subject to the statutory appeals process.

Employers and other parties interested in the enforcement process should contact their closest OSHA area office or their OSHA regional office. This process is described in detail in the OSHA pamphlet, *Employer Rights and Responsibilities Following on OSHA Safety Inspection.* Addresses and telephone numbers for OSHA regional offices are listed in appendix E of this report.

Chapter V. Analysis of Recordability of Cases

This chapter presents guidelines for determining whether a case must be recorded under the recordkeeping requirements of the Occupational Safety and Health Act of 1970, as well as how to classify recorded cases. These requirements should not be confused with recordkeeping requirements of various workers' compensation systems, internal industrial safety and health monitoring systems, the ANSI Z.16 standards for recording and measuring work injury and illness experience, and private insurance company rating systems. Reporting a case on the OSHA records should not affect recordkeeping determinations under these or other systems. Also:

Recording an injury or illness under the OSHA system does not necessarily imply that management was at fault, that the worker was at fault, that a violation of an OSHA standard has occurred, or that the injury or illness is compensable under worker's compensation or other systems.

At the outset, it should be noted that the scope of recordability of the OSHA system detailed in this chapter is broader and more inclusive than that of most other recordkeeping systems. Some injuries and illnesses are included that may not be "compensable" in the workers' compensation context, or "recordable" under individual company safety and health recordkeeping systems. These cases were included in order to make the system as simple and equitable as possible. The alternative of developing a detailed list of exceptions for not recording specific injuries and illnesses was felt to impose far greater administrative and reporting burdens on most employers than requiring that a relatively small number of borderline cases be recorded. The relatively simple OSHA recording boundaries assure a valid, consistent, and uniform recordkeeping system that is capable of producing reliable statistical information.

The OSH Act provides a basic description of which cases are to be recorded. The recordkeeping regulations in 29 CFR Part 1904 provide specific recording and reporting requirements which comprise the framework of the OSH recordkeeping system. The regulations also expand upon the basic definition of recordability in the act.

In a few situations, the criteria of the act, regulations, or the guidelines listed in this report may seem inappropriate. However, it would be virtually impossible to enact legislation, draft regulations, or issue guidelines that address every possible recordkeeping situation. The recordkeeping system currently encompasses over 5 million workplaces throughout the United States. Wide variations exist in the training of individuals making recordkeeping determinations and the resources firms can allocate to the recordkeeping process. Recordkeeping

criteria must be sufficient to meet the needs of safety and health professional maintaining complex programs, while also remaining comprehensible to those maintaining records without the benefit of specialized safety and health training (such as some employers with small-sized establishments) and the approximately 75 million employees involved in the recordkeeping process through the posting and access provisions of the regulations.

Although generally well intentioned, employers or trade associations are discouraged from formulating their own guidelines for recordability which differ in substance from these guidelines or deviate from the OSHA regulations. If employers follow different guidelines, differences in interpretation might be injected into the system which could jeopardize the uniformity of the records and the validity of the statistical data. The BLS guidelines represent official agency interpretations of employer recordkeeping requirements. They provide recordkeeping principles that were developed through a cooperative effort between government, business, and labor prior to and following the implementation of the act, and have been followed by most employers in making recordkeeping determinations since their issuance in 1972. The guidelines provide the Department of Labor's interpretation of the requirements of the OSH Act and regulations, and are considered supplemental instructions to the recordkeeping forms.

Employers with questions on OSHA recordkeeping and reporting not specifically addressed in this report should contact the State agency cooperating with BLS in administering the recordkeeping program or the BLS regional or National offices.

A. Method Used for Case Analysis

Sections 8(c)(2) and 24(a) of the Occupational Safety and Health Act provide the basic definition of the types of cases to be recorded:

> . . . work-related deaths, injuries and illnesses other than minor injuries requiring only first aid treatment and which do not involve medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job.

Part 1904.12(c) of the *Code of Federal Regulations* contains a definition of recordable injuries and illnesses which follows this language and incorporates criteria for determining the extent or outcome of these cases. Under this part, injuries and illnesses are classified as deaths, lost-time cases, or non-lost-time cases.

The definition of a recordable case in the heading of the log (OSHA No. 200) reflects the language of the act and regulations:

> RECORDABLE CASES: You are required to record information about every occupational *death;* every nonfatal occupational *illness;* and those nonfatal occupational *injuries* which involve one or more of the following: loss of consciousness, restriction of work or motion, transfer to another job, or medical treatment (other than first aid).

This definition provides sufficient guidance for the analysis of the vast majority of cases under the OSHA recordkeeping system. Chart I presents this methodology in graphic form and outlines the line of thought employers should apply in deciding whether or not to record a particular case. Only a very small proportion of the cases require additional criteria to determine recordability.

The decisionmaking process consists of five steps:

1. Determine whether a case occurred: that is, whether there was a death, illness, or an injury;
2. Establish that the case was work related; that it resulted from an event or exposure in the work environment;
3. Decide whether the case is an injury or an illness;
4. If the case is an illness, record it and check the appropriate illness category on the log;
5. If the case is an injury, decide if it is recordable based on a finding of medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job.

B. Determining Whether or Not a Case Occurred

The first step in the decisionmaking process is the determination of whether or not an injury or illness occurred. Employers have nothing to record unless an employee has experienced a work-related injury or unless a work-related illness is recognized. In most instances, recognition of these injuries and illnesses is a fairly simple matter. However, some of the following situations have troubled employers over the years.

B–1. Q. If an injury or illness occurs, does it matter for the purposes of recordability who was at fault in causing the accident or illness exposure?

A. No. Fault plays no role in the OSHA recordkeeping system. Injury and illness statistics produced by such a system would not accurately reflect overall worker experience (i.e., it would be missing those cases reported for which employers are not at fault) and consequently would not satisfy the coverage requirements of the Occupational Safety and Health Act of 1970. Section 2(b)(12) of the act states that one of its purposes is to provide for appropriate reporting procedures ". . . which will accurately describe the nature of the occupational safety and health problem." Sections 8(c)(2) and 24(a) of the act specifically define what is a recordable injury. They make no distinction between incidents that are compensable under State workers' compensation laws, incidents caused by employer neglect, incidents that are preventable, or the random incidents that seem to happen when no one is at fault.

In addition, there are serious practical limitations. Recording cases on the basis of fault would necessitate the introduction of extremely complex recording criteria to be evaluated by both employers and employees. And whose judgment would prevail as to who was at fault in causing the injury or illness? Such determinations would almost certainly result in employers and employees contesting a significant number of recordkeeping decisions.

The concept of fault has never been a consideration in any recordkeeping system of the Department of Labor, nor has it been incorporated into various State workers' compensation systems or statistical systems of other agencies such as the American National Standards Institute.

B–2. Q. Does it matter for OSHA recordkeeping purposes whether or not the injuries and illnesses are preventable?

A. No. Recording only those injuries and illnesses that are preventable would not produce sufficient information to meet the coverage requirements of the OSH Act and 29 CFR Part 1904, nor would it satisfy the needs of the Occupational Safety and Health Administration for comprehensive injury and illness information. Focusing on whether or not the injuries and illnesses experienced were preventable would result in employers and employees contesting a significant number of recordkeeping decisions, and would unduly complicate many recordkeeping determinations.

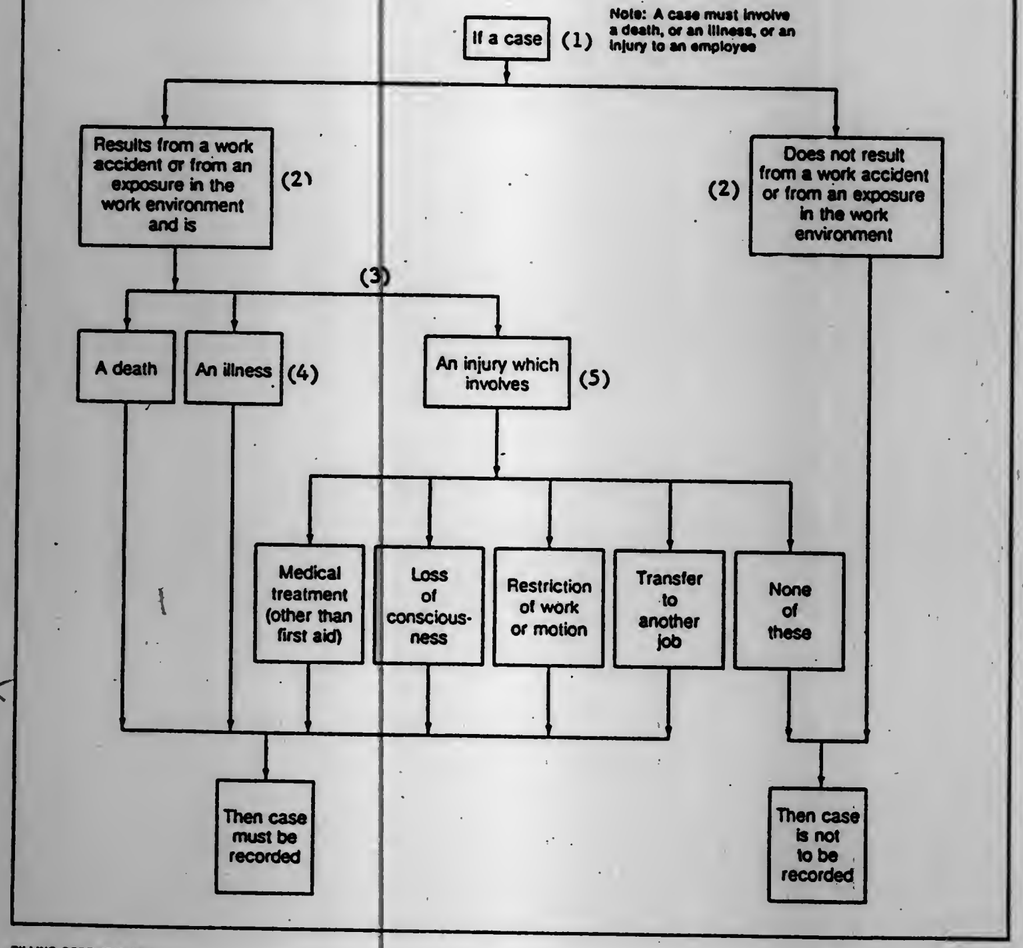
Chart 1. Guide to Recordability of Cases Under the Occupational Safety and Health Act



BILLING CODE 4510-24-C

B–3. Q. Must an employee be involved in a specific job task for an injury or illness to be recordable?

A. No. For a case to be recordable, the worker must have been an employee of the firm at the time of the injury or illness exposure. Workers are considered employees while in pay status. In this context, pay status refers to the overall employment relationship whereby the worker is receiving wages or some other form of compensation for the employer for services rendered. It does not mean that the worker must be involved in some specific job task at the time of the injury or illness exposure for the case to be recordable, or that cases are recordable only if they occur during hours for which wages are paid. (See section C of this chapter for a discussion of work relationship.)

B–4. Q. Are cases recordable if they are discovered after the injured or ill employee has been terminated or has retired?

A. These cases are recordable throughout the 5-year record retention period (see chapter III), so long as the employee was on active duty or in pay status when the injury or illness exposure occurred. The worker does not need to be an active employee or in pay status at the time the case is recorded. Such cases should be recorded on the log of the year of the injury or illness exposure.

B–5. Q. Are there time limits in recording cases. Suppose a worker says he hurt his back 2 weeks ago, but there was no record or report of it at that time. Is it subsequently recordable on this OSHA No. 200?

A. Yes. If it is established that a recordable back injury did occur, it must be included on the OSHA No. 200, even though the determination was made several weeks after the injury occurred. The actual date of injury should be entered in column *B* of the log.

Employers are required to make entries on the OSHA logs for all recordable injuries and illnesses experienced by their employees. This obligation exists not only during the year that the injury or illness exposure took place, but also throughout the 5-year maintenance and retention period. (See chapter III, sections D and E.)

B–6. Q. Are exposures to harmful substances recordable?

A. These exposures, in and of themselves, are not recordable under Part 1904 of the regulations. Entries on the log, OSHA No. 200, and on the supplementary record, OSHA No. 101, need be made only when the exposure results in a recordable work injury or illness.

However, in addition to the general recording requirements in Part 1904, some specific OSHA standards or State regulations may require the recording of exposures to particular substances. These requirements are not addressed in this report. Employers should consult the appropriate OSHA standards or State regulations to ascertain their additional recordkeeping obligations.

B–7. Q. Are permanent or temporary transfers to another job to remove employees from further exposure to hazards considered recordable cases for the purposes of OSHA recordkeeping?

A. If these transfers are preventive in nature, and if no work-related illness has occurred, they are not considered recordable events.

Employers usually make such transfers either: (1) To control the amount of employee exposure during a specific period of time, or (2) to remove an employee from an area to control adverse health effects.

B–8. Q. If a driver involved in an auto accident is sent for a physical examination without any specific injury, should the case be recorded?

A. This would be in the nature of preventive medicine and would not be recorded unless the examination reveals that a recordable injury resulted from the accident.

B–9. Q. If a hospital employee contracts an illness from a patient and all employees in the hospital unit are inoculated to prevent spread of the illness, is each person so treated considered a recordable case?

A. No. Such cases would not be recordable because the employees are receiving preventive care and are not injured or ill. Of course, the case of the hospital employee who contracted the illness should be recorded.

B–10. Q. Is hospitalization for observation recordable?

A. If an employee goes to or is sent to a hospital for a brief period of time for observation, it is not recordable, provided that no medical treatment was given, or no illness was recognized. While hospitalization for observation under these circumstances is not recordable on the OSHA 200 form, if 5 or more such hospitalizations occurs as the result of a single incident at a worksite, the incident shall be reported to OSHA within 48 hours. (See 29 CFR 1904.8, chapter VII, section B of these guidelines, or the OSHA Field Operation Manual instructions.)

B–11. Q. What if the employee is admitted to the hospital or stays in the hospital for observation for several hours? Is this still not recordable?

A. These cases are recordable. The focus, however, is not on the length of the stay, but on whether medical treatment was provided or whether the incident is recordable on one of the other grounds. Prolonged hospital stays are usually associated with the more serious cases and often involve some form of medical treatment, even though they may be initiated for primarily diagnostic purposes.

B–12. Q. How do you differentiate between a new incident and the recurrence or further complication of a previous injury or illness? What is the difference between these two situations for OSHA recordkeeping purposes?

A. Employers are required to make new entries on their OSHA forms for each new recordable injury or illness. New entries should not be made for the recurrence of symptoms from previous cases.

Injuries. The aggravation of a preexisting injury almost always results from some movement by the employee. Consequently, when work-related, these new incidents should be recorded as new cases on the OSHA forms, assuming they meet the criteria for recordability described in sections C, D, and E of this chapter.

Illnesses. Deciding whether the emergence of illness symptoms constitutes a new event or the recurrence of a previous illness is more complex. Generally, each occupational illness should be recorded with a separate entry on the OSHA No. 200. However, certain illnesses, such as silicosis, may have prolonged effects which recur over time. The recurrence of these symptoms should not be recorded as a new case on the OSHA forms.

The recurrence of symptoms of previous illnesses may require adjustment of entries on the log for previously recorded illnesses to reflect possible changes in the extent or outcome of the particular case.

B–13. Q. Should an employee's pre-existing condition be taken into account in making OSHA recordkeeping determinations?

A. Pre-existing conditions are not considered relevant in making determinations of recordability under the OSH Act except for the recurrence of symptoms of work-related illnesses discussed in B–12 above. Employers should record each case resulting from an event (such as a slip, trip, fall, or overexertion) and each exposure that results in a recordable work injury or illness regardless of the employee's pre-existing condition. This is essential to the maintenance of a workable system that produces statistics that accurately reflect the incidence (and not

prevalence) of work injuries and illnesses.

B–14. Q. Does this mean that when an

B–17. Q. Must there be an identifiable event or exposure in the work

horseplay; and, an employee injured while playing basketball in the company

VOL 50 ISS 137 JL 17 1985 UMI

prevalence) of work injuries and illnesses.

B–14. Q. Does this mean that when an employee is hired with a known physical defect, such as a trick knee, a work accident partially attributable to this defect would result in a recordable case?

A. Yes. An employee's physical defect or pre-existing physical condition does not affect the determination of recordability. If such a case results from an event or exposure in the work environment and meets the other criteria for recordability, the employer must enter it on the OSHA forms without regard to the employee's pre-existing physical condition. If injury results *solely* from a physical defect (i.e., employee falls while walking when trick knee gives way AND there is no environmental factor), it is *not* occupational. However, if the work environment or a work event contributes (i.e., employee steps on stone or slips, trick knee gives way, and he falls), any resulting injury is occupational.

B–15. Q. Are there specific requirements for evaluating the occurrence of back or hernia cases?

A. No. Back and hernia cases should be evaluated in the same manner as any other case. Questions concerning the recordability of these cases usually revolve around: (1) The impact of a previous back or hernia condition on the recordability of the case, or (2) whether or not the back injury or hernia was work related.

Pre-existing conditions generally do not impact the recordability of cases under the OSHA system. (See preceding questions 13 and 14.)

For a back or hernia case to be considered work related, it must have resulted from a work-related event or exposure in the work environment. Employers may sometimes be able to distinguish between back injuries that *result* from an event in the work environment, and back injuries that are caused elsewhere and merely *surface* in the work environment. The former are recordable; the latter are not. (See section C of this chapter for a discussion of work relationship.)

B–16. Q. An employee's back goes out while performing routine activity at work. Assuming the employee was not involved in any stressful activity, such as lifting a heavy object, is the case recordable?

A. Particularly stressful activity is not required. If an event occurred in the work environment that caused or contributed to the injury, the case would be recordable, assuming it meets the other requirements for recordability.

B–17. Q. Must there be an identifiable event or exposure in the work environment for there to be a recordable case? What if someone experiences a backache, but cannot identify the particular movement which caused the injury?

A. Usually, there will be an identifiable event or exposure to which the employer or employee can attribute the injury or illness. However, this is not necessary for recordkeeping purposes. If it seems likely that an event or exposure in the work environment either caused or contributed to the case, the case is recordable, even though the exact time or location of the particular event or exposure cannot be identified.

If the backache is known to result from some nonwork-related activity outside the work environment and merely surfaces at work, then the employer need not record the case. In these situations, employers may want to document the reaons they feel the case is not work related.

B–18. Q. What about cases where the employee alleges that an injury or illness has occurred? Must employers record these cases without any medical verification?

A. Medical verification is not required for recordability. However, employers have ultimate responsibility for making good-faith recordkeeping determinations. If an employer doubts the validity of an employees' alleged injury or illness and there is no substantive or medical evidence supporting the allegation, the employer need not record the case.

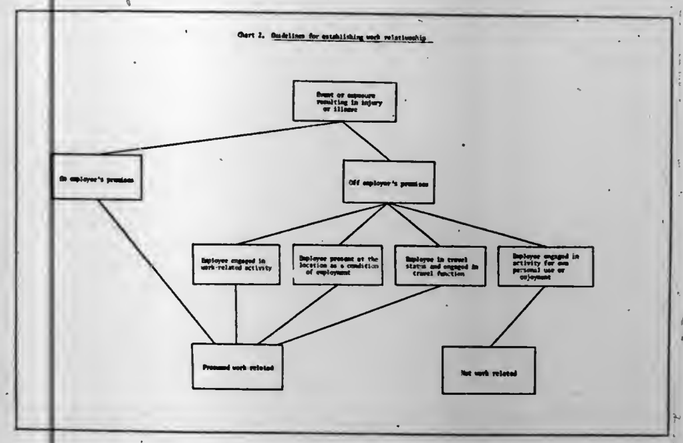
B–19. Q. Must occupational injuries and illnesses that are disputed be recorded?

A. Within 6 workdays after receiving information that an injury or illness has occurred, the employer must determine whether the case is recordable. Questionable cases should be entered on the log, OSHA No. 200, and lined out at a later date if they are found not recordable.

C. Establishing Work Relationship

Work relationship is the next requirement for recordability. The Occupational Safety and Health Act of 1970 requires employers to record injuries and illnesses that are work related. *Work relationship is established under the OSHA recordkeeping system when the injury or illness results from an event or exposure in the work environment. The work environment is primarily composed of: (1) The employer's premises, and (2) other locations where employees are engaged in work-related activities or are present as a condition of their employment.* When an employee is off the employer's premises, work relationship must be established; when on the premises, this relationship is presumed. The employer's premises encompass the total establishment. This includes not only the primary facility, but also such areas as company storage facilities and restricted company parking lots. In addition to physical locations, equipment, or materials used in the course of an employee's work are also considered part of the employee's work environment.

Chart 2 provides a guide for establishing the work relationship of cases.



1. *Injuries and illnesses resulting from events or exposures on the employer's premises.* Generally, injuries and illnesses that result from an event or exposure on the employer's premises are considered work related. The employer's premises consist of the total establishment. They include the primary work facility and other areas which are considered part of the employer's general work area.

C–1. Q. Are injuries of employees in company restrooms, hallways, or cafeterias considered to be work related?

A. Yes. These areas are generally all considered to be part of the employer's premises and constitute part of the work environment. Injuries occurring in the work environment are considered work related. The specific activity the employee was engaged in at the time of the injury is not the controlling factor.

C–2. Q. Do the employer's premises include employer controlled recreational facilities such as company ball fields, golf courses, etc.?

A. For OSHA recordkeeping purposes, the definition of work premises excludes employer controlled ball fields, tennis courts, golf courses, parks, swimming pools, and other similar recreational facilities which are *basically apart from the workplace and dedicated primarily to employee use during off-work hours.* However, recreational facilities located within the work environment are included as part of the work premises. These may include company controlled gymnasiums, handball courts, racketball courts, etc. *that are located within the work facility.*

C–3. Q. Are company parking lots considered part of the employer's work premises?

A. Parking facilities that are generally accessible to both employees and members of the general public are not considered part of the employer's work premises. Therefore, injuries to employees on these public parking lots are not recordable unless the employee was engaged in some specific work activity. However, injuries to employees on parking lots restricted to employee and visitor use only would be considered on premises and hence presumed work related.

Visitor parking spaces are distinguished from parking for general public by the firm's ability to limit or revoke driver access.

C–4. Q. An employer neither owns nor leases the property on which he conducts his business operations. Under the regulations, would the property be considered part of the employer's premises?

A. The determination of whether a particular location constitutes part of the employer's premises depends upon whether the location is considered part of the employer's domain, not whether he owns or leases it. As a general rule, if the site is part of an establishment of the employer, it is considered part of his premises.

An establishment is a single physical location where business is conducted or where services or industrial operations are performed.

C–5. Q. Is a right-of-way used by a utility company considered to be part of the utility company's premises?

A. Yes. A utility company has a sufficient relationship to these rights-of-way to have them considered part of its premises. Injuries and illnesses occurring to utility workers in these areas are presumably work related.

C–6. Q. What about cases that occur on the premises during nonduty hours? If a case occurs either before or after normal work hours, or on the weekends and holidays when work is not scheduled, is it recordable?

A. Presence on the employer's premises is normally sufficient to establish work relationship. It does not matter whether or not the incident occurs during regular working hours if the worker is present to perform some job task or receive some employment benefit, or if his presence is in some way *related to his status as an employee.* (For further clarification, see the answers to questions C–9 and C–10.)

C–7. Q. Is every case resulting from an event or exposure on the employer's premises considered work related?

A. No. The general rule is that all injuries and illnesses which result from events or exposures occurring to employees on the employer's premises are presumed to be work related. Under the recordkeeping system, the premises include the total establishment. The nature of activity which the employee is engaged in at the time of the event or exposure, the degree of employer control over the employee's activity, the preventability of the incident, or the concept of fault do not affect the determination.

There are cases which occur on the employer's premises and which do not seem to have anything to do with the work but which must still be recorded to maintain the simplicity of the recording criteria and the integrity of the statistics. Some examples are: employee chokes while eating lunch in company cafeteria; injuries resulting from employee horseplay; and, an employee injured while playing basketball in the company gymnasium during lunch break. These are included to keep relatively simple recording boundaries necessary for maintaining a workable system which can be used by the 5 million employers and 75 million employees subject to the recordkeeping regulations.

C–8. Q. Under the OSHA recordkeeping system, work relationship is presumed when the employee is on the employer's premises. Is this presumption rebuttable? If so, describe some situations where the employee's presence on the premises would not be sufficient, by itself, to establish work relationship.

A. The presumption is rebuttable. One situation where the presumption would not apply would be where a worker is on the employer's premises as a member of the general public and not as an employee. (See question C–9, for a further description of these situations.) Another example would be a case, with symptoms that merely surface on the employer's premises, where the symptoms are the result of a nonwork-related event or exposure off premises. (See questions B–15 and B–17 for the application of this type of analysis to back cases.)

C–9. Q. How do you determine those situations where a worker is off duty and is on the employer's premises as a member of the general public and not as an employee? For example, a department store employee returns to the store during off-duty hours solely to shop and is injured. Is this case work related?

A. No. The case is not work related. For cases such as this to be recordable, there must be some relationship between the persons's presence on the premises and his or her status as an employee. Employers should ask themselves: Would the person have been on the premises but for the fact that he or she was an employee? It is important to note that the focus is on the *status* of the person as an employee, not on the activity the person was engaged in at the time of the event or exposure.

The example provided above is not recordable because the worker was present on the premises solely to shop; his presence on the premises had no relationship whatsoever to his status as an employee. Any member of the general public could come into the store to shop. This exclusion applies even if the employee is receiving some employment benefit such as an employee discount in a department store, or using public restrooms while on the employer's work facilities for

personal reasons, e.g., filling station employee working on his or her own car. Identical cases which occur when an

C–12. Q. Do employers have to record an injury on the employer's premises that occurs to an employee as a result of

related activities. Public places are generally not part of the work

An employee's work-related activities on a business trip include such

event or exposure which caused the case, not by the resulting condition of

D–1. Q. Should an adverse reaction to

personal reasons, e.g., filling station employee working on his or her own car. Identical cases which occur when an employee is in work status would, however, be considered work related and hence recordable. The following situations illustrate cases where there is sufficient connection between an off-duty employee and the job to establish work relationship:

1. The employee is injured on the premises while going to or from a work shift.

2. The employee is injured on the premises while picking up a pay check during off-duty hours.

3. An employee is injured on the premises during lunch or coffee breaks.

C–10. Q. Please define "premises" for the trucking industry. Is the cab of the truck the premises? What about loading and unloading? Is the area around the truck used for loading and unloading considered part of the premises?

A. A truck on the road or loading and unloading away from its home base would be off the employer's premises. However, injury or illness exposures experienced during these activities would still be work related because the employees are engaged in work-related activities. The truck and its surroundings are considered part of the work environment even though they are not part of the employer's premises.

C–11. Q. Why record injuries and illnesses other than those that occur during the execution of a specific work assignment undertaken at the direction of management?

A. The stated purpose of the Occupational Safety and Health Act of 1970 requires a broader scope of coverage than "the execution of specific work assignments." Section 2 of the act addresses injuries and illnesses arising out of "work situations." Sections 2(b)(1), (2), and (4) of the act refer to "place of employment" and the provisions of safe and healthful "working conditions." Section 2(b)(7) of the act deals with preventing employee ill health as a result of the "work experience." Section 2(b)(12) states that one of the purposes of the act is to provide for appropriate reporting procedures ". . . which will accurately describe the nature of the occupational safety and health problem." These and other references throughout the act indicate that its coverage is intended to go beyond specific job tasks to encompass the total work environment.

In addition, the inclusion of these cases is necessary for the maintenance of a simple and equitable recordkeeping system capable of furnishing statistically reliable information.

C–12. Q. Do employers have to record an injury on the employer's premises that occurs to an employee as a result of horseplay? Would they have to record a case if it resulted from a robbery?

A. Yes. Both would be recordable. Activities on the employer's premises are presumed to be work related. The basis for determining work relationship for OSHA recordkeeping purposes is that the event occurred in the work environment.

Sections 8(c)(2) and 24(a) of the OSH Act specifically define recordable injuries and illnesses. They make no distinction between incidents that are compensable under State workers' compensation laws, incidents that are caused by worker negligence, incidents caused by employer neglect, incidents that are preventable, or the random incidents that seem to happen when no one is at fault.

2. *Injuries and illnesses resulting from events or exposures off premises.* When an employee is off the employer's premises and suffers an injury or an illness exposure, work relationship must be established; it is not presumed. Injuries and illness exposures off premises are considered work related if the employee is engaged in a work activity or if they occur in the work environment. The work environment in these instances includes locations where employees are engaged in job tasks or work-related activities, or places where employees are present due to the nature of their job or as a condition of their employment.

C–13. Q. Our employees participate in many off premises activities such as picnics, impromptu softball games at noon, bowling leagues at night, and a football team which plays its games on weekends. If any of our employees are injured in these activities and require medical treatment, should the injuries be recorded?

A. They need only be recorded if they are connected with the injured person's job. If the employees are paid for sports activities or are required by their employer to participate, any resulting injuries are work related and should be recorded. If not, the injuries which occur are not recordable, even though the employer may be providing uniforms and equipment.

C–14. Q. Is a case recordable if an employee is injured while walking to work on a public sidewalk from a public parking lot? What if an employee gets into a fight or is attacked in this situation?

A. These cases do not appear to be work related since the injuries did not occur in the work environment, and the employees were not engaged in work-related activities. Public places are generally not part of the work environment unless the employee has begun work and is performing a work-related activity, or is present at the public location as a condition of his or her employment. For example, the work environment for a route salesperson may include public streets, highways, sidewalks, etc.

C–15. Q. Would an injury which took place after a person checked into work, but occured while he or she was off the company permises on an errand be recordable?

A. This case is recordable if the employee was engaged in a work-related activity or if the person's presence at the location of the injury was required by his or her job. If the errand was personal in nature, the injury should not be recorded.

C–16. Q. Are the employee's activities off the employer's premises all deemed work related once the employee's work shift has begun?

A. No. Work relationship must be established for employee activities off premises—it is not presumed. To be engaged in a work-related activity off premises, the employee must have been performing some job, task, or sevice for the employer, or must have been present at the off-premises location in connection with his or her employment. If the employee is off the employer's premises, and leaves the normal area of operations entirely for his or her own purpose, then these activities would not be considered work related.

C–17. Q. Is an injury occuring during the lunch of an employee working off the employer's premises in nontravel status considered work related?

A. This case would be work related if it occurred in the off-premises work environment or if it was a work-related luncheon.

C–18. Q. Are injuries considered work related when they occur to employees who work on the employer's premises, but leave the premises for lunch and are injured?

A. No. Injuries occurring to employees while they are off the employer's premises and out of the work environment on lunch are not recordable unless the luncheon is in some way required by their job.

C–19. Q. How are employees in travel status handled differently?

A. All of the employee's activities required by the trip are considered to be work related. The rationale is that the traveling employee would not be exposed at this location but for the travel requirement of his or her job.

An employee's work-related activities on a business trip include such necessary travel-related functions as eating, sleeping and traveling. However, extraneous activities unrelated to the normal scope of the trip and solely for the employee's own personal use or enjoyment should not be recorded. Examples of these non-recordable events would be injuries on excursions, such as ski trips, or injuries which occur in public places when the employee is there for recreational purposes only.

C–20. Q. Are there any time limitations imposed on the work relationship designation for employees in travel status?

A. An employee in travel status is considered to be in the work environment 24 hours a day. However, see question C–19 above for the substantive limitations.

C–21. Q. When is work relationship first established for an employee in travel status? When he or she leaves home? At the airport, train station, etc.?

A. For recordkeeping purposes, work-related activities begin when the employee leaves home, assuming the employee did not intend to report to his or her office prior to beginning the trip. If the employee first reports to the office, travel status begins when the employee leaves the office to begin the trip. Travel status ends once the employee returns to the point of origin of the trip. (Employers should refer to questions A–12–14 in chapter I for a discussion of the geographic coverage limitations on travel status.)

C–22. Q. How do you differentiate between employees working off premises in nontravel status and employees in travel status?

A. Employees off premises in nontravel status still work within their normally scheduled hours and normal geographic area of operation. Employees in travel status must either be: (1) Outside their normal area of operation, or (2) working off premises for more than a normal workday (such as staying overnight).

D. Distinguishing Between Injuries and Illnesses

Under the OSH Act, all work-related illnesses must be recorded, while only those injuries which required medical treatment (other than first aid), or involve loss or consciousness, restriction of work or motion, or transfer to another job are recordable. The distinction between injuries and illnesses, therefore, has significant recordkeeping implications.

The determination of whether a case involves an injury or illness is determined by the nature of the original event or exposure which caused the case, not by the resulting condition of the affected employee. Injuries are caused by *instantaneous* exposures in the work environment. Cases resulting from anything other than instantaneous events are considered illnesses. This concept of illnesses includes acute illnesses which result from exposures of relatively short duration.

An occupational injury is defined on the back of the log and summary form, OSHA No. 200, as follows:

Occupational Injury is any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from an exposure involving a single incident in the work environment.

Note.—Conditions resulting from animal bites, such as insect or snake bites, or from one-time exposure to chemicals are considered to be injuries.

A single incident involving a *one-time instantaneous* exposure to chemicals is classified as an injury. Occupational injuries are analyzed in detail in the following section of this chapter.

An occupational illness is defined on the back of the log and summary form, OSHA No. 200:

Occupational Illness of an employee is any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact.

Some conditions may be classified as either an injury or an illness (but not both), depending upon the nature of the event that produced the condition. For example, a loss of hearing resulting from an explosion (an instantaneous event) is classified as an injury; the same condition arising from exposure to industrial noise over a period of time would be classified as an occupational illness. Similarly, irritation of the throat from exposure to chlorine gas fumes could be classified as either an injury or an illness. If the exposure was instantaneous and occurred when a cyclinder of gas ruptured, the case would be considered an injury. The case would be an illness if the employee was exposed to the agent over time, such as working in an area where chlorine fumes from a bleaching process were present.

This seeming inconsistency in recording certain types of cases has its foundation in industrial safety practice. The safety measures rquired to avoid instantaneous events are considered fundamentally different from those required to prevent exposures over a period of time which result in conditions of ill health. The classification of a case as an injury or an illness is intended to reflect this distinction.

D–1. Q. Should an adverse reaction to a tetanus shot given for a laceration be classified as an injury or an illness?

A. This should be classified as an injury because the classification is based on the original event—the laceration—not on the subsequent developments.

D–2. Q. Should the following two cases be recorded differently; if so, what is the rationale behind the differentiation?

a. Lacerations resulting from a chemical explosion.

b. A respiratory ailment resulting from a chemical explosion.

A. Both of these cases would be classified as injuries because of the nature of the original event, a chemical explosion.

D–3. Q. How do you distinguish an injury from an illness? For example, it appears that a burn can be one or the other.

A. The basic definition of an occupational injury includes those cases which result from a work accident or from an exposure involving a *single instantaneous incident* in the work environment. Contact with a hot surface or a caustic chemical which produces a burn in a single instantaneous moment of contact is an injury. Sunburn or welding flash burns which result from prolonged exposure to sunrays or welding flashes are considered illnesses. Similarly, a one-time blow which damages the tendons of the hand is considered an injury; while repeated trauma or repetitious movement which produces tenosynovitis is considered an illness.

The basic determinant is the single-incident concept. If the case resulted from something that happened in one instant, it is classified as an injury. If the case resulted from something that was not instantaneous, such as prolonged exposure to hazardous substances or other environmental factors, it is considered an illness.

D–4. Q. How should back cases be classified—as injuries or illnesses? What about a situation where an employee complains of his back hurting, but is unable to associate it with a single instantaneous event?

A. Back cases should be classified as injuries because they are usually triggered by an instantaneous event.

Classifying back cases as injuries is appropriate not only for cases resulting from identifiable events, but also for cases where the specific event cannot be pinpointed, since back cases are usually triggered by some specific movement. Such generalizations are necessary to keep recordkeeping

determinations as simple and equitable as possible.

D–5. Q. Should carpal tunnel

Therefore, for OSHA recordkeeping purposes occupational illnesses include

(other than an occupational injury). Detection of these abnormal conditions

occupation where each condition is likely to occur, symptoms associated

A. No. Any diagnosed occupational illness reported to the employer is

levels are not recordable in and of themselves. See question E–10 below.

VOL 50 ISS 137 JL 17 1985 UMI

determinations as simple and equitable as possible.

D–5. Q. Should carpal tunnel syndrome be classified as an injury or an illness?

A. Carpal tunnel syndrome is a condition involving compression of the median nerve in the wrist which results in tingling, discomfort, and numbness in the thumb, index, and long fingers. Because carpal tunnel syndrome cases almost always result from repetitious movement, they should be classified as occupational illnesses. The entry for these cases should be in column 7(f) of the log for disorders associated with repeated trauma.

D–6. Q. Is the following case recordable? A chemical worker contracted a mild case of dermatitis on both hands while working in a solution for several hours. The employee was sent to the doctor, who recommended application of a topical lotion (a commercial, nonprescription remedy). The employee bought a bottle of the lotion and treated the rash for a few days until it disappeared. There were no subsequent visits to the doctor. The rash did not prevent the employee from performing all the duties of the job.

A. The case is a recordable occupational illness. The answer to this question is based on the distinction between an injury and an illness. If considered an injury, the case would not be recordable since no medical treatment was provided. However, since the case almost certainly did not involve a single instantaneous exposure, it should be classified as an occupational illness. Consequently, the kind of treatment given by the doctor (none in this case) is immaterial, since all occupational illnesses are recordable.

E. Recording Occupational Illnesses

The Occupational Safety and Health Act of 1970 and the recordkeeping regulations in 29 CFR Part 1904 require employers to record the occurrence of all occupational illnesses. However, neither the act nor the regulations provide a precise definition of what constitutes an occupational illness.

An occupational illness is defined in the instructions on the back of the log and summary form, OSHA No. 200:

> Occupational illness of an employee is any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact.

The instructions also refer to recording illnesses which were "diagnosed or recognized."

Therefore, for OSHA recordkeeping purposes occupational illnesses include any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. Illness exposures ultimately result in conditions of a chemical, physical, biological, or psychological nature.

Occupational illnesses must be diagnosed to be recordable. However, they do not necessarily have to be diagnosed by a physician or other medical personnel. Diagnosis may be by a physician, registered nurse, or a person who by training or experience is qualified to make such a determination. Employers, employees, and others may be able to detect some illnesses, such as skin diseases or disorders, without the benefit of specialized medical training. However, a case more difficult to diagnose, such as silicosis, would require evaluation by properly trained medical personnel.

In addition to recording the occurrence of occupational illnesses, employers are required to record each illness case in 1 of the 7 categories on the front of the log.

The back of the log form contains a listing of types of illness or disorders and gives examples for each illnesses category. These are only examples, however, and should not be considered as a complete list of types of illnesses under each category. See Appendix A—Glossary of Terms for a list of these illness categories.

Recording and classifying occupational illnesses is difficult for employers, especially the chronic and long term latent illnesses. Many illnesses are not easily detected; and it is often difficult to determine whether an illness is work related. Also, employees may not report illnesses because the symptoms may not be readily apparent, or because they do not think their illness is serious or work related.

Lack of expertise in occupational medicine is not limited to employers and employees. Few doctors in private practice have adequate training in occupational medicine. Even physicians in the workplace have difficulty determining the influence of a job on a worker's health.

The following material is provided to *assist* in detecting occupational illnesses and in determining their work relationship.

1. Detection and diagnosis of occupational illnesses.

An occupational illness is defined in the instructions on the log as any work-related abnormal condition or disorder (other than an occupational injury). Detection of these abnormal conditions or disorders, the first step in recording illnesses, is often difficult. When an occupational illness is suspected, employers may want to consider the following:

a. A routine medical examination of the employee's physiological systems; e.g.,

- Head and neck;
- Eyes, ears, nose and throat;
- Endocrine;
- Genitourinary
- Musculoskeletal;
- Neurological;
- Respiratory;
- Cardiovascular; and
- Gastrointestinal.

b. Observation and evaluation of behavior related to emotional status;

c. Specific examination for health effects of suspected or possible disease agents by competent medical personnel;

d. Comparison of date of onset of symptoms with occupational history;

e. Evaluation of results of any past biological or medical monitoring (blood, urine, other sample analysis) and previous physical examinations; and

f. Evaluation of laboratory tests: routine (complete blood count, blood chemistry profile, urinalysis) and specific tests for suspected disease agents (e.g., blood or urine tests for specific agents, chest or other X-rays, liver function tests, pulmonary function tests).

In addition the National Institute for Occupational Safety and Health (NIOSH) has prepared a Sentinal Health Event (Occupational) List (SHEO) which encompasses disease conditions potentially linked to the workplace. A Sentinal Health Event is defined by NIOSH as a disease, disability, or untimely death which is occupationally related and whose occurrence may: 1) provide the impetus for epidemiologic or industrial hygiene studies; or 2) serve as a warning signal that materials substitution, engineering control, personal protection, or medical care may be required. The list includes only those conditions for which NIOSH found "objective documentation of an associated agent, industry, and occupation . . . in the scientific literature." NIOSH has indicated that the list will be expanded in the future.

Appendix C of this report contains a table of work-related illnesses based upon the NIOSH Sentinal Health Event List. The table is provided for information purposes only to *assist* employers in recognizing certain illnesses and diseases. The table lists illness conditions, the industry and/or occupation where each condition is likely to occur, symptoms associated with each condition, the agent likely to cause the condition, and the appropriate illness column to be checked on the log, OSHA No. 200. *IT DOES NOT INCLUDE EVERY CONDITION, ILLNESS, OR DISEASE THAT MAY RESULT FROM AN EXPOSURE IN THE WORK ENVIRONMENT. FURTHER, IT SHOULD NOT BE INTERPRETED TO MEAN THAT A SPECIFIC CONDITION CAN ONLY BE CONTRACTED IN THE INDUSTRIES OR OCCUPATIONS LISTED. IT ALSO DOES NOT MEAN THAT EVERY CONDITION LISTED IS RECORDABLE IF EXPERIENCED BY EMPLOYEES IN THESE INDUSTRIES AND/OR OCCUPATIONS. FOR THE CASE TO BE OSHA RECORDABLE, EMPLOYERS MUST STILL ESTABLISH THAT THE CONDITION IS A RESULT OF AN EXPOSURE IN THEIR WORK ENVIRONMENT.*

2. Determining whether the illness is occupationally related.

The instructions on the back of the log define occupational illnesses as those "caused by environmental factors associated with employment". In some cases, such as contact dermatitis, the relationship between an illness and work-related exposure is easy to recognize. In other cases, where the occupational cause is not direct and apparent, it may be difficult to accurately determine whether an employee's illness is occupational in nature. In these situations it may help employers to ask the following questions:

a. Has an illness condition clearly been established?

b. Does it appear that the illness resulted from, or was aggravated by, suspected agents or other conditions in the work environment?

c. Are these suspected agents present (or have they been present) in the work environment?

d. Was the ill employee exposed to these agents in the work environment?

e. Was the exposure to a sufficient degree and/or duration to result in the iliness condition?

f. Was the illness attributable to a non-occupational exposure?

Employers may want to check the "material data sheet" for those substances suspected of causing employee illnesses to verify the relationship between the exposure and the resulting symptoms.

E–1. Q. Should employers record only those occupational illnesses which require treatment beyond the initial day of onset of illness?

A. No. Any diagnosed occupational illness reported to the employer is recordable, whether or not medical treatment is given or lost workdays are involved.

E–2. Q. Do occupational illnesses have to be diagnosed by a physician to be recordable?

A. No. "Diagnosis" is commonly defined as the act or process of deciding the nature of a diseased condition by examination of the symptoms. Diagnosis may be by a physician, registered nurse, or a person who by training or experience is qualified to make such a determination.

E–3. Q. Does this mean that employers are capable of diagnosing occupational illnesses?

A. Yes. However, their ability to properly diagnose cases depends upon their training and experience and the nature of the particular illness in question. Employers, employees, and others may be able to detect various illnesses, such as skin diseases or disorders, without the benefit of specialized medical training. However, a case more difficult to diagnose, such as silicosis, would require evaluation by properly trained medical personnel.

E–4. Q. What is meant by an "abnormal condition or disorder"?

A. An "abnormal condition or disorder" is an atypical condition of the employee which may be of either a chemical, physical, biological, or psychological nature. These conditions are recordable when they result from exposure in the work environment.

E–5. Q. Are the illnesses listed in appendix C the only illnesses that need be recorded on the log, OSHA No. 200?

A. No. These are a listing of disease conditions of which NIOSH found objective documentation of association between occupation/industry/agent in the scientific literature. In addition to the Sentinel Health Event (Occupational) List, many other abnormal conditions or diseases may be OSHA recordable.

E–6. Q. Do employers record only those illnesses directly caused by work-related exposures, or is it sufficient for the work exposure to be a contributing factor to an illness or to aggravate a pre-existing illness condition?

A. Yes, it is sufficient for the exposure to be a contributing and/or aggravating factor to the illness.

E–7. Q. What are the reporting requirements for test results which indicate an elevated blood-lead level?

A. Employers are required to conduct surveillance and monitoring tests for employees working with hazardous substances, such as lead. However, test results showing elevated blood-lead levels are not recordable in and of themselves. See question E–10 below.

On the other hand, employers are still required to record cases where the worker: (1) Has symptoms of lead poisoning, such as colic, nerve, or renal damage, anemia, and gum problems; or (2) receives medical treatment for lead poisoning or to lower blood-lead levels. Usually, elevated blood-lead levels above 50 micrograms per 100 grams of whole blood are accompanied by some of the recordable symptoms of lead poisoning mentioned above.

Employers may want to reference the OSHA lead standard 29 CFR 1910.1025 for additional information.

E–8. Q. The chest X-ray of an employee is found to have an abnormality due to a prolonged exposure at work. However, the abnormality does not impair his lung function or cause him to lose workdays. Is this a recordable occupational illness?

A. Yes. An occupational illness is defined as any abnormal condition or disorder, other than one resulting from an injury, caused by exposure to environmental factors associated with employment. Any such abnormality reported to the employer is recordable, whether or not functional impairment is present or lost workdays are involved.

E–9. Q. Is fibrosis the only asbestos-related disorder that must be recorded on the OSHA No. 200?

A. No. Asbestos-related disease encompasses not only fibrosis, but also various cancers of the lung, stomach, and pleural lining and asbestos-induced pleural abnormalities (e.g., pleural plaques and calcifications).

E–10. Q. What is the basis for the distinction between the recordability of asbestos-related disorders and the nonrecognition of elevated blood-lead levels for recordkeeping purposes?

A. Identifiable asbestos-related abnormalities constitute abnormal conditions or disorders of the affected employee. Elevated blood-lead levels are considered a precursor to the illness, and are recordable if accompanied by any other conditions which are indicative of lead poisoning. The overall biological effect—lead toxicity—constitutes the illness that is recordable. (See question E–7 for other recordable symptoms of lead poisoning.)

E–11. Q. Is hearing loss recordable? If so, how should it be recorded?

A. Hearing loss should be evaluated solely on the existing criteria for recordability contained in the Occupational Safety and Health Act and 29 CFR Part 1904. Once work-related hearing loss is established, it may be classified as either an injury or an

illness, depending upon the type of event or exposure which caused the loss. If the hearing loss resulted from or

exposure in the work environment. Cases of high blood pressure should be

Such one-time treatment, and followup visit for the purpose of observation is considered first aid even though provided by a physician

requiring tetanus shots may be

the abstract. In this situation, the case

VOL 50 ISS 137 JL 17 1985 UMI

illness, depending upon the type of event or exposure which caused the loss. If the hearing loss resulted from or was aggravated by an instantaneous exposure, it is considered an injury, and is recordable only if it involves medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job. If the hearing loss resulted from or was aggravated by anything other than an instantaneous exposure it should be classified as an occupational illness. All job-related illnesses are recordable.

E–12. Q. Is this case recordable? An employee goes to a doctor who informs her that prescription glasses must be worn as a result of work-related eye deterioration caused by the nature of her job.

A. Assuming that work relationship could be established, this case would be recordable as an occupational illness since it involves the recognition of an abnormal condition or disorder. However, employers should distinguish work-related eye problems from those due to aging or heredity factors unrelated to the job.

E–13. Q. How should a massive heart attack be classified?

A. Work-related heart attacks are classified as illnesses because they normally do not result from work accidents or single instantaneous incidents in the work environment. When they occur, an entry should be made in column 7(g) of the log under "All other occupational illnesses"

E–14. Q. Must a heart attack occur in the work environment to be recordable?

A. Heart attacks must satisfy the same requirements for work relationship as any other type of illness before they are recordable on the OSHA No. 200. Under the OSHA system, this does not mean that heart attacks are recordable if they occur in the work environment, but rather that they must result from an exposure in the work environment. (See section C of this chapter for an analysis of work relationship.)

E–15. Q. How should a work-related illness, diagnosed as stress, be classified? Is this a disorder associated with repeated trauma?

A. "Disorders associated with repeated trauma," column 7(f) of the log, OSHA No. 200, involve conditions caused by repeated contact or repetitious movement. Cases involving work-related stress should be classified as "All other occupational illnesses" in column 7(g) of the log.

E–16. Q. Is high blood pressure recordable?

A. High blood pressure is an abnormal condition or disorder. Consequently, it is recordable *if* it can be attributed to exposure in the work environment. Cases of high blood pressure should be classified as "All other occupational illnesses" in column 7(g) of the log.

E–17. Q. Does the difference in individual tolerances to specific substances affect decisions on recordability?

A. No. Variations in the characteristics of particular employees or their susceptibility to various illnesses should not affect decisions of recordability. If a recordable illness occurs, employers should enter it on the OSHA No. 200.

F. Deciding if Work-Related Injuries Are Recordable

Although the act requires that all work-related deaths and illnesses be recorded, it limits the recording of injuries to certain specific types of cases. Sections 8(c)(2) and 24(a) of the act refer to maintaining records for work injuries ". . . other than minor injuries requiring only first aid treatment, and which do not involve medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job." Consequently, a work-related injury must involve at least 1 of these 4 conditions before it is deemed recordable. Minor injuries requiring only first aid treatment are not recordable.

1. *Medical treatment.* It is important to understand the distinction between medical treatment and first aid treatment since may work-related injuries are recordable only because medical treatment was given.

Part 1904.12(d) of the regulations and the instructions on the back of the log and summary, OSHA No. 200, define medical treatment as any treatment, other than first aid treatment, administered to injured employees. Essentially, medical treatment involves the provision of medical or surgical care for injuries that are not minor through the application of procedures or systematic therapeutic measures.

The act also specifically states that work-related injuries which involve only first aid treatment must *not* be recorded. Therefore, the definition of first aid treatment has important implications for evaluating potential medical treatment cases. First aid is commonly thought to mean emergency treatment of injuries before regular medical care is available. However, first aid treatment has a different meaning for OSHA recordkeeping purposes. Part 1940.12(e) of the regulations defines first aid treatment as:

any one-time treatment, and any followup visit for the purpose of observation, of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care. Such one-time treatment, and followup visit for the purpose of observation is considered first aid even though provided by a physician or registered professional personnel.

The distinction between a medical treatment and first aid depends not only on the treatment provided, but also on the severity of the injury being treated. First aid is: (1) Limited to *one-time treatment* and subsequent observation; *and* (2) involves treatment of only *minor* injuries, *not* emergency treatment of serious injuries. Injuries are *not* minor if:

(a) They can be treated *only* by a physician or licensed medical personnel;

(b) They impair bodily function (i.e., normal use of senses, limbs, etc.);

(c) They result in damage or harm to the physical structure of a nonsuperficial nature (e.g., hairline fractures); or

(d) They involve complications requiring follow up medical treatment.

Physicians or registered medical professionals, working under the standing orders of a physician, routinely treat minor injuries. Such treatment constitutes first aid. Also, some visits to a doctor do not involve treatment at all. For example, a visit to a doctor for an examination or other diagnostic procedure to determine whether the employee has an injury does not constitute medical treatment. Conversely, medical treatment can be provided to employees by someone other than a physician or registered medical personnel.

The following classifications list certain procedures as either medical treatment of first aid treatment. These criteria are also listed in the one-page Recordkeeping Summary provided in appendix F.

The following are generally considered medical treatment. Work-related injuries for which this type of treatment was provided or should have been provided are almost always recordable.

—Treatment of INFECTION
—Application of ANTISEPTICS during second or subsequent visits to medical personnel
—Treatment of SECOND OR THIRD DEGREE BURN(S)
—Application of BUTTERFLY ADHESIVE DRESSING(S)
—Applications of SUTURES (stitches)
—Removal of FOREIGN BODIES EMBEDDED IN EYE
—Removal of FOREIGN BODIES from wound; if procedure is COMPLICATED because of depth of embedment, size, or location
—Use of PRESCRIPTION MEDICATIONS

—Use of hot or cold SOAKING THERAPY during second or subsequent visit to medical personnel
—Application of hot or cold COMPRESS(ES) during second or subsequent visit to medical personnel
—CUTTING AWAY DEAD SKIN (surgical debridgement)
—Application of HEAT THERAPY during second or subsequent visit to medical personnel
—Use of WHIRLPOOL BATH THERAPY during second or subsequent visit to medical personnel
—POSITIVE X-RAY DIAGNOSIS (fractures, broken bones, etc.)
—ADMISSION TO A HOSPITAL or equivalent medical facility for treatment or prolonged observation.

The following are generally considered first aid treatment (e.g., one-time treatment and subsequent observation of minor injuries) and need not be recorded if the work-related injury does not involve loss of consciousness, restriction of work or motion, or transfer to another job:

—Application of ANTISEPTICS during first visit to medical personnel
—Treatment of FIRST DEGREE BURN(S)
—Application of BANDAGE(S) during any visit to medical personnel
—Use of ELASTIC BANDAGE(S) during first visit to medical personnel
—Removal of FOREIGN BODIES NOT EMBEDDED IN EYE if only irrigation is required
—Removal of FOREIGN BODIES from wound, if procedure is UNCOMPLICATED, and is, for example, by tweezers or other simple technique
—Use of NONPRESCRIPTION MEDICATIONS
—SOAKING THERAPY ON INITIAL VISIT to medical personnel or removal of bandages by SOAKING
—Application of hot or cold COMPRESS(ES) during first visit to medical personnel
—Application of OINTMENTS to abrasions to prevent drying or cracking
—Application of HEAT THERAPY during first visit to medical personnel
—Use of WHIRLPOOL BATH THERAPY during the first visit to medical personnel
—NEGATIVE X–RAY DIAGNOSIS
—BRIEF OBSERVATION of injury during visit to medical personnel

The following procedure, by itself, is considered medical treatment:

—Administration of TETANUS SHOT(S or BOOSTER(S. However, these shots are often given in conjunction with the more serious injuries; injuries requiring tetanus shots may be recordable for other reasons.

2. *Loss of consciousness.* If an employee loses consciousness as the result of a work-related injury, the act requires that the case be recorded no matter what type of treatment was provided. The rationale behind this requirement is that loss of consciousness is generally associated with the more serious injuries.

3. *Transfer to another job.* Injuries requiring transfer of the employee to another job are also considered serious enough to be recordable regardless of the type of treatment provided. Transfers are seldom the sole criterion for recordability because injury cases are almost always recordable on other grounds, primarily medical treatment or restriction of work or motion.

4. *Restriction of work or motion.* Restriction of work or motion is the fourth criterion specified by the act for determining whether an injury is serious enough to be recorded. The decision that a case involves restricted work activity should be made solely on the rules set forth in Part 1904.12(f) of the *Code of Federal Regulations* and in the instructions to the Log and Summary of Occupational Injuries and Illnesses, OSHA No. 200. The central concept established in these sections is that restricted work activity occurs when the employee, because of the impact of a job-related injury or illness, is physically or mentally unable to perform *all* or *any part* of his or her normal assignment during *all* or *any part* of the workday or shift. The emphasis is on the employee's *ability* to perform normal job duties. Restriction of work or motion may result in either a lost worktime injury or a nonlost worktime injury, depending upon whether the restriction extended beyond the date of injury. This distinction is discussed at length in chater VI.

Restriction of work or motion sometimes is the sole reason for recording a case. For example, if an employee suffers a cut on a joint of the first finger and the wound requires only a small bandage, the bandage may prevent bending the finger. This case involves a work-related injury, but is it recordable? The employer can reasonably conclude that no medical treatment was involved nor was there any loss of consciousness or transfer to another job. The case would be recordable only if it involves restriction of work motion; that is if the motion that was limited affected the employee's ability to perform his or her normal job duties. It is important to differentiate that concept from limitation of motion in the abstract. In this situation, the case would be recordable if it involved a typist who was unable to type, but probably not if it involved an executive.

F–1. Q. Are all first aid injury cases nonrecordable?

A. Medical treatment is only one criterion for determining whether or not injuries are recordable. Injuries which require only first aid treatment are recordable if they involve loss of consciousness, restriction of work or motion, or transfer to another job.

F–2. Q. Our plant does not have a nurse available on the second and third shifts. Injuries on these shifts are sent to the hospital. If this is the only time the injury is treated, does it have to be recorded?

A. If medical treatment is administered, the case is recordable. If only first aid treatment is administered, then the case is not recordable. (See the definitions in the preceding narrative section.) The *kind of treatment* which is, or should have been, provided is the determining factor, not the place or person providing the treatment.

F–3. Q. Can medical treatment be provided by anyone other than a physician or trained medical personnel?

A. The regulations have been interpreted to mean that medical treatment may be administered by medical or nonmedical personnel. The treatment is the main factor to consider in distinguishing medical treatment from first aid, not the person who is administering it.

In distinguishing between medical treatment and first aid, Congress intended to foucs on the seriousness of the injury. Doctors or medical personnel often provide first aid treatment for minor injuries; nonmedical personnel often provide medical treatment for certain injuries that are relatively serious in nature.

F–4. Q. If an employee is treated in the medical department for an injury such as a cut, burn, etc., but does not need a doctor's care, does a report need to be made of the injury?

A. If the case comes under the definition of "medical treatment" rather than "first aid," a record would have to be maintained. On the other hand, first aid treatment would not be recorded, even if given by a doctor. Again, the key factor to be considered is the type of treatment which was, or should have been, provided, not the person administering it.

F–5. Q. Does the requirement for recording medical-treatment injuries encompass only those injuries where the treatment was actually provided to the individual?

A. This requirement focuses on whether the injury was serious enough

F–12. Q. If an employee has a minor scratch but the doctor gives him a

was not recordable because the provision of a nonprescription

differences in recordkeeping definitions.

G–5. Q. Won't recording a case on the

UMI

A. This requirement focuses on whether the injury was serious enough that medical treatment was actually provided or should have been provided. Cases should be recorded where medical treatment was *clearly* required, but for one reason or another, was not actually provided.

F–6. Q. When are bruises experienced by employees considered recordable?

A. When they are serious enough to involve 1 of the 4 criteria for recording injuries—medical treatment, loss of consciousness, restriction of work or motion, or transfer to another job.

F–7. Q. How are fractures classified? What about a hairline fracture that is given no treatment and does not interfere with the employee's work activities?

A. Injuries resulting in fractures should be recorded because they are not minor in nature and ordinarily require medical treatment or involve restriction of work or motion. This is in keeping with the mandate of the Occupational Safety and Health Act of 1970 to record all injuries that are not minor.

F–8. Q. Are injuries that result in chipped or broken teeth recordable?

A. These injuries would normally be recordable due to their relative severity and the fact that they ordinarily require medical treatment.

F–9. Q. What about situations where an employee damages a prosthetic device, such as an artificial arm or leg? Is this recordable?

A. Generally, situations such as this are recordable if they involve either some form of medical treatment or restriction of work or motion.

F–10. Q. If there is more than one followup visit to a doctor for minor cuts or burns, is such an injury recordable?

A. If the second visit is simply for observation or to change an adhesive or small bandage, the injury would not be recorded. It would be recorded, however, if any medical treatment was provided.

F–11. Q. What if an employee is injured and loses worktime in traveling to or from a doctor's office for a medical examination? Does this loss of worktime constitute restriction of work or motion, and make the case recordable for OSHA purposes?

A. Injuries should be evaluated on the extent of medical treatment required, not on the amount of time spent seeking treatment. If the examination revealed that no medical treatment was required, the case would not be recordable. Restriction of work or motion concerns the employee's ability to perform normal job duties; it does not include loss of worktime for travel to or from a doctor's office.

F–12. Q. If an employee has a minor scratch but the doctor gives him a tetanus shot anyway, does this constitute medical treatment and make it a recordable case?

A. Such tetanus shots should not be regarded as medical treatment. Consequently, the case would not be recordable unless other treatment was provided.

F–13. Q. Do rabies vaccinations constitute medical treatment?

A. Yes. Rabies vaccinations constitute medical treatment since they are considered absolutely necessary and involve a series of injections far more extensive than the concept of first aid contemplated in the act and defined in the regulations.

F–14. Q. Is treatment given by chiropractors considered medical treatment?

A. Yes. This is considered medical treatment since it involves considerably more extensive treatment than first aid as defined in Part 1904.12(e) of the regulations.

F–15. Q. Is it considered medical treatment when prescription medications are given solely as prevention measures for minor injuries or for patient comfort?

A. The use of prescription medications is considered medical treatment. This is because prescription medications are normally used in connection with the more serious injuries. The use of nonprescription medications for minor injuries or solely preventive purposes doe not constitute medical treatment.

There may be a few situations where this distinction may seem inappropriate. However, the generalization is necessary to provide reasonable guidance while keeping the recording criteria as simple as possible.

F–16. Q. What about prescription drugs provided to employees soley for psychological care? Should this be considered medical treatment?

A. If the prescription medications are being provided in connection with job-related stress, the medical treatment issue would be irrelevant since the stress case would be considered an occupational illness. All occupational illnesses are recordable.

F–17. Q. Suppose a nonprescription medication is dispensed to an employee with a minor injury, who then suffers an adverse reaction. Is this recordable? If so, is it an injury or an illness?

A. This case should be considered an injury since the case determination must relate back to the original event. This is because the affected employee would not have suffered the adverse reaction to the medication *but for* the occupational injury. Initially, the case was not recordable because the provision of a nonprescription medication does not constitute medical treatment. *THE CASE MAY NOW BE RECORDABLE.* To be recordable, the adverse reaction must have been serious enough to require additional medical treatment or involve loss of consciousness, restriction of work or motion, or transfer to another job.

G: Relationship of OSHA Recordkeeping Requirements to Those of State Workers' Compensation Systems

OSHA recordkeeping and reporting requirements differ from those established under various State workers' compensation laws. Differences exist in both the mechanics of the recordkeeping process and in the criteria used for evaluating the recordability of individual cases. Section 4(b)(4) of the act states:

Nothing in this Act shall be construed to supersede or in any manner affect any workmen's compensation law or to enlarge or diminish or affect in any other manner the common law or statutory rights, duties, or liabilities of employers and employees under any law with respect to injuries, diseases, or death of employees arising out of or in the course of employment.

Consequently, recordkeeping determinations under the OSH Act should not affect the employer obligations under State workers' compensation systems. Also, workers' compensation criteria should not be substituted for OSHA definitions in determining whether or not a case should be recorded under the OSHA system. Although the OSHA system is fundamentally different from various compensation systems, qualifying workers' compensation first report forms may be substituted for the OSHA No. 101, the Supplementary Record of Occupational Injuries and Illnesses. To qualify for this purpose, the workers' compensation form must contain all of the items on the OSHA No. 101 or be supplemented to do so. This is permitted to eliminate duplicate recording whenever possible. Chapter III, section C of this report provides a detailed discussion of the requirements for potential substitutes for the supplementary record.

It should be stressed that allowance of the substitution of forms is in no way indicative of any comparability in the recordkeeping criteria between the two systems. In instances where State workers' compensation forms are being used in lieu of the OSHA No. 101, employers must still adhere to the

differences in recordkeeping definitions. There may be instances where the employer will have to prepare a form for an OSHA recordable case even though the State workers' compensation law does not require that a report be prepared or vice versa.

G–1. Q. Does a workers' compensation insurance carrier have any responsibility or liability under the OSH Act other than to its own employees?

A. No. Aside from recordkeeping obligations pertaining to its own employees, a workers' compensation insurance carrier has no responsibility for the OSHA recordkeeping of its clients.

G–2. Q. Is there any connection between OSHA records and reports and the reporting requirements of State workers' compensation acts?

A. No. The only relationship between the systems pertains to the forms used. To eliminate duplicate recordkeeping, most State workers' compensation agencies have revised their first report forms to make them acceptable as substitutes for the OSHA No. 101, the Supplementary Record of Occupational Injuries and Illnesses. See chapter II, section C for a discussion of the requirements for the supplementary record.

G–3. Q. What entries, if any, need to be made on the OSHA records in instances of employer-employee disputes involving contested cases under State workers' compensation systems?

A. Workers' compensation determinations have no direct bearing on the recordability of cases under OSHA. Some cases are covered by workers' compensation but are not OSHA-recordable; others are recordable under OSHA but are not covered by workers' compensation.

For example, many cases that do not involve lost worktime may be OSHA-recordable, but may not be recordable under State workers' compensation systems. Each case should be evaluated and recorded solely on the basis of OSHA recordkeeping criteria.

G–4. Q. Should employers wait to record cases on the OSHA forms if the cases are being contested under workers' compensation?

A. No. Employers are required to record cases on the OSHA forms no later than 6 working days after receipt of information that a recordable injury or illness has occurred. If a case is recordable under the OSHA system, an entry must be made on the OSHA records without any regard to the status of the case under workers' compensation.

G–5. Q. Won't recording a case on the OSHA records bias the outcome of contested workers' compensation cases?

A. No. Because of the significant differences between the two systems, recording injuries and illnesses on the OSHA forms should have no effect on cases litigated under workers' compensation. Section 4(b)(4) of the OSH Act provides that the provisions of the act will not affect workers' compensation liability.

Chapter VI. Evaluating of the Extent of Recordable Cases

Once the employer decides that a recordable injury or illness has occurred, the case must be evlauated to determine its extent or outcome. Part 1904.12(c) of the regulations provides the three categories of recordable cases: Fatalities, lost workday cases, and cases without lost workdays. Every recordable case must be placed in only one of these categories.

A. Fatalities

The Occupational Safety and Health Act of 1970 and part 1904 of the regulations require the recording of all work-related fatalities. Part 1904.12(c)(1) states that recordable occupational injuries and illnesses include fatalities, regardless of the time between the injury and the death, or the length of the illness.

A–1. Q. An employee has an occupational illness which keeps him away from work for 6 months. At the end of that time, he dies as a result of the illness. How should the case be recorded on the log?

A. Any entries in the lost workday illness columns 9 through 12 of the log should be lined out, and the date of death should be entered in column 8.

Injury-related fatalities that were initially recorded as lost worktime should be treated in a similar manner. Entries in the lost workday injury columns 2 through 5 should be lined out, and the date of death entered in column 7.

A–2. Q. Must an employee's death occur in the work environment for the case to be recorded as a work-related fatality?

A. No. Cases are recordable as work-related fatalities when the death results from an *event or exposure* that occurs in the work environment. The employee need not actually die in the work environment.

A–3. Q. Do employers have any recording or reporting obligations for fatalities other than making the appropriate entries on the OSHA No. 200?

A. Yes. Part 1904.8 of the regulations requires that employers report within 48 hours the occurrence of job-related fatalities to their OSHA area office. This subject is discussed in chapter VII.

A–4. Q. What constitutes death for OSHA recordkeeping purposes? What if a person suffers "brain death," but is maintained on life support systems?

A. For OSHA recordkeeping purposes, death occurs when the injured or ill employee's condition is such that a death certificate is issuable by the State or territory which has jurisdiction. In some States, a death certificate would be issued for cases involving "brain death," in others it would not.

A–5. Q. What is the appropriate date of death to be entered in these cases?

A. The date entered in column 1 or column 8 of the log should be the date of death entered on the death certificate.

B. Lost workday cases

Parts 1904.12(c)(2) and 1904.12(f) of the regulations provided the definition of lost workday cases. These cases are generally the most serious nonfatal injuries and illnesses. They occur when the injured or ill employee experiences either days away from work, days of restricted work activity, or both. In these situations, the injured or ill employee is affected to such an extent that: (1) Days must be taken off from the job for medical treatment or recuperation; or (2) the employee is unable to perform his or her normal job duties over a normal work shift, even though the employee may be able to continue working.

Injuries and illnesses are not considered lost workday cases unless they affect the employee *beyond* the day of injury or onset of illness. When counting the number of days away from work or days of restricted work activity, do not include: (1) The initial day of injury or onset of illness, or (2) any days on which the employee would not have worked even though able to work.

1. *Lost workday cases involving days away from work* are cases resulting in days the employees would have worked but could not because of the job-related injury or illness. The focus of these cases is on the employee's inability, because of injury or illness, to be present in the work environment during his or her normal work shift.

2. *Lost workday cases involving days of restricted work activity* are those cases where, because of injury or illness, (1) the employee was assigned to another job on a temporary basis, or (2) the employee worked at a permanent job less than full time, (3) the employee worked at his or her permanently assigned job but could not perform all the duties normally connected with it.

Restricted work activity occurs when the employee, because of the job-related

number of lost workdays, which is a measure of the severity of the case

when they result in termination or

B–13. Q. An employee experiences a bona fide lost-time injury on a

should be classified as a lost workday case involving days of restricted work

case *would* be recorded as a lost workday case involving restricted work

VOL 50 ISS 137 JL 17 1985 UMI

Restricted work activity occurs when the employee, because of the job-related injury or illness, is physically or mentally unable to perform *all* or *any part* of his or her normal assignment during *all or any part* of the normal workday or shift. The emphasis is on the employee's *inability* to perform normal job duties over a normal work shift.

B–1. Q. An employee is injured at the beginning of the normal work shift and misses the remainder of the workday. Is this a lost workday case?

A. This would not constitute a lost workday case unless the employee was unable to perform his or her normal work duties on a subsequent workday or work shift. Injuries and illnesses are not considered lost workday cases unless they affect the employee *beyond* the day of injury or onset of illness.

B–2. Q. Suppose an employee is injured on Thursday and is unable to return to work until the following Wednesday. How would the lost workdays be counted?

A. The count of lost workdays should not include the day of injury or onset of illness, or any days on which the employee would not have worked even though able to work. Therefore, assuming the employee normally worked Monday through Friday, this case would involve 3 lost workdays. Thursday would not be counted since it was the day of injury. Saturday and Sunday would not be counted because the employee does not normally work on the weekend. Friday, Monday, and Tuesday *would* be counted because they are normally scheduled workdays.

B–3. Q. If normal work schedules encompass overtime (6 days), are the overtime days counted as lost workdays?

A. Yes. If the employee would have worked the overtime days had he or she not been injured, then the days should be counted.

B–4. Q. How does the employer count lost workdays for employees who are off the job due to a work stoppage or strike?

A. Lost workdays include only those days in which the injured or ill employee would have worked but could not. Thus, no lost workdays are counted if he or she would not have worked because of a work stoppage.

B–5. Q. How is a lost workday case that carries over into the next year recorded? For instance, how should a case be recorded where an employee is injured in December 1984 and is still out on January 31, 1985?

A. Two important points are involved: (1) One case should not appear in the records for 2 different years; and (2) it is important not to lose the count of the number of lost workdays, which is a measure of the severity of the case.

On the 1984 log, the employer should estimate the number of workdays the employee is expected to lose in 1985 and add them to the count of workdays lost in 1984. When the employee returns to work and is able to perform all the duties of his or regular job or the count of lost workdays is otherwise ended, the actual count of lost workdays (days away from work and any days of restricted activity) should be verified, and the entry on the 1984 log should be corrected as necessary.

B–6. Q. An employee is injured on Wednesday and, due to the injury, is unable to work on Thursday and Friday of that week. The plant is closed for the next 2 weeks and all employees are on vacation. The employee is still injured and would not have been able to work if the plant had been in operation. Should the paid vacation time be counted as lost workdays for this employee?

A. No. In this case, the lost workdays consist of the 2 days beyond the day of injury or onset of illness during which the employee would normally have worked but could not do so. The employee was not scheduled to work during the period that the plant closed down for vacation. Any workdays lost due to the injury after the 2-week vacation period ended should also be counted as lost workdays.

B–7. Q. An employee suffers a work-related injury which renders him temporarily unable to work. If the employee elects to reschedule his vacation for time off to recuperate, in lieu of using sick leave, should the days away from work still be counted as lost workday?

A. Yes. These days should be counted as lost workdays if the vacation was not scheduled prior to the injury. The substitution of vacation leave for sick leave does not alter the fact that the employee was unable to work as a result of the injury.

B–8. Q. When do lost workdays cease to accumulate for injured employees who have long-term medical restrictions (i.e., such as no lifting over 30 pounds) but have returned to work?

A. If such restrictions prevent them from performing any of their normally assigned duties, then each day that they cannot perform all of their regular duties should be counted as a day of restricted work activity. However, if long-term restrictions result in permanent assignments to modified jobs, the count of days of restricted work activity ceases once the transfer or modification is made permanent.

B–9. Q. Should occupational illnesses be recorded differently than injuries when they result in termination or permanent transfer?

A. Yes. If workdays were lost, the case would be recorded as a lost workday illness case and identified as a termination or permanent transfer by placing an asterisk next to the check in the appropriate illness column. If no workdays were lost, the illness would still be identifed with an asterisk and be recorded as an illness without lost workdays. Terminations and permanent transfers are identified only for occupational illnesses.

B–10. Q. How are lost workday cases affected by termination of employment?

A. Termination of employment may stop the count of lost workdays if unrelated to the employee's injury or illness. However, if a termination results from an employee's injury or illness, the case would come within the definition of a lost workday case. (Days away from work are those days the employee would have worked but could not because of the injury or illness. Days of restricted work activity occur when the injury or illness renders the employee unable to perform all or any part of his or her normal assignment during all or any part of the workday or shift.) If an employee's unjury or illness results in his being terminated, the case should be recorded as a lost workday case and an estimate should be made of the total number of workdays that would have been lost had the employee not been terminated. This is necessary to provide an accurate measure of the severity of the case.

B–11. Q. How are lost workdays counted in cases where the injured or ill employee retires before resuming all of his or her normal duties?

A. These cases should be treated in the same manner as other termination cases. If the retirement was unrelated to the injury or illness, the count of lost workdays would normally stop upon the employee's scheduled retirement. If the retirement was a result of the injury or illness, the case should be recorded as a lost workday case and an estimate should be made of the total number of days that would have been lost had the employee not retired. This is necessary to provide an accurate measure of the severity of the case.

B–12. Q. How are lost workdays counted for cases that end in total disability?

A. Practical considerations govern the count of lost workdays in total disability cases. Lost workdays should be counted for these cases until a final determination is made that the injured or ill employee is totally disabled.

B–13. Q. An employee experiences a bona fide lost-time injury on a construction job. Before the employee is able to return to work, the project is completed and the construction firm moves on to another job. How is this recorded on the OSHA No. 200?

A. The case is recorded and the count of lost workdays continues until the employee is able to resume his normal job duties. The firm's movement to another construction site does not affect the employer's obligation.

B–14. Q. How should a case be recorded when the injured employee does not report back to work even though the company doctor and/or his doctor has given him permission to do so?

A. The concept of lost worktime focuses on the employee's *ability* to perform all of his or her normal duties for all of the normal work shift. Therefore, employers need not record lost workdays when an injured employee is able to resume work, but simply refuses to do so.

B–15. Q. How are lost workdays recorded in situations where the injured employees do not return to work or contact their employer after the day of injury?

A. If the injury was work-related, then lost workdays should be estimated and counted.

B–16. Q. In some areas, State or local health laws require employees to take time off from work when injured or once they are exposed to toxic substances. When this occurs, should this be recorded as lost worktime for the purposes of OSHA recordkeeping?

A. Whether or not a case is recordable as involving days away from work or days of restricted work activity centers on the employee's *ability* to perform all of his or her normal job duties. In some of these situations, the employee's inability to work is a result of the injury or illness. These cases *should* be recorded as lost time cases either involving days away from work or days of restricted work activity. In others, the lost time may be due solely to adherence to State and local health codes. These cases would clearly *not be* recordable as involving lost worktime. Each of these cases should be evaluated separately on its own merits.

B–17. Q. Suppose that an employee experiences a minor injury—requiring first aid only—but the injury is such that the person cannot perform normal duties for 2 or 3 days. Is the case recordable? If so, how should the case be recorded?

A. Such a case would be recordable because it meets 1 of the 4 requirements for recording injuries: *Restriction of work or motion.* Once recorded, the case should be classified as a lost workday case involving days of restricted work activity.

B–18. Q. Should time away from the job for visits to a doctor on days following the day of injury be recorded as lost worktime involving restricted work activity?

A. Restricted work activity occurs when the employee, because of a job-related injury or illness, is physically or mentally unable to perform *all or any part* of his or her normal assignment during *all or any part* of the normal workday or shift. Since the emphasis is on the employee's *ability* to perform, time off to obtain medical attention is not considered to be restricted work activity. If an employee is able to perform all normal work duties during all normal workdays or shifts following the day of injury or onset of illness, then absence from work for visits to doctors' offices or clinics to receive medical attention should *not* be recorded as a lost workday case involving restricted work activity.

The following hypothetical situations illustrate restricted work activity concepts. Assume that all cases are work related.

1. On Monday, an employee severely cuts his hand while on the job. He receives medical treatment on the date of injury. Tuesday morning, the employee goes to a doctor's office, is examined, and is released to return to work. He arrives at work 3 hours after his normal starting time and is able to complete the remainder of his shift. This case would be recorded as a nonfatal case without lost workdays. It would *not* be recorded as a restricted work activity case, even though the employee missed a portion of his normal work shift on Tuesday, because the employee's *ability* to perform his normal work duties on Tuesday was not impaired.

2. Assume another injury occurs with exactly the same facts as stated in number 1, except that the injury is such that the employee cannot perform *all* of his normal job functions on Tuesday. This case *would* be recorded as a lost time case involving restricted work activity. The employee's *inability* to perform at work was the key factor, not the time spent at the doctor's office.

3. Another injury occurs in the plant on Monday, with an employee severely straining her wrist. She receives medical treatment on the date of injury. Despite the injury, the employee can perform all her normal work duties on Monday. The employee reports to work on Tuesday, performs all her duties until her wrist begins to ache, then reports to the doctor's office in the afternoon where she is examined and sent home. This case *would* be recorded as a lost workday case involving restricted work activity. The employee was able to perform all her duties, but was unable to complete a full workday due to the effect of the injury. Her inability to perform all her duties over the subsequent *normal work shift* constitutes restricted work activity.

4. An employee working in a remote location was involved in an accident and was sent by the employer to get medical attention. The doctor exsmined and treated the employee. The employee spent the entire day following the accident traveling to and from the doctor's office. At all times, the employee was able to perform all the duties of his job. This is *not* a lost workday case since the loss of worktime was a function of the location of the worksite, not of the injury.

5. Assume facts identical to those in number 2 where the employee was unable to perform all of his normal job duties. However, in this case the employer directed the employee to report to the plant clinic on the day following the injury. He did not record the case as a lost workday case because he had heard that "time away from work to receive medical attention does not have to be recorded as restricted work activity." This case *should* be recorded as a lost workday case involving restricted work activity. Although time spent receiving medical attention is not considered lost worktime, the determining factor is the employee's inability *to perform his normal duties.* Employers may not avoid recording restricted work activity cases by sending employees to a health unit or doctor's office. Again, the focus of the analysis should center on the effect of the injury or illness on the employee's *ability* to perform his *normal job duties* for a *full work shift.*

B–19. Q. Why must lost workdays be recorded for an injured worker on light duty, when the employer still gets a day's work from the employee?

A. The workdays that are counted are those on which the employee was unable to contribute a full day's work on all parts of his or her permanent job. The definition was chosen to be simple and uniform, and to preclude concealment of significant injuries or illnesses by temporary assignment to nonproductive jobs. To evaluate the seriousness of lost workdays, they are separated into two classes—days away from work and days of restricted work activity.

B–20. Q. How are partial lost workdays recorded?

A. Cases involving the loss of less than a full workday or shift (beyond the

1985
UMI

A. Cases involving the loss of less than a full workday or shift (beyond the day of injury or onset of illness) should be recorded as lost workday cases invoiving restricted work activity. Restricted work activity cases occur when the employee, because of the impact of a job-related injury or illness, is physically or menatally unable to perform all or any part of his or her normal work assignment *during all or any or any part of the normal workday or shift.*

For OSHA recordkeeping purposes, each partial workday lost is counted as one full day of restricted work activity. Fractions are not used.

B–21. Q. Where are lost workdays recorded for employees who normally rotate among several different establishments? For example, if an employee is injured in establishment A and as a result cannot report to his next scheduled shift in establishment B, which establishment records the lost workdays?

A. All lost workdays resulting from the injury in establishment A should be entered on the log for establishment A since injuries, illnesses, and lost workdays must be reflected in the records of the establishment in which the exposure occurs.

C. Cases not involving lost workdays

These cases consist of the relatively less serious injuries and illnesses which satisfy the criteria for recordability listed in chapter V, but which do not result in death or require the affected employee to have days away from work or days of restricted work activity beyond the date of injury or onset of illness.

C–1. Q. If nonfatal cases without lost workdays are not considered to be serious injuries or illnesses, why record them at all?

A. Although generally not considered the most serious injuries and illnesses, recognition and elimination of these cases were considered important by Congress when it initially promulgated the Occupational Safety and Health Act of 1970. Identification of these frequently occurring cases still has important safety and health implications, and is often linked to the prevention of more serious injuries.

C–2. Q. Is it possible for an employee to experience restricted work activity and have the case recorded only as a nonfatal case without lost workdays?

A. Yes, if the restriction does not go beyond the day of injury or onset of illness.

Chapter VII. Employer Obligations for Reporting Occupational Injuries and Illnesses

This chapter focuses on the requirements of Section 8(c)(2) of the Occupational Safety and Health Act of 1970 and Title 29, Part 1904, of the *Code of Federal Regulations* for employers to make reports of occupational injuries and illnesses. It does not include the reporting requirements of other standards or regulations of the Occupational Safety and Health Administration (OSHA) or of any other State or Federal agency.

A. The Annual Survey of Occupational Injuries and Illnesses

Section 8(c)(2) of the act requires employers to make periodic reports of deaths, injuries, and illnesses which have been recorded on the OSHA injury and illness records. This periodic reporting is accomplished through the Annual Survey of Occupational Injuries and Illnesses of the Bureau of Labor Statistics.

The annual survey provides measures of the occurrence and the extent of recordable occupational injuries and illnesses. Injuries and illnesses are reported as either fatalities, lost workday cases, or nonfatal cases without lost workdays. The survey produces national occupational injury and illness estimates at the 4-digit Standard Industrial Classification (SIC) level in most manufacturing industries and at the 2-digit SIC level in most nonmanufacturing industries. Estimates are produced at the 3-digit level for some high-risk nonmanufacturing industries such as construction. Equivalent data are provided for most States.

The measures produced by the system include incidence rates and numbers of occupational injuries and illnesses. Incidence rates relate the numbers of injuries, illnesses, or lost workdays to a common base of exposure. They show the equivalent number of injuries and illnesses or lost workdays per 100 full-time workers. This common base enables accurate interindustry comparisons, trend analyses over time, and comparisons among firms regardless of size.

Employer reporting obligations for the annual survey are provided in Part 1904.21 of the regulations:

Upon receipt of an Occupational Injuries and Illnesses Survey Form, the employer shall promptly complete the form in accordance with the instructions contained therein, and return it in accordance with the aforesaid instructions.

The survey is conducted on a sample basis, and firms required to submit reports of their injury and illness experience are contacted by BLS or a participating State agency. A firm not contacted by its State agency or BLS need not file a report of its injury and illness experience. Employers should note, however, that even if they are not selected to participate in the annual survey for a given year, they must still comply with the recordkeeping requirements listed in the preceding chapters of these guidelines as well as with the requirements for reporting fatalities and multiple hospitalization cases provided in the next section of this chapter.

Participants in the annual survey consist of two categories of employers: (1) Employers who maintain OSHA records on a regular basis; and (2) a small, rotating sample of employers who are regularly exempt from OSHA recordkeeping. The survey procedure is different for these two groups of employers.

1. *Participation of firms regularly maintaining OSHA records.* When employers regularly maintaining OSHA records are selected to participate in the Annual Survey of Occupational Injuries and Illnesses, they are mailed the survey questionnaire in February of the year following the reference calendar year of the survey. (A firm selected to participate in the 1984 Survey would be contacted in February of 1985.) The survey form, the Occupational Injuries and Illnesses Survey Questionnaire, OSHA No. 200–S, requests information about the establishment(s) included in the report and the injuries and illnesses experienced during the previous year. Information for the injury and illness portion of the report from usually can be copied directly from the totals on the log and summary, OSHA No. 200, which the employer should have completed and posted in the establishment by the time the questionnaire arrives. The survey form also requests summary information about the type of business activity and number of employees and hours worked at the reporting unit during the reference year.

2. *Participation of normally exempt small employers and employers in low-hazard industries.* A few regularly exempt employers (those with fewer than 11 employees in the previous calendar year and those in designated low-hazard industries) are also required to participate in the annual survey. Their participation is necessary for the production of injury and illness statistics that are comparable in coverage to the statistics published in years prior to the

exemptions. These employers are notified *prior* to the reference calendar year of the survey that they must maintain injury and illness records for the coming year. (A firm selected to participate in the 1984 Survey would be contacted in December 1983.) At the time of notification, they are supplied with the necessary forms and instructions. During the reference calendar year, prenotified employers make entries on the log, OHSA No. 200.

Participating, regularly exempt firms are not required to complete a Supplementary Record of Occupational Injuries and Illnesses, OHSA No. 101, for each log entry. Also, they are *not* required to post the summary of the OSHA No. 200 in February following the year for which they kept records.

A–1. Q. Why must the Department of Labor conduct a survey of occupational injuries and illnesses? Can't it utilize workers' compensation data or information already available from other sources?

A. National work injury and illness statistics cannot be produced from workers' compensation records because workers' compensation systems are not uniform among States and do not cover some OSHA recordable cases. Injury and illness statistics produced by the BLS annual survey are not obtainable from any other data source.

A–2. Q. After receiving the OSHA No. 200–S survey package, how long do employers have to complete and return the survey questionnaire?

A. Employers should complete and return the questionnaire within 3 weeks after they receive the survey package.

A–3. Q. Why does the Department of Labor request information concerning the number of employee hours worked?

A. Information on the number of hours worked is needed to produce injury and illness incidence rates which relate the data to a common base of exposure, and thus enable interindustry comparisons, trend analysis, or comparisons among firms regardless of size.

A–4. Q. If information on employee hours worked is not readily available from payroll or other time records, how can it be estimated?

A. The hours-worked figure should be obtained from payroll or other time records whenever possible, and should exclude paid nonworktime such as vacations, sick leave, holidays, etc. If hours worked are not maintained separately from hours paid, employers should record their best estimate of the hours actually worked. If actual hours worked are unobtainable for certain types of employees (such as those paid on commission, salary, by the mile, etc.), hours worked may be estimated on the basis of scheduled hours, or on the basis of the average hours normally worked.

A–5. Q. Should the figure for hours worked include hours for situations where the employee's activities are deemed work related, even though the employee is not engaged in a specific job task or is outside a normal 8 hour work shift? For example, should hours worked include time for employees using on-premises exercise facilities or on travel status?

A. The figure for hours worked should reflect the actual hours of work-related exposure for all employees. If injuries and illnesses experienced during a particular activity are recordable, then the employee's time spent in the activity should be included in the hours estimate. Work-related exposures include most of the employers' activities on the employees' premises as well as situations off premises where the employees are engaged in job tasks or are there as a condition of employment.

Time spent using on-premises exercise facilities would be included in hours worked, because this is considered a work-related activity for OSHA recordkeeping purposes. (See chapter V, section C for a discussion of work relationship.)

For employees in travel status, the figure for hours worked should include all the empoyees' work-related activities and such necessary travel functions as eating, sleeping, and traveling. The figure for hours worked should *not* include hours spent on extraneous activities unrelated to the normal scope of the trip and solely for the employee's own personal use or enjoyment. (See question C–19 of chapter V for activities covered in travel status.)

A–6. Q. For the purposes of the Annual Survey of Occupational Injuries and Illnesses, how do employers report cases that are not yet resolved by the end of the calendar year?

A. Employers should report these cases based on their best estimate of the final case determination. The injury and illness portion of the OSHA No. 200–S survey form is completed by merely copying information from the summary lines of the log and summary, OSHA No. 200. In summarizing the log and summary, employers will have already made interim determinations on unresolved cases. (A sample survey form is provided in appendix B.)

A–7. Q. Will the information for a particular company reported on the OSHA No. 200–S survey form remain confidential?

A. Yes. Information for individual establishments and reporting units is kept strictly confidential.

A–8. Q. Are the regularly exempt employers who participate in the annual survey required to maintain their OSHA injury and illness records for 5 years like the participating employers regularly maintaining OSHA records?

A. No. Regularly exempt employers are not subject to the maintenance or retention requirements of Part 1904 of the regulations. However, these employers should keep their OSHA records for 3 months after they have completed the OSHA 200–S survey questionnaire since they may be needed for survey verification purposes.

B. Reporting Fatalities and Multiple Hospitalizations

All employers are required to report accidents resulting in one or more fatalities or the hospitalization of five or more employees by Part 1904.8 of the record-keeping regulations:

Within 48 hours after the occurrence of an employment accident which is fatal to one or more employees or which results in hospitalization of five or more employees, the employer of any employees so injured or killed shall report the accident either orally or in writing to the nearest office of the Area Director of the Occupational Safety and Health Administration, U.S. Department of Labor. The reporting may be by telephone or telegraph. The report shall relate the circumstances of the accident, the number of fatalities, and the extent of any injuries. The Area Director may require such additional reports in writing or otherwise as he deems necessary, concerning the accident.

Employers with questions on these reporting requirements should contact their nearest OSHA area office. Additional guidelines are available in the OSHA Field Operations Manual.

B–1. Q. Do all States have the same reporting requirements under Part 1904.8 of the regulations?

A. No. All States under Federal jurisdiction must comply with the requirements of Part 1904.8. However, States with approved State plans under Section 18(b) of the act may have more strigent reporting requirements. Employers in these States should contact their State agency for specific reporting requirements. Addresses and telephone numbers for States with approved plans are provided in appendix D of this report.

B–2. Q. Part 1904.8 of the regulations requires that a report be made of a fatality or a multiple hospitalization case. To whom is the report made?

A. The report is made to the nearest office of the Area Director of the Occupational Safety and Health Administration, U.S. Department of Labor, *unless* the State in which the accident occurred is administering an

approved State plan under Section 18(b) of the act. Those States designate a

Chapter VIII. Access to OSHA Records and Penalties for Failure To Comply

Services (formerly the Department of Health, Education and Welfare) while

provides for access to only those

Labor representatives are also subject to

are performed; the place where the

approved State plan under Section 18(b) of the act. Those States designate a State agency to which the report must be made. (See appendix D for States with approved State Plans.)

B–3. Q. When are accidents reportable under Part 1904.8 of the regulation?

A. Part 1904.8 is quite specific: Immediate reports must be made of accidents which result in a fatality or the hospitalization of five or more employees.

B–4 Q. What information must be reported?

A. The report must contain three pieces of information: (1) Circumstances surrounding the accident, (2) number of fatalities, and (3) number of hospitalized injuries. If necessary, the OSHA Area Director may require additional information on the accident.

B–5 Q. What is the purpose of the special reporting requirements for fatalities and multiple hospitalization cases in Part 1904.8?

A. The 48-hour reporting requirement of Part 1904.8 provides OSHA with sufficient notice to conduct immediate investigations of the accident scene to determine the causes of cases resulting in death or multiple hospitalizations.

B–6 Q. How can fatalities resulting from heart attacks or similar causes be reported within 48 hours when in most cases the employer cannot determine in that period whether or not it is occupationally related?

A. Heart attacks will generally not be reported under Part 1904.8 since the application of this portion of the regulations is limited to "accidents." When in doubt of the occupational origin of a fatal accident, employers should report it. OSHA will not investigate if it is determined that the case was not occupational in origin.

B–7 Q. Must all fatalities be reported to OSHA in accordance with the requirements of Part 1904.8?

A. Yes. All work-related accidents which result in death or the hospitalization of 5 or more employees must be reported in conformance with the 48-hour reporting requirement of Part 1904.8. The 48-hour reporting requirement has been interpreted to mean that employers must make their report within 48 hours after the occurrence of the accident or fatality. After receiving information that a fatality or multiple hospitalization has occurred, OSHA will evaluate the case to determine whether or not an inspection is warranted.

Chapter VIII. Access to OSHA Records and Penalties for Failure To Comply With Recordkeeping Obligations

The preceding chapters describe the recordkeeping and reporting requirements of the Occupational Safety and Health Act of 1970 and 29 CFR Part 1904. This chapter covers subjects related to insuring the integrity of the OSH recordkeeping process—access to OSHA records and penalties for recordkeeping violations.

A. Access to OSHA Records

Availability of the OSHA records for viewing, inspection, and copying is the focus of Part 1904.7 of the regulations:

(a) Each employer shall provide, upon request, records, provided for in sections 1904.2, 1904.4, and 1904.5 for inspection and copying by any representative of the Secretary of Labor for the purpose of carrying out the provisions of the Act, and by representatives of the Secretary of Health, Education, and Welfare during any investigation under section 20(b) of the Act or by any representative of a State accorded jurisdiction for occupational safety and health inspections or for statistical compilation under sections 18 and 24 of the act.

(b) (1) The log and summary of all recordable occupational injuries and illnesses (OSHA No. 200) (the log) provided for in section 1904.2 shall, upon request, be made available by the employer to any employee, former employee, and to their representatives for examination and copying in a reasonable manner and at reasonable times. The employee, former employee, and their representatives shall have access to the log for any establishment in which the employee is or has been employed.

(2) Nothing in this section shall be deemed to preclude employees and employee representatives from collectively bargaining to obtain access to information relating to occupational injuries and illnesses in addition to the information made available under this section.

(3) Access to the log provided under this section shall pertain to all logs retained under the requirements of section 1904.6.

This part of the regulations concerns only access to OSHA injury and illness records. It provides that all OSHA records, which are being kept for the 5-year retention period, be available for inspection and copying by authorized Federal and State government officials. Employees, former employees, and their representatives are provided access to only the log and summary, OSHA No. 200.

Government officials with access to the OSHA record include: Representatives of the Department of Labor including OSHA safety and health compliance officers and BLS representatives; representatives of the Department of Health, and Human Services (formerly the Department of Health, Education and Welfare) while carrying out the Department's research responsibilities; and representatives of States accorded jurisdiction for inspections or statistical compilations. "Representatives" may include Department of Labor officials inspecting a workplace or gathering information, officials of the Department of Health and Human Services, or contractors working for the agencies mentioned above, depending on the provisions of the contract under which they work.

Employees access to the log is limited to the records of the establishment in which the employee currently works or formerly worked. All current logs and those being maintained for the 5-year retention period must be made available for inspection and copying by employees, former employees, and their representatives.

An employee representative can be a member of a union representing the employee, or any person designated by the employee or former employee.

Access to the log is to be provided to employees, former employees, and employee representatives in a reasonable manner and at a reasonable time. Redress for failure to comply with the access provisions of the regulations can be obtained through a complaint to OSHA.

A–1. Q. Which OSHA records are subject to the access provisions of Part 1904.7 of the regulations?

A. Government representatives have access to all the OSHA forms—the Log and Summary of Occupational Injuries and Illnesses, OSHA No. 200; and the Supplementary Record of Occupational Injuries and Illnesses, OSHA No. 101.

Employees, former employees, and their representatives have access to only the log, and summary, OSHA No. 200.

A–2. Q. What is meant by the term "access" in Part 1904.7?

A. "Access" is the examination and copying of the relevant OSHA records at reasonable times and in a reasonable manner.

A–3. Q. Can employees gain access to any injury and illness records other than those specifically designated in Part 1904.7?

A. Yes. Employees can gain access to medical records through OSHA's standard on Access to Employee Exposure and Medical Records. For information on these provisions, refer directly to the standard or contact an OSHA area office. Also, employees can gain access to other injury and illness information through collective bargaining or other agreements made with employers. However, Part 1904.7 provides for access to only those records that are specified.

A–4. Q. Do the access provisions of the regulations allow employees to see the entire log, or only that portion containing an entry that specifically relates to them?

A. Employees or their representatives have access to the entire log and summary.

B. Penalties for Failure To Comply With Recordkeeping Obligations

Part 1904.9 of the regulations prescribes penalties for the falsification of OSHA records or the failure to keep the OSHA records or make OSHA reports. Part 1904.9(b) incorporates, by reference, Sections 9, 10, and 17 of the OSH Act pertaining to the issuance of citations, the procedures for enforcement, and the assessment of penalties. In doing so, it subjects employers committing recordkeeping and reporting violations to the same sanctions as employers violating other OSHA requirements such as safety and health standards and regulations. Part 1904.9 concerning falsification or failure to keep records or reports states:

(a) Section 17(g) of the Act provides that "Whoever knowingly makes any false statement, representation, or certification in any application, record, report, plan or other document filed or required to be maintained pursuant to this Act shall, upon conviction, be punished by a fine of not more than $10,000 or by imprisonment, for not more than 6 months or both."

(b) Failure to maintain records or file reports required by this part, or in the details required by forms and instructions issued under this part, may result in the issuance of citations and assessment of penalties as provided for in sections 9, 10, and 17 of the Act.

The OSHA records are an important source of information for all groups and individuals interested in promoting job safety and health. In addition, OSHA relies upon the information in these records to direct its resources to those industries and establishments where they are most needed. Consequently, the agency intends to vigorously pursue recordkeeping and rperoting violations to insure the continued integrity of the records and validity of the data produced.

B–1. Q. Does this mean that employers will be penalized under Part 1904.9(a) for every mistake they make in OSHA recordkeeping?

A. No. Part 1904.9(a) refers only to those who *knowingly* make false statements, representations, or certifications. However, employers notified of incorrect recordkeeping determinations by the Department of Labor representatives are also subject to these provisions.

B–2. Q. Can employers be penalized for failing to maintain OSHA records?

A. Yes. Part 1904.9(b) provides that the failure to maintain records as required by the regulations may result in the assessment of penalties as provided in Sections 9, 10, and 17 of the act.

B–3. Q. Are employers subject to any penalty for failing to respond to the BLS survey questionnaire on occupational injuries and illnesses, OSHA No. 200–S?

A. Yes. Part 1904.9(b) provides that failure to file reports may result in the penalties provided in Sections S9, 10, and 17 of the act.

Appendix A. Glossary of Terms

Annual summary.—Consists of a copy of the occupational injury and illness totals for the year from the OSHA No. 200, and the following information: The calendar year covered; company name; establishment address; certification signature, title, and date.

Annual survey.—Each year, BLS conducts an annual survey of occupational injuries and illnesses to produce national statistics. The OSHA injury and illness records maintained by employers in their establishments serve as the basis for this survey.

Bureau of Labor Statistics (BLS).—The Bureau of Labor Statistics is the agency responsible for administering and maintaining the OSHA recordkeeping system, and for collecting, compiling, and analyzing work injury and illness statistics.

Certification.—The person who supervises the preparation of the Log and Summary of Occupational Injuries and Illnesses, OSHA No. 200, certifies that it is true and complete by signing the last page of, or by appending a statement to that effect to, the annual summary.

Cooperative program.—A program jointly conducted by the States and the Federal Government to collect occupational injury and illness statistics.

Employee.—One who is employed in the business of his or her employer affecting commerce.

Employee representative.—Anyone designated by the employee for the purpose of gaining access to the employer's log of occupational injuries and illnesses.

Employer.—Any person engaged in a business affecting commerce who has employees; this does not include the United States Government or any State or political subdivision of a State.

Establishment.—A single physical location where business is conducted or where services or industrial operations are performed; the place where the employees report for work, operate from, or from which they are paid.

Federal Register.—The official source of information and public notification on OSHA's proposed rulemaking, standards, regulations, and other official matters, including amendments, corrections, insertions or deletions.

First aid.—Any *one-time* treatment and subsequent observation of *minor* scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care. Such treatment and observation is considered first aid even though provided by a physician or registered professional personnel.

First report of injury.—A workers' compensation form which may qualify as a substitute for the supplementary record, OSHA No. 101.

Incidence rate.—The number of injuries, illnesses, or lost workdays related to a common exposure base of 100 full-time workers. The common exposure base enables one to make accurate interindustry comparisons, trend analysis over time, or comparisons among firms regardless of size. This rate is calculated as:

$$\frac{N}{EH} \times 200{,}000$$

where:
N=number of injuries and illnesses or lost workdays
EH=total hours worked by all employees during calendar year
200,000=base for 100 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

Low-hazard industries.—Selected industries in retail trade; finance, insurance, and real estate; and services which are regularly exempt from OSHA recordkeeping. To be included in this exemption, an industry must fall within and SIC not targeted for general schedule inspections and must have an average lost workday case injury rate for a designated 3-year measurement period at or below 75 percent of the private sector average rate.

Log and summary (OSHA No. 200).—The OSHA recordkeeping form used to list injuries and illnesses and to note the extent of each case.

Lost workday cases.—Cases which involve days away from work or days of restricted work activity, or both.

Lost workdays.—The number of workdays (consecutive or not), beyond the day of injury or onset of illness, the employee was away from work or limited to restricted work activity

because of an occupational injury or illness.

(1) *Lost workdays—away from work.*

chemicals, dusts, gases, or fumes; farmer's lung; etc.

programs which reduce workplace hazards.

President, for use in the classification of establishments by type of activity in

Supplementary Record (OSHA No. 101).—The form (or equivalent) on

condition of their employment. The work environment includes not only

because of an occupational injury or illness.

(1) *Lost workdays—away from work* The number of workdays (consecutive or not) on which the employee would have worked but could not because of occupational injury or illness.

(2) *Lost workdays—restricted work activity*

The number of workdays (consecutive or not) on which, because of injury or illness: (1) The employee was assigned to another job on a temporary basis; or (2) the employee worked at a permanent job less than full time; or (3) the employee worked at a permanently assigned job but could not perform all duties normally connected with it.

The number of days away from work or days of restricted work activity does not include the day of injury or onset of illness or any days on which the employee would not have worked even though able to work.

Medical treatment.—Includes Treatment of injuries administered by physicians, registered professional personnel, or lay persons. Medical treatment does not include first aid treatment (one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care) even though provided by a physician or registered professional personnel.

Occupational illness.—Any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact, and which can be included in the categories listed below. The following categories should be used by employers to classify recordable occupational illnesses on the log in the columns indicated:

Column 7a. Occupational skin diseases or disorders.
Examples: Contact dermatitis, eczema, or rash caused by primary irritants and sensitizers or poisonous plants; oil acne; chrome ulcers; chemical burns of inflammations; etc.

Column 7b. Dust disease of the lung (pneumoconioses).
Examples: Silicosis, asbestosis, coal worker's pneumoconiosis, byssinosis, and other peneumoconioses.

Column 7c. Respiratory conditions due to toxic agents.
Examples: Pneumonitis, pharyngitis, rhinitis or acute congestion due to chemicals, dusts, gases, or fumes; farmer's lung; etc.

Column 7d. Poisoning (systemic effects of toxic materials).
Examples: Poisoning by lead, mercury, cadmium, arsenic, or other metals; poisoning by carbon monoxide, hydrogen sulfide, or other gases; poisoning by benzol, carbon tetrachloride, or other organic solvents; poisoning by insecticide sprays such as parathion, lead arsenate; poisoning by other chemicals such as formaldehyde, plastics, and resins, etc.

Column 7e. Disorders due to physical agents (other than toxic materials).
Examples: Heatstroke, sunstroke, heat exhaustion, and other effects of environmental heat; freezing frostbite, and effects of exposure to low temperatures; caisson disease; effects of ionizing radiation (isotopes, X-rays, radium); effects of nonionizing radiation (welding flash, ultra-violet rays, microwaves, sunburn); etc.

Column 7f. Disorders associated with repeated trauma.
Examples: Noise-induced hearing loss; synovitis, tenosynovitis, and bursitis; Raynaud's phenomena; and other conditions due to repeated motion vibration, or pressure.

Column 7g. All other occupational illnesses.
Examples: Anthrax, brucellosis, infectious hepatitis, malignant and benign tumors, food poisoning, histoplasmosis, coccidiodomycosis, etc.

Occupational injury.—Any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from a single instantaneous exposure in the work environment.

Note.—Conditions resulting from bites, such as insect or snake bites, or from one-time exposure to chemicals are considered to be injuries.

Occupational injuries and illnesses; extent and outcome.—All occupational injuries or illnesses result in either:

(1) Fatalities, regardless of the time between the injury and death, or the length of illness; or

(2) Lost workday cases, other than fatalities, that result in lost workdays; or

(3) Nonfatal cases without lost workdays.

Occupational Safety and Health Administration (OSHA).—OSHA is the Federal agency within the Department of Labor responsible for developing, implementing, and enforcing safety and health standards and regulations. OSHA works with employers and employees to foster effective safety and health programs which reduce workplace hazards.

Premises.—Consist of the employer's total establishment; they include the primary work facility and other areas in the employer's domain such as company storage facilities, cafeterias, restrooms, and restricted company parking lots.

Posting.—The annual summary of occupational injuries and illnesses must be posted at each establishment by February 1 and remain in place until March 1 to provide employees with the record of their establishment's injury and illness experience for the previous calendar year.

Recordable cases.—All work-related deaths, and illnesses, and those work-related injuries which result in: loss of consciousness, restriction of work or motion, transfer to another job, or medical treatment beyond first aid.

Recordkeeping system.—Refers to the nationwide system for recording and reporting occupational injuries and illnesses mandated by the Occupational Safety and Health Act of 1970 and implemented by Title 29, Code of Federal Regulations, Part 1904. This system is the only source of reliable national statistics on job-related injuries and illnesses occurring in the private sector.

Regularly exempt employers.—Employers regularly exempt from OSHA recordkeeping include: (a) All employers with no more than 10 full- or part-time employees at any one time in the previous calendar year; and (b) all employers in retail trade; finance, insurance, and real estate; and services industries—i.e., SIC's 52–89 (except building materials and garden supplies, SIC 52; general merchandise and food stores, SIC's 53 and 54; hotels and other lodging places, SIC 70; repair services, SIC's 75 and 76; amusement and recreation services, SIC 79; and health services, SIC 80).

Report form.—Refers to survey form OSHA No. 200–S which is completed and returned by the surveyed reporting unit.

Restriction of work or motion.—Occurs when the employee, because of the result of a job-related injury or illness, is physically or mentally unable to perform *all* or *any part* of his or her normal assignment during *all* or *any part* of the workday or shift.

Small employers.—Employers with no more than 10 employees among all the establishments of their firm at any one time during the previous calendar year.

Standard Industrial Classification (SIC).—A classification system developed by the Office of Management and Budget, Executive Office of the President, for use in the classification of establishments by type of activity in which engaged. Each establishment is assigned an industry code for its major activity which is determined by the product or services rendered. Establishments may be classified in 2-, 3-, or 4-digit industries according to the degree of information available.

State (when mentioned alone).—Refers to a State of the United States, the District of Columbia, and U.S. territories and jurisdictions.

State agency.—State agency administering the OSHA recordkeeping and reporting system. Many States cooperate directly with BLS in administering the OSHA recordkeeping and reporting programs. Some States have their own safety and health laws which may impose different or additional obligations.

Supplementary Record (OSHA No. 101).—The form (or equivalent) on which additional information is recorded for each injury and illness entered on the log.

Title 29 of the Code of Federal Regulations. Part 1900–1999.—The parts of the *Code of Federal Regulations* which contain OSHA regulations.

Volunteers.—Workers who are not considered to be employees under the act when they serve of their own free will without compensation.

Workers' compensation systems.—State systems that provide medical benefits and/or indemnity compensation to victims of work-related injuries and illnesses.

Work environment.—Consists of the employer's premises and other locations where employees are engaged in work-related activities or are present as a condition of their employment. The work environment includes not only physical locations, but also the equipment or materials used by the employee during the course of his or her work.

OSHA No. 200

Certification of Annual Summary Totals By _____ Title _____ Date _____

FOLD

OSHA No. 200

POST ONLY THIS PORTION OF THE LAST PAGE NO LATER THAN FEBRUARY 1.

Instructions for OSHA No. 200

I. Log and Summary of Occupational Injuries and Illnesses

Each employer who is subject to the recordkeeping requirements of the Occupational Safety and Health Act of 1970 must maintain for each establishment a log of all recordable occupational injuries and illnesses. This form (OSHA No. 200) may be used for that purpose. A substitute for the OSHA No. 200 is acceptable if it is as detailed, easily readable, and understandable as the OSHA No. 200.

Enter each recordable case on the log within six (6) workdays after learning of its occurrence. Although other records must be maintained at the establishment to which they refer, it is possible to prepare and maintain the log at another location using data processing equipment if desired. If the log is prepared elsewhere, a copy updated to within 45 calendar days must be present at all times in the establishment.

Logs must be maintained and retained for five (5) years following the end of the calendar year to which they relate. Logs must be available (normally at the establishment) for inspection and copying by representatives of the Department of Labor, or the Department of Health and Human Services, or States accorded jurisdiction under the Act. Access to the log is also provided to employees, former employees and their representatives.

II. Changes in Extent of or Outcome of Injury or Illness

If, during the 5-year period the log must be retained, there is a change in an extent and outcome of an injury or illness which affects entries in columns 1, 2, 6, 8, 9, or 13, the first entry should be lined out and a new entry made. For example, if an injured employee at first required only medical treatment but later lost workdays away from work, the check in column 6 should be lined out, and checks entered in columns 2 and 3 and the number of lost workdays entered in column 4.

In another example, if an employee with an occupational illness lost work days, returned to work, and then died of the illness, any entries in columns 9 through 12 should be lined out and the date of death entered in column 8.

The entire entry for an injury or illness should be lined out if later found to be nonrecordable. For example, an injury which is later determined not to be work related, or which was initially thought to involve medical treatment but later was determined to have involved only first aid.

III. Posting Requirements

A copy of the totals and information following the fold line of the last page for the year must be posted at each establishment in the place or places where notices to employees are customarily posted. This copy must be posted no later than ***February 1 and must remain in place until March 1.***

Even though there were no injuries or illnesses during the year, zeros must be entered on the totals line, and the form posted.

The person responsible for the ***annual summary totals*** shall certify that the totals are true and complete by signing at the bottom of the form.

IV. Instructions for Completing Log and Summary of Occupational Injuries and Illnesses

Column A – CASE OR FILE NUMBER. Self-explanatory.

Column B – DATE OF INJURY OR ONSET OF ILLNESS.
For occupational injuries, enter the date of the work accident which resulted in injury. For occupational illnesses, enter the date of initial diagnosis of illness, or, if absence from work occurred before diagnosis, enter the first day of the absence attributable to the illness which was later diagnosed or recognized.

Columns C through F – Self-explanatory.

Columns 1 and 8 – INJURY OR ILLNESS-RELATED DEATHS.
Self-explanatory.

Columns 2 and 9 – INJURIES OR ILLNESSES WITH LOST WORKDAYS.
Self-explanatory.

Any injury which involves days away from work, or days of restricted work activity, or both must be recorded since it always involves one or more of the criteria for recordability.

Columns 3 and 10 – INJURIES OR ILLNESSES INVOLVING DAYS AWAY FROM WORK. Self-explanatory.

Columns 4 and 11 – LOST WORKDAYS—DAYS AWAY FROM WORK.
Enter the number of workdays (consecutive or not) on which the employee would have worked but could not because of occupational injury or illness. The number of lost workdays should not include the day of injury or onset of illness or any days on which the employee would not have worked even though able to work.

NOTE: For employees not having a regularly scheduled shift, such as certain truck drivers, construction workers, farm labor, casual labor, part-time employees, etc. it may be necessary to estimate the number of lost workdays. Estimates of lost workdays shall be based on prior work history of the employee AND days worked by employees, not ill or injured, working in the department and/or occupation of the ill or injured employee.

Columns 6 and 12 – LOST WORKDAYS—DAYS OF RESTRICTED WORK ACTIVITY.
Enter the number of workdays (consecutive or not) on which because of injury or illness:

(1) the employee was assigned to another job on a temporary basis, or
(2) the employee worked at a permanent job less than full time, or
(3) the employee worked at a permanently assigned job but could not perform all duties normally connected with it.

The number of lost workdays should not include the day of injury or onset of illness or any days on which the employee would not have worked even though able to work.

Columns 6 and 13 – INJURIES OR ILLNESSES WITHOUT LOST WORKDAYS. Self-explanatory.

Columns 7a through 7g – TYPE OF ILLNESS.
Enter a check in only one column for each illness.

TERMINATION OR PERMANENT TRANSFER—Place an asterisk to the right of the entry in columns 7a through 7g (type of illness) which represented a termination of employment or permanent transfer.

V. Totals

Add number of entries in columns 1 and 8.
Add number of checks in columns 2, 3, 6, 7, 8, 10, and 13.
Add number of days in columns 4, 5, 11, and 12.
Yearly totals for each column (1-13) are required for posting. Running or page totals may be generated at the discretion of the employer.

If an employee's loss of workdays is continuing at the time the totals are summarized, estimate the number of future workdays the employee will lose and add that estimate to the workdays already lost and include this figure in the annual totals. No further entries are to be made with respect to such cases in the next year's log.

VI. Definitions

OCCUPATIONAL INJURY is any injury such as a cut, fracture, sprain, amputation, etc., which results from a work accident or from an exposure involving a single incident in the work environment.

NOTE: Conditions resulting from animal bites, such as insect or snake bites or from one-time exposure to chemicals, are considered to be injuries.

OCCUPATIONAL ILLNESS of an employee is any abnormal condition or disorder, other than one resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact.

The following listing gives the categories of occupational illnesses and disorders that will be utilized for the purpose of classifying recordable illnesses. For purposes of information, examples of each category are given. These are typical examples, however, and are not to be considered the complete listing of the types of illnesses and disorders that are to be counted under such category.

7a. **Occupational Skin Diseases or Disorders**
Examples: Contact dermatitis, eczema, or rash caused by primary irritants and sensitizers or poisonous plants, oil acne, chrome ulcers, chemical burns or inflammations, etc.

7b. **Dust Diseases of the Lungs (Pneumoconioses)**
Examples: Silicosis, asbestosis and other asbestos-related diseases, coal worker's pneumoconiosis, byssinosis, siderosis, and other pneumoconioses.

7c. **Respiratory Conditions Due to Toxic Agents**
Examples: Pneumonitis, pharyngitis, rhinitis or acute congestion due to chemicals, dusts, gases, or fumes, farmer's lung, etc.

7d. **Poisoning (Systemic Effect of Toxic Materials)**
Examples: Poisoning by lead, mercury, cadmium, arsenic, or other metals, poisoning by carbon monoxide, hydrogen sulfide, or other gases, poisoning by benzol, carbon tetrachloride, or other organic solvents; poisoning by insecticide sprays such as parathion, lead arsenate, poisoning by other chemicals such as formaldehyde, plastics, and resins, etc.

7e. **Disorders Due to Physical Agents (Other than Toxic Materials)**
Examples: Heatstroke, sunstroke, heat exhaustion, and other effects of environmental heat, freezing, frostbite, and effects of exposure to low temperatures; caisson disease, effects of ionizing radiation (isotopes, X-rays, radium); effects of nonionizing radiation (welding flash, ultraviolet rays, microwaves, sunburn); etc.

7f. **Disorders Associated With Repeated Trauma**
Examples: Noise-induced hearing loss; synovitis, tenosynovitis, and bursitis; Raynaud's phenomena, and other conditions due to repeated motion, vibration, or pressure.

7g. **All Other Occupational Illnesses**
Examples: Anthrax, brucellosis, infectious hepatitis, malignant and benign tumors, food poisoning, histoplasmosis, coccidioidomycosis, etc.

MEDICAL TREATMENT includes treatment (other than first aid) administered by a physician or by registered professional personnel under the standing orders of a physician. Medical treatment does NOT include first-aid treatment (one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, and so forth, which do not ordinarily require medical care) even though provided by a physician or registered professional personnel.

ESTABLISHMENT: A single physical location where business is conducted or where services or industrial operations are performed (for example: a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, or central administrative office). Where distinctly separate activities are performed at a single physical location, such as construction activities operated from the same physical location as a lumber yard, each activity shall be treated as a separate establishment.

For firms engaged in activities which may be physically dispersed, such as agriculture, construction, transportation, communications, and electric, gas, and sanitary services, records may be maintained at a place to which employees report each day.

Records for personnel who do not primarily report or work at a single establishment, such as traveling salesmen, technicians, engineers, etc., shall be maintained at the location from which they are paid or the base from which personnel operate to carry out their activities.

WORK ENVIRONMENT is comprised of the physical location, equipment, materials processed or used, and the kinds of operations performed in the course of an employee's work, whether on or off the employer's premises.

Bureau of Labor Statistics
Supplementary Record of
Occupational Injuries and Illnesses

U.S. Department of Labor

This form is required by Public Law 91-596 and must be kept in the establishment for 5 years. Failure to maintain can result in the issuance of citations and assessment of penalties.

Case or File No.

Form Approved
O.M.B. No. 1220-0029

Employer

1. Name

2. Mail address *(No. and street, city or town, State, and zip code)*

3. Location, if different from mail address

Injured or Ill Employee

4. Name *(First, middle, and last)* | Social Security No.

5. Home address *(No. and street, city or town, State, and zip code)*

6. Age | 7. Sex *(Check one)* Male ☐ Female ☐

8. Occupation *(Enter regular job title, not the specific activity he was performing at time of injury.)*

9. Department *(Enter name of department or division in which the injured person is regularly employed, even though he may have been temporarily working in another department at the time of injury.)*

The Accident or Exposure to Occupational Illness

If accident or exposure occurred on employer's premises, give address of plant or establishment in which it occurred. Do not indicate department or division within the plant or establishment. If accident occurred outside employer's premises at an identifiable address, give that address. If it occurred on a public highway or at any other place which cannot be identified by number and street, please provide place references locating the place of injury as accurately as possible.

10. Place of accident or exposure *(No. and street, city or town, State, and zip code)*

11. Was place of accident or exposure on employer's premises? Yes ☐ No ☐

12. What was the employee doing when injured? *(Be specific. If he was using tools or equipment or handling material, name them and tell what he was doing with them.)*

13. How did the accident occur? *(Describe fully the events which resulted in the injury or occupational illness. Tell what happened and how it happened. Name any objects or substances involved and tell how they were involved. Give full details on all factors which led or contributed to the accident. Use separate sheet for additional space.)*

Occupational Injury or Occupational Illness

14. Describe the injury or illness in detail and indicate the part of body affected. *(E.g., amputation of right index finger at second joint; fracture of ribs; lead poisoning; dermatitis of left hand, etc.)*

15. Name the object or substance which directly injured the employee. *(For example, the machine or thing he struck against or which struck him; the vapor or poison he inhaled or swallowed; the chemical or radiation which irritated his skin; or in cases of strains, hernias, etc., the thing he was lifting, pulling, etc.)*

16. Date of injury or initial diagnosis of occupational illness | 17. Did employee die? *(Check one)* Yes ☐ No ☐

Other

18. Name and address of physician

19. If hospitalized, name and address of hospital

Date of report | Prepared by | Official position

OSHA No. 101 (Feb. 1981)

SUPPLEMENTARY RECORD OF OCCUPATIONAL INJURIES AND ILLNESSES

To supplement the Log and Summary of Occupational Injuries and Illnesses (OSHA No. 200), each establishment must maintain a record of each recordable occupational injury or illness. Worker's compensation, insurance, or other reports are acceptable as records if they contain all facts listed below or are supplemented to do so. If no suitable report is made for other purposes, this form (OSHA No. 101) may be used or the necessary facts can be listed on a separate plain sheet of paper. These records must also be available in the establishment without delay and at reasonable times for examination by representatives of the Department of Labor and the Department of Health and Human Services, and States accorded jurisdiction under the Act. The records must be maintained for a period of not less than five years following the end of the calendar year to which they relate.

Such records must contain at least the following facts:

1) *About the employer*—name, mail address, and location if different from mail address.

2) *About the injured or ill employee*—name, social security number, home address, age, sex, occupation, and department.

3) *About the accident or exposure to occupational illness*—place of accident or exposure, whether it was on employer's premises, what the employee was doing when injured, and how the accident occurred.

4) *About the occupational injury or illness*—description of the injury or illness, including part of body affected; name of the object or substance which directly injured the employee; and date of injury or diagnosis of illness.

5) *Other*—name and address of physician; if hospitalized, name and address of hospital; date of report; and name and position of person preparing the report.

SEE *DEFINITIONS* ON THE BACK OF OSHA FORM 200.

SIC
EDIT

Complete this report whether or not there were recordable occupational injuries or illnesses.

PLEASE READ THE ENCLOSED INSTRUCTIONS

Complete and return ONLY THIS FORM within 3 weeks

I. ANNUAL AVERAGE EMPLOYMENT IN 1983

Enter the average number of employees who worked during calendar year 1983 in the establishment(s) covered by this report. Include all classes of employees, full-time, part-time, seasonal, temporary, etc. See the instructions for an example of an annual average employment calculation. *(Round to the nearest whole number.)*

II. TOTAL HOURS WORKED IN 1983

Enter the total number of hours actually worked during 1983 by all employees covered by this report. DO NOT include any non-work time even though paid such as vacations, sick leave, etc. If employees worked low hours in 1983 due to layoffs, strikes, fires, etc., explain under Comments (section VII). *(Round to the nearest whole number.)*

III. NATURE OF BUSINESS IN 1983

A. Check the box which best describes the general type of activity performed by the establishment(s) included in this report.

- ☐ Agriculture
- ☐ Forestry
- ☐ Fishing
- ☐ Mining
- ☐ Construction
- ☐ Manufacturing
- ☐ Transportation
- ☐ Communication
- ☐ Public Utilities
- ☐ Wholesale Trade
- ☐ Retail Trade
- ☐ Finance
- ☐ Insurance
- ☐ Real Estate
- ☐ Services
- ☐ Public Administration

B. Enter in order of importance the principal products, lines of trade, services or other activities. For each entry also include the approximate percent of total 1983 annual value of production, sales or receipts.

_____ %
_____ %
_____ %

C. If this report includes any establishment(s) which perform services for other units of your company, indicate the primary type of service or support provided. *(Check as many as apply.)*

1. ☐ Central administration
2. ☐ Research, development and testing
3. ☐ Storage (warehouse)
4. ☐ Other (specify)

IV. MONTH OF OSHA INSPECTION

If the establishment(s) covered by this report had either a Federal or State OSHA compliance inspection during calendar year 1983, please enter the name of the month in which the *first* inspection occurred.

(Leave this box blank.)

V. RECORDABLE INJURIES AND ILLNESSES

Did the establishment(s) have any recordable injuries or illnesses during calendar year 1983?

1. ☐ No (Please complete section VII)
2. ☐ Yes (Please complete sections VI and VII)

SEE REVERSE

REPORT LOCATION AND IDENTIFICATION

Complete this report for the establishment(s) covered by the description below

Please indicate any address changes below.

RETURN REPORT TO:

For Information Call:

OSHA No. 200-S (Rev. April 1983)

VI. OCCUPATIONAL INJURY AND ILLNESS SUMMARY (Covering Calendar Year 1983)

- *Complete this section by copying totals from the annual summary of your 1983 OSHA No. 200.*
- Remember to reverse the carbon insert before completing this side.
- Leave section VI blank if there were no OSHA recordable injuries or illnesses during 1983.
- *Note: First aid even when administered by a doctor or nurse is not recordable.*
- Please check your figures to be certain that the sum of entries in columns (7a) + (7b) + (7c) + (7d) + (7e) + (7f) + (7g) = the sum of entries in columns (8) + (9) + (13).
- If you listed fatalities in columns (1) and/or (8), please give a brief description of the object or event which caused each fatality in the "Comments" section.

OCCUPATIONAL INJURY CASES

INJURY RELATED FATALITIES** (DEATHS)	INJURIES WITH LOST WORKDAYS				INJURIES WITHOUT LOST WORKDAYS*

SURVEY REPORTING REGULATIONS

Title 29, Part 1904.20-22 of the Code of Federal Regulations requires that each employer shall return the completed survey form, OSHA No. 200-S, within 3 weeks of receipt in accordance with the instructions shown below.

INSTRUCTIONS FOR COMPLETING THE OSHA NO. 200-S FORM 1983 OCCUPATIONAL INJURIES AND ILLNESSES SURVEY (Covering Calendar Year 1983)

Change of Ownership—When there has been a change of ownership during the report period, only the records of the current owner are to be entered in the report. Explain fully under Comments (Section VII), and include the date of the ownership change and the time period this report covers.

Partial-Year Reporting—For any establishment(s) which was not in existence for the entire report year, the report should cover the portion of the period during which the establishment(s) was in existence. Explain fully under Comments (Section VII), including the time period this report covers.

ESTABLISHMENTS INCLUDED IN THE REPORT

This report should include only those establishments located in, or identified by, the Report Location and Identification designation which appears next to your mailing address. This designation may be a geographical area, usually a county or city, or it could be a brief description of your operation within a geographical area. If you have any questions concerning the coverage of this report, please contact the agency identified on the OSHA No. 200-S report form.

DEFINITION OF ESTABLISHMENT

An **ESTABLISHMENT** is defined as a single physical location where business is conducted or where services or industrial operations are performed. (For example: a factory, mill, store, hotel, restaurant, movie theatre, farm, ranch, bank, sales office, warehouse, or central administrative office.)

For firms engaged in activities such as construction, transportation, communication, or electric, gas and sanitary services, which may be physically dispersed, reports should cover the place to which employees normally report each day.

Reports for personnel who do not primarily report or work at a single establishment, such as traveling salespersons, technicians, engineers, etc., should cover the location from which they are paid or the base from which personnel operate to carry out their activities.

NOTE: If more than one establishment is included, information in Section III should reflect the combined activities of all such establishments. One code will be assigned which best indicates the nature of business of the group of establishments as a whole.

SECTION IV. MONTH OF OSHA INSPECTION

Enter the name of the first month in 1983 during which your establishment(s) had an OSHA compliance inspection. Include inspections under the Federal or State equivalents of the Occupational Safety and Health Act by Federal or State inspectors and other inspections which may result in penalties for violations of safety and health standards. Do not include inspections limited to elevators, boilers, fire safety or those which are consultative in nature.

SECTION V. RECORDABLE INJURIES OR ILLNESSES

Check the appropriate box. If you checked "Yes," complete Sections VI and VII on the back of the form. If you checked "No," complete only Section VII.

SECTION VI. OCCUPATIONAL INJURY AND ILLNESS SUMMARY

This section can be completed easily by copying the totals from the annual summary of your 1983 OSHA No. 200 form (Log and Summary of Occupational Injuries and Illnesses). Please note that if this report covers more than one establishment, the final totals on the "Log" for each must be added and the sums entered in Section VI.

Leave Section VI blank if the employees covered in this report experienced no recordable injuries or illnesses during 1983.

If there were recordable injuries or illnesses during the year, please review your OSHA No. 200 form for each establishment to be included in this report to make sure that all entries are correct and complete before completing Section VI. Each recordable case should be included on the "Log" in only one of the six main categories of injuries or illnesses:

1. INJURY—related deaths (Log column 1)
2. INJURIES with days away from work and/or restricted days (Log column 2)
3. INJURIES without lost workdays (Log column 6)
4. ILLNESS—related deaths (Log column 8)
5. ILLNESSES with days away from work and/or restricted days (Log column 9)
6. ILLNESSES without lost workdays (Log column 13)

SECTION I. ANNUAL AVERAGE EMPLOYMENT IN 1983

Enter in Section I the **average** (not the total) number of full and part-time employees who worked during calendar year 1983 in the establishment(s) included in this report. If more than one establishment is included in this report, add together the annual average employment for each establishment and enter the sum. Include all classes of employees—seasonal, temporary, administrative, supervisory, clerical, professional, technical, sales, delivery, installation, construction and service personnel, as well as operators and related workers.

Annual Average employment should be computed by summing the employment from all pay periods during 1983 and then dividing that sum by the total number of such pay periods throughout the entire year, including periods with no employment. For example, if you had the following monthly employment—Jan.-10, Feb.-10, Mar.-10, Apr.-5, May-5, June 5, July-5, Aug.-0, Sept.-0, Oct.-0, Nov.-5, Dec.-5—you would sum the number of employees for each monthly pay period (in this case, 60) and then divide that total by 12 (the number of pay periods during the year) to derive an annual average employment of 5.

SECTION II. TOTAL HOURS WORKED IN 1983

Enter in Section II the **total** number of hours actually **worked** by all classes of employees during **1983.** Be sure to include **ONLY** time on duty **DO NOT include any non-work time** even though paid, such as vacations, sick leave, holidays, etc. The hours worked figure should be obtained from payroll or other time records wherever possible, if **hours worked** are not maintained separately from **hours paid**, please enter your best estimate. If actual hours worked are not available for employees paid on commission, salary, by the mile, etc. hours worked may be estimated on the basis of scheduled hours or 8 hours per workday.

For example, if a group of 10 salaried employees worked an average of 8 hours per day, 5 days a week, for 50 weeks of the report period, the total hours worked for this group would be 10 x 8 x 5 x 50 = 20,000 hours for the report period.

SECTION III. NATURE OF BUSINESS IN 1983

In order to verify the nature of business code, we must have information about the specific economic activity carried on by the establishment(s) included in your report during calendar year 1983.

Complete Parts A, B and C as indicated in Section III on the OSHA No. 200-S form. Complete Part C **only** if supporting services are provided to other establishments of your company. Leave Part C blank if a) supporting services are not the primary function of any establishment(s) included in this report or b) supporting services are provided but only on a **contract or fee basis** for the general public or for other business firms. **(Instructions continued on page 2.)**

2

[redacted]

Also review each case to ensure that the appropriate entries have been made for the other columns if applicable. For example, if the case is an Injury with Lost Workdays, be sure that the check for an injury involving days away from work (Log column 3) is entered if necessary. Also verify that the correct number of days away from work (Log column 4) and/or days of restricted work activity (Log column 5) are recorded. A similar review should be made for a case which is an Illness with Lost Workdays (including Log columns 10, 11 and 12). Please remember that if your employees' loss of workdays is still continuing at the time the annual summary for the year is completed, you should estimate the number of future workdays they will lose and add this estimate to the actual workdays already lost. Each partial day away from work, other than the day of the occurrence of the injury or onset of illness, should be entered as one full restricted workday.

Also, for each case which is an Illness, make sure that the appropriate column indicating Type of Illness (Log columns 7a-7g) is checked.

After completing your review of the individual case entries on the "Log," please make sure that the "Totals" line has been completed by summarizing Columns 1 through 13 according to the instructions on the back of the "Log" form. Then, copy these "Totals" onto Section VI of the OSHA No. 200-S form. If you entered fatalities in columns (1) and/or (8), please include in the "Comments" section a brief description of the object or event which caused each fatality.

FIRST AID

Finally, please remember that all injuries which, in your judgement, required **only First Aid Treatment**, even when administered by a doctor or nurse, should not be included in this report. First Aid Treatment is defined as one-time treatment and subsequent observation of minor scratches, cuts, burns, splinters, etc., which do not ordinarily require medical care.

SECTION VII. COMMENTS AND IDENTIFICATION

Please complete all parts including your area code and telephone number. Then return the OSHA No. 200-S form in the pre-addressed envelope. **KEEP** your file copy.

Dear Employer:

The Occupational Safety and Health Act of 1970 requires the Secretary of Labor to collect, compile, and analyze statistics on occupational injuries and illnesses. This is accomplished through a joint Federal/State survey program with States that have received Federal grants for collecting and compiling statistics. Establishments are selected for this survey on a sample basis with varying probabilities depending upon size. Certain establishments may be included in each year's sample because of their importance to the statistics for their industry.

You have been selected to participate in the nationwide Occupational Injuries and Illnesses Survey for 1983. Under the Occupational Safety and Health Act, your report is mandatory.

The following items are enclosed for your use: (1) Instructions for completing the form; (2) The OSHA No. 200-S form and a copy for your files; and (3) An addressed return envelope. Please complete the OSHA No. 200-S form and return it within three weeks in the envelope provided.

If you have any questions about this survey, contact the survey collection agency indicated on the OSHA No. 200-S form.

Thank you for your cooperation with this important survey.

Sincerely,

THORNE G. AUCHTER
Assistant Secretary for
Occupational Safety and Health

BILLING CODE 4510-24-C

Appendix C.—Selected Illnesses Which May Result From Exposure in the Work Environment

whose occurrence may: 1) provide the impetus for epidemiologic or industrial hygiene studies; or 2) serve as a warning

Recording illnesses has historically been a problem for employers,

Condition	Industry and/or occupation	Symptoms	Agent	Log col.

Appendix C.—Selected Illnesses Which May Result From Exposure in the Work Environment

The following table is included *for information purposes only, to assist* employers in recognizing certain occupational illnesses and diseases. It does not include every condition, illness, or disease that may result from an exposure in the work environment.

The table is based upon a Sentinel Health Event List (Occupational) (SHEO), initially prepared by the National Institute for Occupational Safety and Health (NIOSH), which encompassed 50 disease conditions linked to the workplace. A Sentinal Health Event is defined by NIOSH as a disease, disability, or untimely death which is occupationally related and whose occurrence may: 1) provide the impetus for epidemiologic or industrial hygiene studies; or 2) serve as a warning signal that materials substitution, engineering control, personal protection, or medical care may be required. The list included only those conditions for which NIOSH found "objective documentation of an associated agent, industry, and occupation. . . . in the scientific literature." NIOSH has indicated that the list will be expanded in the future.

The following table lists illness conditions, the industry and/or occupation where each condition is likely to occur, symptoms associated with each condition, the agent likely to cause the condition, and the appropriate illness column to be checked on the log, OSHA No. 200.

Recording illnesses has historically been a problem for employers, especially chronic or long term latent illnesses. This table is furnished to assist employers in making accurate illness determinations. *The table should not be interpreted to mean that a specific condition can only be contracted in the industries or occupations listed. It also does not mean that every condition listed is recordable if experienced by employees in these industries and/or occupations.* For the case to be OSHA recordable, employers must still establish that the condition is a result of an exposure in *their* work environment. For guidelines for determining work relationship, see Chapter V, Section C.

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Pulmonary tuberculosis	Physicians, medical personnel, medical laboratory workers.	Tuberculous lesion; chest pain; coughing; bloody and pus-like sputum; hectic fever; weight loss; or night sweats.	Mycobacterium tuberculosis	7c
Silico-tuberculosis	Quarrymen, sandblasters, silica, processors, mining, metal foundries, ceramic industry.	Decrease in maximum breathing capacity; massive fibrosis; pronounced, energetic or labored respiration with low oxygen content in arteries producing bluish skin and mucous membrane discolorations; bloodstained sputum; attacks of bronchopneumonia; malaise; disturbed sleep; anorexia; chest pains; or hoarseness.	S:02, Mycobacterium tuberculosis	7b
Plague	Shepherds, farmers, ranchers, hunters, field geologists, medical laboratory workers.	Acutely inflamed and painful lymph nodes; pulmonary lesions; cough; chills; 103°–106 °F temperature; rapid and thready pulse, hypertension; restlessness; delirium; confusion; incoordination; headache; vomiting; or diarrhea.	Yersinia pestis via bite of infected flea, wild rodents, or inhalation.	7g
Tularemia	Hunters, fur handlers, sheep industry workers, cooks, veterinarians, ranchers, veterinary pathologists, forestry workers, farmers, butchers, laboratory workers.	Ulcer at bite site followed by inflammation of regional lymph nodes; a nonspecific rash; headache; muscle pains; chills; nausea; vomiting and rapid rise in temperature to 103°–104 °F with severe prostration; extreme weakness; and drenching sweats—all symptomatic of a typhoid-like state; bacteremia; and atypical pneumonia.	Francisella tularensis via bite of flies, fleas, ticks, and lice or handling infected animals.	7g
Anthrax (diagnosis often hinges upon determination of occupation).	Shepherds, farmers, butchers, handlers of imported hides or fibers, veterinarians, veterinary pathologists, weavers.	*Cutaneous Form:* Red-brown papule skin eruption which enlarges with red patches of variable size and shape; pus-like pimples; and hardening of tissue. Progressive ulceration follows with blood and pus bursting from the pimples and dead tissue forming. Local lymph node enlargement is accompanied by general feeling of illness; muscle pain; headache; fever; nausea; and vomiting. *Pulmonary Form:* Symptoms are insidious, suggesting an influenza-like illness. Increased fever is followed in 1–3 days by severe respiratory distress with bluish-purplish discoloration of mucous membranes and skin; shock; and coma.	Bacillus anthracis	7g
Brucellosis	Farmers, shepherds, veterinarians, laboratory workers, slaughterhouse workers.	Remittant undulatory evening fever for 1–5 weeks; headaches and back-of-neckaches; morning sweats with lowered fever; weakness and aching without localizing findings. Is repetitive with remissions over months or years. Cervical pain; constipation; occasional diarrhea; anorexia; weight loss; irritability; insomnia; mental depression; emotional instability. Enlarged spleen and lymph nodes may occur.	Brucella abortus, suis	7g
Tetanus	Farmers, ranchers	Lockjaw; spasms, primarily of masseter and neck muscles and secondarily of the back muscles; stiffness of the jaw; restlessness; irritability; constipation; stiff neck; difficulty in swallowing; stiff arms or legs; headache; fever; sore throat; chilliness; painful convulsions.	Clostridium tetani	7g
Rubella	Medical personnel, intensive care personnel.	Pale pink rash or measles-like eruptions following slight fever and inflammation of mucous membranes of head, nose, throat; sore throat; pains in limbs; cough; intense intolerance of light.	Rubella virus	7g
Hepatitis A (infectious)	Day care center staff, orphanage staff, mental retardation institution staff, medical personnel.	Anorexia; fever; liver enlargement and tenderness; generalized debilitation; drowsiness; nausea; headache; occasionally jaundice.	Hepatitis A virus	7g
Hepatitis B (serum)	Nurses and aides, anesthesiologists, orphanage and mental institution staff, medical laboratory personnel, general dentists, oral surgeons, physicians.	Flu-like feeling; weakness; drowsiness; anorexia; nausea; abdominal discomfort; fever; headache; definite jaundice.	Hepatitis B virus	7g
Non-A, non-B hepatitis (toxic)	As above for hepatitis A & B	Nausea; vomiting; jaundice; stupor; coma; toxic effects on kidney, brain, or bone marrow may be more conspicuous.	Unknown; suspected drugs and chemicals include: carbon tetrachloride, insecticides, industrial solvents, and various metallic compounds (arsenic, gold, mercury iron).	7g

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Rabies	Veterinarians, animal and game wardens, lab researchers, farmers, ranchers, trappers, cave explorers, delivery personnel.	Malaise or general feeling of illness or discomfort; depression of spirits; swelling of lymphatics around wound; choking; spasmodic catching of breath, succeeded by increasing spasms, especially of the muscles of respiration and swallowing, which are increased by attempts to drink water or even by sight of water. Also, fever; headache; mental derangement; nausea; vomiting; profuse secretion of a sticky saliva; and albumin in the urine. Usually fatal within 2–5 days.	Rabies virus	7g
Ornithosis	Psittacine bird (parrot and parakeet) breeders, pet shop staff, poultry producers, veterinarians, zoo employees, taxidermists, laboratory and hospital personnel.	Chills; headache; dry cough; feverish with slow pulse; lethargy; insomnia; abnormal fear of light; sore throat; nausea; vomiting; diarrhea; protein in urine; anorexia; abnormal white blood cell count; enlarged but non-tender liver; and commonly, inflammation of lungs. Severe cases include muscle pain with stiffness and spasms; delirium and stupor.	Chlamydia psittaci	7g
Hemangiosar-coma of the liver	Vinyl chloride polymerization industry, vintners (winemaker).	A malignant tumor composed of cancerous thin and flat scale-like cells forming vessel-like spaces in some instances.	Vinyl Chloride Monomer; arsenical pesticides.	7g
Malignant neoplasm of nasal cavities.	Woodworkers, cabinet and furniture makers, boot and shoe industry, radium chemists and processors, dial painters, chromium producers, processors, users, nickel-smelting and refining.	Malignant tumor; headache; pain; paralysis of the lateral rectus muscle of the eye.	Hardwood dusts; unknown; radium; chromates; nickel.	7g
Malignant neoplasm of larynx	Asbestos industries and utilizers	Hoarseness; acute laryngitis; polyp of a vocal cord; dropped voice pitch which becomes monotone; voicelessness; difficult or labored breathing.	Asbestos	7g
Malignant neoplasm of trachea, bronchus, and lung.	Asbestos industry and utilizers, topside coke oven workers, uranium fluorsper miners, chromium producers and processors, users, nickel smelters, processors, users, smelters, mustard gas formulators, ion- exchange resin makers, chemists.	Chronic cough; localized wheeze; collapsed portion of lung with shrinkage of chest wall and diminution of chest movement and breath sounds; scanty and mucoid sputum unless an infection away from bronchial obstruction occurs; occasional spitting of blood or bloody sputum; severe, constant, nonpleuritic, unilateral pain; sometimes a remote metastasis, especially in the brain, occurs; advanced state-weight loss, anorexia, weakness, hoarseness; bone pain.	Asbestos; coke oven emissions; radon daughters; chromates; nickel; arsenic; mustard gas; bis(chloromethyl) ether chloromethyl methyl ether.	7g
Mesothelioma (MN of peritoneum) (MN of pleura).	Asbestos industries and utilizers	Primary tumor composed of cells similar to those forming lining of the peritoneum, pericardium, or pleura.	Asbestos	7g
Malignant neoplasm of bone	Dail painters, radium chemists, and processors.	Fracture may be first clue to bone cyst, pain swelling	Radium	7g
Malignant neoplasm of scrotum	Automatic lathe operators; metalworkers; coke oven workers; petroleum refiners, tar distillers, chimney sweeps.	Scrotal mass progressively increasing in size; sometimes associated with pain; minor trauma; hemorrhaging may produce extreme local pain and tenderness.	Mineral/Cutting Oils; soots and tars, tar distillates.	7g
Malignant neoplasm of bladder	Rubber and dye workers	Discharge of blood or pus-filled urine; pain or burning while urinating; colicky pain accompanying obstruction; frequent urination.	Benzidine, alpha and beta naphthylamine, auramine, magenta, aminobiphenyl, 4-Nitrophenyl.	7g
Malignant neoplasm of kidney, other, and unspecified urinary organs.	Coke oven workers	Pain; malignant mass or tumor of the connective tissues, muscles, urogenital system, vascular system, and epithelial lining of the coelom; discharge of bloody urine; fever; anorexia; nausea; vomiting; hypertension.	Coke oven emissions	7g
Lymphoid leukemia, acute	Rubber industry, radiologists	Abrupt onset of fever with secondary infection of mouth, throat, or lungs; joint pains; thrombocytopenia (decrease in absolute number of platelets below normal) may cause minute rounded spots of hemorrhage on skin, mucous membrane, or organ, and discoloration of skin due to blood vessel rupture, plus bleeding from mouth, nose, kidneys, and bowel. Moderate enlargement of liver, spleen, and lymph nodes and progressive weakness and pallor.	Unknow; ionizing radiation	7g
Myeloid leukemia, acute	Occupations with exposure to benzene; radiologists.	Fatigue; weakness; anorexia; weight loss; moderately enlarged spleen causing epigastric stress or a heavy feeling; sternal tenderness reflects hypercellularity of the marrow; minor lymph node enlargement; thrombocytopenia (decrease in absolute number of blood platelets below normal) followed by hemostasis (arrest of a flow of blood or hemorrhage).	Benzene; inotzing radiation	7g
Erythroleukemia	Occupations with exposure to benzene	Rare form of leukemia in which multiple hemorrhages, especially fore the base of the tongue and gums occur; plus an uninterrupted fall of both the white and red blood cell count of the blood; fever; aplastic anemia.	Benzene	7g
Hemolytic Anemia, nonautoimmune.	Whitewashing and leather industry; electrolytic processes, arsenical ore smelting; plastics industry; dye, celluloid, resin industry.	Weakness; vertigo; headache; tinnitus; spots before the eyes; easy fatigability; drowsiness; irritability; euphoria; psychotic behavior; occasionally amenorrhea (absence of menstruation); loss of libido; or low-grade fever; gastrointestinal complaints and congestive heart failure. Characterized by jaundice; enlargement of the spleen; and evidence of accelerated blood destruction. Hemolytic crises are accompanied by malaise, chills, and fever; aching in the extremities, back, and abdomen; and the presence of hemoglobin and methoglobin in the urine which is diminished in the amount excreted over 24 hrs. If the blood destruction is intravascular. In chronic hemolytic anemia, liver enlargement and pigment gallstones as well as chronic leg ulcers are often seen.	Copper sulfate; arsine; trimellitic anhydride; Naphthalene.	7d
Aplastic anemia	Explosives manufacturer, occupations with exposure to benzene, radiologists, radium chemists and dial painters.	Usually insidious, but can be explosive in development. Waxy pallor of skin and mucous membranes. Chronic cases show brown skin pigmentation. If decrease in absolute number of platelets is below normal (thrombocytopenia), blood may rupture into mucous membrances and skin. Hemorrhages into ocular fundi are frequent. Severe sore throat associated with sharp reduction in number of granulocytes (agranulocitic angina) may occur. Spleen enlargement is absent.	TNT: Benzene; ionizing radation	7d 7e

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Lymphoid leukemia, chronic	Rubber industry, radiologists	Fever; anorexia; weight loss; moderately enlarged spleen causing epigastric stress or a heavy feeling; sternal tenderness reflects hypercellularity of the marrow; minor lymph node enlargement; thrombocytopenia (decrease in absolute number of blood platelets below normal) followed by hemostasis (arrest of a flow of blood or hemorrhage).	Unknow; ionizing radiation	7g
Myeloid leukemia, chronic	Occupations with exposure to benzene; radiologists.	Fever; anorexia; weight loss; moderately enlarged spleen causing epigastric stress or a heavy feeling; sternal tenderness reflects hypercellularity of the marrow; minor lymph node enlargement; thrombocytopenia (decrease in absolute number of blood platelets below normal) followed by hemostasis (arrest of a flow of blood or hemorrhage).	Benzene; inotzing radiation	7g
Multiple myeloma	Rubber industry, radiologists	Bone pain; pathological fractures; anemia; hypercalcemia; renal failure; infections; hemorrhagic diathesis; amyloidosis; hyperuricemia; hyperviscosity syndrome; and neurologic manifestations.	Unknow; ionizing radiation	7g
Parkinsonism	Manganese processing industry, welders, miners, longshoremen, dockworkers.	Tremor; rigidity; bradykinesia; gait disturbance; mask-like facies; monotonous speech; dementia; depression; and hallucinations.	Manganese	7g
Peripheral neuropathy	Acrylamide industry, tunnel workers, rubber industry, pesticide applicators, lead workers.	Numbness; tingling; pain; and weakness in the hands and feet; loss of deep tendon reflexes; and decreased motor nerve conduction velocity.	Acrylamide; carbon disulfide; n-hexane; methyl n-butyl ketone; pyridine; lead; arsenic; pesticides.	7g
Polycythemia	Rubber industry, radiologists	Headache; dizziness; tinnitus; blurred vision; lassitude; dyspnea; pruritus; weakness; and sweating. Plethoric appearance of skin and mucous membranes. Hypertension; cardiomegaly; congestive heart failure; and thrombosis may occur. Splenomegaly and hepatomegaly may be present.	Unknow; ionizing radiation	7g
Primary carcinoma of the liver	Vinyl chloride polymerization industry, vintners (winemaker).	Malignant tumor composed of cancerous cells resembling liver cells; pain; weakness; anorexia; weight loss; and jaundice.	Vinyl Chloride Monomer; arsenical pesticides.	7g
Primary carcinoma of the lung	Asbestos industry and utilizers, topside coke oven workers, uranium fluorsper miners, chromium producers and processors, users, nickel smelters, processors, users, smelters, mustard gas formulators, ion- exchange resin makers, chemists.	Chronic cough; localized wheeze; collapsed portion of lung with shrinkage of chest wall and diminution of chest movement and breath sounds; scanty and mucoid sputum unless an infection away from bronchial obstruction occurs; occasional spitting of blood or bloody sputum; severe, constant, nonpleuritic, unilateral pain; sometimes a remote metastasis, especially in the brain, occurs; advanced state-weight loss, anorexia, weakness, hoarseness; bone pain.	Asbestos; coke oven emissions; radon daughters; chromates; nickel; arsenic; mustard gas; bis(chloromethyl) ether chloromethyl methyl ether.	7g
Primary carcinoma of the skin	Arsenic industry, coal tar distillers, shale oil workers, paraffin workers, roofers, tarmac workers.	Malignant tumor composed of cancerous cells resembling skin cells; pain; weakness; anorexia; weight loss; and jaundice.	Arsenic; coal tars; coal tar pitch volatiles; soots; mineral oils.	7g
Primary carcinoma of the urinary bladder	Rubber and dye workers	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Benzidine, alpha and beta naphthylamine, auramine, magenta, aminobiphenyl, 4-Nitrophenyl.	7g
Primary carcinoma of the urinary bladder	Coke oven workers	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Coke oven emissions	7g

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Primary carcinoma of the urinary bladder	Rubber industry, radiologists	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Unknow; ionizing radiation	7g
Primary carcinoma of the urinary bladder	Occupations with exposure to benzene; radiologists.	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Benzene; inotzing radiation	7g
Primary carcinoma of the urinary bladder	Occupations with exposure to benzene	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Benzene	7g
Primary carcinoma of the urinary bladder	Explosives manufacturer, occupations with exposure to benzene, radiologists, radium chemists and dial painters.	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	TNT: Benzene; ionizing radation	7d 7e
Primary carcinoma of the urinary bladder	Whitewashing and leather industry; electrolytic processes, arsenical ore smelting; plastics industry; dye, celluloid, resin industry.	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Copper sulfate; arsine; trimellitic anhydride; Naphthalene.	7d
Primary carcinoma of the urinary bladder	Asbestos industries and utilizers	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Asbestos	7g
Primary carcinoma of the urinary bladder	Asbestos industry and utilizers, topside coke oven workers, uranium fluorsper miners, chromium producers and processors, users, nickel smelters, processors, users, smelters, mustard gas formulators, ion- exchange resin makers, chemists.	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Asbestos; coke oven emissions; radon daughters; chromates; nickel; arsenic; mustard gas; bis(chloromethyl) ether chloromethyl methyl ether.	7g
Primary carcinoma of the urinary bladder	Arsenic industry, coal tar distillers, shale oil workers, paraffin workers, roofers, tarmac workers.	Malignant tumor composed of cancerous cells resembling bladder cells; pain; weakness; anorexia; weight loss; and jaundice.	Arsenic; coal tars; coal tar pitch volatiles; soots; mineral oils.	7g

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Agranulocytosis or neutropenia	Occupations with exposure to benzene, explosives and pesticide industries, pesticides, pigments, pharmaceuticals.	Acute disease characterized by marked leukopenia and neutropenia (below normal number of leukocytes and neutrophils per unit volume of peripheral blood) and with ulcerative lesions of the throat and other mucous membranes, of the gastrointestinal tract and of the skin. Two or three days of fatigue or overpowering weakness is followed by general ill feeling, chills, high fever, rapid weak pulse, sore throat, difficulty in swallowing, ulcers of the oral mucosa, and ulcerations of the pharyngeal and buccal mucosae. Prostration is extreme. Regional lymph diease but no enlargement of nodes, liver, or spleen. Fatal.	Benzene; phosphorus; inorganic arsenic.	7d
Methemoglobinemia (attacks usually develop some hours after employee has left plant and rarely during work.).	Explosives and dye industries	The oxidized form of hemoglobin, in which the iron atom is trivalent, and which is not able to combine reversibly with oxygen. Formation of large amounts of methemoglobin prevents the normal function of hemoglobin, that of transporting oxygen in the body thus causing asphyxia of the tissues. When large amounts are present, the blood becomes chocolate-brown in color. The skin takes on a bluish-gray color varying in intensity from lilac to a deep leaden hue, and quite different from the bluish-purple color of cyanosis due to a lack of oxygen. This distinctive tint is most noticeable on the cheeks, ears, tip of the nose, and fingernails. Sensation of weakness in the knees and a staggering gait follow. If destruction of the red blood cells is severe, anemia occurs and there may also be injuries to the kidney and liver. Jaundice and enlargement of the spleen may occur.	Aromatic amino and nitro compounds (aniline, TNT, nitroglycerin).	7d
Toxic encephalitis (noninfectious)	Battery, smelter, and foundry workers, electrolytic chlorine production, battery makers, fungicide formulators.	Rapid onset of fever; depression; loss of consciousness or coma; seizures; meningeal symptoms and signs may be accompanied by cerebral disorder, including alterations of consciosness, personality change, convulsions, tremor, muscle weakness of one side of the body (hemiparesis), and cranial nerve abnormalities, progressing within a few days to coma and death.	Lead; inorganic and organic mercury	7d
Parkinson's Disease (secondary)	Manganese processing, battery makers, welders, internal combustion engine industries.	Listlessness and sleepiness by day but insomnia by night; muscular pains, including cramps in the calves; unsteady gait; weakness and stiffness of the limbs; involuntary movements of the arms, legs, trunk, jaw, and head which may be severe enough to shake the bed; occasionally uncontrollable laughter or crying; impulsive acts such as running, dancing, singing, and uncontrolled talking; or forced movements such as falling without being able to catch oneself. Also, absentmindedness; mental confusion; hallucinations; and attacks of aggressiveness; irritability and euphoria; handwriting is tremulous, letters and words cramped, and micrographia is common; speech disturbances include run-on words and sentences, monotone voice, loss of speech (aphonia); impaired swallowing; masklike face; excessive salivation and sweating.	Manganese; carbon monoxide	7g
Cerebellar ataxia	Chemical industry using toluene, electrolytic chlorine production, battery makers, fungicide formulators.	Unsteadiness in walking; arm tremors; pyramidal tract involvement or posterior column disorder may be present; the motor neurons or peripheral nerves may be affected; sometimes optic atrophy, retinitis pigmentosa, paralysis of the eye muscles (ophthalmoplegia), nerve deafness, or mental deterioration. Skeletal changes (scoliosis or spinal curvature and pedal or foot abnormalities) are common.	Toluene; organic mercury	7g
Inflammatory and toxic neuropethy.	Pesticides, pigments, pharmaceuticals, furniture refinishers, degreasing operations, plastic-coated-fabric workers, explosives industry, rayon manufacturing, plastics, hydraulics, coke industries, battery, smelter, and foundary workers, dentists, chloralkali workers, chloralkali plants, fungicide makers, battery makers, plastics industry, paper manufacturing.	Numbness, tingling, and burning of feet and hands, followed by muscular weakness. There may also be a decrease in touch, pain, and temperature sensation in the feet and hands, and tendon reflexes may be diminished or absent.	Arsenic and arsenic compounds; hexane; methyl N-butyl ketone; TNT; CS2; tri-o-cresyl phosphates; inorganic lead; inorganic mercury; organic mercury; acrylamide.	7g
Cataract	Microwave and radar technicians; explosives industries; radiologists; blacksmiths, glass blowers, bakers; moth repellant formulators, fumigators; explosives, dyes, herbicide and pesticide industries.	Progressive, painless loss of vision unless the cataract swells and produces secondary glaucoma. Well-advanced cataracts appear as gray opacities in the lens. Small ones stand out as dark defects in the red reflex.	Microwaves; Ionizing radiation; Infrared radiation; Napthalene, Dinitrophenol, dinitro-o-cre sol	7e 7e 7e 7g 7g
Noise effects on inner ear	Any industry and/or occupation involving exposure to excessive noise.	Tinnitus—hissing, ringing, buzzing, humming, thumping, whistling, or roaring in the ear—may be constant or intermittent and often accompanied by hearing loss. Clicking; cracking; or ticking sounds or abnormal or pathological sounds, originating within the patient's body (by a muscle contraction, etc.) in region of the ear and audible to others as well as to the patient.	Excessive noise	7i
Raynaud's phenomenon (secondary).	Lumberjacks, chain sawyers, grinders, chippers, vinyl chloride polymerization industry.	Intermittent pellor and sometimes bluish-purplish discoloration (cyanosis) of the skin precipitated by exposure to cold, without clinical evidence of blockage of the large peripheral vessels and with nutritional lesions (if present at all, limited to the skin). Blanching and numbing when exposed to chilling weather or emotional upsets with probable loss of muscular control and reduction of sensitivity to heat, cold, and pain are main symptoms. Cyanosis and pain are rare. Gangrene and serious complications are very rare if, indeed, they occur at all.	Whole body or segmental vibration; vinyl chloride monomer.	7i
Extrinsic allergic alveolitis	Farmer's lung, baggassosis, bird fancier's lung, suberosis, malt worker's lung, mushroom worker's lung, maple bark disease, cheese washer's lung, coffee worker's lung, fish-meal worker's lung, furrier's lung, sequoiosis, wood worker's lung, miller's lung.	Difficult or labored breathing (dyspnea); fever; and oxygen deficiency (hypoxia) during acute phase lasting several weeks. Cough with scanty, black, stringy, occasionally bloody sputum; bluish-purple discoloration of mucous membranes (cyanosis); patchy infiltrates in the lung can also occur.	Various agents (usually a fungus or mold and dusty substances).	7g

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Extrinsic asthma or allergic asthma.	Jewelry, alloy and catalyst makers, polyurethane, adhesive, paint workers, alloy, catalyst, refinery workers, solderers, plastic, dye, insecticide makers, foam workers, latex makers, biologists; printing industry, nickel plasters, bakers, plastics industry, woodworkers, furniture makers, detergent formulators.	Sudden onset after exposure to an allegen. Sense of tightness in the chest due to spasmodic contraction of the bronchi; difficult or labored breathing (dyspnea); wheezing. Symptoms may subside in one hour or less, continue for several hours, or persist as status asthmaticus for many days. End of attack is marked by pronounced coughing with expectoration of thick, tenacious sputum, immediately followed by a sensation of relief and "clearing" of the air passages. Physical signs consist of prolongation of expiration and the presence of sonorous and sibilant rales throughout the chest; normal but labored respiration; markedly distended chest; bluish-purplish discoloration of skin and mucous membranes (cyanosis). Between attacks breathing may be quiet, but forced expiration will produce sonorous or sibilant rales. Frequency and severity of attacks may be greatly influenced by secondary factors (e.g., changes in temperature and humidity); by exposure to noxious fumes; by fatigue; by endocrine changes (puberty, menstruation, pregnancy, menopaused); by emotional stress. Since these secondary factors may perpetuate attacks, attention should be directed to their control.	Platinum; isocyanates; chromium and cobalt; aluminum soldering flux; phthalic anhydride; formaldehyde; gum arabic; NiSO4; flour; trimellitic anhydride; red cedar and other wood dusts; bacillus-derived Excenzymes.	7e
Coalworkers pneumoconiosis	Coal miners	Black spit increasing in quantity as disease advances; jet-black nodules and cavities of the lung; chest becomes barrel-shaped and there may be clubbing of the fingers; right heart failure or silico-tuberculosis may supervene to cause death; disease is visualized by X-ray as fine, discrete pinhead mottling or nodulation or dense conglomerate shadows resembling angel's wings; eventually large fibrotic masses develop and difficult or labored breathing with cough may ensue.	Coal dust	7b
Asbestosis	Asbestos industries and utilizers	Progressive difficult or labored breathing (dyspnea); non-productive cough (little or no sputum), unless pulmonary TB is present yielding bloodstained sputum; slight pain between shoulders, under shoulder blades, or sternum; visualized by X-ray as fine pulmonary fibrosis enmeshed with asbestos bodies giving a ground glass appearance; increased susceptibility to lung cancer; pleural plaques and calcifications are often present in the fibrous tissues and emphysema is extensive, but localized to lower and apical parts of the lungs.	Asbestos	7b
Silicosis	Quarrymen, sandblasters, silica processors, mining, metal and ceramic industries.	Discrete nodulation in the absence of emphysema is usually asymptomatic. It is the massive conglomerate fibrosis resulting from the coalescence of nodules that yields symptoms: difficult or labored breathing (dyspnea) which is progressively deeper and faster; dry cough; malaise; disturbed sleep; anorexia; chest pains; hoarseness; bluish discoloration of skin and mucous membranes (cyanosis); and bloodstained sputum with bronchopneumonia and subsequent bronchiectasis developing. TB often develops. Fever is rare. Physical signs (end loud pulmonic valve component of S2 heer sound, decreased chest expansion and excursion of diaphragm, breath sounds) are few or absent. Right heart failure or pus-producing bronchopneumonia will result in death.	Silica	7b
Talcosis	Talc processors	Difficult or labored breathing (dyspnea), X-ray yields nodular shadows distributed over both lungs; nodules show whorling different from silicosis and contain fiber-like structures arranged singly and in clumps.	Talc	7b
Chronic beryllium disease of the lung.	Beryllium alloy workers; ceramic and cathode ray tube makers, nuclear reactor workers (onset may be 5 years after exposure).	Morbid condition of the lungs, more rarely of the skin (conjunctivitis and dermatitis), subcutaneous tissue, lymph nodes liver, and other structures, characterized by formation of granulomas (tumors). Chronic granulomatous pneumoconiosis with thickening of alveoler walls. An acute transient inflammation of respiratory tract (nasal passages and pharynx) yielding nosebleeds, bronchitis or pneumonitis. Symptoms of respiratory insufficiency with diffusion difficulty (weakness, anorexia, weight loss, malaise, dyspnea or difficult or labored breathing, hyperpnea or deeper and faster breathing, cyanosis or bluish discoloration of skin or mucous membranes, and cough) are most prominent and out of proportion to physical or X-ray signs. Resembles miliary TB or pulmonary sarcoidosis.	Beryllium	7b
Byssinosis (develops over 10-year period working with raw or waste cotton.).	Cotton industry workers	Periodic bronchoconstriction or Monday morning fever with wheezing and difficult or labored breathing upon return to work after 2-day absence. Later develops into severe airway obstruction and impaired elastic recoil due to chronic bronchitis, and emphysema. Patient has overdistended lungs but no characteristic X-ray pattern or recognizable lung fibrosis or infiltration are seen. Diagnosis is established by measuring the patient's ventilatory capacity before he starts work on Monday and again no more than 1 hour after his work shift.	Cotton, flax, hemp, cotton-synthetic dusts.	7b
Acute, bronchitis, pneumonitis, and pulmonary edema due to fumes and vapors.	Refrigeration, fertilizer, oil refining industries, alkali and bleach industries, silo fillers, arc welders, nitric acid industry, paper and refrigeration industry, oil refining, cadmium smelters, processors, plastics industry.	Acute inflammation of the tracheo bronchial tree. Symptoms are those of acute URI: inflammation of the mucous membranes of the nose, usually marked by sneezing, nasal airway congestion, and discharge of watery mucous (coryza); malaise; chilliness; slight fever; back and muscle pain; sore throat. Dry nonproductive cough signals bronchitis, later yielding a glutinous and mucous with pus-filled sputum. Fever to 101 or 102 F occurs for 3–5 days. Persistent occasional sibilant or crackling pulmonary sounds may suggest complications. Pulmonary edema: asthmatic wheezing; difficultry breathing except in upright position (orthopnea); pallor; sweating, bluish discoloration of skin and mucous membranes (cyanosis); frothy or pinkish sputum.	Ammonia; chlorine; nitrogen oxides; sulfur dioxides; cadmium; trimellitic anhydride.	7c

Condition	Industry and/or occupation	Symptoms	Agent	Log column
Toxic hepatitis	Solvent utilizers, dry cleaners, plastics industry, explosives and dye industries, fire and waterproofing additive formulators, plastics formulators, fumigators, gasoline, fire extinguisher formulators, disinfectant, fumigant, synthetic resin formulators.	Nausea; vomiting; jaundice; stupor; and coma may follow exposure. Toxic effects on kidney, brain, or bone marrow may be more conspicuous than the hepatic involvement.	Carbon tet- rachloride, chloroform, tetrachloroethane, trichloroethylene; phosphorus TNT; chloronaphthalenes; methylene-dianiline; ethylene dibromide; cresol.	7d
Acute or chronic renal failure	Battery makers, plumbers, solderers, electrolytic processes, arsenical ore smelting, battery makers, jewelers, dentists, fluorocarbon formulators, fire extinguisher makers, antifreeze manufacture.	Failure to void; lumber pain and tenderness; and analysis of urinary volume and the character of the urinary sediment is extremely valuable in differential diagnosis of acute renal failure. In *obstruction*, urinary sediment is scanty, with only occasional red and white blood cells or hyaline and granuline casts. Proteinuria is minimal or absent. In *prerenal failure*, occasional hyaline and granular casts are found and proteinuria is minimal. Urinary sp. gr. is usually >1.020 and urinary sodium concentration <15 m Eq/L. In *acute tubuler necrosis* numerous renal epithelial cells, cell casts, and coarsely granular casts are present. Hb and RBC casts are seen occasionally. Proteinuria is minimal or moderate. Urinary sp. gr. is usually <1.018 and sodium concentration >20 m Eq/L. In *acute glomerulonephritis and collagen diseases*, hematuria and RBC casts are characteristic and protein excretion is usually moderate or heavy.	Inorganic lead; arsine; inorganic, mercury; carbon tetrachloride; ethylene glycol.	7d
Infertility, male	Formulators, DBCP producers, formulators, and applicators.	Physical examination and semen analysis are necessary to diagnosis and should include work history.	Kepone; dibromochloropropane	7d
Contact and allergic dermatitis	Leather tanning, poultry dressing plants, fish packing, adhesives and sealents industry, boat building and repair.	Transient redness to severe swelling and blister (bulla) formation; itching and vesiculation are practically always present. Vesicles and bullas rupture, ooze, and crust; followed by scaling and some temporary thickening of skin. Secondary infection, excoriation (skin abrasions), and reaction to treatment may complicate and induce a chronic eczematous dermatitis.	Irritants (e.g. cutting oils, solvents, phenol acids, alkalis, detergents); allergens (e.g., nickel, chromates, formaldehyde, dyes, rubber products).	7a

Appendix E. United States Department of Labor, Occupational Safety and Health Administration—Regional Offices

The list below gives addresses and telephone numbers for OSHA Regional Offices. Complete information on field locations may be obtained from any OSHA Regional Office.

Region I: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
1 Dock Square Building, 4th Floor, 16–18 North Street, Boston, Massachusetts 02109, Phone: 617–223–6710

Region II: New Jersey, New York, Puerto Rico, Virgin Islands
1515 Broadway, Room 3445, New York, New York 10036, Phone: 212–944–3432

Region III: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia
Gateway Building, Suite 2100, 3535 Market Street, Philadelphia, Pennsylvania 19104, Phone: 215–596–1201

Region IV: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee
1375 Peachtree Street, N.E., Suite 587, Atlanta, Georgia 30367, Phone: 404–881–3573

Region V: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin
230 South Dearborn Street, Room 3244, Chicago, Illinois 60604, Phone: 312–353–2220

Region VI: Arkansas, Louisiana, New Mexico, Oklahoma, Texas
555 Griffin Square Building, Room 602, Dallas, Texas 75202, Phone: 214–767–4731

Region VII: Iowa, Kansas, Missouri, Nebraska
911 Walnut Street, Room 406, Kansas City, Missouri 64106, Phone: 816–374–5861

Region VIII: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming
Federal Building, Room 1554, 1961 Stout Street, Denver, Colorado 80294, Phone: 303–837–3061

Region IX: Arizona, California, Hawaii, Nevada, American Samoa, Guam, Trust Territory of the Pacific Islands
450 Golden Gate Avenue, Box 36017, San Francisco, California 94102, Phone: 415–556–7260

Region X: Alaska, Idaho, Oregon, Washington
Federal Office Building, Room 6003, 909 First Avenue, Seattle, Washington 98174, Phone: 206–442–5930

Recordkeeping Summary

Basic recordkeeping concepts and guidelines are included with instructions on the back of form OSHA No. 200. The following summarizes the major recordkeeping concepts and provides additional information to aid in keeping records accurately.

General Concepts of Recordability

1. An injury or illness is considered work related if it results from an event of exposure in the work environment. The work environment is primarily composed of: (1) The employer's premises, and (2) other locations where employees are engaged in work-related activities or are present as a condition of their employment. *When an employee is off the employer's premises, work relationship must be established; when on the premises, this relationship is presumed.* The employer's premises encompass the total establishment. This includes not only the primary facility, but also such areas as company storage facilities and company parking lots. In addition to physical locations, equipment or materials used in the

course of an employee's work are also considered part of the employee's work

Reporting of a fatality or multiple

course of an employee's work are also considered part of the employee's work environment.

2. All work-related fatalities are recordable.

3. All recognized or diagnosed work-related illnesses are recordable.

4. All work-related injuries requiring medical treatment or involving loss of consciousness, restriction or work or motion, or transfer to another job are recordable.

Analysis of Injuries

Recordable and nonrecordable injuries. Each case is distinguished by the treatment provided; i.e., if the injury was such that *medical treatment* was provided or should have been provided, it is recordable; if only first aid was required, it not recordable. *However, medical treatment is only one of several criteria for determining recordability.* Regardless of treatment, if the injury involved loss of consciousness, restriction of work or motion, transfer to another job, or termination of employment, the injury is recordable. (See chart 1 on p. 28.)

Medical treatment. The following procedures are generally considered medical treatment. Injuries for which this type of treatment was provided or should have been provided are almost always recordable if the injury is work related.

—Treatment of infection.
—Application of antiseptics during SECOND OR SUBSEQUENT VISITS to medical personnel.
—Treatment of second or third degree burn(s).
—Application of butterfly adhesive dressing(s).
—Application of sutures (stitches).
—Removal of foreign bodies embedded in eye.
—Removal of foreign bodies from wound; if procedure is complicated because of depth of embedment, size, or location.
—Use of prescription medications.
—Use of hot or cold soaking therapy during SECOND OR SUBSEQUENT VISIT to medical personnel.
—Application of hot or cold compress(es) during SECOND OR SUBSEQUENT VISIT to medical personnel.
—Cutting away dead skin (surgical debridement).
—Application of HEAT THERAPY during second or subsequent visit to medical personnel.
—Use of WHIRLPOOL BATH THERAPY during second or subsequent visit to medical personnel.
—Positive x-ray diagnosis.
—Admission TO HOSPITAL FOR OBSERVATION or equivalent medical facility for treatment or prolonged observation.

First aid treatment. The following procedures are generally considered first aid treatment (e.g., one-time treatment and subsequent observation of minor injuries) and need not be recorded if the work-related injury does not involve loss of consciousness, restriction of work or motion or transfer to another job.

—Application of antiseptics during FIRST VISIT to medical personnel.
—Treatment of FIRST DEGREE burn(s).
—Application of bandage(s) during any visit to medical personnel.
—Use of elastic bandage(s) during first visit to medical personnel.
—Removal of foreign bodies not embedded in eye if only irrigation is required.

Removal of foreign bodies from wound if procedure is UNCOMPLICATED, and is, for example, by tweezers or other simple technique.

—Use of nonprescription medications.
—Soaking therapy on initial visit to medical personnel or removal of bandages by soaking.
—Application of hot or cold compress(es) during FIRST VISIT to medical personnel.
—Application of ointments to abrasions to prevent drying or cracking.
—Application of HEAT THERAPY during first visit to medical personnel.
—Use of WHIRLPOOL BATH THERAPY during first visit to medical personnel.
—Negative X-ray diagnosis.
—Brief observation of injury during visit to medical personnel.

The following procedure, by itself, is not considered medical treatment:

—Administration of tetanus shot(s) or booster(s). However, employers should note that these shots are often given in conjunction with the more serious injuries. Consequently, injuries requiring tetanus shots may be recordable for other reasons.

Reminder: Work-related injuries requiring only first aid treatment and that do not involve any of the conditions in item 4 above, are not recordable.

The following is a list of subjects that will constitute the index when this document is published in final form. The list has been included to allow for comment on the substantive issues listed. Page numbers have not been included because this version has been formatted for inclusion in the **Federal Register**. However, page numbers will appear in the final version of this document.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 761

[OPTS 62035D; TSH FRL 2835-6]

Polychlorinated Biphenyls in Electrical Transformers

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This final rule amends portions of an existing EPA rule concerning the use of polychlorinated biphenyls (PCBs) by placing additional restrictions and conditions on the use of PCB Transformers (Electrical transformers containing 500 parts per million or greater PCBs). This rule: (1) Prohibits the use of higher secondary voltage (480 volts and above) network PCB Transformers in or near commercial buildings after October 1, 1990, (2) requires, by October 1, 1990, the installation of enhanced electrical protection on lower secondary voltage network PCB Transformers and higher secondary voltage radial PCB Transformers in use in or near commercial buildings, (3) prohibits further installation of PCB Transformers in or near commercial buildings after October 1, 1985, (4) requires the registration, by December 1, 1985, of all PCB Transformers with fire response personnel and building owners, (5) requires the marking, by December 1, 1985, of the exterior of all PCB Transformer locations, and (6) requires the removal, by December 1, 1985, of stored combustibles located near PCB Transformers.

EPA is also requiring that owners of PCB Transformers involved in fire-related incidents immediately notify the National Response Center, and, take measures as soon as practically and safely possible to contain any potential releases of PCBs or incomplete combustion products to water.

DATES: In accordance with 40 CFR 23.5 (50 FR 7271), this rule shall be promulgated for purposes of judicial review at 1 p.m. Eastern Daylight Time on July 24, 1985. These amendments shall be effective on August 16, 1985.

FOR FURTHER INFORMATION CONTACT: Edward A. Klein, Director, TSCA Assistance Office (TS-799), Office of Toxic Substances, Environmental Protection Agency, Rm. E-543, 401 M St., SW., Washington, D.C. 20460. Toll free: (800-424-9065). In Washington, D.C.: (554-1404). Outside the USA: (Operator-202-554-1404).

SUPPLEMENTARY INFORMATION: OMB Control Number: 2070-0073.

I. Background

Section 6(e) of the Toxic Substances Control Act (TSCA) generally prohibits the use of PCBs after January 1, 1978. The statute does, however, set forth two exceptions under which EPA may, by rule, allow a particular use of PCBs to continue. Under section 6(e)(2) of TSCA, EPA may allow PCBs to be used in a "totally enclosed manner." A "totally enclosed manner" is defined by TSCA to be "any manner which will ensure that any exposure of human beings or the environment to a polychlorinated biphenyl will be insignificant, as determined by the Administrator by rule." TSCA also allows EPA to authorize the use of PCBs in a manner other than a totally enclosed manner if the Agency finds that the use "will not present an unreasonable risk of injury to health or the environment."

EPA promulgated a rule, which was published in the **Federal Register** of May 31, 1979 (44 FR 31514), to implement section 6(e) (2) and (3) of TSCA. This rule is listed in the Code of Federal Regulations under 40 CFR Part 761. The rule, among other provisions, designated all intact, nonleaking capacitors, electromagnets, and transformers, other than railroad transformers, as "totally enclosed," thus permitting their use without specific authorizations or conditions. The Environmental Defense Fund (EDF) petitioned the U.S. Court of Appeals for the District of Columbia Circuit to review a number of provisions of the rule, including the portion of the rule that designated all intact and nonleaking capacitors, electromagnets, and transformers as "totally enclosed" (*Environmental Defense Fund, Inc.* v. *Environmental Protection Agency*, 636 F.2d 1267).

On October 30, 1980, the court, among other things, decided that there was insufficient evidence in the record to support the Agency's classification of transformers, capacitors, and electromagnets as totally enclosed. The court invalidated this portion of the rule, as well as other provisions, and remanded the rule to EPA for further action.

As a consequence of the October 1980 decision, EPA undertook a number of rulemaking actions. The rule relevant to the subject of today's final rule was published in the **Federal Register** of August 25, 1982 (47 FR 37342) (hereafter, PCB Electrical Use Rule). This rule amended the May 1979 rule by authorizing the continued use of PCB Transformers (electrical transformers containing greater than 500 ppm PCBs) in facilities involved in handling of food or feed items until October 1, 1985, and by authorizing the use of all other categories of non-railroad electrical transformers containing or contaminated with PCBs for the remainder of their useful lives. In its August 1982 decision, EPA made a determination that authorizing the use of these tranformers for the remainder of their useful lives did not present an unreasonable risk to public health or the environment for the following reasons:

1. EPA determined that if it did not authorize the use of PCBs in transformers, the costs to the public and United States industry would be billions of dollars, primarily as a result of the disruption of electrical service. EPA determined that the resulting reduction in risk would not outweigh these substantial costs.

2. EPA determined that the inspection and maintenance programs required under the rule reasonably reduced the exposure risks associated with the use of PCBs in PCB Transformers, and the servicing conditions prevented further PCB contamination of transformers.

3. EPA determined that releases of PCBs to the environment and exposure to humans and biological organisms from mineral oil transformers are minimal. EPA estimated that these transformers contain less than 0.15 percent of all the PCBs used in tranformers and release less than one half of a percent of these PCBs on annual basis.

4. EPA determined that the costs associated with other risk reduction measures such as accelerated phase-out, reducing the PCB concentration in the dielectric fluid, or providing containment for tranformers were not reasonable when compared to the potential reduction in release of PCBs achieved.

In evaluating the risks posed by the continued use of electrical transformers containing PCBs for the August 1982 PCB Electrical Use Rule, EPA considered exposures resulting from leaks and spills of PCB-containing dielectric fluid as constituting the principal route of release of PCBs to the environment from this equipment.

However, EPA has learned that fires involving transformers also can be responsible for the release of PCBs, and, that PCBs released from transformers in fire situations can be volatilized and converted into materials which are orders of magnitude more toxic than PCBs. For example, on February 5, 1981, in the Binghamton State Office Building in Binghamtom, New York, a PCB

Transformer was involved in a fire in the basement of the building. PCBs and oxidation products were distributed throughout the 18-story office building via two vertical ventilation shafts that ran the length of the building and opened into the transformer vault in the basement. Monitoring, completed after the fire, indicated that PCBs, polychlorinated dibenzofurans (PCDFs) (including the toxic congener 2,3,7,8-tetrachlorodibenzofuran (2,3,7,8-TCDF)), and polychlorinated dibenzodioxins (PCDDs) (including the toxic congener 2,3,7,8,-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD)) were distributed throughout the interior of the building. From laboratory studies, it appears that PCDFs are formed from both the oxidation of PCBs and the oxidation of chlorinated benzenes in combustion situations. PCDDs, however, appear to be formed only from the oxidation of chlorinated benzenes. (Tri- and Tetra-chlorinated benzenes often make up 30-35 percent of PCB askarel dielectic fluid, and can be present at low levels as contaminants in other fluids.)

At the time of promulgation of the August 25, 1982 PCB Electical Use Rule, EPA believed that PCB Transformer fires were very rare, isolated events. Thus, although EPA made determinations that the use of electrical transformers containing PCBs did not pose unreasonable risks to public health or the environment, EPA did not directly consider the public health and environmental risks posed by fire-related events. EPA also did not evaluate the cost of implementing risk reduction measures to mitigate the risks posed by fires involving this equipment or factor into its economic assessment certain now-identified costs associated with the continued use of these transformers, principally, the very high costs of cleanup following more serious incidents. These costs reduce the benefits associated with the continued use of these transformers.

After the promulgation of the PCB Electical Use Rule, additional information came to EPA's attention that indicated that PCB Transformer fires may occur more frequently than previously expected, and that transformer fire-related hazards are not restricted solely to transformers located inside buildings. On May 15, 1983, in the One Market Plaza complex in San Francisco, California, a PCB Transformer was involved in a smoky transformer vault fire. Monitoring completed after the fire indicated the presence of PCBs, PCDFs, and PCDDs, in soot from this fire. Although the vault housing the transformer was located exterior to the building itself (in a sidewalk vault), unsealed conduits from the vault to the basement and outside air intake vents drew contaminated smoke into the building.

The San Francisco incident, and four more recent incidents, in the First National Bank Building in Chicago, Illinois, in September 1983; in Tulsa, Oklahoma, in December 1983 and May 1984; and in Miami, Florida, in May 1984, have prompted EPA to reassess its earlier position on the expected frequency of fire-related incidents involving transformers that contain PCBs.

EPA issued an Advance Notice of Proposed Rulemaking (ANPR), which was published in the **Federal Register** of March 23, 1984 (49 FR 11070), to solicit additional information on the risks posed by fires involving transformers containing PCBs, their frequency of occurrence, the costs of cleanup following these incidents, and the effectiveness and costs associated with regulatory control measures. At that time, EPA indicated that it would use the new information to reconsider the use authorization issued in the August 1982 PCB Electrical Use Rule for the continued use of most electrical transformers containing PCBs.

In the ANPR, EPA solicited comments on a wide range of potential regulatory control measures, including the phaseout of PCB Transformers, increased electrical protection, fire and smoke control technologies, and fire hazard inspection programs. EPA also solicited comments on the relative risks posed by PCB Transformer fires in commercial buildings such as office buildings, versus the risks posed by fires in industrial facilities and outdoor electrical substations. EPA suggested in the ANPR that the risks posed by PCB Transformer fires in commercial buildings may be greater than those posed by transformer fires in industrial facilities and outdoor electrical substations.

EPA received over 50 comments on the ANPR during the public comment period, which closed on May 22, 1984. EPA received information from a number of different sources, including the insurance industry, fire departments, building owners, industrial transformer users, and utilities. (The comments on the ANPR are summarized in: "PCB Transformer Fires: Comments on the Advance Notice of Proposed Rulemaking" (September 1984).) Several comments were received following the close of the comment period, and EPA reserved these comments for consideration following the issuance of the Proposed Rules.

After considering the comments received in response to the ANPR, and after completing further analyses of available data, EPA issued a Proposed Rule, which was published in the **Federal Register** of October 11, 1984 (49 FR 39966), to address the risks posed by fires involving transformers that contain PCBs. The Proposed Rule presented EPA's determination that additional regulatory control measures were warranted on the use of PCB Transformers. At the same time, EPA reaffirmed its August 1982 determination that the indefinite use of PCB-Contaminated transformers does not present unreasonable risks to public health or the environment. EPA's determinations were based on analyses of the risks posed by fires involving electrical transformers containing PCBs, the benefits of PCBs and the availability of substitutes, and the costs and benefits of control measures designed to mitigate or eliminate the fire-associated risks posed by the equipment.

EPA received over 130 comments on the Proposed Rule during the public comment period, which closed on February 11, 1985. On January 14, 15, and 16, 1985, EPA held a public hearing in Washington, D.C., where 15 parties provided testimony on various provisions of the Proposed Rule.

EPA has considered all the comments received in response to the Proposed Rule (as well as the comments received after the close of the ANPR comment period), and has modified the rule where appropriate. Further, EPA has prepared a support document for this rulemaking which addresses all substantive comments on the Proposed Rule and includes EPA's responses to comments which did not result in the actual modification of the rule. This document, entitled: "Response to Comments on the PCB Transformer Fires Proposed Rule (July 1985)," is available by contacting the Toxic Substances Control Act Assistancce Office (see **FOR FURTHER INFORMATION CONTACT**).

II. Summary of the Final Rule

Under section 6(e)(2)(B) of TSCA, EPA can authorize a use of PCBs provided that the use "will not present an unreasonable risk of injury to health or the environment." EPA's August 1982 decision to allow the continued use of electrical transformers containing PCBs was based on the reported low frequency of leaks and spills of PCBs from this equipment compared to the high costs associated with replacing this equipment with substitute transformers

or requiring secondary containment to limit the spread of spilled materials,

proposed that PCB Transformer owners maintain records of their efforts in

installations should be the subject of more stringent control measures. In

the blocking of floor drains, the containment of water runoff, and the

or requiring secondary containment to limit the spread of spilled materials.

EPA subsequently undertook an evaluation of the fire-related risks posed by the continued use of PCB Transformers, and the costs and benefits of measures designed to reduce those risks. On October 11, 1984, EPA issued a Proposed Rule which contained EPA's determination that PCB Transformer fires (fires involving transformers containing greater than 500 ppm PCBs), particularly fires which occur in or near buildings, do present risks to human health and the environment. EPA reached this determination after considering the extreme toxicity of materials which can be formed and released during fires involving this equipment, as well as the potential for human and environmental exposures to these compounds from a single incident, and the expected frequency of incidents over the remaining useful life of this equipment.

EPA further determined that the continued use of PCB Transformers without additional restrictions does present an unreasonable risk of injury to health and the environment. EPA reached this determination after considering the risks posed, the costs of cleanup following these incidents, the availability of adequate substitute materials, and the costs and benefits associated with risk reduction measures. EPA did, therefore, propose additional regulatory controls on the use of this equipment.

EPA proposed to require: (1) The immediate registration of all PCB Transformers with appropriate fire department jurisdictions, and the immediate registration with building owners of all PCB Transformers located in or near buildings, (2) the immediate marking of the exterior of the vault door, machinery room door, means of egress, or grate(s) accessing a PCB Transformers with PCB identification labels, (3) the immediate removal of stored combustibles from PCB Transformers locations, (4) the installation, by July 1, 1988, of additional electrical protective devices on PCB Transformers in or near buildings in high secondary voltage systems (480/277 volt systems), and (5) the isolation, by July 1, 1988, of all PCB Transformers in or near buildings from building ventilation systems, building ductwork, and openings in construction to reduce the widespread contamination of structures and the environment by smoke and soot in the event of a PCB Transformer fire. In addition, to facilitate monitoring compliance with the isolation requirements, EPA proposed that PCB Transformer owners maintain records of their efforts in isolating transformers through the completion of PCB Smoke Spread Reduction Plans (PCB–SSRPs).

Finally, in the event of a PCB Transformer fire, EPA proposed to require PCB Transformer owners to take immediate measures to contain potential water discharges, and to report all PCB Transformer fire-related incidents to the National Response Center (NRC) prior to the initiation of cleanup efforts.

This final rule modifies and clarifies some of the requirements presented in the Proposed Rule as a result of information and comments provided to the Agency during public comment periods and at the public hearing. In developing the Proposed Rule, EPA evaluated the risks posed by PCB Transformer fires in or near buildings by using an office building setting to evaluate generically the nature of an potential for human and environmental exposures to PCBs and incomplete combustion products. EPA determined that additional control measures, principally the isolation of PCB Transformers from building ventilation equipment and ductwork, were necessary to reduce the risks posed by the continued use of this equipment.

During the public comment period for the Proposed Rule, EPA received extensive comments in three specific areas, and has modified the final rule accordingly. First, many comments received in response to the Proposed Rule suggested that EPA consider evaluating separately the fire-related risks posed by the continued use of PCB Transformers in industrial locations versus the fire-related risks posed by the use of PCB Transformers in or near buildings such as office buildings, stores, hospitals and schools (hereafter, all non-industrial, non-substation buildings will be referred to as "commercial buildings"). This final rule adopts this suggestion and addresses the use of PCB Transformers in or near industrial buildings separately from the use of PCB Transformers in or near commercial buildings.

Second, many comments on the Proposed Rule discussed the probability of PCB Transformer failures and fires, and suggested that certain types of PCB Transformer installations, network installations with higher secondary voltages (secondary voltages of 480 volts and above, including 480/277 volt secondaries), may be particularly likely to be involved in fire-related incidents. These comments suggest that if EPA were to pursue additional restrictions on the use of PCB Transformers, these installations should be the subject of more stringent control measures. In response to these comments, this final rule considers factors such as the relative probabilities of failures and fires in different types of PCB Transformer installations and places more stringent controls on those transformers which EPA believes pose higher risks of failures and fires.

Finally, in response to comments on the Proposed Rule, in this final rule, EPA has increased its emphasis of the prevention of PCB Transformer fires through increased electrical protection, and decreased its emphasis on the use of isolation measures to minimize the spread of already formed and/or released contaminants.

This final rule prohibits:

1. The continued use of higher secondary voltage network PCB Transformers (network PCB Transformers with secondary voltages at or above 480 volts, including 480/277 volt systems) in or near commercial buildings beyond October 1, 1990.

2. The further installation of PCB Transformers (which have been placed into storage for reuse) in or near commercial buildings.

This final rule also requires:

1. The installation, by October 1, 1990, of enhanced electrical protection on lower secondary voltage network PCB Transformers and on higher secondary voltage radial PCB Transformers (radial PCB Transformers with secondary voltages at or above 480 volts, including 480/277 volt systems) used in or near commercial buildings.

2. The registration, by December 1, 1985 of all PCB Transformers with fire departments or fire brigades with primary response function, and the registration, by December 1, 1985, of all PCB Transformers located in or near buildings with building owners.

3. The marking, by December 1, 1985, of the exterior of all PCB Transformer locations (excluding grates and manhole covers).

4. The removal, by December 1, 1985, of combustible materials stored within a PCB Transformer enclosure, within 5 meters of a PCB Transformer enclosure, or within 5 meters of an unenclosed PCB Transformer.

This rule also requires the immediate notification of the National Response Center in the event of a PCB Transformer fire-related incident; and, that PCB Transformer owners take measures as soon as practically and safely possible to contain any potential water releases associated with a PCB Transformer fire-related incident. These measures include, but are not limited to, the blocking of floor drains, the containment of water runoff, and the control and treatment of cleanup water prior to discharge.

Fire events involving the rupture of PCB Transformers can lead to contamination of sewers, sewage treatment systems, sewage sludges and bodies of water. Liquid PCBs and incomplete combustion products such as dioxins or furans may be conveyed through drains into storm or sanitary sewer systems. This process is facilitated when water is used in firefighting operations or is present as a result of the rupture of water pipes. Disruption of sewage treatment processes can also be caused, and eventually contaminants may be discharged into receiving waters poorly treated or not treated at all.

Contamination of receiving waters presents a risk of long lasting adverse effects on aquatic life and bottom sediment, as well as threats to public health through contamination of drinking water supplies and direct public contact with contaminated water.

The cost of cleaning up contaminated sewer systems and associated treatment facilities may be very high. Sludge contaminated with PCBs, dioxins and furans may be required to be handled and disposed of as hazardous waste under the resource Conservation and Recovery Act (RCRA) and pursuant to the PCB regulations under the Toxic Substances Control Act (TSCA). Clean up of water bodies and bottom sediments, if possible, would also be very expensive. Data indicating water and sewer treatment system contamination following the Binghamton fire confirm that water treatment facility sludge can become contaminated with PCBs as a result of releases during PCB Transformer fires.

For these reasons, it is important that sewer systems and treatment plant operators have as much notice as possible of a PCB Transformer fire event. The sooner this information is available, the sooner action can be taken to isolate or contain contaminants (if possible), to limit their spread and to assure proper handling.

Fire departments are required to be notified pursuant to § 761.30(a)(1)(vi) of this regulations as to the location of PCB Transformers. Fire departments generally maintain good information for response to emergencies and have plans and a coordinating capacity for dealing with fires involving hazardous materials. EPA therefore strongly urges fire departments, on a voluntary basis, to contact storm and sanitary sewer system and treatment plant operators in the areas served by the fire department, once the information required to be submitted to the fire departments under § 761.30(a)(1)(vi) is available. EPA also urges the fire department to work wih sewer system and treatment plant operators to develop contingency plans for handling contamination entering the sewers as a result of PCB Transformer fire events.

EPA also urges owners of PCB Transformers and owners of buildings in which those transformers are located to plan ahead for a fire event. Building owners, working with other parties, should plan their best course of action to prevent or limit release of PCBs and other contaminants in the event of a fire. These plans should give special consideration to the location of individual PCB Transformers, the location of drains near these transformers, and methods for closing the drains in the event of a PCB Transformer fire.

To support this voluntary cooperative effort, EPA will develop guidance for use by owners and operators of sanitary sewer systems and treatment facilities, pointing out the availability at local fire departments of information on the location of transformers and the potential impact of the release of PCBs and other contaminants into the sewer system in the event of a fire. EPA will also evaluate the possible roles of organizations such as the Water Pollution Control Federation, the Association of State and Interstate Water Pollution Control Authorities, the American Public Works Association, and the National Fire Protection Association in distributing information, and may request their cooperation in this effort.

For purposes of this rule, commercial building is defined as a non-industrial (non-substation) building which is typically accessible to both members of the general public and employees. Commercial buildings include: (1) Public assembly properties, (2) educational properties, (3) institutional properties, (4) residential properties, (5) stores, (6) office buildings, and (7) transportation centers (i.e., airport terminal buildings, subway stations, bus stations, and train stations). For purposes of this rule, "in or near" a commercial building is defined as: (1) Within the interior of a commercial building, (2) on the roof of a commercial building or attached to the exterior wall of a commercial building, (3) in the parking area of a commercial building, or (4) located within 30 meters of a commercial building.

An industrial building is defined as a building directly used in manufacturing or technically productive enterprises. Industrial buildings are not generally or typically accessible to other than workers. Industrial buildings include buildings used directly in the production of power, the manufacture of products, the mining of raw materials, and the storage of textiles, petroleum products, wood and paper products, chemicals or plastics, and metals.

EPA has determined that requiring the removal of particularly high risk PCB Transformers from use and adding conditions and restrictions on the use of the remaining PCB Transformers (including enhanced electrical protection, registration, and labeling) will significantly reduce the fire-related risks posed by the use of PCB Transformers. EPA has determined that the continued use of PCBs in PCB Transformers which comply with the conditions and requirements described above do not present unreasonable risks to public health or the environment. Further, after considering the risks posed by fires involving transformers containing less than 500 ppm PCBs, and the costs of regulatory control measures, EPA is reaffirming its August 1982 determination that the continued use of PCB-Contaminated transformers and non-PCB transformers (transformers containing 50–500 ppm PCBs, and less than 50 ppm PCBs respectively) do not present unreasonable risks to public health and the environment.

The enhanced electrical protection requirements for higher secondary voltage radial PCB Transformers consist of the installation of protection against transformer failures from sustained low current faults. EPA has determined that the enhanced protection of these PCB Transformers is necessary to reduce the fire-related risks posed by the continued use of these transformers in commercial locations. This protection will reduce the frequency of PCB Transformer fires in these types of transformers by allowing for rapid deenergization in the event of a sustained low current fault.

While EPA is aware of at least five basic types of radial installations (simple radial systems, expanded radial systems, primary selective systems, primary loop systems, and secondary selective systems), existing data do not indicate that the probability of low current fault-related failures would be significantly different among these five types of radial installations. Thus, EPA has required enhanced electrical protection on all commercial higher secondary voltage radial PCB Transformers.

EPA recognizes, however, that additional experience and further research into the causes of PCB Transformer failures and fires may

result in the development of data by industry which would indicate that there

IV. Transformer Fire-Related Risks

to man. It exhibits delayed biological

micrograms per kg bw (as compared with the acute oral LD50 for 2,3,7,8-

in acute studies in guinea pigs using PCDFs and PCDDs. In addition, the

from 550 °C to 600 °C, but drop off to tenths of a percent at temperatures

result in the development of data by industry which would indicate that there are significant differences in the probabilities of fault-related failures among the different types of radial systems. If these data are developed, they should be submitted to EPA for consideration. Based on the timely submission of new information, that is, within 2 years of the date of promulgation of this final rule, EPA may choose to revisit this particular requirement.

The remainder of this preamble describes the basis for the determinations reached in this final rule.

III. Use Authorizations Under Section 6(e)

In order to authorize a use of PCBs under section 6(e)(2)(B) of TSCA, EPA must find that such use "will not present an unreasonable risk of injury to health or the environment." To determine whether a risk is unreasonable, EPA must balance the probability that harm will occur from the use against the benefits to society of allowing the continued use. In completing this assessment for the use of PCB containing electrical transformers, EPA has considered the following factors for each of four categories of electrical transformers containing PCBs (PCB Transformers located in or near commercial buildings, PCB Transformers located in or near industrial facilities, PCB Transformers located outdoors (away from commercial buildings), and PCB Contaminated transformers):

1. The effects of PCBs and their incomplete combustion products on human health and the environment.

2. The magnitude of human and environmental exposure to PCBs and their incomplete combustion products.

3. The benefits of using PCBs and the availability of substitutes.

4. The economic impact resulting from the rule upon the national economy, small business, technological innovation, the environment, and public health.

These are the same types of considerations listed in section 6(c) of TSCA, which describes factors EPA must consider in deciding whether a chemical presents an unreasonable risk under section 6(a) of TSCA.

The remaining units of this preamble will discuss these key factors in the unreasonable risk determinations made in this rule, and the basis for EPA's determination to allow the continued use of PCB-containing transformers with certain additional conditions and restrictions.

IV. Transformer Fire-Related Risks

A. Toxicity of PCBs and Incomplete Combustion Products

In earlier rulemakings, EPA has already concluded that, based upon available information persons exposed to PCBs can develop chloracne; and, that based on animal data, there is a potential for reproductive effects and developmental toxicity as well as oncogenicity in humans exposed to PCBs. While fires involving PCB-containing transformers have resulted in the release of large quantities of PCBs, these incidents have also resulted in the formation of toxic products of incomplete combustion.

Many other compounds of potential toxicological significance, including PCDFs, PCDDs, and polychlorinated biphenylenes, were measured in soot samples following fires involving PCB Transformers. However, the bulk of toxicity testing of PCDF and PCDD congeners has been completed on what are anticipated to be the most toxic species, the 2,3,7,8 substituted PCDFs and PCDDs. EPA has evaluated the risks posed by PCB Transformer fires through an evaluation of: (1) The toxicities of PCBs, 2,3,7,8-TCDF, and 2,3,7,8-TCDD; (2) the toxicities and potential toxicities of other PCDF and PCDD congeners; and (3) the potential for exposure to these materials as a result of a fire.

While the majority of toxicological testing has been completed on PCBs, 2,3,7,8-TCDF and 2,3,7,8-TCDD, this does not mean that human and environmental exposures to other congeners of PCDFs and PCDDs as well as polychlorinated biphenylenes pose little risk of toxic effects. For example, limited testing of 1,2,3,7,8-pentachlorodibenzo-p-dioxin (1,2,3,7,8-PeCDD), 1,2,3,6,7,8-hexachlorodibenzo-p-dioxin (1,2,3,6,7,8-HxCDD), and 1,2,3,7,8,9-hexachlorodibenzo-p-dioxin (1,2,3,7,8,9-HxCDD) suggest that these congeners are qualitatively similar in their toxic action to 2,3,7,8-TCDD for observed effects. However, they are less toxic for the observed effects than the 2,3,7,8-TCDD congener. EPA expects that similar structure-activity relationships would exist between 2,3,7,8-TCDF and 1,2,3,7,8-PeCDF, 1,2,3,7,8,9-HxCDF, and 1,2,3,6,7,8-HxCDF. However, EPA also believes that reducing exposures to the extremely toxic congeners, 2,3,7,8-TCDD and 2,3,7,8-TCDF, will also reduce exposures to these other compounds of potential toxicological significance.

According to EPA's February 1984 Ambient Water Quality Criteria (AWQC) for 2,3,7,8-tetrachlorodibenzo-p-dioxin (2,3,7,8-TCDD), 2,3,7,8-TCDD is one of the most toxic substances known to man. It exhibits delayed biological response in many species and is highly lethal, at low doses, to aquatic organisms, birds, and mammals. It has been shown to be acnegenic, fetotoxic, teratogenic, mutagenic (limited evidence), carcinogenic, and adversely affects the immune response in mammals.

The AWQC lists the acute LD50 for 2,3,7,8-TCDD for several species. The oral LD50 values ranges from 0.6 microgram per kilogram (kg) body weight (bw) for guinea pigs to 5,051 micrograms per kilogram body weight for hamsters. The AWQC presents the acceptable daily intake (ADI) value for a 70 kg man as 2.2×10^{-7} micromoles 2,3,7,8-TCDD per day. This ADI is based on the lowest-observed-adverse-effect levels (LOAEL) in rats, and has been calculated in accordance with the National Academy of Science's guidelines for calculating an ADI based on a LOAEL.

Although the ADI value presented above is very low, it still may not be sufficiently protective of human health. This ADI level does not take into account the demonstrated carcinogenic effects of 2,3,7,8-TCDD in laboratory animals. The AWQC concludes that 2,3,7,8-TCDD is an animal carcinogen and that the epidemiological findings are consistent with the conclusions drawn from animal studies that 2,3,7,8-TCDD is a probable human carcinogen.

The carcinogenic potency of 2,3,7,8-TCDD using the linearized multistage model has been estimated relative to 53 other chemicals which EPA's Cancer Assessment Group (CAG) has evaluated as suspect carcinogens. This relative potency index is 5×10^{7} per millimole (mmol) per kg per day (137 per ug per kg per day), making 2,3,7,8-TCDD the most potent carcinogen that the CAG has evaluated. CAG ranks 2,3,7,8-TCDD as a 2–A carcinogen, which means that there are sufficient laboratory animal data indicating its carcinogenicity as well as suggestive human evidence.

The limited data on other PCDD congeners indicate that they are qualitatively similar in their toxic action to 2,3,7,8-TCDD when comparisons are made in a single species. This is illustrated in mice, where 2,3,7,8-TCDD has an LD50 value of 0.88 micromoles (umol) per kg and 1,2,3,7,8-peCDD; 1,2,3,6,7,8-HxCDD and 1,2,3,7,8,9-HxCDD have LD50 values of 0.94, 3.19, and 3.67 umol/kg, respectively.

Toxicological testing of PCDFs, specifically, 2,3,7,8-TCDF, has been more limited than testing of 2,3,7,8-TCDD. The acute oral LD50 in the guinea pig is reported to be 5

micrograms per kg bw (as compared with the acute oral LD50 for 2,3,7,8-TCDD in this species which is reported to be 0.6 microgram per kg bw). Subchronic testing of 2,3,7,8-TCDF in rhesus macaques indicated that this compound is extraordinarily toxic. Based upon EPA's review of this study, the No Observed Effect Level (NOEL) for 2,3,7,8-TCDF is expected to be below 5.0 parts per billion (ppb). The author of this study concluded that continued daily oral intake of small amounts of 2,3,7,8-TCDF gave monkeys a disease which is clinically and morphologically similar to acute or chronic ingestion of 2,3,7,8-TCDD. The clinical course is marked chiefly by weight loss, swelling of the eyelids, dryness and granularity of the skin, hair loss and reduced physical activity. For most of the observed biological effects, the potency of the two compounds are within an order of magnitude of each other, with 2,3,7,8-TCDF being somewhat less toxic than 2,3,7,8-TCDD. Some scientists have estimated that in laboratory animals, 2,3,7,8-TCDF is 2 to 33 percent less toxic than 2,3,7,8-TCDD, depending upon the particular endpoint in question. Further, the toxicity of 2,3,7,8-TCDF in rhesus macaques has been estimated to be about 20 times that of 3,4,4',5'-tetrachlorobiphenyl and 1,000 times more toxic than PCB Aroclor 1248.

Based on its assessment of available literature on the toxicity of 2,3,7,8-TCDF and the structural similarity of 2,3,7,8-TCDF to 2,3,7,8-TCDD, EPA has concluded that it is prudent to assume that exposures to 2,3,7,8-TCDF would pose risks of similar toxic effects as exposures to 2,3,7,8-TCDD. Further, based on structure-activity relationships and limited in-vitro studies, EPA assumes that other PCDF congeners, particularly 1,2,3,7,8-PeCDF, 2,3,4,7,8-PeCDF, 1,2,3,4,7,8-HxCDF, 1,2,3,6,7,8-HxCDF, and 1,2,3,7,8,9-HxCDF may also pose risks of similar toxic effects as exposures to 2,3,7,8-TCDF (and 2,3,7,8-TCDD).

Following the Binghamton fire, several researchers completed toxicological testing of soot samples in guinea pigs. Based on these studies, using Binghamton State Office Building (BSOB) soot, EPA has concluded that exposures to soot from PCB Transformer fires have the potential to produce toxicity in the thymus, the hematopoietic system, the salivary gland duct epithelium and, possibly, the liver.

It is worth noting that thymic atrophy, bone marrow depletion, and diminished body weight gain, all effects of the subchronic administration of the BSOB soot, have been routinely demonstrated in acute studies in guinea pigs using PCDFs and PCDDs. In addition, the group of guinea pigs dosed with 231.1 ppm BSOB soot (in feed) in the subchronic study exhibited symptoms characteristic of acute exposure to 2,3,7,8-TCDD and 2,3,7,8-TCDF, which include skeletal muscle degeneration, fatty changes in hepatocytes, and degeneration of gastrointestinal tract epithelium.

One paper stated that the oral LD50 of the BSOB soot in guinea pigs is 410 milligrams per kilogram body weight, which would classify this material as very toxic.

For more in-depth analyses of the toxicities of PCBs, PCDFs, and PCDDs see documents 2, 3, 4, 5, 6, 8, and 13 in Unit X.B.

B. The Formation of Oxidation Products From PCBs

There is direct evidence of the formation of PCDFs and PCDDs from heating and burning commercial mixtures of PCBs and diluents from: (1) Chemical analyses of materials at the sites where fires were known to involve transformers that contained PCBs and chlorinated benzenes, and (2) laboratory experiments published in chemical and other literature. PCBs, PCDFs, and PCDDs were found in some soot specimens from both the Binghamton and San Francisco fires. Data submitted to EPA following the issuance of the Proposed Rule indicate that PCDFs and PCDDs were also measured in samples taken following the Miami and Chicago fires.

Laboratory studies provide the best available information on the conversion of pure PCBs to PCDFs. In these studies, a number of different PCB congeners and mixtures of congeners have been heated and the resulting materials analyzed for PCDFs and PCDDs. A specific PCB compound reacts to form a limited number of PCDFs. The formation of PCDFs involves intramolecular elimination of three kinds of diatomic molecules, with or without some rearrangement of chlorine atoms on the phenyl rings in the product dibenzofuran. From the products obtained in the PCB reactions, the diatomic molecules, hydrogen, hydrogen chloride, and chlorine, are formed from hydrogen and chlorine atoms in ortho positions on each of the two phenyl rings in the original polychlorinated biphenyl molecule. The optimum temperature range for the published laboratory experiments was 600 °C. Yields of PCDFs have been reported in the literature to be as high as 10 percent (calculated on the amount of PCB decomposed) for reaction temperatures from 550 °C to 600 °C, but drop off to tenths of a percent at temperatures below 500 °C and above 650 °C.

EPA-sponsored studies of the formation of PCDFs and PCDDs indicate that the optimum conditions for the formation of PCDFs from (neat) PCBs are 675 °C for 0.8 second or longer, with 8 percent excess oxygen. Under these conditions, a 3 percent conversion efficiency (PCBs to PCDFs) was observed for askarel fluid. Under the same conditions, PCDFs were also formed from PCBs present at concentrations of 5, 50, and 500 ppm in mineral oil and silicone oil. The EPA study of the formation of PCDFs PCDDs from PCB-containing mineral oil and silicone oil indicates a 4 percent conversion efficiency of PCBs to PCDFs when PCBs are present in these materials at concentrations of 5, 50, and 500 ppm. Statistical analysis showed a linear relationship between the amount of PCB present and the amount of PCDFs formed.

PCB dielectric fluid may also contain chlorinated benzenes as diluents or contaminants, as a result of past servicing activities. Laboratory experiments in the published literature have shown the formation of PCDDs in addition to PCDFs from the pyrolysis of mixtures of chlorobenzenes. Amounts of PCDFs ranged as high as several tenths of a percent for mixtures of trichlorobenzenes. Tetrachlorobenzene and pentachlorobenzene mixtures formed amounts of PCDFs and PCDDs which were two orders of magnitude smaller than the amounts of these compounds formed by trichlorobenzene. These reactions are bimolecular and the experimental concentrations of chlorobenzenes were high.

EPA-sponsored studies of the incomplete combustion of chlorinated benezenes indicate that PCDFs, and to a lesser extent PCDDs, are formed from the incomplete combustion of trichlorobenzene dielectric fluid containing no detectable PCBs. EPA also studied the incomplete combustion of tetrachloroethylene (perchloroethylene) and high temperature hydrocarbons (both of which are potential PCB substitutes) to determine whether PCDFs and PCDDS would be formed from these materials in fire situations. EPA's preliminary study indicates that PCDFs and PCDDs are formed from the incomplete combustion of tetrachloroethylene fluid. The two high temperature hydrocarbon fluids did not produce PCDFs or PCDDs under the experimental conditions.

dielectric fluids that also contain PCBs, are not expected to lead to substantial increases in the amounts of PCDFs formed from burning or heating the PCBs, but, may result in the formation of some PCDDs. EPA believes that the PCDD levels found in the Binghamton soot samples resulted from the pyrolysis or incomplete combustion of chlorobenzenes. The low level PCDDs found following the San Francisco fire could have been associated with the presence of chlorobenzenes in that fluid as well.

For further discussions of the formation of incomplete combustion products from PCBs and other potential substitute fluids, see the EPA-sponsored studies completed by the Midwest Research Institute, documents 10 and 11 in Unit X.R.

The description and characterization of the chemical reactions occurring in a fire in which aroclors (or any other commercial mixtures of many PCB compounds) are burned are far more complex than the laboratory experiments. However, EPA believes that reactions observed in the laboratory should also occur in fire situations where the reactants and reactions conditions are similar to laboratory reaction conditions. Data from actual PCB Transformer fires confirm the relatively high rates of conversion of PCBs to PCDFs in actual PCB Transformer fires.

PCDFs and PCDDs have also been detected following high temperature incineration. High temperatures incineration is required by EPA regulations to dispose of PCBs in oil. However, the levels of PCDFs and PCDDs measured following high temperature incineration have been substantially less than those measured following the above described laboratory experiments. This is because of high temperature incineration requires a 1200 °C temperature, a 2-second residence time, and sufficient oxygen to sustain complete combustion. As explained above, laboratory experiments indicate that the reaction temperature for the formation of PCDFs is optimized at around 600 °C. It is probable that yields of PCDFs from PCBs are reduced at higher temperatures because of increased destruction efficiency and ease of combustion.

C. Causes of PCB Transformer Fire-Related Failures

PCB Transformer fire-related incidents can occur from many causes, including overloading, overheating, electrical faults (overcurrent conditions or low current faults either in the transformer itself or external to the transformer in associated electrical equipment), and fires near transformers, involving building components or stored materials. PCB Transformer fires can also occur as a result of mechanical failures which can lead to electrical faults, and then, to fires. Of the well-documented PCB Transformer fires, many have reportedly occurred as a result of electrical faults, which led to transformer failures and fires. Electrical faults are of two basic categories: faults characterized by high current or excessive current flow (high current faults), and faults characterized by low current flow (low current faults).

Electrical faults can occur in transformers themselves or in associated electrical equipment. Faults in associated electrical equipment are of equal concern to faults inside transformers, first, because these faults can ultimately cause transformer failure, and second, because most faults occur external to the transformers themselves, in associated electrical equipment. Thus, as a general rule, the more associated electrical equipment present, the higher the probability of a fault occurring. Further, electrical faults are more likely to be self-sustained rather than self-extinguishing when voltages are higher.

1. *Mechanisms of failure*—a. *Excessive current flow.* The first failure mechanism is excessive current flow of the transformer. This is termed an overcurrent condition or simply, "overcurrent". Prolonged overcurrent conditions can lead to fires inside a transformer. If the overcurrent condition is due to a fault in the transformer itself, then there is a high energy arc in the transformer's insulating fluid. Failure to extinguish quickly high current arcs in a transformer will result in rapid transformer failure, involving the rupture of the transformer casing and loss of dielectric fluid. If the overcurrent condition is due to a fault in the associated electrical equipment, then there is high energy fault in the associated electrical equipment. Faults are more likely to occur externally, in associated electrical equipment, than in the transformer itself. However a high current fault in associated electrical equipment can draw excessive current from the transformer, heat the solid insulation, increase the discharge activity in the transformer and cause transformer failure (rupture and release of dielectric fluid).

According to comments on the Proposed Rule, electrical faults which occur on the load side or secondary side of a transformer (in the low voltage winding, low voltage leads, or in other associated switchgear and equipment) are more likely to be self-sustaining rather than self-extinguishing when the secondary or load side voltage is higher. That is, self-sustained high current faults in the secondary (the low voltage side) are more likely in higher voltage secondaries (i.e., 480 volt secondaries) than in lower voltage secondaries (i.e., 208 volt secondaries).

Current-limiting fuses or energy-limiting devices and overcurrent protective relays are the types of electrical protective devices which can be used to quickly extinguish high current arcs inside the transformer casing, as well as high current faults which occur external to the transformer in associated electrical equipment. PCB Transformer fires which occur as a result of overcurrent conditions occur when overcurrent electrical protective devices (fuses and/or circuit breakers) are not present; when overcurrent protection is not set sensitive enough to deenergize the transformer before high temperatures or pressures are reached; and when overcurrent protection simply fails to operate when called upon.

b. *Low current faults.* The second failure mechanism is the widely recognized (in written comments on the Proposed Rule and in testimony at the public hearing) possibility that low current faults may occur in a transformer itself, or external to a transformer, in its associated electrical equipment, and not activate conventional overcurrent protective devices (the fuses and circuit breakers discussed earlier). For a low current fault in a transformer to release sufficient energy to lead to tank rupture, the fault must first produce a pressure rise in the transformer tank. In contrast to the short time involved from the occurrence of a sustained high energy (high current) arc to the reputure of a transformer, low current faults may take some time to release sufficient energy to cause tank rupture.

Low current faults can also occur external to a transformer, in associated electrical equipment such as network protectors (circuit breakers which are typically installed on the secondary side of network transformers) and network collector buswork. Sustained or prolonged low current faults external to a transformer can ultimately involve the transformer itself, causing rupture and release of PCBs.

As was the case for high current faults, comments on the Proposed Rule indicate that when the secondary voltage of a transformer is higher, low current faults which occur in the secondary (in the low voltage winding, low voltage leads, or associated equipment) have a greater likelihood of being self-sustained rather than self-extinguishing. That is, low current faults in 480 volt secondaries have a greater likelihood of being sustained than low current faults in 208 volt secondaries.

Protecting against sustained low current arcing faults in a transformer involves the use of appropriate sensors and disconnect equipment. The sensors are designed to detect a pressure rise in the transformer tank and/or a temperature rise in the lower voltage transformer winding. Protection against sustained low current arching faults in external associated electrical equipment (which can ultimately involve the transformer) involves placing heat or ultraviolet sensors in this equipment. When the sensors detect an abnormal condition, (i.e., a rise in pressure or temperature) the transformer is rapidly deenergized, either automatically or manually (following the receipt of an audio or visual signal at a control center).

2. *Protection currently provided against common mechanisms of fault-related failures.* Comments submitted in response to the Proposed Rule and testimony supplied at the public hearing indicate that PCB Transformers are currently equipped with electrical protection to reduce the frequency of transformer failure; but, that the level and type of electrical protection provided varies depending upon the nature of the transformer installation. Certain transformers and installations are better protected against fault-related failures than other types of transformers and installations. For purposes of this section, it is sufficient to divide the applications into two types.

The first application includes all arrangements in which the PCB Transformer can be energized only from the primary winding. These transformers are termed radial PCB Transformers. (There are, however, five basic types of radial installations, simple radial systems, expanded radial systems, primary selective systems, primary loop systems, and secondary selective systems.)

The second application includes those arrangements in which the PCB Transformer can be energized from either the primary winding or the secondary winding. The secondary winding is the winding from which energy flows during normal operation. In these systems, the primary winding can be energized from the secondary winding under abnormal conditions. These transformers are termed network PCB Transformers. There are two basic types of network installations, grid networks and spot networks.

Functionally, there are two types of electrical protection devices. One type interrupts the flow of current by vaporizing a segment of the conductor if the current exceeds a predetermined level. Fuses and distribution cutouts operate in this manner. The second type of electrical protection device operates by opening a switch. A circuit breaker opens a switch in response to a temperature rise in the device due to the current flowing in the circuit. A ground fault interrupter opens switch contacts in response to an unbalanced current flow. A network protector opens switch contacts in response to a reversal of the current flow.

"Non electrical" protection devices are also available. Devices such as pressure sensors open (or close) relay contacts to switches when the pressure (or rate of rise of pressure) exceeds a predetermined level. Temperature sensors and fluid level sensors operate in a similar manner.

a. *Radial PCB Transformers.* According to comments submitted in response to the Proposed Rule, radial PCB Transformers are typically equipped with overcurrent protection (on the high voltage side) in the form of either a current-limiting fuse or circuit breaker, and, often, with fuses and/or circuit breakers on the low voltage side or the load side. The overcurrent protection on the primary is set at a predetermined level to clear high current faults on the primary and is typically set sensitive enough to clear downstream high current faults in the secondary as well. These fuses/circuit breakers are set to operate quickly enough to avoid transformer failure in the event of high current faults in the primary or secondary.

Radial transformers are not, however, typically protected against low current arcing faults; these faults do not activate conventional overcurrent protective devices. Low current arcing faults can occur in areas such as the secondary winding and low voltage leads of radial transformers and can progress unseen by existing overcurrent protection, leading to transformer failure. Radial transformers with higher secondary voltages are more likely to experience a low current arcing fault on the secondary which is self-sustained than radial transformers with lower secondary voltages.

According to comments on the Proposed Rule, many radial PCB Transformers used in industrial applications are equipped with temperature and pressure relays and circuit breakers on-site which can be manually operated to actuate transformer deenergization in the event of a sustained fault. However, if on-site control of a radial transformer is not possible (through the use of a manually operable circuit breaker), which is more likely the case in commercial installations, deenergization would involve contacting the utility substation to deenergize the substation primary feeder. Comments on the Proposed Rule indicate that this is a difficult thing for a utility to do, because deenergizing the primary feeder results in the deenergization of all transformers served from that primary feeder. This results in the loss of electric power to many buildings served by this same primary feeder.

b. *Network PCB Transformers.* According to comments on the Proposed Rule, network transformers are typically equipped with the least sensitive overcurrent protection of all utility distribution transformers. While radial transformers are typically equipped with overcurrent protection on the primary (which is set sensitive enough to clear high current faults on the primary as well as downstream high current faults in the secondary), network transformers are not typically equipped with current-limiting or energy-limiting devices on the primary circuit. Electrical protection for high current faults on the primary (in the primary feeder, the high voltage leads, and switchgear) is typically provided by relays to a primary feeder circuit breaker at the utility substation. The relays to the primary feeder breaker cannot detect downstream sustained high current faults in the secondary.

Further, while the relays to the substation primary feeder breaker on network transformers will operate for sustained high current faults in the primary (allowing for deenergization), deenergization may not occur quickly enough to avoid switchgear and/or transformer rupture. Thus, switchgear rupture and transformer failure can occur in network transformers from high current faults on the primary.

Unlike radial transformers, network transformers are equipped with network protectors, which are circuit breakers located on the secondary side of network transformers. The network protector is set to operate when it senses a reverse power flow. Thus, it operates to prevent power being fed back into the transformer in the event that the primary feeder breaker has been activated. The network protector operates in a coordinated fashion with the substation breaker relays to isolate a faulted network transformer. By isolating the faulted network transformer, service continues to be

supplied to the load by other transformers in the network.

provided against these faults in different types of transformer installations, and

fire are values which are representative of situations in which combustion

fire; (5) persons returning to the building following cleanup; and, (6) persons

estimated 7,600 480 volt network PCB

supplied to the load by other transformers in the network.

According to comments on the Proposed Rule, current-limiting fuses are used in the secondary of higher secondary voltage network transformers (in the services and in the network protector). These fuses operate when high current faults occur downstream from these areas. However, the presence of these fuses does not mean that the entire secondary is protected against high current faults. There is a zone in the secondary in network transformers which is currently "unprotected," where high current faults can occur and not be seen by the relays to the primary feeder breaker or by these fuses in the services and the network protector. High current faults in this area can result in transformer failures and fires. Network transformers with higher secondary voltages are more likely to experience high current faults in the secondary which are self-sustaining, than network transformers with lower secondary voltages.

Like radial transformers, network transformers are not typically protected against low current arcing faults. Further, in network transformers, there is typically more associated electrical equipment where these faults can occur. Low current arcing faults in network transformers can occur in the network protector and (for spot network transformers) in the network collector bus as well as in the secondary winding and low voltage leads. Again, these faults are more likely to be self-sustaining rather than self-clearing when the secondary voltage is higher.

Unlike industrial transformers, commercial transformers, particularly network transformers are not typically equipped with primary circuit breakers on site. The deenergization of a commercial network transformer after failure from a sustained (undetected) low current or high current fault would typically require the manual opening of the utility substation primary feeder breaker, after the utility has been contacted about a malfunction in the equipment. As indicated earlier, utilities are generally hesitant to open primary feeder breakers because of their desire for continuity of service to their customers.

3. *Conclusions.* Comments on the Proposed Rule suggest that there are ways in which both radial and network PCB Transformer installations could be better protected to minimize the likelihood of fault-related failures and fires. Several comments on the Proposed Rule discussed the role of high current faults in PCB Transformer failures and fires, the level of protection currently provided against these faults in different types of transformer installations, and ways in which PCB Transformers could be better protected to minimize the chance of failure from these types of faults. Network PCB Transformers are currently the least well-protected against high current faults of all distribution class PCB Transformers in use. According to comments submitted in response to the Proposed Rule, the Tulsa PCB Transformer fire was associated with this type of fault in the high voltage switchgear of a 208/120 volt network PCB Transformer.

Many comments on the Proposed Rule, however, focused on sustained low current arcing faults in PCB Transformers as the culprit in the number of documented PCB Transformer fires. These comments discussed the level of protection currently provided against these faults in PCB Transformer installations and ways in which PCB Transformers could be better protected to avoid low current fault-associated failures and fires. The San Francisco fire, the Chicago fire, and the Miami fire have been associated with these types of faults in 480/277 volt network PCB Transformers.

Simply stated, sustained low current arcing faults can occur in PCB Transformers and associated electrical equipment, and with existing levels of conventional protection, progress undetected and unseen, resulting in transformer failure and fire. According to comments submitted in response to the Proposed Rule, low current arcing faults can occur in the secondaries of all types of transformer installations, radial transformers, lower secondary voltage network transformers, and higher secondary voltage network transformers. They are, however, more likely to occur in installations with more, as opposed to less, associated electrical equipment and are more likely to be sustained in transformer secondaries when the secondary voltage is higher. This is because faults are more likely to "restrike" or be sustained at higher voltages than be self-extinguishing or self-clearing.

All types of PCB Transformers typically lack the sensors (pressure and/or temperature sensors) necessary for the early detection of low current arcing faults. Further, many commercial PCB Transformers are typically unequipped with on-site primary circuit breakers to actuate transformer deenergization. This means that low current arcing faults can progress unseen in these transformers, and that these transformers cannot be easily deenergized, even after transformer rupture has occurred.

Deenergization of commercial PCB Transformers (when disconnect equipment is not present on site) typically requires the opening of the primary feeder breaker at the electric utility substation, which is often miles away from a transformer installation. According to testimony at the public hearing, the opening of a primary feeder breaker at an electrical substation is a very difficult thing for a utility to do, because opening the primary feeder breaker for a malfunction in a single PCB Transformer will also result in other (well-functioning) transformers in the distribution system being deenergized.

D. Potential for Exposure

Toxicity and exposure are the two basic components of risk. In Unit IV.A, EPA addressed the toxicity of PCBs, PCDFs, and PCDDs. The following summarizes EPA's evaluation of the potential for human and environmental exposures to PCBs, PCDFs, and PCDDs from transformer fires.

As discussed in Unit IV.C, high current faults and low current faults in electrical transformers and/or associated equipment, as well as the ignition of combustible or flammable materials in a transformer location, can all lead to the rupturing of a transformer, the volatilization of PCBs, and the formation of incomplete combustion products. Sustained high temperatures in the area of a ruptured transformer increase the potential for the formation of toxic products of incomplete combustion, including PCDFs, 2,3,7,8-TCDF, PCDDs, and 2,3,7,8-TCDD. These high temperatures can either occur as a result of the initial malfunction or as a result of prolonged arcing associated with an inability to deenergize the transformer completely. Smoke and soot from a high temperature fire involving a PCB Transformer can contain high concentrations of volatilized PCBs and oxidation products.

The most extensive monitoring data on PCB, 2,3,7,8-TCDF and 2,3,7,8-TCDD levels in buildings following PCB-Transformer fires were obtained from the Binghamton State Office Building site. A composite soot sample from this fire indicated the presence of 7,200 ppm PCBs, 231 ppm 2,3,7,8-TCDF, and 2.9 ppm 2,3,7,8-TCDD. For a full description of PCB, PCDF, and PCDD levels measured following transformer fires, see the quantitative exposure assessment completed for this final rule, support document 1 in Unit X.B.

EPA believes that the levels of PCBs and oxidation products measured in soot samples following the Binghamton

fire are values which are representative of situations in which combustion conditions are conducive to the formation and/or release of PCBs and oxidation products. Therefore, in this rule, EPA has used these values to estimate human and environmental exposures to PCBs, PCDFs, and PCDDs from PCB Transformer fires and fires involving PCB Contaminated transformers.

In the Proposed Rule, EPA evaluated the likelihood and nature of human and environmental exposures from transformer fires in or near buildings by analyzing likely exposures from a PCB Transformer fire in or near an office building. A number of comments received in response to the Proposed Rule suggested that EPA evaluate separately the expected exposures from transformer fires in or near industrial facilities and the costs of control measures for these transformers. Comments suggested that the use of PCB Transformers in industrial facilities pose lower fire-related risks than the use of PCB Transformers in commercial buildings and that the costs of the proposed transformer isolation requirement would be substantially greater for industrial facilities than for commercial buildings.

EPA agrees that industrial facilities should be evaluated separately from commercial buildings. Accordingly, EPA has evaluated the potential for human and environmental exposures for the following categories of PCB Transformer fires: (1) A PCB Transformer fire in or near a commercial building (both before the implementation of risk reduction measures and after the implementation of risk reduction measures); (2) a PCB Transformer fire in an industrial facility; (3) a PCB Transformer fire in an outdoor electrical substation; and (4) a PCB Contaminated transformer fire in or near a commercial building.

The first step in evaluating the potential for human exposures to PCBs and oxidation products is to determine the populations that are likely to experience these exposures. EPA has identified six populations that may be at risk of exposure to PCBs and oxidation products in the event of a fire involving a transformer containing PCBs. These are: (1) Persons present in a building or possibly in an adjacent building at the time of a fire in or near a building; (2) firemen and other emergency response personnel responding to a fire; (3) onlookers present during the extinguishing of a fire and members of the general public in the vicinity of the fire; (4) persons involved in sampling and cleanup operations following the fire; (5) persons returning to the building following cleanup; and, (6) persons exposed to equipment, automobiles, etc. that may have been contaminated during or after the fire. Human exposures to PCBs and oxidation products from transformer fires would be expected to occur principally through the inhalation and dermal routes.

1. *PCB Transformer fires in or near commercial buildings*—a. *Nature of installations and operation.* PCB Transformers serving commercial buildings are typically located in basements, in machinery rooms on the first few floors of buildings, or in sidewalk or underground vaults adjacent to buildings. Commercial PCB Transformers may also be located on roof-tops or near buildings in outside locations such as parking areas or loading docks. Electrical transformers used in or near commercial buildings are most typically located in areas which are not easily accessible or visible to building occupants. Based on the results of the Equitable Life Assurance survey of commercial transformer locations, EPA estimates that 69 percent of commercial transformers located on lower floors of buildings are vaulted, and that transformers located on interior upper floors are generally located in separate mechanical rooms. The majority of transformers located exterior to commercial buildings are also vaulted. According to utility representatives, in many cases, more than one PCB Transformer is located in a vault. Typically, two to four PCB Transformers are located within a single vault.

While commercial buildings may have janitorial crews on duty for building maintenance, electrical equipment operations are not typically closely supervised or monitored by trained electrical engineers or technicians. Maintenance and testing of these transformers would, in general, be expected to be less than that provided for utility substation equipment or industrial transformers. Further, disconnect equipment (i.e., circuit breakers) is generally not present in commercial installations, and there is typically no one present on site who is trained in disconnecting the equipment, even if such equipment were provided.

Comments on the Proposed Rule and EPA's analysis of available information indicates that there are approximately 77,568 PCB Transformers used in or near commercial buildings. Of these 77,568 PCB Transformers, EPA estimates that approximately 29 percent are network PCB Transformers and 71 percent are radial PCB Transformers. Further, of the estimated 7,600 480 volt network PCB Transformers in use (those transformers with a particularly high probability of fault-failure), EPA believes that over 97 percent of these transformers are used in or near commercial buildings.

b. *Frequency of PCB Transformer fires.* In the Proposed Rule, EPA estimated that 0.003 to 0.004 percent of nonsubstation PCB Transformers are involved in "serious" PCB Transformer fires (PCB Transformer fires involving smoke spread into buildings) each year. Within the category of "serious" fires are fires with moderate smoke distribution and fires with extensive smoke distribution. EPA used data from the National Fire Incident Reporting System (NFIRS) for 1982 on the frequency of structure-related electrical transformer fires, data from the NFIRS on the frequency of structure-related transformer fires with smoke spread beyond the room of origin of the fire, limited data from the NFIRS on the make, model, and year of transformers involved in these fires, and data supplied by various sources in response to the ANPR to develop this estimate. While EPA received several comments on this estimate (some indicating that EPA had severely underestimated the frequency of occurrence and other indicating that EPA had significantly overestimated the frequency of occurrence), little additional quantitative data were submitted to support modifying EPA's estimate of the frequency of occurrence of serious PCB Transformer fires. Thus, EPA believes that its estimate of 50 serious PCB Transformer fires over the remaining useful life of PCB Transformers is a reasonable estimate of the future frequency of serious PCB Transformer fires.

Since many comments on the Proposed Rule suggested that EPA evaluate separately the risks posed by PCB Transformers in or near industrial facilities, EPA has developed estimates of the frequency of PCB Transformer fires in industrial facilities and in commercial buildings.

As discussed in Unit IV.C, EPA believes that the probability of PCB Transformer fault-related failure varies depending upon the type of PCB Transformer installation (and includes such considerations as the amount of associated electrical equipment present, the secondary voltage of the transformers, and the current level of protection provided against sustained high current faults and sustained low current faults). Based on this analysis, and available empirical data on installation types in documented PCB

Transformer fires, EPA has developed estimates of the relative probabilities of

the volatilization of PCBs, and the widespread distribution of PCBs and

to 8 minutes, building occupants will be

additional exposures when emergency response personnel (the principal

of materials which are commonly stored

days in a year. EPA also expects that

Transformer fires, EPA has developed estimates of the relative probabilities of failure for different types of PCB Transformer installations (high and low secondary voltage network transformers versus high and low secondary voltage radial transformers). EPA has used these estimates and available data on the distribution of these installation types in commercial locations and industrial locations to estimate the frequency of serious PCB Transformer fires both in commercial buildings and in industrial facilities.

EPA believes that 480 volt network PCB Transformers would have a particularly high probability of failure; that lower secondary voltage network PCB Transformers and 480 volt radial PCB Transformers would have a lower probability of failure (compared to 480 volt network transformers); and that lower secondary voltage radial PCB Transformers would have the lowest probability of fault-related failures.

EPA estimates that 44 of the 50 structure-related serious PCB Transformer fires which will occur over the remaining useful life of PCB Transformers will occur in or near commercial buildings. This estimate is supported by electrical engineering theory concerning the mechanisms of PCB Transformer fault-related failures and the likelihood of failures in different types of installations as well as by available empirical data. The PCB Transformer fires in Binghamton, San Francisco, Chicago, Miami, and Tulsa all occurred in or near commercial buildings; specifically, in office buildings.

Further, the San Francisco fire, the Chicago fire, and the Miami fire all reportedly occurred in 480 volt network PCB Transformers. Three other fire-related incidents in commercial buildings in the Boston area also reportedly involved 480 volt network PCB Transformers. A total of 6 out of 10 known PCB Transformer fires have occurred in higher secondary voltage network PCB Transformers (in 480 volt network installations). This is particularly dramatic when one considers that there are only an estimated 7,600 480 volt network PCB Transformers in use.

c. *Exposure assessment.* EPA has evaluated likely exposures from a serious PCB Transformer fire in or near a commercial building by using reasonable yet environmentally conservative assumptions. EPA assumes that a PCB Transformer fire in a commercial building would involve sustained high temperatures in the transformer location, the rupture of the transformer casing, the release of PCBs, the volatilization of PCBs, and the widespread distribution of PCBs and oxidation products throughout the interior of a densely populated building (i.e., an office building), into the ambient air, and into waterways. EPA assumes that smoke and soot containing PCBs and oxidation products are spread throughout a large office building during peak use hours, that emergency response personnel are unaware that certain precautions should be taken to minimize exposures, and, that reoccupancy occurs only after the removal of visible traces of soot by cleanup crews.

EPA assumes that a PCB Transformer fire in or near a commercial building would involve the rupture of the transformer and sustained high temperatures in the transformer location for up to 4 hours. EPA has assumed this because transformers located in or near commercial buildings are more likely to be located in inaccessible, low visibility areas, where malfunctions would not be readily identified. Further, EPA has assumed that the transformer will not be deenergized automatically and that the transformer will not have the capability to be deenergized manually from an on-site location. EPA made these assumptions because many PCB Transformers located in or near commercial buildings are network transformers, which are currently less well-protected electrically, and, are less likely to be able to be deenergized manually from an on-site location.

EPA's assessment of the potential for human exposures to PCBs and oxidation products from a PCB Transformer fire in a commercial building serves as the baseline for subsequent assessments of the expected effectiveness of fire hazard risk reduction measures in these locations. This assessment is also used in assessing likely human exposures from PCB Transformer fires in industrial settings and in outdoor locations (away from commercial and residential areas), and for estimating likely human exposures from PCB-Contaminated transformer fires in or near commercial buildings.

A PCB Transformer fire which occurs in or near a commercial building during a period of peak use may expose hundreds to thousands of building occupants to smoke and soot from the fire during the evacuation of the building. The potential for exposures of large numbers of building occupants to this smoke and soot is increased if the transformer involved in a fire is located near building ventilation equipment and ductwork. EPA estimates that evacuation times will be on the order of 6 to 8 minutes, and, that during these 6 to 8 minutes, building occupants will be exposed to smoke and soot, primarily through inhalation.

Emergency response personnel, unaware that the smoke and soot from the fire may contain PCBs and toxic products of incomplete combustion, may be exposed to these materials through inhalation, and may incur some dermal exposure to facial areas. EPA estimates that 30 to 60 emergency response personnel may be exposed for up to 4 hours during the extinguishing of a PCB Transformer fire. Dermal and inhalation exposures of firefighters and other emergency response personnel may continue during the completion of equipment maintenance procedures and during the cleaning of personal clothing and firefighting equipment after the fire.

EPA has developed quantitative estimates of exposures by cleanup crews, firefighters, building occupants, and members of the general public to PCBs, PCDFs, and PCDDs. EPA developed these estimates primarily to evaluate relative exposures among these populations for different types of PCB Transformer fires and not to define in an absolute sense expected human exposures. In developing quantitative exposure estimates, EPA must make assumptions about parameters such as the concentration of PCBs, PCDFs, and PCDDs present in soot, the amount of soot generated, the distribution of soot in the interior of a building, the duration of exposure, the frequency of exposure, and the expected routes of exposure. As would be expected, the assumptions selected for use in quantitative exposure assessments can strongly influence the final exposure estimates. Recognizing this, EPA tends to routinely adopt more environmentally conservative assumptions for the different parameters of the exposure assessment.

EPA's quantitative estimates of potential firefighter exposures (assuming that respiratory protection is not worn during a PCB Transformer fire of 4 hours duration, as well as other assumptions detailed in support document 1 in Unit X.B.) in terms of estimated lifetime average daily doses (LADD) is 8,006 picograms per kilogram per day (pg/kg/day) PCBs, 98 pg/kg/day 2,3,7,8-TCDF, 56 pg/kg/day other TCDFs, 319 pg/kg/day other PCDFs, 5.1 pg/kg/day 2,3,7,8-TCDD, 0.98 pg/kg/day other TCDDs, and 45 pg/kg/day other PCDDs.

Building occupants also may incur additional exposures (above those which may occur during building evacuation), if these parties remain nearby, as onlookers during the extinguishing of the fire. Further, there is an increased potential for these additional exposures when emergency response personnel (the principal authority figures at the scene of a fire) are unaware of the nature of risks posed by exposures to smoke and soot from these fires.

The rupture of a PCB Transformer and the release of potentially hundreds of gallons of PCBs (and potentially PCDFs and PCDDs) into floor drains in transformer locations could result in the contamination of waterways. Further, if water is used to extinguish the fire, or if water pipes rupture due to high temperatures caused by the fire, water runoff could ultimately result in contamination of surface waters and drinking water. Members of the general public, in addition to fish and wildlife, in the vicinity of a PCB Transformer fire may be exposed to PCBs and oxidation products through the ingestion of residues. While comments on the ANPR suggest that water is not frequently used in extinguishing an electrical transformer fire, EPA believes that there is a potential for contamination of water from the rupture of the transformer, burst water pipes, the extinguishing of ignited materials in the area (other than electrical equipment) and from cleanup efforts.

The presence of a floor drain leading to a storm sewer in a transformer location provides a readily accessible pathway for the contamination of surface waters, and potentially, drinking water supplies. Water contaminated with soot containing PCBs, PCDFs, and PCDDs can enter these drains as a result of firefighting operations, burst water pipes, and cleanup operations. Very large amounts of water can be used in the cleanup process. For example, during the first year of cleanup at the Binghamton site, over 160,000 gallons of water were used, treated by charcoal filtration and secondary treatment, and discharged to surface waters. The nearest drinking water intake downstream is 45 miles away and serves 16,500 persons.

Atmospheric transport of PCBs and oxidation products in an urban area could also be responsible for exposing many members of the general population who live or work in the vicinity of a fire. In the Binghamton, New York incident, 2,585 people lived within 3 to 4 kilometers of the building. While inhalation exposures by the general public as a direct result of a PCB Transformer fire would be unlikely to occur for an extended period of time, soot fallout from a PCB Transformer fire may contaminate surface soil and surface water, in addition to outdoor furniture, automobiles, and other types of materials which are commonly stored outside. Contamination of surface soil and surface water may result in exposures to fish and wildlife as well. Thus, dermal, inhalation, and even oral exposures to the general population in the vicinity of a fire may occur on a continuing basis long after the initial incident.

Exposures at the site of a fire to soot containing PCBs and oxidation products may also continue long after the extinguishing of the fire. Cleanup crews, dispatched to the scene by a building owner who is unaware of the nature of risks posed by a PCB Transformer fire, may not be initially equipped with respiratory protection or protective clothing. Inhalation and dermal exposures would be expected to occur as these crews work to remove soot from surfaces inside the building. Soot particles are likely to become airborne as a result of cleanup efforts, and would be expected to be inhaled by workers. In addition, because of the strenuous nature of cleanup work, these workers would be expected to have a high respiration rate, further increasing exposures to PCBs and oxidation products through inhalation.

EPA's quantitative estimates of potential exposures to cleanup crews (assuming a 4-hour fire, the lack of protective clothing, and the superficial cleanup of a building, as well as other assumptions detailed in support document 1 in Unit X.B.) is 13,784 pg/kg/day PCBs, 34 pg/kg/day 2,3,7,8-TCDF, 19.9 pg/kg/day other TCDFs, 109 pg/kg/day other PCDFs, 1.8 pg/kg/day 2,3,7,8-TCDD , 0.33 pg/kg/day other TCDDs, and 15.7 pg/kg/day other PCDDs.

Even if respiratory protection and protective clothing are utilized by cleanup crews, EPA expects that some level of exposure to these materials may occur both dermally and through inhalation because of the expected prolonged period of exposure. Cleanup crews may work long hours for extended periods of time. For example, in the Binghamton incident, 40 to 70 workers were involved in cleanup operations for 7 hours a day for over 250 days.

Finally, depending upon the level of knowledge of the building owner, emergency response personnel, the utility, and local public health authorities about the nature of risks posed by PCB Transformer fires, building occupants may be allowed to return prematurely to a building following the removal of only visible traces of soot. Exposures may occur to faces, hands, and lower arms for 8 hours a day over the course of 250 working days in a year. EPA also expects that inhalation exposures would occur as a result of the circulation of airborne contaminants by the building's ventilation system. Further, these exposures may continue for an indefinite period of time because these materials are expected to the quite persistent, and resistant to degradation. Residual concentrations may remain on interior building surfaces for several years. EPA's quantitative estimates of potential building occupant exposures (assuming that the fire burns for 4 hours, that the building is occupied at the time of the fire, and that reoccupancy occurs following cleanup to visible traces of soot in the buildings, as well as other assumptions detailed in support document 1 in Unit X.B.) is 39,583 pg/kg/day PCBs, 65 pg/kg/day 2,3,7,8-TCDF, 65 pg/kg/day other TCDFs, 277 pg/kg/day other PCDFs, 1.2 pg/kg/day 2,3,7,8-TCDD, 0.76 pg/kg/day other TCDDs, and 35 pg/kg/day other PCDDs.

EPA has prepared additional quantitative estimates of potential human exposures to PCBs, PCDFs, 2,3,7,8-TCDF, PCDDs, and 2,3,7,8-TCDD from a reasonable worst-case PCB Transformer fire in a commercial building. These estimates are presented in support document 1 in Unit X.B.

2. *PCB Transformer fires in or near commercial buildings with risk reduction measures in ploce.* In order to evaluate the effectiveness of risk reduction measures in reducing exposures to PCBs and oxidation products, EPA has assessed expected exposures to these materials from a PCB Transformer fire in a commercial building, assuming the implementation of certain risk reduction measures.

In the Proposed Rule, EPA evaluated the expected exposures associated with a PCB Transformer fire in or near a commercial building with certain risk reduction measures in place. The risk reduction measures addressed in the Proposed Rule were transformer isolation from building ventilation equipment and ductwork, the control of potential water releases, the reporting of the fire to the National Response Center, the registration of the transformer with the responding fire department and the building owner, and the labeling of the exterior of the transformer location. EPA assumed that most PCB Transformers could be deenergized within 15 minutes of failure (without the installation of additional protection), and, for those transformers that EPA believed could not be deenergized completely, EPA proposed requiring additional electrical protection on the secondary side of the transformers.

Thus, in evaluating the effectiveness of transformer isolation, registration, assessed expected exposures to PCBs and oxidation products in the event that

b. *Exposure assessment.* The potential for the volatilization of large amounts of

in particular would also function to

the potential for the release of PCBs and

remaining useful life of PCB

VOL 50 ISS 137 JL 17 1985 UMI

Thus, in evaluating the effectiveness of transformer isolation, registration, labeling, and reporting of PCB Transformers fires, EPA assumed that all but a subset of PCB Transformers could be easily deenergized within 15 minutes of failure. For that subset, EPA required increased electrical protection on the secondary side of the transformers.

Comments on the Proposed Rule, however, indicate that: (1) Many PCB Transformers in commercial buildings are not capable of being easily deenergized after failures; (2) PCB Transformers in commercial buildings could be equipped with enhanced electrical protection which would reduce the probability of transformer failures from electrical faults; and, (3) while the proposed additional electrical protective measures (for a subset of the PCB Transformer population) would have avoided some failures in this equipment, failures in these transformers from other common mechanisms of failure could still occur.

Many comments on the Proposed Rule suggested that EPA increase its emphasis on the reduction of risk through the prevention of PCB Transformer fault-related failures and decrease its emphasis on the use of isolation measures to reduce structure and environmental contamination. These comments indicate that while transformer isolation can reduce exposures in the event of a PCB Transformer fire (by reducing widespread structure and environmental contamination), if a transformer cannot be easily deenergized after failure occurs, then substantial quantities of smoke and soot can be generated. The longer a transformer remains energized, the less likely it is that isolation will be an effective risk reduction measure.

EPA agrees that measures designed to prevent PCB Transformer failures are preferred over measures designed to contain and control already released and/or formed incomplete combustion products. Further, EPA's evaluation of mechanisms of transformer failure, commercial installation characteristics and operations, and the current levels of electrical protection in commercial PCB Transformer installations indicates that many of these PCB Transformers could be better protected electrically to reduce the frequency of fault-related failures and fires. Thus, in this final rule, EPA has focused on increased electrical protection rather than transformer isolation as the preferred measure for reducing the frequency of serious PCB Transformer fires.

Since electrical protective devices are subject to malfunction, EPA has also assessed expected exposures to PCBs and oxidation products in the event that transformer failure occurs despite the presence of increased electrical protection; but, has assumed that measures are taken to control water releases; that the incident is reported to the National Response Center; and, that the transformer is registered with both the responding fire department and the building owner. In addition, EPA assumes that the exterior of the transformer location is marked with PCB identification labels.

a. *Frequency of serious PCB Transformer fires with risk reduction measures in place.* EPA has used data from transformer and electrical equipment reliability studies to evaluate the probability of electrical protective device malfunction; and thereby, to estimate the effectiveness of electrical protection in avoiding serious PCB Transformer fires. For purposes of this rule, EPA defines electrical protective device malfunction as the failure of a device to operate when called upon to operate. It is difficult to develop a precise estimate of the expected rate of failure of specific combinations of electrical protective devices such as those which appear in this final rule. However, based upon available information on the failure rate of circuit breakers, current-limiting fuses, and heat and fluid level sensors, EPA expects the failure rate to be low, below 3 percent. Further, according to data on the failure modes of circuit breakers, only 9 percent of circuit breaker failures are failures to operate when called upon to open. The majority of circuit breaker failures are characterized by the operation of a circuit breaker when it should not have operated or opened. That is, circuit breaker failure typically involves deenergization without cause rather than failure to deenergize when called upon to open.

EPA has assumed that enhanced electrical protective systems will function to avoid between 97 and 99 percent of the serious PCB Transformer fires (about 43 fires) which would be expected to occur in commercial buildings over the remaining useful life of this equipment (this assumes that electrical protection can be implemented immediately). Electrical protection for commercial transformers phased in over a 5-year period is expected to avoid about 36 serious PCB Transformer fires. EPA expects that one to two serious PCB Transformer fires will occur over the remaining useful life of this equipment as a result of the failure of the enhanced electrical protective systems to operate.

b. *Exposure assessment.* The potential for the volatilization of large amounts of PCBs, and the formation of products of incomplete combustion from PCB Transformer fires is reduced if efforts are made to control combustion conditions in the transformer location. EPA believes that the removal of stored combustibles from a PCB Transformer location will reduce the likelihood of a fire occurring external to a PCB Transformer resulting in transformer failure. More importantly, the installation of enhanced electrical protection on commercial PCB Transformers is expected to reduce substantially the frequency of PCB Transformer fault-related failures in this equipment.

Comparing the circumstances surrounding well-documented PCB Transformer fires indicates that the sooner a faulted transformer is deenergized, the less likely it is that significant quantities of PCDFs and PCDDs will be formed. Experience from actual incidents indicates that EPA is correct in its belief that there are practical means available for successfully controlling combustion conditions in PCB Transformer locations. Certain measures, once implemented, would reduce the likelihood of fault-related failures and sustained high temperatures. These measures are expected to reduce significantly the fire-related risks posed by the continued use of these transformers.

Analyses of the levels of electrical protection currently provided for many commercial PCB Transformer locations indicate that these PCB Transformers could be better protected electrically to reduce the frequency of transformer failures from electrical faults. Comments on the Proposed Rule suggest that many of the well-documented PCB Transformer fires could have been avoided if transformer failure had been avoided through the use of enhanced electrical protection, such as current-limiting devices, sensors, and disconnect equipment.

Enhanced electrical protection, that is, the installation of overcurrent protection on transformers which lack such protection, and sensors and disconnect equipment to avoid sustained low current faults will reduce the likelihood of PCB Transformer fault-related failures. These systems are intended to actuate complete deenergization of transformers when abnormal conditions are sensed. While abnormal conditions are expected to be typically caused by sustained high and low current faults, the low current fault protection system

in particular would also function to avoid sustained high temperatures and changes in internal pressure from other causes as well. Finally, the final rule requires the removal of stored combustibles near PCB Transformers to reduce the likelihood of a PCB Transformer fire occurring from an external source of combustion.

If transformer failure and fire occurs despite the presence of the required electrical protection system and the removal of stored combustibles, the nature and magnitude exposures to PCBs and oxidation products by building occupants, firefighters, cleanup crews, and members of the general population could be equivalent to that described above, in Unit IV.C.1.c. However, the presence of disconnect equipment on site (which can be manually operated) for many PCB Transformers will provide for more rapid deenergization than is currently the case.

Registration, labeling, containment of potential water releases, and notification of the National Response Center would also be expected to reduce exposures to these populations in the event that transformer failure occurred despite the presence of increased electrical protection. Advance knowledge on the part of fire departments and building owners about the contents of a transformer and the notification of EPA in the event of a fire would be expected to reduce exposures to building occupants, in addition to reducing exposures to firefighters and other emergency response personnel. EPA expects that firefighters, aware of the nature of risks posed by a transformer fire, would be more likely to wear respiratory protection and protective clothing and would be more protective of bystanders and onlookers. Building owners who are aware that a transformer fire involves a PCB Transformer would be less likely to dispatch unprotected cleanup crews to the site, and would be less likely to allow building occupants to return unprotected to an involved building.

If PCB Transformer owners take measures as soon as practically and safely possible to contain any spilled PCBs and or PCDFs/PCDDs (released as a result of a fire-related incident) and water potentially contaminated with PCBs, PCDFs, and PCDDs, EPA expects that potential releases to waterways will be substantially reduced. The blocking of floor drains in a transformer location as soon as practically and safely possible, and the containment of all water associated with the incident (including cleanup water) should reduce the potential for the release of PCBs and untreated water into surface waters. Finally, by requiring the reporting of all PCB Transformer fire-related incidents to the National Response Center (NRC), EPA will be able to monitor cleanup efforts and the treatment and discharge of water, to insure that safe levels are not exceeded.

3. *Industrial PCB Transformer fires*—a. *Nature of installations and operations.* PCB Transformers used in industrial applications may be located indoors or outdoors, depending upon variables such as the service being supplied by the unit, the size of the unit, and the geographic location of the facility. According to comments submitted in response to the Proposed Rule, many (but not all) industrial transformers are located in production areas, near motors, machinery, and other equipment. These transformers are typically unvaulted and readily visible to facility workers during the routine conduct of their work. This is in contrast to the typical commercial PCB Transformer installation, which is generally inaccessible and less visible to employees.

Comments on the Proposed Rule indicate that in many industrial facilities, the performance of transformers in monitored during production shifts by engineers, electricians, or other similarly trained personnel. Further, comments indicate that industrial transformer owners reportedly utilize visual inspections, monitoring, and electrical testing of transformer function on a routine basis. Electrical equipment failure and fire in an industrial facility means loss of production time, which can have severe economic impacts. Thus, industrial transformer owners have this incentive to provide for transformer maintenance and testing on a routine basis to avoid fault-related failures and for providing disconnect equipment on site to provide for rapid deenergization in the event of a fault-related failure.

EPA's analysis indicates that there are approximately 26,700 PCB Transformers used in or near industrial facilities. Of these 26,700 PCB Transformers, EPA estimates that 98 percent are radial PCB Transformers, and, that 2 percent are network PCB Transformers. Of the estimated 7,600 480 volt network PCB Transformers in use, EPA estimates that only 3 percent (or 179 PCB Transformers) are used in or near industrial facilities.

b. *Frequency of PCB Transformer fires.* EPA estimates that 6 out of the expected 50 serious PCB Transformer fires which will occur over the remaining useful life of PCB Transformers will occur in or near industrial facilities. Four of these fires are expected to occur after October 1, 1990. This estimate was derived by considering available information on the number and type of PCB Transformers used in or near industrial facilities and available information on the probability of PCB Transformer fault-related failure for each type of transformer installation.

EPA has very little data on PCB Transformer fires which have actually occurred in industrial facilities. Limited data were submitted by the American Paper Institute (API) regarding two PCB Transformer fire-related incidents in forest industry facilities. According to the results of an API survey, during an 8.5 year period, between January 1976 and March 1984, there were two PCB Transformer fires (which involved smoke spread into buildings) out of an estimated 3,509 PCB Transformers used by the surveyed companies. API indicates that none of these incidents approached "Binghamton" proportions, and could be classified as moderate incidents on the spectrum of PCB Transformers fires.

c. *Exposure assessment.* EPA has little data on the circumstances surrounding actual PCB Transformer fires in industrial facilities. However, EPA has used environmentally conservative yet reasonable assumptions in evaluating likely human and environmental exposures from a PCB Transformer fire in a typical industrial facility. EPA recognizes that PCB Transformer fires may occur in atypical industrial facilities, where the exposures may be somewhat greater than those described here. However, based on comments on the Proposed Rule, EPA believes that there are fundamental differences between the potential for human exposures to PCBs, PCDFs and PCDDs from the use of PCB Transformers in industrial facilities versus their use in commercial buildings.

EPA assumes that a PCB Transformer fire in an industrial facility would involve an indoor PCB Transformer, sustained high temperatures in the transformer location, the rupture of the transformer, the release of PCBs, the volatilization of PCBs, and the distribution of PCBs and oxidation products into the interior of an industrial facility, into the ambient air, and into waterways. EPA assumes that smoke and soot containing PCBs and oxidation products are spread throughout the interior of an industrial facility during peak use hours, worker evacuation occurs during the early stages of the fire, an on-site fire brigade makes the initial

response, and, that reoccupancy of the facility by workers occurs after the

2,3,7,8-TCDD, 0.06 pg/kg/day other TCDDs, and 3.1 pg/kg/day other PCDDs.

Cleanup following an industrial PCB Transformer fire could be as time-

installations and operations. PCB

from releases to air from an outdoor fire

would be linearly related to the amount

response, and, that reoccupancy of the facility by workers occurs after the removal of visible traces of soot.

EPA assumes that a PCB Transformer fire in an industrial facility will involve the rupture of the transformer and sustained high temperatures in the transformer location for up to 0.5 hour (in contrast to a 4-hour burn time assumed for commercial buildings). EPA has assumed this reduced burn time because comments on the Proposed Rule and available data indicate that transformers used in or near industrial facilities are more likely to be located in higher visibility areas, where malfunctions would be more rapidly identified. This is in contrast to the typical commercial PCB Transformer installation, which is not readily accessible or visible to employees. Further, EPA has assumed that once a malfunction has been identified, the transformer can be more easily deenergized in industrial facilities by on-site trained personnel. EPA made this assumption because comments indicate that industrial use PCB Transformers are typically equipped with primary disconnect equipment on site. Further, comments indicate that many industrial facilities employ electrical engineers or technicians during duty hours to monitor electrical equipment operations. This too is in contrast to the typical commercial installation, which is not equipped with primary disconnect equipment on site. Further, commercial PCB Transformer operations are not typically monitored.

An industrial PCB Transformer fire which occurs during a period of peak use may expose hundreds of workers to smoke and soot from the fire during the evacuation of the facility. However, EPA expects that worker evacuation times may be quicker than those assumed for commercial buildings. First, industrial facilities are not typically high-rise buildings. Second, there are typically fewer people to be evacuated. Finally, industrial workers would be expected to be more educated about the potential risks posed by any type of fire in an industrial location, and about proper evacuation procedures. EPA has assumed that exposures by workers to residual levels of PCBs and oxidation products would, however, continue following reoccupancy. EPA's estimate of potential exposures to industrial workers (assuming a 0.5 hour burn time and cleanup to visible traces of soot, as well as other assumptions detailed in support document 1 in Unit X.B.) is 2,888 pg/kg/day PCBs, 6.7 pg/kg/day 2,3,7,8-TCDF, 3.8 pg/kg/day other TCDFs, 22 pg/kg/day other PCDFs, 0.38 pg/kg/day 2,3,7,8-TCDD, 0.06 pg/kg/day other TCDDs, and 3.1 pg/kg/day other PCDDs.

Many industrial facilities have fire brigades on site to handle initial emergency response situations. According to comments on the Proposed Rule, these fire brigades are typically well-trained and well-equipped to handle industrial accidents and fires, including PCB Transformer fires. A PCB Transformer located in an industrial facility would likely be less confined than in a commercial building, and, therefore, would provide easier access to firefighters than a commercial location. Firefighting time may be reduced by the accessibility of the transformer, the capability to deenergize the equipment on site, and the level of site-specific training of industrial fire brigades.

EPA assumes that a 10-man fire brigade would respond to a PCB Transformer fire in an industrial facility, and that brigade members would be more likely to wear appropriate protective clothing and respirators. (Other assumptions are detailed in support document 1 in Unit X.B.) EPA's estimate of potential exposures to these firefighters is 45 pg/kg/day PCBs, 0.11 pg/kg/day 2,3,7,8-TCDF, 0.068 pg/kg/day other TCDFs, 0.37 pg/kg/day other PCDFs, 0.006 pg/kg/day 2,3,7,8-TCDD, 0.001 pg/kg/day other TCDDs, and 0.05 pg/kg/day other PCDDs. Additional exposures following the fire may, however, occur during the cleanup of turnout gear and firefighting equipment. EPA expects that industrial fire brigade personnel would take appropriate precautions to limit further exposures.

If water is used to extinguish the fire, or if water pipes rupture due to high temperatures, water runoff could ultimately result in contamination of surface waters and drinking water supplies. Industrial facilities typically have many floor drains, which are readily accessible pathways for the release of PCBs and oxidation products to waterways.

Atmospheric transport of PCBs and oxidation products in a metropolitan area could also be responsible for exposing many people who live or work in the vicinity of an industrial plant to PCBs and oxidation products. Higher ventilation rates in industrial facilities may lead to more rapid distribution of PCBs and oxidation products into the ambient air than would be the case for a fire in a commercial building. However, the shorter burn time for the fire would decrease the total amount of PCBs volatilized and incomplete combustion products formed and released.

Cleanup following an industrial PCB Transformer fire could be as time-consuming as an indoor commercial PCB Transformer fire. The cleaning and decontamination of valuable machinery and equipment would be very time-consuming. The cleanup of the structure itself may be less involved than for a high-rise office building. Industrial facilities are more open and building surfaces are generally more accessible to cleaning and decontamination. In addition, higher ventilation rates in industrial facilities would encourage the distribution of smoke and soot into the ambient air outside the facility. Further, the ability to deenergize the transformer from an on-site location would reduce both the amount of PCBs volatilized and the amount of incomplete combustion products formed and released.

In facilities which operate around the clock (24 hours per day operations), electrical equipment operations would be expected to be monitored during the entire operating time. However, smaller industrial facilities may operate only 8 hours per day, leaving electrical equipment operations unmonitored for 16 hours per day.

A PCB Transformer fire in an industrial facility after normal hours of operation could, therefore, burn longer than the assumed 0.5 hour. Electrical equipment operations are not typically monitored by operating personnel during off-shift hours. While occasional security patrols would inspect the area, a PCG Transformer fire could progress in much the same manner as a PCB Transformer fire in a commercial building. Deenergization of the transformer, even when on-site disconnect equipment is available, would take longer in these cases, because personnel trained in disconnecting the equipment would most likely not be on site during off-shift hours.

An industrial PCB Transformer fire during off-hours would be more likely to expose volunteer and municipal salaried firefighters than fires during normal operating hours, when company fire brigades would have primary responsibility for initial emergency response. Exposures to members of the general population in the vicinity of the fire would be expected to be higher for fires during off-hours, as would exposures to cleanup crews. Exposures to workers, however, would only be expected to occur following reoccupancy of the building, from contact with residual materials on building surfaces and in the air.

4. *Outdoor fires involving PCB Transformers*—a. *Nature of installations and operations.* PCB Transformers which are used in outdoor applications may be located on the tops of utility poles, pad-mounted in urban, metropolitan, and rural areas, or in electric utility substations. The operation of these transformers is not typically monitored by on-site personnel. Electric utility substation PCB Transformers are typically fenced off to restrict access to authorized personnel, and their operation may be monitored by personnel in control rooms at utility transmission stations and/or generating stations.

EPA estimates that there are about 17,000 PCB Transformers used in outdoor applications. EPA expects that the majority of these transformers are in radial installations.

b. *Frequency of PCB Transformer fires.* Based on estimates of the frequency of "serious" PCB Transformer fires in radial transformer installations, and the estimated number of PCB Transformers located in outdoor electrical substations, EPA estimates that outdoor PCB Transformer fires with smoke generation will occur at a frequency of about 0.0014 percent per year, or, about 3 incidents over the remaining useful life of this equipment.

c. *Exposure assessment.* Fires involving PCB Transformers located in outdoor locations, away from commercial buildings, are expected to result in lower human exposures to PCBs and oxidation products in fire situations than transformer fires in or near buildings. First, because combustion conditions in an outdoor PCB Transformer fire are not expected to be as conducive to the volatilization of spilled PCBs and the formation of large quantities of PCDFs, 2,3,7,8-TCDF, PCDDs, or 2,3,7,8-TCDD as would be the case with transformers located in machinery rooms or vaults. Generally, combustible materials are not present near outdoor PCB Transformers and some of the heat generated from arcing or fires would be expected to dissipate in the environment.

Further, outdoor utility substations in particular are generally fenced to restrict access to authorized personnel only, thus limiting the number of people at immediate risk of exposure in the event of a fire. In contrast to the smoke and soot produced from transformer fires in or near buildings, any smoke or soot produced in an outdoor transformer fire, away from commercial buildings, is expected to be more widely dispersed in the environment. EPA has developed a model for the release of PCBs and the formation of PCDFs and/or PCDDs from an outdoor PCB Transformer fire. EPA has estimated the expected exposures from releases to air from an outdoor fire and has found that exposures decrease with increasing distance, and that at a distance of 200 meters from a fire, inhalation exposures from a typical fire would be expected to be relatively low.

While there is a potential that emergency response personnel and cleanup crews responding to such fires may be exposed to some PCDFs, 2,3,7,8-TCDF, PCDDs, and 2,3,7,8-TCDD, exposures to PCBs would be more likely to occur. Firefighting equipment and protective clothing may become contaminated with PCBs, and may result in exposures to firefighters during equipment cleanup and maintenance.

Fires involving outdoor PCB Transformers near commercial buildings (i.e., within 30 meters of commercial buildings) could result in more people being exposed to higher levels of PCBs and any oxidation products produced. For this reason, EPA has included outdoor PCB Transformers located within 30 meters of commercial buildings within the definition of PCB Transformers located in or near commercial buildings.

5. *Fires involving transformers containing less than 500 ppm PCBs*—a. *Nature of installations and operations.* EPA estimates that there are over 20 million mineral oil transformers in the electric utility industry and about 5 million in all other applications. These mineral oil transformers may contain low levels of PCBs (less than 500 ppm PCBs) as a result of contamination from past servicing activities. EPA estimates that approximately 16 million of these mineral oil transformers are used in nonsubstation applications, in or near commercial buildings, industrial facilities and outdoors on utility poles. These transformers are installed in both radial and network configurations.

b. *Exposure assessment.* PCB Transformers typically contain 65 percent PCBs, or about 1,600 times the maximum amount of PCBs present in PCB Contaminated transformers (and 13,000 times the amount of PCBs present in transformers containing 50 ppm PCBs). EPA has assessed the potential for exposures to PCBs, PCDFs, 2,3,7,8-TCDF, PCDDs, 2,3,7,8-TCDD from fires involving PCB-Contaminated equipment by assuming that the transformer present in the Binghamton State Office Building was a PCB-Contaminated transformer, and, by assuming reasonable worst-case values for other parameters. Based on the results of EPA's study of the incomplete combustion of PCB-Contaminated transformer fluids, EPA has assumed that the formation of PCDFs and PCDDs in a PCB-Contaminated transformer would be linearly related to the amount of PCBs present in the transformer. Given this situation, PCB, PCDF, 2,3,7,8-TCDF, PCDD, and 2,3,7,8-TCDD levels in the soot from such a fire would be expected to be reduced by a factor of 1,300, compared to levels actually measured in Binghamton. Similarly, human exposures to these materials are assumed to be reduced by the same factor.

6. *Conclusions—Risks posed by fires involving transformers that contain PCBs.* Toxicity and exposure are the two basic components of risk. In earlier units of this preamble, EPA evaluated the toxicity of PCBs, PCDFs, 2,3,7,8-TCDF, PCDDs, and 2,3,7,8-TCDD and presented assessments of the potential for human exposure to these materials from transformer fires. EPA concluded that both 2,3,7,8-TCDD and PCBs are probable human carcinogens, based upon studies in laboratory animals. Further, since 2,3,7,8-TCDF is structurally and chemically similar to 2,3,7,8-TCDD, EPA has concluded that it is prudent to assume that an oncogenic potential exists in 2,3,7,8-TCDF and perhaps in other PCDD and PCDF congeners as well.

EPA has determined that relatively large quantities of these compounds can be formed and released during a PCB Transformer fire, particularly a fire which occurs in or near a commercial building. Sustained high temperatures in these transformer locations are more likely than in industrial or outdoor locations because of the nature of commercial PCB Transformer installations. Many commercial transformers are network transformers (which are the least well protected distribution (transformers). Further, malfunctions in commerical PCB Transformers are more likely to progress into more serious incidents because these transformers are typically located in low visibility areas, and because these locations typically lack on-site electrical technicians and necessary disconnect equipment to insure complete deenergization in the event of a sustained fault or failure.

Finally, there are many routes through which commercial building occupants, emergency response personnel, cleanup crews, onlookers, and the general public can be exposed to these materials, once generated. Building evacuation times for large commercial buildings can be relatively long, reoccupancy may occur before adequate cleanup has been completed, emergency response personnel may lack necessary protective equipment, cleanup crews may be dispatched without proper protection,

onlookers may be unaware of the risks posed, and members of the general

decrease the likelihood of fire-related failures in this equipment.

PCB Transformer fires is 6 fires over the remaining useful life of industrial PCB

A. Benefits of PCBs

fire-related risks posed by the use of a dielectric fluid which can be

even though the coefficient of expansion

onlookers may be unaware of the risks posed, and members of the general population in the vicinity of the fire may incur inhalation exposures and dermal exposures during the fire, and for extended periods after the fire from contamination of waterways, drinking water supplies and outdoor materials with PCBs, PCDFs, and PCDDs.

EPA has concluded that fires involving PCB Transformers in or near commercial buildings can pose significant risks of human and environmental exposures to PCBs and oxidation products. EPA believes that 44 of the estimated 50 structure-related serious incidents over the remaining useful life of PCBs Transformers will occur in or near these buildings. Further, based on its analysis of the relative probabilities of PCB Transformer failures and fires, EPA has concluded that many of these fires will involve 480 volt network PCB Transformers.

Given that a single serious PCB Transformer fire in or near a commercial building can potentially expose thousands of people to PCBs and oxidation products in soot in air, water, or on surfaces, EPA has concluded that PCB Transformer fires in or near commercial buildings can pose significant risks to human health and the environment. However, EPA also believes that reducing the potential for the release of PCBs and the potential for the formation and release of PCB oxidation products from PCB Transformers substantially reduce the fire-related risks posed by the continued use of this equipment.

EPA has determined that sustained high temperatures in industrial PCB Transformer locations and in outdoor substation PCB Transformers are less likely than for commercial PCB Transformers because of the nature of these installations. Many of these transformers are radial transformers (which are typically better protected against sustained faults and failures than network transformers). Further, malfunctions in industrial PCB Transformers which go undetected by existing electrical protection are less likely to progress into more serious incidents because of the location of these transformers in higher visibility areas, and because industrial facilities reportedly have on-site electrical engineers and technicians and necessary disconnect equipment to provide for complete deenergization. Finally, the suggested higher frequency of maintenance, inspection, and testing of industrial transformers and utility substation transformers would further decrease the likelihood of fire-related failures in this equipment.

EPA estimates that up to 6 out of the expected 50 serious PCB Transformer fires over the remaining useful life of PCB Transformers will occur in or near industrial facilities, and that less than 3 PCB Transformer fires with smoke distribution will occur in outdoor PCB Transformer locations.

While exposures to workers, emergency response personnel, cleanup crews and the general population may occur from an industrial PCB Transformer fire, the magnitude of exposure associated with a PCB Transformer fire in a typical industrial facility would be anticipated to be greatly reduced (when compared to a commercial PCB Transformer fire) as a result of several factors. First, EPA expects that the duration of industrial PCB Transformer fire-related incidents would be significantly less than the duration of commercial PCB Transformer fires, because of the presence of trained personnel and disconnect equipment on site. The reduced duration would reduce exposures to all populations potentially at risk of exposures. Second, there are generally fewer workers present in industrial facilities than in commercial buildings, and worker evacuation times would be expected to be less for industrial facilities than for commercial buildings. This is because of the single-story nature of many industrial facilities, and the expected increased level of education of industrial workers about workplace hazards. Third, according to comments on the Proposed Rule, industrial facilities often utilize well-trained, well-equipped fire brigades for initial emergency response, rather than local volunteer or salaried municipal firefighters. Emergency response personnel as a group, then, would be expected to incur lower exposures in responding to industrial PCB Transformer fires than would be the case for commercial PCB Transformer fires.

A comparison of estimated exposures from a commercial PCB Transformer fire to an industrial PCB Transformer fire indicates that exposures by building occupants to PCRs, 2,3,7,8-TCDF, other TCDFs, other PCDFs, 2,3,7,8-TCDD, other TCDDs, and other PCDDs could be as much as an order of magnitude higher for commercial building fires than for industrial building fires.

EPA recognizes that exposures from PCB Transformer fires in atypical industrial facilities could be higher than described earlier. However, EPA's estimate of the frequency of industrial PCB Transformer fires is 6 fires over the remaining useful life of industrial PCB Transformers. Even if EPA were to assume that all 6 of these fires resulted in individual exposures of the same order of magnitude suggested for commercial PCB Transformer fires, there are fewer people at risk of these exposures in industrial locations when compared to commercial buildings.

One could consider the overall fire-related risk posed by the continued use of PCB Transformers and compare the different frequencies of occurrence of fires in commercial buildings versus industrial facilities (assuming as a worst-case, that the risks posed by commercial PCB Transformer fires and industrial PCB Transformer fires are equivalent). This analysis indicates that 88 percent of the fire-related risk posed by the continued use of PCB Transformers (in locations in or near buildings) are associated with their use in or near commercial buildings and 12 percent of the total risks are associated with their use in industrial locations.

EPA has further determined that outdoor PCB Transformer fires, (away from commercial buildings) and fires involving PCB-Contaminated transformers pose lower risks than PCB Transformer fires in or near commercial buildings. While EPA expects that outdoor PCB Transformer fires may result in the release of PCBs, EPA expects that outdoor PCB Transformer fires would be less likely to result in the volatilization of large amounts of PCBs and less likely to lead to the formation and release of large amounts of PCDFs and PCDDs. Further, PCBs and oxidation products released from outdoor PCB Transformer fires would be expected to be more widely dispersed in the environment. Although PCBs may be released and oxidation products may be formed during the PCB-Contaminated transformer fires, the amounts of these materials formed and released are expected to be significantly reduced compared to the amounts formed and released from PCB Transformers.

IV. Benefits of PCB-Transformers and the Availability of Substitutes

As part of the unreasonable risk determination, EPA must consider both the benefits of PCBs and the availability of substitute materials. The unreasonable risk determination requires EPA to balance the risks posed by the use of PCBs against the availability of adequate substitute materials and the costs associated with regulatory control measures.

A. Benefits of PCBs

PCBs were originally used as dielectric fluid in electrical transformers primarily because of their fire-resistance properties. Generally, PCB Transformers were placed in locations where concerns for fire safety were paramount. Other dielectric fluids, such as mineral oil, have superior electrical properties to PCBs, but their fire resistance properties are not as good as PCBs.

Monsanto Company has had in progress for over a year a study assessing and comparing fire risks of PCBs and of mineral oil. The Monsanto-sponsored study indicates that the average frequency of a fire spreading beyond the transformer room is 300 times greater for a mineral oil transformer than for a PCB Transformer containing 50 percent PCBs and 50 percent chlorinated benzenes. The report further indicates that there is a significant decrease in the risk of fatalities when a mineral oil transformer is replaced by a PCB Transformer containing 50 percent PCBs and 50 percent chlorinated benzenes.

B. Substitute Transformers

In its August 1982 PCB Electrical Use Rule, EPA concluded that adequate substitutes exist for PCBs in indoor transformer locations. There are two basic categories of transformers, fluid-filled and dry. There are six general types of fluid-filled substitutes for PCBs in transformers: Silicones; high-temperature hydrocarbon (HTH); chlorinated hydrocarbons; non-PCB askarels; fluorocarbons; and mineral oil. EPA summarized available data on these substitute fluids in the Proposed Rule and concluded that adequate substitutes exist for PCBs for indoor transformer locations, including silicone-filled transformers and dry transformers.

As discussed earlier, EPA-sponsored studies indicate that PCDFs and PCDDs can be formed from the incomplete combustion of chlorinated benzenes. Similarly, an EPA-sponsored study indicates that PCDFs can be formed from the incomplete combustion of tetrachloroethylene (perchloroethylene).

The replacement of PCB dielectric fluid with substitute fluids which in fire situations may also lead to the formation of PCDFs and PCDDs should be carefully considered in light of the Agency's decision in this rule to place additional conditions and restrictions on the use of PCB Transformers. EPA's evaluation of the risks posed by the incomplete combustion of PCB dielectric fluid and the frequency of occurrence of PCB Transformer fires indicate that the fire-related risks posed by the use of a dielectric fluid which can be transformed into PCDFs and/or PCDDs can be significant. EPA will study this issue further and evaluate the need for additional EPA action.

C. Retrofilling PCB Transformers

1. *Introduction.* Two general types of substitutes for PCBs in transformers stand out as the best retrofill candidates. These fluids are silicones and high temperature hydrocarbons (HTH). The principal questions to be considered are the cost of retrofill versus the value of the remaining life of the transformer and the qualification of the fluid as "less flammable" for insurance purposes. A related question is the potential for the formation of toxic products of incomplete combustion from the retrofill fluid and remaining residual concentration of PCBs. Other fluids, such as chlorinated hydrocarbons, fluorocarbon, and mineral oil, are used in new transformers but are inappropriate for retrofilling because the design of the PCB Transformers does not fit the properties of the fluids.

Experience with retrofilling to date indicates that reclassification of askarel PCB Transformers to non PCB status is often not cost-effective. Reclassification to PCB Contaminated status, however, has been accomplished in a cost-effective manner for a number of askarel PCB Transformer units. Testimony at the public hearing, however, indicates that retrofill technology continues to evolve, and, that cost-effective reclassification of askarel PCB Transformers to non PCB status may be on the horizon.

2. *Silicones.* There are six silicone fluids sold by six different companies for use as dielectric fluid. Four of the six fluids have been approved by Factory Mutual Research Corporation (FMRC) as "less flammable" fluids. Silicones have a higher viscosity than PCBs and are therefore not quite comparable to PCBs as a coolant. For this reason, it is possible that transformers retrofilled with silicone would have to be derated. According to one silicone fluid manufacturer, if the transformer were fully loaded, a derating not exceeding 5 percent could be necessary. (Derating means lowering the maximum level of electrical load that the transformer can handle.)

It has been mentioned in the literature that a leaking problem could be created because silicone fluids are not compatible with silicone rubber gaskets and the coefficient of expansion of silicone fluids is 50 percent greater than that of PCBs. In actual practice, however, the silicone gaskets are replaced during retrofilling. (Further, even though the coefficient of expansion is greater than that for PCBs, the greater solubility of the filler gas (nitrogen) in silicone eliminates the expected increase in pressure.)

3. *HTHs.* There are six HTH fluids sold by five companies that may be used as transformer dielectric fluids. There are also two products sold by two other companies that when mixed with other products may be used as HTH transformer fluids. Three of the six fluids are paraffinic based oils and three are esters. As mentioned earlier, the three esters are more specialized for use in railroad transformers.

The other three fluids are more viscous than the silicones at lower temperatures, but thin more rapidly at higher temperatures. According to an HTH manufacturer, this property allows the transformers to be retrofilled with HTH without any derating. At lower normal load temperatures, however, the transformers do run hotter. These fluids are completely compatible with the materials that make up PCB Transformers, and they are soluble in PCBs. Two of these fluids are approved by FMRC as "less flammable transformer fluids," and the fire point of the third is over 300 °C.

Because the paraffinic HTHs have high convective and radiant heat release rates, the owner's insurance company may recommend more stringent installation requirements.

V. Benefits and Costs of Regulatory Options

A. Introduction

This unit presents an analysis of the effectiveness and economic impact of various regulatory options for reducing the fire-related risks posed by the continued use of PCB Transformers. For a full analysis of the expected economic impacts see the regulatory analysis for this final rule, support document 7 in Unit X.B. The analysis considers separately, the effectiveness and costs of five major regulatory control options for four categories of PCB Transformers: (1) PCB Transformers in or near commercial buildings, (2) PCB Transformers in or near industrial locations, (3) PCB Transformers in outdoor electrical substations, and (4) PCB Contaminated Transformers. The regulatory control measures considered are: (1) Placing no additional conditions or restrictions on the use of PCB Transformers; (2) requiring the registration and additional labeling of PCB Transformers, the removal of stored combustibles, the containment of potential water releases and the

reporting of PCB Transformer fires to the National Response Center; (3) requiring PCB Transformer failures and fires and the level of protection currently

TABLE 1.—COSTS AND BENEFITS OF CONTROL MEASURES FOR COMMERCIAL PCB TRANS-

with fire departments, the labeling of the exterior of transformer locations is

or simply limiting the contamination

reporting of PCB Transformer fires to the National Response Center; (3) requiring the isolation of PCB Transformers to reduce widespread structure and environmental contamination with PCBs and products of incomplete combustion; (4) requiring the installation of increased electrical protection on PCB Transformers to avoid PCB Transformer failures; and, (5) requiring the removal or retrofill of PCB Transformers. The analysis includes a consideration of the expected savings in cleanup costs as a result of implementing these measures.

Given the well-established toxicity of PCBs, and the presence of materials that are much more toxic than PCBs in the soot from a fire involving a PCB Transformer, owners of PCB Transformers involved in PCB Transformer fires have invested more than $20 million dollars each to ensure the safety of persons returning to occupy these buildings. These costs, for sampling, cleanup and removal of contaminated materials containing PCBs, PCDFs, and PCDDs can be factored into the economic analysis of the benefits of the continued use of PCB Transformers. Earlier analyses of the benefits of the continued use of these transformers, completed in support of the August 1982 PCB Electrical Use Rule, did not take into consideration the costs of cleanup in the event of PCB Transformer fires.

B. Summary of Benefits and Costs

The removal or retrofill of PCB Transformers is both the most effective, and, the most costly measure for reducing the frequency of serious PCB Transformer fires. This measure, once implemented, gives the greatest assurance that PCB Transformer fires will be avoided, regardless of initiating cause. However, it is also the measure which, as a practical matter, would require the longest time for implementation. Concerns such as the availability of PCB disposal capacity, transformer manufacturing capacity, and avoiding the disruption of electrical service make phaseout and/or retrofill more difficult to implement quickly than other risk reduction measures. Based upon EPA's analysis of the frequency of PCB Transformer fires, it is likely that serious PCB Transformer fires will occur in the interim, between the date of promulgation of any phaseout requirement and the actual date of the removal of PCB Transformers from use.

Providing enhanced electrical protection is anticipated to be very effective in avoiding serious PCB Transformer fires, through the prevention of PCB Transformer fault-related failures. Studies of the causes of PCB Transformer failures and fires and the level of protection currently provided indicate that many PCB Transformers could be better protected to avoid fires caused by more common mechanisms of failure, electrical faults. The effectiveness of increased electrical protection is expected to approach that of phaseout/retrofill, although EPA recognizes that electrical protective devices are subject to some (low) rate of malfunction, and, that PCB Transformer fires can also result from less common mechanisms of failure. Requiring a certain level of redundancy in the type of sensors used and the placement of sensors provide increased assurance of a higher level of effectiveness. Further, as a practical matter, this control measure could be implemented more quickly than phaseout/retrofill, because availability of PCB disposal capacity and transformer manufacturing capacity are not primary concerns. Further, this measure would be less disruptive to electrical service than phaseout/retrofill.

Increased electrical protection can be costly, however, compared to other risk reduction measures (other than phaseout/retrofill). Further, while electrical protection systems are expected to have a high degree of reliability in avoiding failures, there is the potential for false outages. These are circumstances in which a transformer is mistakenly deenergized when a sustained fault condition does not in fact exist. While EPA acknowledges the potential economic impact of false outages, EPA has not attempted to quantify this impact.

The isolation of PCB Transformers is expected to be effective in avoiding serious PCB Transformer fires by avoiding widespread structure and environmental contamination. The effectiveness of isolation in actually avoiding more serious PCB Transformer fires depends, however, to a great degree on the capability of a failed transformer to be deenergized within 15 minutes of failure. Isolation is not expected to be very effective for transformers which cannot be easily deenergized after failure occurs. Isolation is expected to be effective in mininizing the distribution of PCBs and incomplete combustion products in circumstances where a transformer has the capability to be deenergized within 15 minutes of failure.

As was the case for the installation of increased electrical protection, isolation measures can be implemented more quickly than PCB Transformer phaseout/retrofill, because availability of PCB disposal capacity and transformer manufacturing capacity are not primary concerns. However, implementation of transformer isolation requirements would be, in general, more complex than providing enhanced electrical protection in a transformer installation. This is because the isolation of transformers would typically require negotiation between building owners and transformer owners for necessary structural changes to buildings. While transformer isolation is costly, it would be in many cases less expensive than either phaseout/retrofill or increased electrical protection.

The registration of PCB Transformers with building owners and fire departments, the labeling of the exterior of PCB Transformer locations, the containment of potential water releases, and the reporting of PCB Transformer fires to the NRC are measures which are expected to reduce exposures in the event of a serious PCB Transformer fire. However, these measures will not be effective in avoiding any of projected 50 serious building fires, or the estimated 3 outdoor PCB Transformer fires from occurring. The effectiveness of these risk reduction measures depends, to a large extent, on the implementation of voluntary measures based on knowledge about the contents of a transformer involved in a fire-related incident. These measures are the least costly control measures that EPA considered.

C. Regulatory Options and Economic Impacts

1. *PCB Transformers in or near commercial buildings—a. Summary table.* The following table (Table 1) summarizes the real costs, benefits, and net costs (after a consideration of savings in cleanup costs from avoided fires) of the major regulatory control measures considered for commercial PCB Transformers. For a full discussion of the assumptions made for this analysis, see support document 7 in Unit X.B.

TABLE 1.—COSTS AND BENEFITS OF CONTROL MEASURES FOR COMMERCIAL PCB TRANSFORMERS

Option	Real cost (millions)	Expected fires	Avoided fires	Net cost (millions)
No action	N/A	44	0	[1] $399
Labeling and registration	$7.3	44	[2] 0	7.3
Enhanced E. protection, 5-years	590	9	35	343
Removal:

[1] Fire-related cleanup expense over, remaining useful life.
[2] Would be expected to reduce exposures.
[3] Avoided cleanup costs exceed real cost of measure.

b. *Take no additional action.* The first regulatory option that EPA considered for PCB Transformers located in or near commercial buildings was to take no further regulatory action at this time to restrict the use of these transformers. This would allow the continued use of PCBs in or near buildings such as office buildings, shopping centers, apartment buildings, and hospitals without additional restrictions above the requirements of the August 1982 PCB Electrical Use Rule. That rule authorized the continued use of transformers containing PCBs (that pose no exposure risk to human food or animal feed) for the remainder of their useful lives subject to certain recordkeeping and inspection requirements, based on the concentration of PCBs in the equipment.

There are no costs to transformer owners associated with EPA's allowing the continued use of these transformers, other than the potential future costs associated with cleanup and liability suits following fires involving this equipment. If the use of PCB Transformers in or near commercial buildings were authorized indefinitely, without additional restrictions, EPA expects that 44 additional incidents will occur over the remaining useful life of this equipment.

For purposes of this analysis, these 44 incidents would be expected to require cleanup efforts whose cost would approach $20 million each (1985 dollars) or an estimated $399 million over the remaining useful life of this equipment.

c. *Labeling and registration programs.* The registration of PCB Transformers located in or near commercial buildings with fire departments and building owners, in combination with the labeling of the exterior of transformer locations with PCB identification labels may be effective in reducing exposures to firemen, building occupants, and bystanders. Compared to the other regulatory alternatives under consideration (other than the alternative of taking no additional action), the cost of this option is relatively low. EPA believes that in addition to registration with fire departments, the labeling of the exterior of transformer locations is necessary to insure that emergency response personnel arriving at the scene of a fire know that the fire involves a transformer that contains PCBs. EPA expects that the costs of labeling the exterior of PCB Transformer locations will be about $76.00 per location. EPA estimates that the total cost of labeling the exterior of commercial PCB Transformer installations will be about $3.5 million.

The costs of registering commercial PCB Transformers are also expected to be minimal, since the location of all PCB Transformers should already be known by the owners of this equipment. The costs to transformer owners of forwarding this information to all building owners and to fire departments with primary jurisdiction is expected to be minimal, on the order of $50.00 per transformer. EPA estimates that total costs of this registration program for commercial PCB Transformers would be approximately $3.8 million. The total real costs of registration and labeling of commercial PCB Transformers would be on the order of $7 million.

While transformer registration and labeling programs would be expected to reduce human and environmental exposures to PCBs, and oxidation products, they will not reduce the frequency of serious PCB Transformer fires.

d. *Smoke control technologies.* Certain design techniques or changes in commercial PCB Transformer locations may be effective in reducing the likelihood of widespread structure and environmental contamination from a failed PCB Transformer. The effectiveness of transformer isolation as a control measure depends to a large extent, however, on the type of PCB Transformer installation and the ease of actuating deenergization.

Unlike the ventilation systems for other oil-filled transformers, the ventilation systems for PCB Transformers were not designed for the purpose of fire isolation but rather were designed only to keep the ambient temperature at or below 30° Centigrade (C). However, the removal or alteration of existing ventilation systems could result in higher operating temperatures which shorten transformer operating lives and may increase the likelihood of equipment failure.

Thus, the design of alternative ventilation or cooling systems may be necessary to reduce the potential for building contamination. Ventilation alternatives include air conditioners, redirected venting, and heat exchangers, or simply limiting the contamination potential of the existing system by reducing the ventilation cooling effectiveness.

The objective of isolation is to reduce the widespread contamination of structures and the environment by smoke and soot from a transformer fire. These techniques often include the modification of the ventilation system serving the transformer location and/or sealing cracks or openings which would permit smoke to escape freely into occupied areas and the environment. In the more serious transformer incidents, the presence of building ventilation systems, building ductwork, and openings in construction in transformer locations have been responsible for the dispersion of toxic contaminants into buildings.

While transformer isolation can reduce exposures in the event of a failure and fire involving a PCB Transformer (by reducing the spread of contaminants), if a transformer cannot be easily deenergized within 15 minutes after a sustained fault occurs, then substantial quantities of smoke and soot can be generated. The longer a transformer remains energized after a serious fault occurs, the less likely it is that isolation will be effective in reducing exposures to PCBs and incomplete combustion products.

Although specific design changes and costs of isolation techniques are dependent on the individual transformer location, EPA has developed some general cost estimates. A firm involved in survey and design projects for PCB Transformers estimates that in 85 to 90 percent of all cases where isolation is the desired alternative, the costs are about $8,000 per transformer location.

For purposes of the cost-effectiveness analysis, an average cost of $8,000 per location is assumed for all locations where some form of suitable transformer enclosure is already present. For nonenclosed transformers, an estimated cost of $15,000 is assumed for retrofit of an enclosure that provides for smoke containment.

In order to facilitate compliance monitoring efforts, EPA would require the development of written PCB Smoke Spread Reduction Plans (PCB–SSRPs). The development of PCB–SSRPs involves documenting measures taken to isolate PCB Transformers from building ventilation equipment, ductwork, and openings in construction. EPA expects that maintaining these records would create a minimal additional burden on PCB Transformer owners (above the burden created by requiring transformer isolation procedures).

The total real costs of isolation procedures for commercial PCB

use have disconnect equipment (in the form of a primary circuit breaker or

Transformers depends both on the form of protection selected, and, whether the

network PCB Transformers, fault sensors would also be needed in the

protection and that there are constraints

PCB Transformers, as well as estimates

The total real costs of isolation procedures for commercial PCB Transformers implemented over a 5-year period are $318 million. Avoidance of cleanup costs through transformer isolation depends to a great extent on the ability to deenergize a transformer rapidly. EPA has limited data on the number of commercial transformers which can be rapidly deenergized (i.e., which currently have the capability to be deenergized within 15 minutes of a sustained fault); these transformers would be the group most likely to derive benefits from isolation in the event of PCB Transformer failure. Available data suggest that most commercial PCB Transformers are not capable of being rapidly deenergized in the event of a sustained fault. This severely reduces the effectiveness of PCB Transformer isolation alone, without increased electrical protection, as a mechanism for avoiding serious PCB Transformer fires in or near commercial buildings.

e. *Increased electrical protection.* Avoidance of serious PCB Transformer fires in commercial buildings through increased electrical protection involves the installation of appropriate sensors and disconnect equipment to detect common causes of transformer failures and to allow for deenergization. The disconnect equipment would either be automatically activated in response to sensed abnormal conditions (with a provision for manual deenergization), or, manually opened following the receipt of an audio or visual signal (indicating abnormal conditions) at an on-site manned control center. Devices which respond to overcurrent conditions and sensors which respond to low current faults would protect against failures from two basic mechanisms of fault-related transformer failures. Low current fault protection in the form of heat and pressure sensors and associated disconnect equipment would also provide deenergization following high temperatures and changes in pressure from other causes, such as mechanical failures or external fires.

As discussed in Unit IV.C, transformer failures can occur as a result of excessive current flow of a transformer. Of the 77,568 PCB Transformers used in or near commercial buildings, approximately 21,000 PCB Transformers (the network transformers) are currently without overcurrent protection on the primary side (the high voltage side) of the transformers. Second, virtually none of the 77,568 PCB Transformers in or near commercial buildings are currently equipped with sensors to detect low current faults. Finally, virtually none of the 21,000 network PCB Transformers in use have disconnect equipment (in the form of a primary circuit breaker or equivalent technology) on site to allow for rapid deenergization, and, EPA expects that many of the 55,000 commercial radial PCB Transformers do not utilize primary circuit breakers for high current fault protection.

The installation of certain safety equipment to detect sustained high current and low current faults on PCB Transformers which currently lack such protection would reduce the probability of failures, fires, and explosions in commercial PCB Transformers, particularly events resulting from electrical malfunctions. Electrical malfunctions, specifically electrical faults, have been implicated in many known PCB Transformer fires.

The highest reduction in the probability of PCB Transformer fault-related failure is attained when protection is provided against both basic mechanisms of transformer fault-related failures. Installation of overcurrent protection without protection against low current faults will avoid only those PCB Transformer fires which occur as a result of overcurrent conditions.

Electrical faults in general are more likely in network transformers than radial transformers because network transformers have more associated electrical equipment (on the secondary side of transformers); network transformers have network protectors and network buswork for faults to occur in. This does not mean that faults will not occur in radial transformers; it simply means that when radial installations are compared to network installations, one would expect more electrical faults in general to occur in network installations.

When the secondary voltage of a transformer is higher, any faults which occur in the secondary are more likely to be sustained rather than self-clearing or self-extinguishing. Sustained faults cause PCB Transformer failures and fires. Thus, higher secondary voltage network PCB Transformers would have the highest probability of failure from faults. Using the same logic, low secondary voltage radial PCB Transformers would have the lowest probability of failure from faults.

According to comments on the Proposed Rule, historically, utilities have installed high current fault protection on the primaries and secondaries of radial transformer installations. Network installations, however, have been less well protected against high current faults.

The cost of installing increased protection on commercial PCB Transformers depends both on the form of protection selected, and, whether the device involves a retrofit of the transformer. High current fault protection is much less costly than low current fault protection. Low current fault protection involves the installation of disconnect equipment as well as the installation of appropriate sensors. High current fault protection involves the installation of current-limiting or energy limiting fuses.

Since comments on the Proposed Rule and EPA's analysis indicate that the probability of a transformer failure from electrical faults is influenced by the type of transformer installation, not all of the above protection would be warranted on a cost/benefit basis for all types of commercial PCB Transformer installations.

Under the option of increased electrical protection, EPA would require that all commercial PCB Transformers be equipped with overcurrent protection to avoid transformer failures as a result of high current faults. Current-limiting fuses are relatively inexpensive, and would avoid failures from high current faults in the primary and secondary areas of transformers. The cost of installing current-limiting fuses (on the estimated 22,191 commercial network PCB Transformers which currently lack such protection) is estimated at $53 million. The installation of these devices on the approximately 15,072 lower secondary voltage network transformers is estimated at $35 million.

EPA would also require that all commercial PCB Transformers with higher secondary voltages be equipped with protection against sustained low current faults. This is because transformers with higher secondary voltages are more likely to experience sustained rather than self-clearing faults. While 480 volt network PCB Transformers may have a particularly high probability of sustained low current faults (because of the high secondary voltage and the presence of more associated electrical equipment), when a low current fault occurs in a higher secondary voltage radial PCB Transformer (in the voltage winding, low voltage leads, or other equipment), it too will be sustained and can result in transformer failure.

For the majority of these higher secondary voltage commercial PCB Transformers, protection against failures from low current faults would mean the installation of a primary circuit breaker on site as well as the installation of non-electrical sensors, such as pressure sensors and temperature sensors in the transformer. For high secondary voltage network PCB Transformers, fault sensors would also be needed in the network protector and the network bus as well. Requiring the installation of both pressure and temperature sensors in the transformer tank and fault sensors in the network protector and network bus of high secondary voltage network PCB Transformers provides a level of redundancy in the protection system; this increases the reliability of electrical protection, and provides increased assurance that increased electrical protection would actually avoid PCB Transformer failures and fires.

The cost of protection against low current faults is principally the cost associated with the installation of disconnect equipment such as circuit breakers on site. The cost of the indicated sensors is a fraction of the cost of the installation of a primary circuit breaker.

The total real costs associated with requiring the installation of high current fault protection on all commercial PCB Transformers and low current fault protection on higher secondary voltage commercial PCB Transformers over a 5-year period is estimated at $590 million. EPA expects that the installation of these electrical protection systems will avoid about 97 percent of serious PCB Transformer fires in commercial buildings which would have otherwise occurred, or, 35 serious PCB Transformer fires over the remaining useful life of this equipment. The net cost of this control measure, after adjusting for avoided cleanup costs is estimated at $343 million.

The increased electrical protection requirement which appeared in the Proposed Rule required installation in 3 years, by October 1, 1988. Based on comments submitted in response to the Proposed Rule concerning the type of electrical protection needed, the higher costs of this protection (compared to the proposed electrical protection requirement and the proposed isolation requirement), and the larger number of PCB Transformers which require additional electrical protection, EPA believes that it is reasonable to allow a longer phasein period for this control measure than was proposed. Further, EPA recognizes that many PCB Transformer owners may choose PCB Transformer removal in lieu of enhanced electrical protection, and that this will place additional burdens on PCB disposal capacity. Requiring the installation of enhanced electrical protection on a schedule which recognizes both the fact that many PCB Transformer owners have chosen or will choose removal rather than electrical protection and that there are constraints on PCB disposal capacity will encourage PCB Transformer owners who have voluntary 5-year phaseout programs in place to continue and may stimulate other owners to initiate such programs. Thus, EPA has allowed 5 years for the implementation of the requirement for enhanced electrical protection.

f. *Retrofilling.* Retrofilling of commercial PCB Transformers to reduce the PCB concentration to below 500 ppm would be expected to reduce human and environmental exposures to PCBs and their oxidation products in the event of a fire. This would be accomplished through a substantial reduction in the amount of PCBs present in the transformers. EPA has completed an analysis of the costs of retrofilling commercial PCB Transformers to reduce PCB concentrations to below 500 ppm. EPA estimates that retrofill costs will range from $15,505 for a 50 KVA transformer to $32,034 for a 3,000 KVA transformer. These estimates include the costs of disposal of PCB fluid, but do not include any consideration of a loss of efficiency or derating as a result of the retrofill.

An estimate of the total resource costs of retrofilling all commercial PCB Transformers (77,568 at end of 1984) to below 500 ppm is about $1.2 billion. Although the retrofilling of PCB Transformers reduces the risks to humans posed by the transformer in the event of a fire (by reducing the amount of PCBs present, the amount of PCBs released, and the amount of PCDF formed and released), it is difficult to estimate the effectiveness of this option in avoiding cleanup costs from fire incidents, since PCDFs and PCDDs may still be formed.

g. *Phaseout of commerical PCB Transformers.* The removal of all PCB Transformers from locations in or near commercial buildings or the removal of particularly high risk PCB Transformers from locations in or near commercial buildings would give increased assurance that future serious PCB Transformer fires from all causes will be avoided. The following table uses a population of 77,568 units (EPA's estimate of the number of PCB Transformers in or near commercial buildings that will be in use at the end of 1984) and a population of 7,420 units (EPS's estimate of the number of high secondary network PCB Transformers in use). EPA uses an estimate of equipment life of 30 years, and presents total real costs of phase-out over 5- and 10-year periods of all commercial PCB Transformers, and phaseout over a 5-year period of higher secondary network PCB Transformers, as well as estimates of the number of PCB Transformer fires avoided, and the net costs, after a consideration of avoided cleanup costs. (EPA did not evaluate an immediate ban because comments indicated that manufacturing capacity was insufficient to allow for this option.) For a full description of the assumptions used in the following analysis, and for a more detailed analysis of phaseout costs versus cleanup costs avoided, see the regulatory analysis for the final rule, support document 7 in Unit X.B.

TABLE 2—PHASEOUT COST COMPARISON

Group	Regular option	Cost ($ millions)	PCB fires avoided	Net cost ($ millions)
All commercial	10-year phaseout	640	29	470
All commercial	5-year phaseout	953	36	704
Commercial 480 Network	5-year phaseout	168	25	−4.7

2. *PCB Transformers in or near industrial facilities*—a. *Summary table.* The following table (Table 3) summarizes the real costs, the benefits, and the net costs (after deducting avoided cleanup costs) of the major regulatory options for industrial PCB Transformers.

TABLE 3—COSTS AND BENEFITS OF CONTROL MEASURES FOR INDUSTRIAL PCB TRANSFORMERS

Option	Real cost (millions)	Expected fires	Avoided fires	Net cost (millions)
No action	N/A	6	0	364
Labeling & Registration	$2.5	6	0	2.5
Enhanced E. protection 5-years	170	2	4	136
Removal 5-years	319	2	4	285

b. *Take no additional action.* This option would allow the continued use of PCB Transformers in or near facilities such as chemical manufacturing plants, electric power generating plants, forest products processing plants, and warehouses without additional restrictions above the requirements of the August 1982 PCB Electrical Use Rule. There are no costs associated with EPA's allowing the continued use of these transformers, other than the potential future costs associated with cleanup and liability suits following fires involving this equipment. If the use of PCB Transformers in or near industrial facilities were authorized indefinitely, without additional restrictions, EPA expects that up to six PCB Transformer fires with smoke

spread will occur over the remaining useful life of this equipment.

deenergized from an on-site location, the costs of increased electrical protection

The cost of the installation of low

Transformers that are able to be

capacity, transformer manufacturing

VOL 50 ISS 137 JL 17 1985 UMI

spread will occur over the remaining useful life of this equipment.

c. *Labeling and registration programs.* The registration of PCB Transformers located in or near industrial facilities with fire departments or fire brigades and the registration with building owners (when the PCB Transformer is not owned by the building owner), in combination with the labeling of the exterior of PCB Transformer locations would cost approximately $2.5 million, assuming that there are about 26,700 industrial PCB Transformers.

While labeling and registration programs would be expected to reduce exposures in the event of a PCB Transformer fire, they will not reduce the frequency of occurrence of these fires.

d. *Smoke control technologies.* Since many industrial PCB Transformers are currently unenclosed, the costs associated with industrial PCB Transformer isolation would be, on the average, higher than for PCB Transformers located in or near commercial buildings. For purposes of the cost-effectiveness analysis, EPA assumes that the cost of the isolation of industrial PCB Transformers will approach $30,000 per transformer location. Assuming that there are 26,700 industrial PCB Transformers, and that there are, on average, 2 PCB Transformers per location, the total cost of the isolation of industrial PCB Transformers over a 5-year period is estimated at $109 million.

The isolation of industrial PCB Transformers (which are typically capable of being more rapidly deenergized than commercial PCB Transformers) would be effective in reducing the relatively low fire-related risks posed by the use of PCB Transformers in industrial facilities even further. Since the majority of PCB Transformers located in or near industrial facilities are capable of being deenergized from an on-site location, isolation of these transformers would be expected to be effective in reducing the spread of any volatilized PCBs or oxidation products released before deenergization could occur.

e. *Increased electrical protection.* For industrial PCB Transformers, increased electrical protection would (typically) involve the installation of appropriate heat and pressure level sensors to detect low current faults and the connection of these sensors to existing primary circuit breakers to allow for automatic deenergization in the event of abnormal conditions. Since industrial PCB Transformers reportedly have primary circuit breakers which provide these transformers with the capability to be deenergized from an on-site location, the costs of increased electrical protection of these transformers would be the costs of installing heat sensors in the secondary winding, and pressure sensors in the transformer tank and connecting these sensors to provide automatic or rapid manual deenergization of the equipment.

For some industrial PCB Transformers, new circuit breakers would have to be installed to allow for the use of these sensors and automatic deenergization.

During plant operating hours, these sensors would reduce the time between the occurrence of a low current fault (or mechanical failure) and the deenergization of the transformer, and, during plant off-hours/non-operational periods, would reduce the probability of a serious incident occurring. Increased electrical protection of industrial transformers (phased-in over a 5-year period) would be expected to avoid four serious PCB Transformer fires which would otherwise occur in these facilities.

The costs associated with the installation of this protection on industrial PCB Transformers would be approximately $170 million for the estimated 26,700 industrial PCB Transformers (phased in over a 5-year period). After adjusting for avoided cleanup costs, the net costs would be estimated at $136 million.

f. *Retrofilling of industrial PCB Transformers.* Retrofilling of industrial PCB Transformers would be expected to reduce even further the fire-related risks posed by the continued use of PCB Transformers in industrial facilities, by reducing the amount of PCBs present for potential release and for conversion to oxidation products. The costs associated with immediately retrofilling the 26,700 industrial PCB Transformers for purposes of reclassification to PCB Contaminated status is estimated at $489 million.

g. *Phaseout of industrial PCB Transformers.* The removal of PCB Transformers from industrial facilities would eliminate the relatively low fire-related risks posed by the continued use of these transformers. Phaseout of industrial PCB Transformers over a 5-year period would avoid up to four industrial PCB Transformer fires with smoke spread at a total cost of $319 million. After adjusting for avoided cleanup costs, the total net cost would be $286 million. Phaseout of industrial PCB Transformers over a 10-year period would avoid about three serious PCB Transformer fires at a total cost of $215 million. After adjusting for avoided cleanup costs, the total net cost would be $192 million.

3. *PCB Transformers in outdoor electrical substations*—a. *Take no additional action.* EPA has few data on PCB Transformer fires which have occurred in outdoor electrical substations. However, EPA has evaluated the potential risks posed by such fires and has developed an estimate of the frequency of these fires. This estimate is based on available information on the probability of serious PCB Transformer fires in or near buildings, and the probability of failures in different types of installations. EPA estimates that up to three outdoor electrical substation fires (with some PCB volatilization and smoke distribution) will occur over the remaining useful life of this equipment.

Since EPA believes that an outdoor PCB Transformer fire will not typically result in the formation of large amounts of incomplete combustion products which would require cleanup, EPA has assumed that cleanup from these incidents will involve primarily the cleanup of spilled PCBs. This type of cleanup operation is significantly less costly than cleanup following a PCB Transformer fire in or near a building.

b. *Labeling and registration programs.* The labeling of the exterior of outdoor PCB Transformer locations, and the registration of these transformers with appropriate fire department jurisdictions is expected to reduce exposures to firefighters and cleanup crews. The cost associated with this registration and labeling program for 17,000 outdoor PCB Transformers is approximately $1.6 million.

c. *Isolation of outdoor PCB Transformers.* Outdoor PCB Transformers could be enclosed to reduce the spread of PCBs and any incomplete combustion products formed. However, enclosing these transformers could create conditions more conducive to the formation of incomplete combustion products. Heat is more likely to be retained rather than dissipated when transformers are enclosed. Thus, while enclosing these transformers would decrease the spread of PCBs following fire-related failures, it could increase the amount of PCBs converted into dibenzofurans from outdoor PCB Transformer fires.

The costs associated with enclosing 17,000 outdoor PCB Transformers over a 5-year period would be on the order of $69 million.

d. *Increased electrical protection.* Outdoor PCB Transformers are typically radial installations, which are already equipped with current-limiting fuses. The cost of the installation of low current fault protection on the higher secondary voltage outdoor PCB Transformers (over a 5-year period) would be on the order of $108 million. Increased electrical protection would be expected to avoid up to three outdoor PCB Transformer fires.

e. *Retrofilling.* EPA has estimated the costs associated with requiring the immediate retrofilling of the approximately 17,000 outdoor PCB Transformers. These costs are estimated to be $270 million.

f. *Phaseout.* EPA has estimated the costs associated with requiring the removal of an estimated 17,000 PCB Transformers in outdoor locations, over 5- and 10-year periods. A 5-year phaseout is estimated to cost $203 million, and a 10-year phaseout is estimated to cost $137 million.

4. *PCB Contaminated transformers.* EPA has also estimated the costs associated with requiring additional controls on the use of PCB Contaminated transformers. The costs range from over $8 billion for the testing of transformer fluids for PCB concentration and the registration and labeling of PCB Contaminated transformers, to over $263 billion for removal within 5 years. Registration and labeling of PCB Contaminated transformers would reduce the low PCB fire-related risks posed by the use of this equipment; and, removal would eliminate these risks.

VI. Risk/Benefit Assessment

1. *Use of PCB Transformers in or near commercial buildings.* PCBs can be released in fires involving PCB Transformers, and, (depending upon the contents of the transformer and the combustion conditions), 2,3,7,8-TCDF, PCDFs, 2,3,7,8-TCDD, and PCDDs can be formed. Laboratory studies on the formation of PCDFs from PCBs, and PCDDs from chlorinated benzenes, as well as sampling data from actual PCB Transformer fire sites confirm that PCBs can be released and 2,3,7,8-TCDF and 2,3,7,8-TCDD (as well as other PCDF and PCDD congeners) can be formed and released from fires involving PCB Transformers.

EPA believes that PCBs are both toxic and persistent, and, that PCDFs and PCDDs are orders of magnitude more toxic than PCBs. PCB Transformers that remain energized after sustained faults or following failures as a result of fires from external sources are more likely to result in the volatilization of large amounts of PCBs and the formation of large amounts of PSDFs, 2,3,7,8-TCDF, PCDDs and 2,3,7,8-TCDD through incomplete combustion than PCB Transformers that are able to be deenergized rapidly and completely when an arc or fault occurs.

PCB Transformers can become involved in fires from many causes including sustained low current faults, sustained high current faults, and fires external to transformers involving stored combustibles or building materials followed by an inability to deenergize the transformer. The fire-related risks posed by the continued use of PCB Transformers in or near commercial buildings are much higher than the fire-related risks posed by the continued use of PCB Transformers in outdoor locations and industrial facilities. The overall probability of PCB Transformer fault-related failure is higher in commercial buildings than in other PCB Transformer locations and the risks posed are also higher in the event of a PCB Transformer fire.

The fire-related risks posed by the continued use of higher secondary voltage network PCB Transformers in commercial buildings are particularly high, because these transformers have the highest probability of failure from both high and low current faults, and, they are typically used in more densely populated commercial buildings, specifically, in locations such as high-rise office buildings.

The benefit of removing commercial PCB Transformers from use is the complete assurance that PCB Transformer fires will no longer occur in or near commercial buildings. Serious PCB Transformer fires which would have otherwise occurred will definitely be avoided. PCB Transformer fires in or near commercial buildings pose particularly high risks to human health, because sustained high temperatures are more likely in these locations (leading to the volatilization of large amounts of PCBs and the formation of large amounts of incomplete combustion products), and building occupants, cleanup crews, and fire response personnel are more likely to incur these higher exposures. In addition, the lack of knowledge on the part of commercial building occupants, firefighters, and cleanup crews about the potential risks posed make exposures even more likely.

There are an estimated 77,568 PCB Transformers located in or near commercial buildings, and 7,420 of these transformers are expected to be higher secondary voltage network PCB Transformers. The 77,568 PCB Transformers used in commercial buildings represent 64 percent of all PCB Transformers in use. The immediate removal of these transformers from use is not possible because of considerations such as PCB disposal capacity, transformer manufacturing capability, and disruption of electrical service. The cost of removing all of these PCB Transformers from use over the next 5 years is estimated at $953 million. Five years may not be an adequate amount of time for the removal and disposal of this many transformers. There are currently only four EPA-approved commercial PCB incinerators. According to comments on the Proposed Rule, PCB disposal capacity is such that the cost of PCB disposal has significantly jumped (almost doubled) over the last year. Disposal capacity will continue to be of concern over the next few years, since existing EPA regulations require the removal of PCB Transformers in use in food and feed processing facilities by October 1, 1985 and a limited phaseout of PCB Capacitors by October 1, 1988.

The removal of all commercial PCB Transformers by 1990 would, however, avoid an estimated 36 serious PCB Transformer fires in commercial locations. The removal of all commercial PCB Transformers by 1995 is estimated to cost on the order of $640 million for the avoidance of an expected 29 serious PCB Transformer fires.

The costs of removing the particularly high risk 7,420 commercial higher secondary voltage network PCB Transformers from use over the next 5 years is estimated at $168 million. The removal of these particularly high risk PCB Transformers from use by 1990 would be expected to avoid an estimated 25 serious PCB Transformer fires, or about 70 percent of all PCB Transformer fires in commercial buildings which EPA expects would otherwise occur. The removal of higher secondary voltage network PCB Transformers from use by October 1, 1990 will avoid an estimated 70 percent of serious commercial PCB Transformer fires for about 17 percent of the cost associated with the removal of all commercial PCB Transformers from use by this same date.

EPA believes that it is prudent to require the removal of commercial higher secondary voltage network PCB Transformers from use as soon as possible, taking into consideration factors such as PCB disposal capacity and continuity of electrical service. EPA believes that the soonest practical date for requiring the removal of this equipment is by October 1, 1990. Testimony at the public hearing, comments on the Proposed Rule, and EPA's analysis overwhelmingly support a determination that these transformers are of particularly high risk. EPA expects that 25 serious commercial PCB

Transformer fires will be avoided by the removal of these PCB Transformers expected to avoid sustained high temperatures in commercial PCB

EPA has selected increased electrical protection for many commercial PCB

PCB Transformer fires could be avoided by requiring the removal or enhanced

practically and safely possible to

the level of risk posed is considerably

Transformer fires will be avoided by the removal of these PCB Transformers (over a 5-year period) for a total real cost of less than $7 million per avoided incident. Cleanup costs alone for a single incident in a commercial building would be expected to exceed this $7 million figure substantially.

While EPA has decided to require the removal of these particularly high risk PCB Transformers from use, it believes that less costly yet highly effective measures can be implemented to reduce the remaining fire-related risks posed by the continued use of other commercial PCB Transformers. Namely, EPA has determined that enhanced electrical protection systems will be effective in avoiding many fires in these remaining commercial installations. Electrical protection can be very effective in avoiding PCB Transformer failures and fires through the early detection of common mechanisms of failure and the rapid deenergization of transformers.

EPA is requiring all commercial PCB Transformers to be protected against failures from sustained high current faults in the primary and secondary areas of the transformers. Further, EPA is requiring that all commercial higher secondary voltage radial PCB Transformers be equipped with protection against sustained low current faults as well.

EPA has determined that all commercial PCB Transformers should be registered with fire departments and building owners and that commercial PCB Transformer locations should be labeled on the exterior. Finally, EPA has determined that stored combustible materials should be removed from all commercial PCB Transformer locations, that all fire-related incidents should be reported to the National Response Center, and that measures be taken to contain all potential releases to water associated with a fire-related incident.

The real cost of requiring registration, labeling, and removal of stored combustibles for all commercial PCB Transformers and enhanced electrical protection for 56,605 commercial PCB Transformers (over a 5-year period) is estimated at $459 million. The expected incremental benefit of these measures (for other than higher secondary voltage network PCB Transformers) is the avoidance of an additional 10 serious PCB Transformer fires which would have otherwise occurred, or about 30 percent of all commercial PCB Transformer fires which EPA expects would otherwise occur over the remaining useful life of these transformers.

Increased electrical protection and the removal of stored combustibles is expected to avoid sustained high temperatures in commercial PCB Transformer locations; thus, significantly reducing the likelihood of PCB volatilization and the formation of large amounts of incomplete combustion products. Reducing the likelihood of PCB Transformer failures in commercial locations reduces potential exposures to building occupants, cleanup crews, and emergency response personnel. PCB Transformer fires may occur through less likely mechanisms and electrical protection systems are subject to some (low) rate of malfunction. The requirement for the registration and labeling of commercial PCB Transformers will reduce exposures in the event that sustained high temperatures occur despite the presence of increased electrical protection.

EPA has selected the option of the removal of commercial higher secondary voltage network PCB Transformers from use by October 1, 1990, the immediate registration, labeling, and removal of stored combustibles for all commercial PCB Transformers, and enhanced electrical protection (by October 1, 1990) for a large majority of the remaining 70,000 commercial PCB Transformers currently in use. EPA is also requiring the reporting of all PCB Transformer fire-related incidents to the National Response Center, and, that measures be taken as soon as practically (and safely) possible to contain any potential releases to water in the event of a PCB Transformer fire-related incident. The total real cost of this program to reduce the fire-related risks posed by the continued use of PCB Transformers in commercial locations is estimated at $635 million and is expected to avoid 35 serious PCB Transformer fires which would have otherwise occurred over the remaining useful life of commercial PCB Transformers, or about $17 million per serious PCB Transformer fire avoided. The net cost, after deducting for avoided cleanup costs, is estimated at $390 million,or about $10 million per serious PCB Transformer fire avoided.

EPA has also banned the further installation of PCB Transformers in locations in or near commercial buildings. EPA recognizes that the costs associated with PCB Transformer removal include the costs of physically removing PCB Transformers as well as providing replacement transformers. The costs associated with not installing a PCB Transformer (which has been placed into storage for reuse) in a commercial building are minimal. Further, even with increased electrical protection, there is some level of risk posed by the use of PCB Transformers in or near commercial buildings. While EPA has selected increased electrical protection for many commercial PCB Transformers, it has determined that the installation of PCB Transformers (which have been placed into storage for reuse) in or near commercial buildings presents an unreasonable risk. Thus, EPA has banned the new installation of PCB Transformers in or near commercial buildings.

2. *Use of PCB Transformers in or near industrial focilities.* PCBs can be released in fires involving industrial PCB Transformers, and, depending upon combustion conditions, incomplete combustion products can be formed. PCB Transformers that remain energized for prolonged periods after sustained faults occur or following failures as a result of fires external to the PCB Transformers are more likely to result in the volatilization of PCBs and the formation of incomplete combustion products than PCB Transformers that are able to be deenergized rapidly and completely when a fault or failure occurs.

Based on comments on the Proposed Rule, EPA believes that PCB Transformers located in or near industrial facilities are less likely to be involved in fires involving sustained high temperatures than PCB Transformers located in or near commercial buildings. This is because these transformers, as a group, are typically equipped with more protection from failures than commercial PCB Transformers, and, are typically able to be deenergized from an on-site location. Thus, the probability of industrial PCB Transformer fault-related failure and fire is lower in industrial facilities than in commercial buildings, and the risks posed in the event of a fault-related failure and fire are also expected to be less.

EPA recognizes that exposures from PCB Transformer fires in atypical industrial facilities (where deenergization does not occur as rapidly) could be higher than the exposure previously described. However, EPA's estimate of the frequency of industrial PCB Transformer fires indicates that up to 6 PCB Transformer fires (with smoke spread into industrial facilities) are expected to occur over the remaining useful life of this equipment. Four industrial PCB Transformer fires would be expected to occur after October 1, 1990. Even if EPA were to assume as a worst-case that the risks posed by PCB Transformer fires in industrial facilities were equivalent to the risks posed by PCB Transformer fires in commercial buildings, EPA expects that only 4 serious industrial PCB Transformer fires could be avoided by requiring the removal or enhanced electrical protection of industrial PCB Transformers by 1990.

The costs, however, of the removal of these industrial PCB Transformers from use by 1990 is estimated at $319 million. The removal of industrial PCB Transformers from use by 1990 would avoid about four PCB Transformer fires involving smoke spread into buildings. The real cost per avoided serious fire is almost $80 million. Enhanced electrical protection of these transformers by 1990 would be expected to avoid about the same number of incidents at a total real cost of $170 million, or, $43 million per avoided incident. Isolation of these transformers by 1990 would be expected to reduce building contamination; thereby, reducing potential exposures to workers, cleanup crews, and fire response personnel at a total cost of $109 million, or, $27 million per incident.

The benefit of removing these transformers or protecting these transformers by 1990 is the avoidance of up to four industrial PCB Transformer fires. PCB Transformer fires involving the formation of large amounts of incomplete combustion products are less likely in industrial facilities than in or near commercial buildings. Sustained high temperatures are less likely in these locations due to equipment visibility and deenergization capability, and, as a result, building occupants (workers), cleanup crews, fire response personnel, and members of the general population are less likely to incur high exposures. Further, there are generally fewer people at risk of incurring these exposures from fires in industrial facilities than from fires in commercial buildings.

The cost of requiring the registration, increased labeling, and removal of stored combustibles from industrial PCB Transformer locations is estimated at $1.9 million. While these measures will not reduce the frequency of serious industrial PCB Transformer fires, they should reduce any exposures to workers, cleanup crews, and fire response personnel.

EPA has selected the option of the registration, external labeling, and removal of stored combustibles from industrial PCB Transformer locations for the estimated 26,700 industrial PCB Transformers in use or in storage for reuse in industrial locations. This is a relatively inexpensive measure which will reduce exposures in the event of a PCB Transformer fire. EPA is also requiring the reporting of all PCB Transformer fire-related incidents to the National Response Center, and, that measures be taken as soon as practically and safely possible to contain any potential release to waterways. These requirements are not burdensome, and will reduce further any human and environmental exposures following industrial PCB Transformer fires.

3. *Use of PCB Transformers in outdoor locations.* EPA's evaluation of the risks posed by PCB Transformer fires indicates that the use of PCB Transformers in outdoor locations away from commercial areas poses less risk to public health and the environment than the use of this equipment in or near buildings. First, combustion conditions in outdoor locations may not be so conducive to the volatilization of PCBs and the formation of incomplete combustion products as combustion conditions in enclosed areas such as sidewalk vaults and machinery rooms.

Second, EPA believes that fewer people are generally present near outdoor PCB Transformer locations, and, that many of these areas are fenced in to restrict access to authorized personnel. Further, if PCBs were volatilized and dispersed into the environment, individual human exposures to PCBs and potential oxidation products from such a fire are expected to be much lower than from fires in or near buildings. EPA expects fewer than three outdoor PCB Transformer fires (with smoke spread) over the remaining useful life of this equipment.

There are an estimated 17,000 PCB Transformers in outdoor locations. The total real cost of the removal of these PCB Transformers from use by 1990 is estimated at $207 million, or, $69 million per avoided incident. The total real cost of installing increased electrical protection on these transformers is $36 million, or, $12 million per avoided incident.

EPA believes, however, that it is prudent to require registration and increased labeling of outdoor PCB Transformers, the containment of all potential releases to water, and the reporting of all PCB Transformer fire-related incidents to the NRC. These measures will reduce exposures of emergency response personnel to spilled PCBs (which is anticipated to be the more prevalent situation in outdoor locations) and would serve to limit the spread of these materials into the environment.

4. *PCB Contaminated transformers.* A fire involving a PCB Contaminated transformer can result in the formation and/or release of PCBs and oxidation products. Thus, the use of these transformers does pose some level of risk in a fire-related incident. However, the level of risk posed is considerably less than the risks posed by the use of PCB Transformers. Further, there are an estimated 20 million PCB Contaminated transformers in use. Even the least costly regulatory alternative, the registration and external labeling of PCB Contaminated transformers, would cost more than $8 billion.

Thus, EPA has determined that the continued use of PCB Contaminated transformers without additional controls will not present unreasonable risks to public health or the environment.

VII. Findings on the Use of PCBs in Electrical Transformers

1. Based on the analyses presented in Unit VI, EPA has determined that the use of PCBs in electrical transformers does not pose unreasonable risks to public health or the environment, provided, that in addition to the inspection, recordkeeping, and servicing requirements of the August 25, 1982 Electrical Equipment Rule:

a. Higher secondary voltage network PCB Transformers (network PCB Transformers with secondary voltage at or above 480 volts, including 480/277 volt network PCB Transformers) in or near commercial buildings are removed from use, reclassified, placed into storage for disposal or disposed by October 1, 1990.

b. By October 1, 1990, higher secondary voltage radial PCB Transformers (radial PCB Transformers with secondary voltages at or above 480 volts, including 480/277 volts radial PCB Transformers) and lower secondary voltage network PCB Transformers used in or near commercial buildings are equipped with sensors to detect electrical faults and insure rapid deenergization prior to transformer failure.

c. All PCB Transformers are registered with appropriate fire response organizations and PCB Transformers located in or near buildings are also registered with building owners.

d. The vault door, machinery room door, or means of access (other than grates and manhole covers) to PCB Transformers are labeled with PCB identification labels.

e. PCB Transformer locations are cleared of stored combustibles.

f. In the event of a PCB Transformer fire, measures are taken to contain water releases.

g. In the event of a PCB Transformer fire, the National Response Center is immediately notified.

2. The use of PCBs in transformers that comply with: (1) The inspection, recordkeeping, and servicing

requirements of the August 25, 1982 Electrical Use Rule; and (2) the fire

requirements of the August 25, 1982 Electrical Use Rule; and (2) the fire hazard risk reduction measures described above, does not pose unreasonable risks to public health or the environment for the following reasons:

a. If EPA immediately banned the continued use of PCB Transformers it would cost the public and United States industry billions of dollars, primarily as a result of the disruption of electrical service. There are over 120,000 PCB Transformers currently in use and an estimated 20 million PCB Contaminated transformers currently in use. The resulting reduction in risk from an immediate ban, after considering both the risks posed by spills and leaks of PCBs as well as the risks posed by fires involving this equipment, would not outweigh these substantial costs.

b. The required inspection, maintenance, and servicing requirements under the August 25, 1982 Electrical Use Rule, and the fire hazard risk reduction measures listed above (including the required removal of commercial higher secondary voltage network PCB Transformers from use by October 1, 1990) reasonably reduce the exposures associated with the use of PCBs in PCB Transformers. The required fire hazard risk reduction measures and the required 5-year phaseout of commercial higher secondary voltage network PCB Transformers are measures which are much less costly than a total ban on the use of PCBs but are of similar effectiveness in reducing the overall fire-related risks posed by the use of these transformers.

c. The costs of phaseout and retrofilling of all PCB Transformers are not reasonable when considering the potential reduction in release of PCBs and the reduction in the risks posed by PCB Transformer fires if these measures were required for all PCB Transformers. EPA has targeted phaseout requirements for those PCB Transformers which EPA has concluded pose particularly high risks of failure and fire.

d. Releases of PCBs to the environment and exposures to humans and biota from the use of PCB-Contaminated and non-PCB transformers are minimal. Further, the risks posed by fires involving this equipment are substantially less than the risks posed by fires involving PCB Transformers, and the costs of any control measures to reduce these low risks further are very high.

VIII. Amendments to the PCB Electrical Equipment Rule

A. Registration/Labeling/Removal of Stored Combustibles

EPA has required the registration of all PCB Transformers by December 1, 1985, with fire departments with primary response jurisdiction. This means that each PCB Transformer in use or in storage for reuse must be registered with the fire department(s) which would be called upon for the initial response to a fire involving the equipment. The information to be supplied to the fire department(s) includes the address of the building in which the transformer is located (or the nearest building for PCB Transformers located near buildings, or, the nearest intersection for outdoor PCB Transformers); the location of the transformer within the building or near the building (e.g., third floor east end, or, west side of the building); and the principal constituent of the dielectric fluid in the transformer (e.g., PCBs, mineral oil, silicone oil). For industrial PCB Transformers, this may mean only the registration of the transformers with the industrial fire brigade on site.

EPA has also required the registration, by December 1, 1985, of PCB Transformers located in or near buildings with building owners. Each owner of a PCB Transformer(s) is responsible for registering the transformer(s). This means that all PCB Transformers located in or near buildings must be registered with appropriate building owners. For PCB Transformers located inside buildings, this means the registration of the transformer(s) with the building owner of record. For PCB Transformers located "near" buildings, this means the registration of the PCB Transformer(s) with all building owners whose buildings are located within 30 meters of the PCB Transformer(s).

EPA has required the labeling of the exterior of all PCB Transformers with the Mark M_L. This means that doors, fences, hallways, and other easily markable means of access to PCB Transformer locations must be marked with PCB identification labels. These labels must be prominently displayed and visible to emergency response personnel in the event of a fire involving this equipment. The exterior of sidewalk and underground vaults, that is, grates and manhole covers, are not required to be marked (because of difficulties in maintaining the mark over time).

EPA has required the removal of stored combustibles from all PCB Transformer locations. This means that materials such as paints, solvents, paper, rubber, and sawn wood must not be stored within a PCB Transformer enclosure, within 5 meters of a PCB Transformer enclosure, or within 5 meters of a PCB Transformer. A PCB Transformer enclosure is defined as a confined area such as a vault, machinery room, partitioned area or fenced-in area that contains a PCB Transformer.

The objective of requiring the removal of stored combustibles is to avoid, to the extent possible and practical, PCB Transformer involvment in fires initiated by the combustion of stored materials and to eliminate a potential source of fuel for a fire initiated by an electrical fault or malfunction in a transformer.

B. Phaseout of Commercial Higher Secondary Voltage Network PCB Transformers

EPA has prohibited the use of all network PCB Transformers with secondary voltages at or above 480 volts (this includes 480 volt network PCB Transformers, 480/277 volt network PCB Transformers and other network PCB Transformers with secondary voltages at or above 480 volts) in or near commercial buildings beyond October 1, 1990, and has required that these transformers be placed into storage for disposal or disposed (or be reclassified to PCB Contaminated or non PCB status).

Commercial buildings are defined as non industrial (non substation) buildings which are generally or typically accessible to both members of the general public and employees. These buildings include: public assembly properties (e.g., arenas, stadiums, libraries, museums, restaurants, theaters, etc.); educational properties (e.g., schools, colleges, universities, etc.); institutional properties (e.g., nursing homes, hospitals, prisons, etc.); residential properties (e.g., apartments, hotels, dormitories, etc.); stores (e.g., supermarkets, clothing stores, malls, etc.); offices (e.g., general business offices (including those located on industrial sites), banks, municipal office buildings, etc.); and, transportation centers (e.g., airport terminal buildings, subway stations, bus stations, train stations, etc.).

An industrial building is defined as a building directly used in manufacturing or technically productive enterprises. Industrial buildings are not generally or typically readily accessible to other than workers. Industrial buildings include buildings used directly in the production of power, the manufacture of products, the mining of raw materials, and the storage of textiles, petroleum products, wood and paper products, chemicals or plastics, and metals.

A PCB Transformer located in or near a commercial building is located within the interior of the building, on the roof of the building or attached to the exterior wall of the building, in the parking area serving the building, or located within 30 meters of the building.

EPA has required the removal of PCB Transformers located near commercial buildings (in addition to those located inside commercial buildings) because incidents like the San Francisco fire indicate that PCB Transformers located near commercial buildings can result in building contamination. Several comments on the Proposed Rule requested that EPA define the term "near" in a more quantitative manner; such as, within 25, 50 or 100 feet of a commercial building. EPA recognizes the desirability of defining the term "near" in a quantitative manner—this would facilitate monitoring compliance with the rule and make the rule more easily understood by the regulated community.

In adopting this suggestion, EPA has three objectives: (1) to facilitate compliance by industry with the rule, (2) to facilitate EPA's monitoring of compliance with the rule, and (3) to insure that any PCB Transformer which poses a real risk of commercial building contamination is covered by the rule. EPA is somewhat hesitant to dictate an absolute distance at which a PCB Transformer would be considered to pose little risk of significant building contamination. Local climactic and geographic conditions could greatly influence the potential for building contamination from PCB Transformer fires in locations such as sidewalk and underground vaults. However, the benefits of establishing a numerical standard, in terms of ease of compliance with the rule and ease of enforcement, are great.

In urban locations, sidewalk vaults and underground vaults are typically located within 15 to 30 meters of buildings, with many located immediately adjacent to exterior walls. It is EPA's intent to include all of these transformers within the definition of PCB Transformers located "near" commercial buildings. Further, outdoor pad-mounted and pole top PCB Transformers located within 15 to 30 meters of commercial buildings are also covered within the definition of PCB Transformers located "near" commercial buildings.

EPA expects that in general very few vaulted PCB Transformers in urban and metropolitan areas are located at distances greater than 30 meters from commercial buildings. However, EPA has also evaluated the potential for building contamination from vaulted PCB Transformers located at distances greater than 30 meters from commercial buildings. EPA believes that the potential for commercial building contamination from a PCB Transformer fire in a vault located more than 30 meters from a building can be greatly influenced by factors such as wind velocity, wind direction, and plume height. While EPA has defined the term "near" by establishing a distance of 30 meters from commercial buildings, EPA recognizes that in certain geographic locales, vaulted PCB Transformers located more than 30 meters from a commercial building could also present a risk of building contamination. EPA suggests that owners of vaulted PCB Transformers located more than 30 meters from commercial buildings individually evaluate the potential for commerical building contamination from fires involving these transformers as well. Factors considered in this evaluation could include average wind velocity for the region and normal wind direction.

C. Increased Electrical Protection

EPA has required the installation of enhanced electrical protection on many of the remaining commercial PCB Transformers (i.e., other than higher secondary voltage network PCB Transformers) by October 1, 1990. The electrical protection requirements are intended to avoid PCB Transformer fires by allowing for the early detection of faults and the complete deenergization of PCB Transformers prior to failure (rupture and/or release of PCBs). The installation of current-limiting fuses or other equivalent energy limiting devices on PCB Transformers is intended to avoid failures from high current faults. In order to be effective in avoiding PCB Transformer failures from high current faults, these current-limiting devices must (in accordance with good engineering practices) be properly installed, appropriately placed, maintained, and set sensitive enough to provide for complete deenergization within several power cycles or several tenths of a second of the occurrence of a sustained high current fault.

The installation of heat and pressure sensitive detectors in higher secondary voltage commercial radial PCB Transformers (and appropriate disconnect equipment) is intended to avoid PCB Transformer failures from sustained low current faults. Equivalent technology that accomplishes the same goal, that is, the early detection of sustained low current faults and complete deenergization prior to failure, is acceptable. In order to be effective in avoiding PCB Transformer failures, these devices must be maintained, and set sensitive enough to allow for complete deenergization within 30 seconds to 1 minute of detection of a sustained low current fault. In addition, if these sensors are electrically powered, they must be provided with a secondary source of power configured to deenergize the transformer on failure (fail-safe).

The disconnect equipment may be set either to open automatically upon the sensing of abnormal conditions (e.g., temperature or pressure), or, it may be set to send a signal to an on-site manned control center where deenergization must occur (during facility operating hours) within 1 minute of the receipt of an audio or visual signal indicating abnormal conditions. Automatically operated circuit breakers must also have the capability to be opened manually.

EPA received several comments on the Proposed Rule which suggested that EPA should give PCB Transformer owners the option of implementing risk reduction measures on shorter schedule (such as enhanced electrical protection by 1990) or PCB Transformer removal on a longer schedule (such as PCB Transformer removal by 1992). EPA did not adopt this suggestion because, without additional reporting requirements (including the reporting to EPA of the address and location of each PCB Transformer and the option selected by the owner), EPA believes that its ability to effectively enforce the shorter term risk reduction measures would be compromised.

D. Prohibition on the Installation of PCB Transformers

EPA has prohibited the new installation of PCB Transformers in or near commercial buildings. PCB Transformers must not be newly installed in or near commercial buildings after October 1, 1985. This means that PCB Transformers which have been placed into storage for reuse cannot be taken out of storage for reuse and placed in use in or near commercial buildings.

While EPA has placed restrictions on the installation of PCB Transformers (by prohibiting the placement of the equipment in or near commercial buildings), owners of PCB Transformers which are in storage for reuse still have many available options. Owners of PCB Transformers which are in storage for reuse may use these transformers in industrial applications and in any outdoor location where there is no real risk of commercial building

contamination. These transformers may also be reclassified to PCB

current faults alone without protection against low current faults in these

Polychlorinated Dibenzofurans (PCDFs), and Polychlorinated Dibenzodioxins

whether a rule is a "major rule" and, therefore, subject to the requirement

transformers for variable treatment based on type and location. The Office

completely within 1 minute of the

contamination. These transformers may also be reclassified to PCB Contaminated status or non-PCB status and be placed in any desired location.

E. Reporting of Fire-Related Incidents and Containments of Potential Water Releases

EPA has required the reporting of all PCB Transformer fire-related incidents to the National Response Center. A fire-related incident is defined as any incident in which high temperatures or high pressures in a transformer location lead to the rupture of a transformer and/or the release of PCBs. PCB Transformer fire-related incidents must be immediately reported to the NRC. The information to be reported must include the type of PCB Transformer installation involved in the fire-related incident, and reasonably ascertainable information on the cause of the fire-related incident.

EPA has required that owners of PCB Transformers involved in fire-related incidents take measures as soon as practically and safely possible to contain any potential releases of PCBs and oxidation products to waterways. This means that measures must be taken to prevent further environmental release and contamination of waterways as soon as there is no immediate danger of injury from the fire itself. These measures include, but are not limited to the blocking of floor drains, the containment of runoff, and the containment and treatment of cleanup water prior to release. If there is evidence of the release of PCBs, PCDFs, and PCDDs down floor drains, the PCB Transformer owner should also notify the sewer system and water treatment system operators as soon as possible to prevent further environmental release.

IX. Compliance and Enforcement

EPA recognizes that technology is constantly evolving in areas such as the development of electrical protection systems. Thus, EPA has allowed some flexibility on the part of transformer owners in the selection of appropriate enhanced electrical protection systems. Further, by requiring electrical protection for commercial PCB Transformers, EPA implicitly allows the replacement of all commercial PCB Transformers with substitute equipment, and the retrofilling and reclassification of PCB Transformers to PCB Contaminated or non-PCB status.

EPA has, however, required the installation of protection against failures from high current faults and low current faults in all commercial higher secondary voltage radial PCB Transformer installations. The installation of protection against high current faults alone without protection against low current faults in these installations constitutes a violation of the PCB Transformer use authorization. For lower secondary voltage commercial PCB Transformer installations, EPA has required protection against failures from high current faults.

Failure to install properly and maintain protection which is set sensitive enough, based on good engineering judgment, to prevent PCB Transformer failures from sustained high and low current faults (for higher secondary voltage radial PCB Transformers) and PCB Transformer failures from high current faults (for lower secondary voltage PCB Transformers) constitutes a violation of the PCB Transformer use authorization.

X. Official Record of Rulemaking

A. Previous Rulemaking Records

(1) Official rulemaking record from "Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce and Use Prohibition Rule" published in the **Federal Register** of May 31, 1979, (44 FR 31514).

(2) Official rulemaking record from "Polychlorinated Biphenyls (PCBs); Disposal and Marking Final Regulation" published in the **Federal Register** of February 17, 1978, (43 FR 7150).

(3) Official rulemaking record from "Polychlorinated Biphenyls (PCBs); Manufacture, Processing, Distribution, and Use in Closed and Controlled Waste Manufacturing Processes" published in the **Federal Register** of October 21, 1982, (47 FR 46980).

(4) Official rulemaking record from "Polychlorinated Biphenyls (PCBs); Manufacturing, Processing, Distribution in Commerce and Use Prohibitions; Use in Electrical Equipment" published in the **Federal Register** of August 25, 1982, (47 FR 37342).

(5) Official record from "Polychlorinated Biphenyls (PCBs); Manufacturing, Processing, Distribution in Commerce and Use Prohibitions; Use in Electrical Transformers" Advance Notice of Proposed Rulemaking, published in the **Federal Register** of March 23, 1984, (49 FR 11070).

(6) Official record from "Polychlorinated Biphenyls (PCBs) Manufacturing, Processing, Distribution in Commerce and Use Prohibitions; Use in Electrical Transformers" Proposed Rule, published in the **Federal Register** of October 11, 1984, (49 FR 39966).

B. Support Documents

XI. Executive Order 12291

Under Executive Order 12291, issued February 17, 1981, EPA must judge whether a rule is a "major rule" and, therefore, subject to the requirement that a Regulatory Impact Analysis be prepared. EPA believes that this amendment to the PCB rule is a major rule as the term is defined in section 1(b) of the Executive Order. Therefore, EPA has prepared a Regulatory Impact Analysis.

While the rule places additional restrictions and conditions on the use of PCB Transformers, it is worth noting that this regulation allows the continued uses of PCBs in electrical transformers that would otherwise be prohibited by section 6(e) of TSCA. This rule avoids the severe disruption of electric service to the public and industry that would occur if the use of this equipment were immediately prohibited. It also avoids the economic impact that would result from a requirement to replace the equipment as soon as possible.

This rule was submitted to the Office of Management and Budget (OMB), as required by the Executive Order.

XII. Regulatory Flexibility Act

Under section 605(b) of the Regulatory Flexibility Act, 5 U.S.C. 605(b), the Administrator may certify that a rule will not, if promulgated have a significant impact on a substantial number of small entities and, therefore, does not require a regulatory flexibility analysis.

In general, this rule will reduce the burden on small businesses that would otherwise be encountered if an immediate ban on PCB-containing transformers were to take effect. If an immediate ban on the use of PCBs in transformers were imposed, large costs would be incurred by all producers and users of electricity, including small businesses.

I certify that this rule will not have a significant economic impact on a substantial number of small entities.

XIII. Paperwork Reduction Act

The information collection requirements of this rule have been submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq. In response to the information collection requirements associated with the proposed rule, OMB commented that the Agency should resubmit the information collection requirements with the final rule showing how EPA has reduced the burdens by limiting the rule's applicability to transformers which because of location or installation type are of higher risk. Based on this comment and other comments made during the public comment period, EPA has segmented transformers for variable treatment based on type and location. The Office of Management and Budget has approved the information collection requirements of this rule under OMB Control Number: 2070-0073.

List of Subjects in 40 CFR Part 761

Hazardous substances, Labeling, Polychlorinated biphenyls, Recordkeeping and reporting requirements, Environmental protection.

Dated: July 1, 1985.

A. James Barnes,

Acting Administrator.

PART 761—[AMENDED]

Therefore, 40 CFR Part 761 is amended as follows:

1. The authority citation for Part 761 is revised to read as follows:

Authority: 15 U.S.C. 2605, 2607, and 2611.

2. In § 761.3, the following paragraphs are alphabetically added to read as follows:

§ 761.3 Definitions.

* * * * *

"In or Near Commercial Buildings" means within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 meters of a non-industrial non-substation building. Commercial buildings are typically accessible to both members of the general public and employees, and include: (1) Public assembly properties, (2) educational properties, (3) institutional properties, (4) residential properties, (5) stores, (6) office buildings, and (7) transportation centers (e.g., airport terminal buildings, subway stations, bus stations, or train stations).

* * * * *

"Industrial buildings" means a building directly used in manufacturing or technically productive enterprises. Industrial buildings are not generally or typically accessible to other than workers. Industrial buildings include buildings used directly in the production of power, the manufacture of products, the mining of raw materials, and the storage of textiles, petroleum products, wood and paper products, chemicals, plastics, and metals.

* * * * *

"Manned Control Center" means an electrical power distribution control room where the operating conditions of a PCB Transformer are continuously monitored during the normal hours of operation (of the facility), and, where the duty engineers, electricians, or other trained personnel have the capability to deenergize a PCB Transformer completely within 1 minute of the receipt of a signal indicating abnormal operating conditions such as an overtemperature condition or overpressure condition in a PCB Transformer.

* * * * *

"On site" means within the boundaries of a contiguous property unit.

* * * * *

"Rupture of a PCB Transformer" means a violent or non-violent break in the integrity of a PCB Transformer caused by an overtemperature and/or overpressure condition that results in the release of PCBs.

* * * * *

3. In § 761.30, the introductory text of paragraph (a) and paragraph (a)(1) are revised and OMB Control Number 2070-0073 is added to read as follows:

§ 761.30 Authorizations.

* * * * *

(a) *Use in and servicing of transformers (other than railroad transformers).* PCBs at any concentration may be used in transformers (other than in railroad locomotives and self-propelled railroad cars) and may be used for purposes of servicing including rebuilding these transformers for the remainder of their useful lives, subject to the following conditions:

(1) *Use conditions.* (i) As of October 1, 1985, the use and storage for reuse of PCB Transformers that pose an exposure risk to food or feed is prohibited.

(ii) As of October 1, 1990, the use of network PCB Transformers with higher secondary voltages (secondary voltages equal to or greater than 480 volts, including 480/277 volt systems) in or near commercial buildings is prohibited. Network PCB Transformers with higher secondary voltages which are removed from service in accordance with this requirement must either be reclassified to PCB Contaminated or non PCB status, placed into storage for disposal, or disposed.

(iii) As of October 1, 1985, the installation of PCB Transformers (which have been placed into storage for reuse or which have been removed from another location) in or near commercial buildings is prohibited.

(iv) As of October 1, 1990, all radial PCB Transformers and lower secondary voltage network PCB Transformers (network transformers with secondary voltages below 480 volts) in use in or near commercial buildings must be equipped with electrical protection to

avoid transformer failures caused by high current faults. Current-limiting total deenergization prior to PCB Transformer rupture (either violent or performed at least once every 3 months. These inspections may take place any

water. These measures include, but are not limited to:

(xiii) A reduced visual inspection frequency of at least once every 12

that the transformer may pose an

1985
UMI

avoid transformer failures caused by high current faults. Current-limiting fuses or other equivalent technology must be used to detect sustained high current faults and provide for complete deenergization of the transformer within several tenths of a second of detection, before transformer failure occurs. The installation, setting, and maintenance of current-limiting fuses or other equivalent technology to avoid PCB Transformer failures from sustained high current faults must be completed in accordance with good engineering practices.

(v) As of October 1, 1990, all radial PCB Transformers with higher secondary voltages (480 volts and above, including 480/277 volt systems) in use in or near commercial buildings must (in addition to the requirements of paragraph (a)(1)(iv) of this section) be equipped with protection to avoid transformer failures caused by sustained low current faults.

(A) Pressure and temperature sensors (or other equivalent technology which has been demonstrated to be effective in the early detection of sustained low current faults) must be used in these transformers to detect sustained low current faults.

(B) Disconnect equipment must be provided to insure complete deenergization of the transformer in the event of a sensed abnormal condition (e.g., an overpressure or overtemperature condition in the transformer), caused by a sustained low current fault. The disconnect equipment must be configured to operate automatically within 30 seconds to 1 minute of the receipt of a signal indicating an abnormal condition from a sustained low current fault, or can be configured to allow for manual deenergization from a manned on-site control center upon the receipt of an audio or visual signal indicating an abnormal condition caused by a sustained low current fault. Manual deenergization from a manned on-site control center must occur within 1 minute of the receipt of the audio or visual signal indicating an abnormal condition caused by a sustained low current fault. If automatic operation is selected and a circuit breaker is utilized for disconnection, it must also have the capability to be manually opened if necessary.

(C) The enhanced electrical protective system required for the detection of sustained low current faults and the complete and rapid deenergization of transformers must be properly installed, maintained, and set sensitive enough (in accordance with good engineering practices) to detect sustained low current faults and allow for rapid and total deenergization prior to PCB Transformer rupture (either violent or non violent rupture) and release of PCBs.

(iv) As of December 1, 1985, all PCB Transformers (including PCB Transformers in storage for reuse) must be registered with fire response personnel with primary jurisdiction (that is, the fire department or fire brigade which would normally be called upon for the initial response to a fire involving the equipment). Information required to be provided to fire response personnel includes:

(A) The location of the PCB Transformer(s) (the address(es) of the building(s) and the physical location of the PCB Transformer(s) on the building site(s) and for outdoor PCB Transformers, the location of the outdoor substation).

(B) The principal constituent of the dielectric fluid in the transformer(s) (e.g., PCBs, mineral oil, or silicone oil).

(C) The name and telephone number of the person to contact in the event of a fire involving the equipment.

(vii) As of December 1, 1985, PCB Transformers in use in or near commercial buildings must be registered with building owners. For PCB Transformers located in commercial buildings, PCB Transformer owners must register the transformers with the building owner of record. For PCB Transformers located near commercial buildings, PCB Transformer owners must register the transformers with all owners of buildings located within 30 meters of the PCB Transformer(s). Information required to be provided to building owners by PCB Transformer owners includes but is not limited to:

(A) The specific location of the PCB Transformer(s).

(B) The principal constituent of the dielectric fluid in the transformer(s) (e.g., PCBs, mineral oil, or silicone oil).

(C) The type of transformer installation (e.g., 208/120 volt network, 280/120 volt radial, 208 volt radial, 480 volt network, 480/277 volt network, 480 volt radial, 480/277 volt radial).

(viii) As of December 1, 1985, combustible materials, including, but not limited to paints, solvents, plastics, paper, and sawn wood must not be stored within a PCB Transformer enclosure (i.e., in a transformer vault or in a partitioned area housing a transformer); within 5 meters of a transformer enclosure, or, if unenclosed (unpartitioned), within 5 meters of a PCB Transformer.

(ix) A visual inspection of each PCB Transformer (as defined in the definition of "PCB Transformer" under § 761.3) in use or stored for reuse shall be performed at least once every 3 months. These inspections may take place any time during the 3-month periods: January-March, April-June, July-September, and October-December as long as there is a minimum of 30 days between inspections. The visual inspection must include investigation for any leak of dielectric fluid on or around the transformer. The extent of the visual inspections will depend on the physical constraints of each transformer installation and should not require an electrical shutdown of the transformer being inspected.

(x) If a PCB Transformer is found to have a leak which results in any quantity of PCBs running off or about to run off the external surface of the transformer, then the transformer must be repaired or replaced to eliminate the source of the leak. In all cases any leaking material must be cleaned up and properly disposed of according to disposal requirements of § 761.60. Cleanup of the released PCBs must be initiated as soon as possible, but in no case later than 48 hours of its discovery. Until appropriate action is completed, any active leak of PCBs must be contained to prevent exposure of humans or the environment and inspected daily to verify containment of the leak. Trenches, dikes, buckets, and pans are examples of proper containment measures.

(xi) If a PCB Transformer is involved in a fire-related incident, the owner of the transformer must immediately report the incident to the National Response Center (toll-free 1-800-424-8802; in Washington, D.C. 202-426-2675). A fire-related incident is defined as any incident involving a PCB Transformer which involves the generation of sufficient heat and/or pressure (by any source) to result in the violent or non-violent rupture of a PCB Transformer and the release of PCBs. Information must be provided regarding the type of PCB Transformer installation involved in the fire-related incident (e.g., high or low secondary voltage network transformer, high or low secondary voltage simple radial system, expanded radial system, primary selective system, primary loop system, or secondary selective system or other systems) and the readily ascertainable cause of the fire-related incident (e.g., high current fault in the primary or secondary or low current fault in secondary). The owner of the PCB Transformer must also take measures as soon as practically and safely possible to contain and control any potential releases of PCBs and incomplete combustion products into

water. These measures include, but are not limited to:

(A) The blocking of all floor drains in the vicinity of the transformer.

(B) The containment of water runoff.

(C) The control and treatment (prior to release) of any water used in subsequent cleanup operations.

(xii) Records of inspection and maintenance history shall be maintained at least 3 years after disposing of the transformer and shall be made available for inspection, upon request by EPA. Such records shall contain the following information for each PCB Transformer:

(A) Its location.

(B) The date of each visual inspection and the date that leak was discovered, if different from the inspection date.

(C) The person performing the inspection.

(D) The location of any leak(s).

(E) An estimate of the amount of dielectric fluid released from any leak.

(F) The date of any cleanup, containment, repair, or replacement.

(G) A description of any cleanup, containment, or repair performed.

(H) The results of any containment and daily inspection required for uncorrected active leaks.

(xiii) A reduced visual inspection frequency of at least once every 12 months applies to PCB Transformers that utilize either of the following risk reduction measures. These inspections may take place any time during the calendar year as long as there is a minimum of 180 days between inspections.

(A) A PCB Transformer which has impervious, undrained, secondary containment capacity of at least 100 percent of the total dielectric fluid volume of all transformers so contained or

(B) A PCB Transformer which has been tested and found to contain less than 60,000 ppm PCBs (after 3 months of in service use if the transformer has been serviced for purposes of reducing the PCB concentration).

(xiv) An increased visual inspection frequency of at least once every week applies to any PCB Transformer in use or stored for reuse which poses an exposure risk to food or feed. The user of a PCB Transformer posing an exposure risk to food is responsible for the inspection, recordkeeping, and maintenance requirements under this section until the user notifies the owner that the transformer may pose an exposure risk to food or feed. Following such notification, it is the owner's ultimate responsibility to determine whether the PCB Transformer poses an exposure risk to food or feed.

* * * * *

(The recordkeeping requirements of paragraphs (a)(1) (vi), (vii), and (xi) were approved by the Office of Management and Budget under OMB Control Number 2070-0073. The recordkeeping requirements of paragraph (xii) were approved by the Office of Management and Budget under OMB Control Number 2070-0007.)

4. In § 761.40, paragraph (j) is added to read as follows:

§ 761.40 Marking requirements.

* * * * *

(j) As of December 1, 1985, the vault door, machinery room door, fence, hallway, or means of access (others than grates and manhole covers) to a PCB Transformer must be marked with the mark M_L. The mark must be placed so that it can be easily read by firemen fighting a fire involving this equipment.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $300.00 per year, or $150.00 for 6 months, payable in advance. The charge for individual copies is $1.50 for each issue, or $1.50 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

There are no restrictions on the republication of material appearing in the **Federal Register**.

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

Title 3—

The President

Executive Order 12526 of July 15, 1985

President's Blue Ribbon Commission on Defense Management

By the authority vested in me as President by the Constitution and the laws of the United States of America, and in order to establish, in accordance with the provisions of the Federal Advisory Committee Act, as amended (5 U.S.C. App. I), a Blue Ribbon Commission on Defense Management, it is hereby ordered as follows:

Section 1. *Establishment.* (a) There is established the President's Blue Ribbon Commission on Defense Management. The Commission shall be composed of no fewer than ten and no more than seventeen members appointed or designated by the President.

(b) The composition of the Commission shall include persons with extensive experience and national reputations in commerce and industry, as well as persons with broad experience in government and national defense.

(c) The President shall designate a Chairman from among the members of the Commission. The Chairman shall appoint a professional and administrative staff to support the Commission.

Sec. 2. *Functions.* (a) The Commission shall study the issues surrounding defense management and organization, and report its findings and recommendations to the President and simultaneously submit a copy of its report to the Secretary of Defense.

(b) The primary objective of the Commission shall be to study defense management policies and procedures, including the budget process, the procurement system, legislative oversight, and the organizational and operational arrangements, both formal and informal, among the Office of the Secretary of Defense, the Organization of the Joint Chiefs of Staff, the Unified and Specified Command system, the Military Departments, and the Congress. In particular, the Commission shall:

1. Review the adequacy of the defense acquisition process, including the adequacy of the defense industrial base, current law governing Federal and Department of Defense procurement activities, departmental directives and management procedures, and the execution of acquisition responsibilities within the Military Departments;

2. Review the adequacy of the current authority and control of the Secretary of Defense in the oversight of the Military Departments, and the efficiency of the decisionmaking apparatus of the Office of the Secretary of Defense;

3. Review the responsibilities of the Organization of the Joint Chiefs of Staff in providing for joint military advice and force development within a resource-constrained environment;

4. Review the adequacy of the Unified and Specified Command system in providing for the effective planning for and use of military forces;

5. Consider the value and continued role of intervening layers of command on the direction and control of military forces in peace and in war;

6. Review the procedures for developing and fielding military systems incorporating new technologies in a timely fashion;

7. Study and make recommendations concerning congressional oversight and investigative procedures relating to the Department of Defense; and

8. Recommend how to improve the effectiveness and stability of resources allocation for defense, including the legislative process.

Rules and Regulations

Federal Register
Vol. 50, No. 138

8. Recommend how to improve the effectiveness and stability of resources allocation for defense, including the legislative process.

(c) In formulating its recommendations to the President, the Commission shall consider the appropriate means for implementing its recommendations. The Commission shall first devote its attention to the procedures and activities of the Department of Defense associated with the procurement of military equipment and materiel. It shall report its conclusions and recommendations on the procurement section of this study by December 31, 1985. The final report, encompassing the balance of the issues reviewed by the Commission, shall be submitted not later than June 30, 1986, with an interim report to be submitted not later than March 31, 1986.

(d) The Commission shall be in place and operating as soon as possible. Shortly thereafter, the Commission shall brief the Assistant to the President for National Security Affairs and the Secretary of Defense on the Commission's plan of action.

(e) Where appropriate, implementation of the Commission's recommendations shall be considered in accordance with regular administrative procedures coordinated by the Office of Management and Budget, and involving the National Security Council, the Department of Defense, and other departments or agencies as required.

Sec. 3. *Administration.* (a) The heads of Executive agencies shall, to the extent permitted by law, provide the Commission such information as it may require for purposes of carrying out its functions.

(b) Members of the Commission shall serve without additional compensation for their work on the Commission. However, members appointed from among private citizens may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by law for persons serving intermittently in the government service (5 U.S.C. 5701–5707), to the extent funds are available.

(c) The Secretary of Defense shall provide the Commission with such administrative services, facilities, staff, and other support services as may be necessary. Any expenses of the Commission shall be paid from such funds as may be available to the Secretary of Defense.

Sec. 4. *General.* (a) Notwithstanding any other Executive order, the functions of the President under the Federal Advisory Committee Act, as amended, except that of reporting to the Congress, which are applicable to the Commission, shall be performed by the Secretary of Defense, in accordance with guidelines and procedures established by the Administrator of General Services.

(b) The Commission shall terminate 30 days after the submission of its final report.

Country Name Change From Kampuchea to Cambodia

AGENCY: Office of Export Administration, International Trade Administration, Commerce.

ACTION: Final rule.

SUMMARY: In accordance with the January 2, 1985 decision of the U.S. Board on Geographic Names, the United States Government will use the country name Cambodia in lieu of the formerly approved country name Kampuchea.

EFFECTIVE DATE: July 18, 1985.

FOR FURTHER INFORMATION CONTACT: Richard Usrey, Exporter Assistance Division, Office of Export Administration, Department of Commerce, Washington, D.C. 20230 (Telephone: (202) 377-3856).

SUPPLEMENTARY INFORMATION:

Rulemaking Requirements

In connection with various rulemaking requirements, the Office of Export Administration has determined that:

1. Since this rule involves a foreign affairs function of the United States, the provisions of the Administrative Procedure Act requiring notice of proposed rulemaking, an opportunity for public participation, and a delay in effective date (5 U.S.C. 553) are inapplicable.

2. This rule does not contain a collection of information requirement under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq.

3. Because a notice of proposed rulemaking is not required to be published for this rule, it is not a rule within the meaning of section 601(2) of the Regulatory Flexibility Act, U.S.C. 601(2) and is not subject to the requirements of that Act. Accordingly, no initial or final Regulatory Flexibility Analysis has been or will be prepared.

4. This rule is not a major rule or regulation within the meaning of section 1(a) of Executive Order 12291 and, accordingly, is not subject to the requirements of that Order. Accordingly, no preliminary or final Regulatory Impact Analysis has been or will be prepared.

Therefore, this regulation is issued in final form. Although there is no formal comment period, pubic comments on this regulation are welcome on a continuing basis.

BILLING CODE 3510-DT-M

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 275

[Release No. IA-983; File No. S7-7-85]

Definition of "Client" of an Investment Adviser for Certain Purposes Relating to Limited Partnerships

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Commission is adopting a rule that specifies certain situations in which a limited partnership, rather than each of its limited partners, may be counted as a "client" of a general partner acting as investment adviser to the partnership, for purposes of an exemption from registration provided by the Investment Advisers Act of 1940. By creating a safe harbor, the rule will provide investment advisers with greater certainty in determining when they may rely on that exemption.

EFFECTIVE DATE: August 19, 1985.

FOR FURTHER INFORMATION CONTACT: Thomas P. Lemke, Chief Counsel (202) 272-2030, or Thomas S. Harman, Attorney (202) 272-2030, Office of Chief Counsel, Division of Investment Management, Securities and Exchange Commission, 450 Fifth Street NW., Washington, D.C. 20549.

SUPPLEMENTARY INFORMATION: The Commission today is adopting rule 203(b)(3)-1 under the Investment Advisers Act of 1940 ("Act").[1] The rule specifies certain circumstances in which a general partner or other person acting as investment adviser to a limited partnership (a "general partner") may count the partnership, rather than each of the individual limited partners, as a "client" for purposes of the Act's registration exemption for any adviser with fewer than fifteen clients who does not hold himself out to the public as an investment adviser (the "private adviser exemption").[2] By providing a "safe harbor" setting forth circumstances when a general partner may count a limited partnership as a single client, the rule will provide general partners with greater certainty regarding when they may rely on the private adviser exemption.

The rule is available to any general partner, subject to two conditions. First, the limited partnership interests must be securities. Second, the general partner must provide investment advice to the partnership based on the investment objectives of the limited partnership. The rule also defines certain situations under which the safe harbor is unavailable with respect to certain limited partners. Readers are referred to Investment Advisers Act Rel. No. 956 (Feb. 25, 1985) [50 FR 8740, March 5, 1985] ("IA-956" or the "proposing release") for a more detailed discussion of the background and reasons for the rule.

Discussion

The Commission received twenty-seven comment letters on the proposed rule. Nearly all of the commenters supported the general intent of the rule, although three did not support its adoption based on general policy considerations. The Commission believes that the rule will add needed guidance and has determined to adopt it. A number of commenters urging adoption suggested specific modifications in order to clarify application of the rule. These comments, and the Commission's response thereto, are summarized below.

I. General comments

A. The status of a General Partner as an Investment Adviser

Two commenters urged the Commission to clarify that the rule is not intended to address the question of when a general partner is an investment adviser as defined by the Act. This interpretation of the rule is correct, because the rule applies only to a general partner who meets that definition and who seeks to rely on the private adviser exemption.[3] The rule does not address the question of whether any general partner in fact meets that definition.[4]

B. The Rule as a "Safe Harbor"

While most commenters endorsed the description of the rule as a "safe harbor," several recommended that the rule itself state that, as a safe harbor, it is not intended to specify the exclusive method for counting clients. This suggestion has been incorporated into a prefatory note to the rule.

C. The Relationship Between the Private Adviser Exemption and the Rule

As previously noted, in order for a general partner to rely on the private adviser exemption, it must satisfy two elements: it must have fewer than fifteen clients and it must not hold itself out to the public as an investment adviser. The safe harbor rule, as proposed, addressed only the former element. One commenter asserted, however, that if a general partner participates in a non-public offering of limited partnership interests, the general partner might be deemed to be holding itself out to the public as an investment adviser. If so, the general partner would not satisfy the latter element of the private adviser exemption and therefore would have to register, notwithstanding its compliance with the safe harbor rule. In this regard, the commenter was particularly concerned by the fact that the disclosure requirements of the federal securities laws would require a private placement memorandum to identify the partnership's investment adviser.[5] The Commission agrees that this limited activity be a general partner should not—in and of itself—cause a general partner relying on this safe harbor rule to fall outside of the second element of the private adviser exemption. Therefore, the Commission has added a new provision to the rule, paragraph (c), to make this point clear.

[1] 15 U.S.C. 80b-1 *et seq.*

[2] Section 203(b)(3) [15 U.S.C. 80b-3(b)(3)] exempts from the registration provision of the Act any investment adviser who during the course of the preceding twelve months has had fewer than fifteen clients and who neither holds himself out generally to the public as an investment adviser nor acts as an investment adviser to any investment company registered under title I of this Act, or a company which has elected to be a business development company pursuant to section 54 of title I of this Act and has not withdrawn its election. For purposes of determining the number of clients of an investment adviser under this paragraph, no shareholder, partner, or beneficial owner of a business development company, as defined in this title, shall be deemed to be a client of such investment adviser unless such person is a client of such investment adviser separate and apart from his status as a shareholder, partner, or beneficial owner.

[3] The definition of an "investment adviser" is set forth in section 202(a)(11) of the Act [15 U.S.C. 80b-2(a)(11)].

[4] As the Commission noted in the proposing release (*see* IA-956 at nn. 6-7 & accompanying text), several courts have addressed this question.

[5] The commenter also asserted that the proviso to paragraph (a)(2) of the proposed rule itself recognized the likelihood that a general partner would participate in the sale of limited partnership interests.

D. Safe Harbor for a General Partner of a General Partnership

Several commenters felt that the scope of the rule should be expanded to provide the same safe harbor to a general partner of a general partnership. The Commission has determined not to adopt this suggestion at this time. The rationale for the proposed rule, in large part was to accord limited partnerships the same treatment accorded passive investment vehicles organized as corporations. Because, among other things, general partnerships do not normally involve passive investors, comparable treatment for general partnerships may not be appropriate.

II. The Rul

A. Definition of Investment Advisory Client: Paragraph (a)(2)

One commenter suggested that the rule clarify whether a general partner's report on partnership investments could constitute investment advice and thus make any limited partner receiving such a report an investment advisory client of the general partner as defined in paragraph (a)(2). As such, the safe harbor would not be available with respect to that limited partner because of paragraph (b)(3). Such an interpretation, the commenter believes, is not appropriate because it would make the rule unavailable to the many general partners who desire to periodically report to limited partners on the status of partnership assets. The Commission agrees that this limited activity should not affect the availability of the safe harbor, and it has expanded paragraph (a)(2) of the rule to provide that a limited partner who receives a general partner's report regarding the performance of or plans for partnership assets (or similar matters) would not, by that fact alone, become an investment advisory client of the general partner.

Several commenters asserted that paragraph (a)(2)(ii) of the proposed rule, which deems a limited partner to be an investment advisory client of a general partner if the general partner advises the limited partner about transferring its assets to another partnership, is unnecessarily restrictive and arbitrarily limits the rule's availability. The Commission has determined to retain this provision because it believes it would be inappropriate for a general partner, in reliance on this safe harbor rule, to be able to establish a series of limited partnerships and switch limited partners from one partnership to another to meet their individual investment objectives, thereby, in effect, providing the limited partners with individualized investment advice.

B. The Rule's Safe Harbor: Paragraph (b)

1. Limited Partnership Interests as Securities: Paragraph (b)(2)(i)

Several commenters questioned the necessity of this provision, which requires that the limited partnership interests must be securities, although others acknowledged its usefulness and supported its retention in the rule as a means of preventing potential abuses. The Commission agrees with the latter commenters and, accordingly, has retained this provision.

2. Providing Investment Advice to the Partnership as a Common Investment Vehicle: Paragraph (b)(2)(ii)

Three commenters suggested that this provision should refer to the "investment objectives of the partnership" rather than the "investment objectives of the limited partners as a group." These commenters asserted that, among other things, such a change would more accurately reflect a typical partnership agreement and would produce the same result. The Commission has modified this provision to incorporate this suggestion.

3. The "Alter Ego" Provision: Paragraph (b)(2)(iii)

A number of commenters addressed this provision of the proposed rule, which made the safe harbor unavailable to a general partner which is the "alter ego" of a registered investment adviser. While commenters generally supported the intent of this provision—to prevent a registered adviser from using the safe harbor rule to circumvent the Act by establishing an unregistered general partner subsidiary to advise a limited partnership—several specifically objected to the use of the phrase "alter ego" on the ground that it is too vague for rulemaking. One commenter suggested that a more effective way to achieve the purpose intended by this condition would be to include in the rule a cross reference to section 208(d) of the Act.[6] The Commission continues to believe that the concept underlying section 208(d) is particularly relevant to this safe harbor rule, but has determined to delete the alter ego provision from the body of the rule. A reminder about the applicability of section 208(d) to a general partner relying on the rule has been added as a prefatory note.

C. Exclusions From the Safe Harbor: Paragraph (b)(3)

Several commenters objected to paragraph (b)(3), which specifies certain situations in which the safe harbor is not available with respect to a particular limited partner. In particular, the commenters did not agree with the inclusion of paragraph (b)(3)(ii) in the proposed rule, which makes the safe harbor unavailable with respect to any limited partner who is, separate and apart from its status as a limited partner, an investment advisory client of a related person of the general partner. The commenters asserted generally that the purpose of paragraph (b)(3) was unclear or that the alter ego provision adequately solved the problems that this provision sought to address. As the Commission noted in the proposing release, the purpose of paragraph (b)(3) is to make the safe harbor unavailable with respect to a limited partner who has an advisory relationship with the general partner, or a related person, in addition to that arising out of the limited partnership. In such a case, the Commission believes it would be inappropriate to include that limited partner within the safe harbor, although, as previously noted, the fact that a particular limited partner is outside the safe harbor does not automatically mean that the limited partner must be counted as a client. While the alter ego provision may to some extent address the same concerns as paragraph (b)(3), it does not deal with all the concerns this provision addresses. Accordingly, the Commission has determined to retain this provision as proposed.

Two commenters requested that the Commission make clear that even if the safe harbor is not available with respect to a particular limited partner because of paragraph (b)3), that fact alone would not make the safe harbor unavailable to other limited partners, so long as they otherwise satisfied the rule. A sentence clarifying this point has been added to paragraph (b)(3).

Summary of Regulatory Flexibility Analysis

Pursuant to section 605(b) of the Regulatory Flexibility Act, the Chairman of the Commission previously certified that rule 203(b)(3)-(1) will not have a significant economic impact on a substantial number of small entities. No

[6] Section 208(d) [15 U.S.C. 80b-8(d)] of the Act makes it unlawful for any person indirectly, or through or by any other person, to do any act which it would be unlawful for such person to do directly under the provisions of the Advisers Act or any rule or regulation thereunder.

Investment Advisers, Reporting and recordkeeping requirements, Securities.

Text of Rule 203(b)(3)–(1)

Part 275 of Chapter II, Title 17 of the Code of Federal Regulations is hereby amended as set forth below:

PART 275—RULES AND REGULATIONS, INVESTMENT ADVISERS ACT OF 1940

1. The authority citation for Part 275 continues to read in part as follows:

Authority: Secs. 203, 204, 211, 54 Stat. 850, as amended, 852, as amended, 855, as amended; 15 U.S.C. 80b–3, 80b–4, 80b–11 * * *; Section 275.203b 3–1 also issued under section 206A (15 U.S.C. 80b–6A).

2. By adding § 275.203b 3–1 as follows:

§ 275.203(b)(3)–1 Definition of "Client" of an investment adviser for certain purposes relating to limited partnerships.

Preliminary Notes

1. This rule is a safe harbor and is not intended to specify the exclusive method for a limited partnership, rather than each limited partner, to be counted as a "client" for purposes of section 203(b)(3) of the Act. The rule is not intended to create any presumptions about the status of any person not relying, or unable to rely, on the rule.

2. Any person relying on this rule is reminded that section 208(d) of the Act makes it unlawful generally for such person to do indirectly, or through any other person, any act which it would be unlawful for such person to do directly under the Act or the rules thereunder. The fact that a person relying on this rule is related to a registered investment adviser is not sufficient, in and of itself, to preclude reliance on the rule. However, absent the separate and distinct operation of a registered adviser from a person relying on this rule, section 208(d) requires the two entities to be viewed as a single entity for purposes of section 203(b)(3) of the Act.

(a) As used in this subsection:

(1) A "related person" of another person is any person controlling, controlled by, under common control with, or any employee or employer of, such other person; and

(2) A limited partner is an "investment advisory client" of a general partner or other person acting as investment adviser to the partnership, or any related person of the foregoing persons, if the limited partner receives from any such person

(i) investment advisory services of a nature that the person providing the services would be an investment adviser, as defined in section 202(a)(11) of the Act, or

(ii) investment advice to transfer its assets from one limited partnership to another one; *Provided, however,* That a limited partner is not an investment advisory client of a person solely because such person offers, promotes, or sells interests in the limited partnership to the limited partner or reports periodically to the limited partners as a group solely with respect to the performance of, or the plans for, the partnership's assets (or similar matters).

(b) For purposes of section 203(b)(3) of the Act:

(1) A limited partnership shall be counted as a client of any general partner or other person acting as investment adviser to the partnership; and

(2) A limited partner of the partnership shall not be counted as a client of the general partner or other person acting as investment adviser to the partnership if:

(i) The limited partnership interests are securities; and

(ii) The general partner or other person provides investment advice to the partnership based on the investment objectives of the limited partnership.

(3) Paragraph (b)(2) of this section shall not be available with respect to any limited partner who is, separate and apart from its status as a limited partner, an investment advisory client of

(i) a general partner or other person acting as investment adviser to the partnership, or

(ii) any related person thereof. The fact that paragraph (b)(2) of this section is not available with respect to a particular limited partner shall not affect the availability of that paragraph with respect to any other limited partner otherwise complying with paragraph (b)(2) of this section.

(c) Any person relying on this rule shall not be deemed to be holding itself out generally to the public as an investment adviser, within the meaning of section 203(b)(3), solely because it participates in a non-public offering of limited partnership interests under the Securities Act of 1933.

By the Commission.

Dated: July 12, 1985.

John Wheeler,

Secretary.

BILLING CODE 8010–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 173

[Docket No. 83F–0324]

Secondary Direct Food Additives Permitted in Food for Human Consumption

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of an aqueous dispersion of small particle-size chloromethylated aminated styrene-divinylbenzene resins for treatment of sugar solutions. This action responds to a petition filed by Rohm and Haas Co.

DATES: Effective July 18, 1985; objections by August 19, 1985.

ADDRESS: Written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Andrew D. Laumbach, Center for Food Safety and Applied Nutrition (HFF–334), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–472–5690.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of October 31, 1983 (48 FR 50170), FDA announced that a petition (FAP 3A3751) had been filed by Rohm and Haas Co., Independence Mall West, Philadelphia, PA 19105, proposing that Part 173 (21 CFR Part 173) of the food additive regulations be amended to provide for the safe use of an aqueous dispersion of small particle-size chloromethylated aminated styrene-divinyl-benzene resins for treatment of sugar solutions.

FDA has evaluated data in the petition and other relevant material and concludes that the proposed food additive use is safe and that the regulations should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition (address above) by appointment with the information contact person listed above. As provided in 21 CFR 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has carefully considered the potential environmental effects of this action and has concluded that the action will not have a significant impact on the human environment and that an environmental impact statement is not required. The agency's finding of no significant impact and the evidence supporting that finding may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday. FDA's regulations implementing the National Environmental Policy Act (21 CFR Part 25) have been replaced by a rule published in the **Federal Register** of April 26, 1985 (50 FR 16636, effective July 25, 1985). Under the new rule, an action of this type would require an environmental assessment under 21 CFR 25.31a(a).

Any person who will be adversely affected by this regulation may at any time on or before August 19, 1985 submit to the Dockets Management Branch (address above) written objections thereto and may make a written request for a public hearing on the stated objections. Each objection shall be separately numbered and each numbered objection shall specify with particularity the provision of the regulation to which objection is made. Each numbered objection on which a hearing is requested shall specifically so state; failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held; failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this regulation. Received objections may be seen in the office above between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 173

Food additives, Food processing aids.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, Part 173 is amended as follows:

PART 173—SECONDARY DIRECT FOOD ADDITIVES PERMITTED IN FOOD FOR HUMAN CONSUMPTION

1. The authority citation for Part 173 is revised to read as follows:

Authority: Secs. 201(s), 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348); 21 CFR 5.10.

2. In Subpart A by adding new § 173.70 to read as follows:

§ 173.70 Chloromethylated aminated styrene-divinylbenzene resin.

Chloromethylated aminated styrene-divinylbenzene copolymer (CAS Reg. No. 60177–39–1) may be safely used in food in accordance with the following prescribed conditions:

(a) The additive is an aqueous dispersion of styrene-divinylbenzene copolymers, first chloromethylated then aminated with trimethylamine, having an average particle size of not more than 2.0 microns.

(b) The additive shall contain no more than 3.0 percent nonvolatile, soluble extractives when tested as follows: One hundred grams of the additive is centrifuged at 17,000 r/min for 2 hours. The resulting clear supernatant is removed from the compacted solids and concentrated to approximately 10 grams on a steam bath. The 10-gram sample is again centrifuged at 17,000 r/min for 2 hours to remove any residual insoluble material. The supernatant from the second centrifugation is then removed from any compacted solids and dried to constant residual weight using a steam bath. The percent nonvolatile solubles is obtained by dividing the weight of the dried residue by the weight of the solids in the original resin dispersion.

(c) The additive is used as a decolorizing and clarification agent for treatment of refinery sugar liquors and juices at levels not to exceed 500 parts of additive solids per million parts of sugar solids.

Dated: July 11, 1985.

Joseph P. Hile,

Associate Commissioner for Regulatory Affairs.

staffing system, and safety and health posters for private and public

VOL 50 ISS 138 JL 18 1985 UMI

EFFECTIVE DATE: October 1, 1983.

FOR FURTHER INFORMATION CONTACT: Richard A. Torbik, Office of Highway Planning, Program Management Division, 202–426–0233, or Michael J. Laska, Office of the Chief Counsel, 202–426–0762, Federal Highway Administration, 400 Seventh Street, SW., Washington, DC 20590. Office hours are from 7:45 a.m. to 4:15 p.m., ET, Monday through Friday.

SUPPLEMENTARY INFORMATION: The provisions contained in 23 CFR Part 825 were issued to prescribe procedures for States to follow when applying for funds under the section 18 program for public transportation in rural and small urban areas (Section 313 of the Surface Transportation Assistance Act of 1978, Pub. L. 95–599, 92 Stat. 2748). The Secretary of Transportation transferred the responsibility for administering this program from the FHWA to UMTA on October 1, 1983. To accommodate UMTA's administrative structure and to streamline the application and assurance requirements, UMTA issued new procedures. (Section 18 Program Guidelines and Grant Application Instructions, 9040.1, September 26, 1983). For this reason, Part 825 is no longer operative, and is, therefore, rescinded.

The FHWA has determined that this document contains neither a major rule under Executive Order 12291 nor a significant regulation under the regulatory policies and procedures of the Department of Transportation. No economic impacts are anticipated as a result of this action. Accordingly, a full regulatory evaluation is not required.

For the reasons stated above, the FHWA finds goods cause to rescind the regulation contained in 23 CFR Part 825 without notice and opportunity for comment and without a 30-day delay in effective date required under the Administrative Procedure Act since public comment is impracticable and unnecessary. In addition, notice and opportunity for comment are not required under the regulatory policies and procedures of the Department of Transportation because it is not anticipated that such action would result in the receipt of useful information.

PART 825—PUBLIC TRANSPORTATION FOR NONURBANIZED AREAS—[REMOVED]

In consideration of the foregoing, the FHWA hereby removes Part 825 "Public Transportation Program for Nonurbanized Areas" from Title 23, Code of Federal Regulations.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research, Planning, and Construction. The regulations implementing Executive Order 12373 regarding intergovernmental consultation on Federal programs and activities apply to this program)

Occupational Safety and Health Administration

29 CFR Part 1952

[Docket No. T–010]

Maryland State Plan; Approval of Revised Compliance Staffing Benchmarks and Final Approval Determination

AGENCY: Department of Labor, Occupational Safety and Health Administration (OSHA).

ACTION: Approval of revised compliance staffing benchmarks and final State plan approval.

SUMMARY: This document amends Subpart O of 29 CFR Part 1952 to reflect the Assistant Secretary's decision approving revised compliance staffing requirements and granting final approval to the Maryland State plan. As a result of this affirmative determination under section 18(e) of the Occupational Safety and Health Act of 1970, Federal OSHA standards and enforcement authority no longer apply to occupational safety and health issues covered by the Maryland plan, and authority for Federal concurrent jurisdiction is relinquished. Federal enforcement jurisdiction is retained over maritime employment in the private sector and employment on military bases. Federal jurisdiction remains in effect with respect to Federal Government employers and employees.

EFFECTIVE DATE: July 18, 1985.

FOR FURTHER INFORMATION CONTACT: James Foster, Director, Office of Information and Consumer Affairs, Occupational Safety and Health Administration, U.S. Department of Labor, Room N–3637, 200 Constitution Avenue, NW., Washington, D.C. 20210. Telephone (202) 523–8148.

SUPPLEMENTARY INFORMATION:

Introduction

Section 18 of the Occupational Safety and Health Act of 1970 (the "Act") provides that States which desire to assume responsibility for the development and enforcement of occupational safety and health standards may do so by submitting, and obtaining Federal approval of, a State plan. Procedures for State plan submission and approval are set forth in regulations at 29 CFR Part 1902. If the Assistant Secretary, applying the criteria set forth in section 18(c) of the Act and 29 CFR 1902.3 and 1902.4, finds that the plan provides or will provide for State standards and enforcement which are "at least as effective" as Federal standards and enforcement, initial approval is granted.

A State may commence operations under its plan after this determination is made, but the Assistant Secretary retains discretionary Federal enforcement authority during the initial approval period as provided by section 18(e) of the Act. A State plan may receive initial approval even though, upon submission, it does not fully meet the criteria set forth in 29 CFR 1902.3 and .4 if it includes satisfactory assurance by the State that it will take the necessary "developmental steps" to meet the criteria within a 3-year period. 29 CFR 1902.2(b). The Assistant Secretary publishes a notice of "certification of completion of developmental steps" when all of a State's developmental commitments have been satisfactorily met. 29 CFR 1902.34.

When a State plan that has been granted initial approval is developed sufficiently to warrant a suspension of concurrent Federal enforcement activity, it becomes eligible to enter into an "operational status agreement" with OSHA. 29 CFR 1954.3(f). A State must have enacted its enabling legislation, promulgated State standards, achieved an adequate level of qualified personnel, and established a system for review of contested enforcement actions. Under these voluntary agreements, concurrent Federal enforcement will not be initiated with regard to Federal occupational safety and health standards in those issues covered by the State plan, where the State program is providing an acceptable level of protection.

Following the initial approval of a complete plan, or the certification of a developmental plan, the Assistant Secretary must monitor and evaluate actual operations under the plan for a

period of at least one year to determine, on the basis of actual operations under the plan, whether the criteria set forth in section 18(c) of the Act and 29 CFR 1902.3, 1902.4 and 1902.37 are being applied. An affirmative determination under section 18(e) of the Act (usually referred to as "final approval" of the State plan) results in the relinquishment of authority for Federal concurrent jurisdiction in the State with respect to occupational safety and health issues covered by the plan. 29 U.S.C. 667(e).

An additional requirement for final approval consideration is that a State must meet the compliance staffing levels, or benchmarks, for safety and health compliance officers established by OSHA for that State. This requirement stems from a 1978 Court Order by the U.S. District Court for the District of Columbia (*AFL–CIO* v. *Marshall*, C.A. No. 74–406), pursuant to a U.S. Court of Appeals decision, that directed the Assistant Secretary to calculate for each State plan State the number of enforcement personnel needed to assure a "fully effective" enforcement program.

History of the Maryland Plan and its Compliance Staffing Benchmarks

Maryland Plan

On November 30, 1972, Maryland submitted occupational safety and health plan in accordance with section 18(b) of the Act and 29 CFR Part 1902, Subpart C, and on January 22, 1973, a notice was published in the **Federal Register** (38 FR 2188) concerning submission of the plan, announcing that initial Federal approval was at issue and offering interested persons an opportunity to submit data, views and arguments concerning the plan. Comments were received from the AFL–CIO and the Construction Industry Safety Advisory Committee. In response to these comments, as well as to OSHA's review of the plan submission, the State made changes in its plan which were discussed in the notice of initial approval. On July 5, 1973, the Assistant Secretary published a notice granting initial approval of the Maryland plan as a developmental plan under section 18(b) of the Act (38 FR 17834). The plan provides for a program patterned in most respects after that of the Federal Occupational Safety and Health Administration.

The Commissioner of the Maryland Division of Labor and Industry is designated as having responsibility for administering the plan throughout the State. The plan provides for the adoption by Maryland of standards which are at least as effective as Federal occupational safety and health standards, including emergency temporary standards. The plan requires employers to do everything necessary to protect the life, safety and health of employees and to comply with all occupational safety and health standards promulgated by the agency. Employees are likewise required to comply with standards applicable to their conduct. The plan contains provisions similar to Federal procedures for, among others, imminent danger proceedings, variances, safeguards to protect trade secrets, and employer and employee rights to participate in inspection and review proceedings. Appeals of citations, penalties and abatement periods are heard by a hearing examiner, whose decision may be reviewed by the Commissioner of Labor and Industry. Decisions of the Commissioner may be appealed to the appropriate State circuit court.

The notice of initial approval noted a few distinctions between the Federal and Maryland programs. The State does not cover private sector maritime employment or employment on military bases. Unlike the Federal Act, citations and penalties under the Maryland plan are first reviewed by the agency with overall responsibility for administering the plan rather than an independent agency. However, those decisions are subject to review by the appropriate circuit courts.

The Assistant Secretary's initial approval of the Maryland developmental plan, a general description of the plan, a schedule of required developmental steps and a provision for discretionary concurrent Federal enforcement during the period of initial approval were codified in the Code of Federal Regulations (29 CFR Part 1952, Subpart O; 38 FR 17834 (July 5, 1973)).

In accordance with the State's developmental schedule, all major structural components of the plan were put in place and appropriate documentation submitted for OSHA approval during the three-year period ending July 5, 1976. These "developmental steps" included amendments to the Maryland Occupational Safety and Health Law, promulgation of State occupational safety and health standards and program regulations, and development of a public employee program. In completing these developmental steps, the State developed and submitted for Federal approval all components of its enforcement program including, among other things, field operations manuals, management information system, merit staffing system, and safety and health posters for private and public employees.

These submissions were carefully reviewed by OSHA; after opportunity for public comment and modification of State submissions, where appropriate, the major plan elements were approved by the Assistant Secretary as meeting the criteria of section 18 of the Act and 29 CFR 1902.3 and 1902.4. The Maryland subpart of 29 CFR 1952 was amended to reflect each of these approval determinations (see 29 CFR 1952.214).

On August 16, 1976, OSHA entered into an operational status agreement with the State of Maryland. Under the terms of that agreement, OSHA voluntarily suspended the application of concurrent Federal enforcement authority with regard to Federal occupational safety and health standards in all issues covered by the Maryland plan.

On February 15, 1980, in accordance with procedures at 29 CFR 1902.34 and 1902.35, the Assistant Secretary certified that Maryland had satisfactorily completed all developmental steps (45 FR 10335). In certifying the plan, the Assistant Secretary found the structural features of the program—the statute, standards, regulations, and written procedures for administering the plan—to be at least as effective as corresponding Federal provisions. Certification does not entail findings or conclusions by OSHA concerning adequacy of actual plan performance. As has already been noted, OSHA regulations provide that certification initiates a period of evaluation and monitoring of State activity to determine, in accordance with section 18(e) of the Act, whether the statutory and regulatory criteria for State plans are being applied in actual operations under the plan and whether final approval should be granted.

Maryland Benchmarks

In 1978, the Assistant Secretary was directed by the U.S. District Court for the District of Columbia (*AFL–CIO* v. *Marshall*, C.A. No. 74–406), pursuant to a U.S. Court of Appeals decision, to calculate for each State plan the number of enforcement personnel (compliance staffing benchmarks) needed to assure a "fully effective" enforcement program. In 1980, OSHA submitted a Report to the Court containing the benchmarks and requiring Maryland to allocate 30 safety compliance officers and 43 industrial hygienists to conduct inspections under the plan.

Pursuant to the initiative begun in August 1983 by the State plan designees as a group with OSHA and in accord

Pursuant to the initiative begun in August 1983 by the State plan designees as a group with OSHA and in accord with the formula and general principles established by that group for individual State revision of the benchmarks, Maryland reassessed the staffing necessary for a "fully effective" occupational safety and health program in the State. In September 1984 Maryland in conjunction with OSHA completed a review of the components and requirements of the 1980 compliance staffing benchmarks established for Maryland. This reassessment resulted in a proposal to OSHA of a revised compliance staffing benchmark of 36 safety and 18 health compliance officers.

History of the Present Proceedings

Procedures for final approval of State plans are set forth at 29 CFR Part 1902, Subpart D. On January 16, 1985, the Occupational Safety and Health Administration published notice of its proposal to approve revised compliance staffing benchmarks for Maryland and the resultant eligibility of the Maryland State plan for determination under section 18(e) of the Act as to whether final approval of the plan should be granted (50 FR 2460). The determination of eligibility was based on monitoring of State operations for at least one year following certification, State participation in the Federal-State Unified Management Information System, and staffing which meets the proposed revised State staffing benchmarks.

The January 16 **Federal Register** notice set forth a general description of the Maryland plan and summarized the results of Federal OSHA monitoring of State operations during the period from October 1982 through March 1984. In addition to the information set forth in the notice itself, OSHA submitted, as part of the record in this rulemaking proceeding, extensive and detailed exhibits documenting the plan, including copies of the State legislation, administrative regulations and procedural manuals under which Maryland operates its plan, and copies of all previous **Federal Register** notices regarding the plan.

A copy of the October 1982—March 1984 Evaluation Report of the Maryland plan ("18(e) Evaluation Report"), which was extensively summarized in the January 16 proposal and which provided the principal factual basis for the proposed 18(e) determination, was included in the record (Ex. 2–10). Copies of all OSHA evaluation reports on the plan since its certification as having completed all developmental steps were made part of the record.

The January 16 **Federal Register** also contained notice of the Occupational Safety and Health Administration's proposal to approve revised compliance staffing benchmarks for Maryland. A detailed description of the methodology and State-specific information used to develop the revised compliance staffing benchmarks for Maryland was included in the notice. In addition, OSHA submitted, as a part of the record (Docket No. T–010), Maryland's detailed submission containing both a narrative explanation and supporting data. A summary of the benchmark revision process was likewise set forth in a separate **Federal Register** notice on January 16, 1985, concerning the Wyoming State plan (50 FR 2491). An informational record was established in a separate docket (No. T–018) and contained background information relevant to the benchmark issue in general and the current benchmark revision process.

To assist and encourage public participation in the benchmark revision process and 18(e) determination, copies of the complete record were maintained in the OSHA Docket Office in Washington, D.C., in the OSHA Region III Office in Philadelphia, Pennsylvania, and the office of the Maryland Division of Labor and Industry in Baltimore. Summaries of the January 16 proposal, with an invitation for public comments, were published in Maryland on January 26 and February 1, 1985 (Ex. 4).

The January 16 proposal invited interested persons to submit, by February 20 (subsequently extended to March 22, 1985, 50 FR 6956, in response to a request from James N. Ellenberger, Department of Occupational Safety, Health and Social Security, AFL–CIO) written comments and views regarding the Maryland plan, whether the proposed revised compliance staffing benchmarks should be approved, and whether final approval should be granted. Opportunity to request an informal public hearing on the issue of final approval was likewise provided. Three comments were received in response to these notices. All three comments were from organized labor. No requests for an informal hearing were received.

Summary and Evaluation of Comments Received

During this proposed rulemaking OSHA has encouraged interested members of the public to provide information and views regarding operations under the Maryland plan, to supplement the information already gathered during OSHA monitoring and evaluation of plan administration and regarding the proposed revised compliance staffing benchmarks for Maryland.

In response to the January **Federal Register** notice, OSHA received comments from the United Steelworkers of America (District No. 8), David Wilson, Director (Ex. 3–2); the American Federation of Labor and Congress of Industrial Organizations (AFL–CIO), Margaret Seminario, Associate Director, Department of Occupational Safety, Health and Social Security (Ex. 3–3); and the United Steelworkers of America, AFL–CIO (USWA), Mary Win O'Brien, Assistant General Counsel (Ex. 3–4). Commissioner of the Maryland Division of Labor and Industry, Dominic N. Fornaro, responded to the public comments (Ex. 3–5).

David Wilson, Director of District No. 8 of the United Steelworkers of America, expressed support for final approval of the Maryland occupational safety and health program and praised the program's commitment to occupational health and its cooperative working relationship. However, Mr. Wilson also expressed concern that the State's benchmark calculation did not provide for routine inspections of worksites with fewer than 10 employees in non-manufacturing and other industry groups. He expressed the belief that a reduction in staff could affect the program's efficiency and effectiveness. It should be noted that Maryland's revised benchmarks do not propose a reduction in actual staffing, but merely a reduction in the unrealistic staffing goals set for the program in 1980.

The United Steelworkers of America commented extentively on the benchmark revision process, with particular reference to Maryland's proposed revision, and therefore opposed the granting of final approval to any State.

The AFL–CIO indicated opposition to approval of the proposed revised benchmarks for Maryland and therefore opposed the granting of final State plan approval. Some of the AFL–CIO's comments were directed toward OSHA's system for monitoring and evaluation of State plans and the requirements that a State must meet to be eligible for final approval.

The evaluation of the Maryland plan was conducted in accordance with OSHA's new State plan monitoring and evaluation system. This system uses statistical data to compare Federal and State performance on a number of criteria, or measures. Significant differences between the two are evaluated to determine whether these differences, viewed within the framework of overall State plan administration, detract from the State's effectiveness and potentially render it less effective than the Federal program.

The AFL–CIO expressed concern that Federal OSHA's monitoring system with its reliance on statistical indicators fails to accurately reflect the overall conduct of the State program and tries to limit those areas of State performance which exceed OSHA's enforcement efforts in several areas. However, OSHA never intended that superior performance would result in any negative conclusion. Statistical outliers display differences, not necessarily deficiencies. If further review related to an outlier determines stronger State performance, clearly no negative determination will be made.

The AFL–CIO also commented on specific State performance issues. These comments are addressed in the appropriate sections of the Findings and conclusions portion of this notice. The Maryland State designee, Dominic N. Fornaro, responded to the concerns expressed by the AFL–CIO and the United Steelworkers on both the benchmark issue and State-specific performance (Ex. 3–5).

Comments by the AFL–CIO and Steelworkers addressing the proposed revised benchmarks for Maryland reflected for the most part the commenters' concerns regarding the benchmark revision process generally. Thus, the comments question whether the benchmarks formula as applied in Maryland should have assumed a need for routine, general schedule inspections at all covered workplaces; whether the proposed staffing levels will be sufficient to respond to new hazards or future standards; and question the appropriateness of the inclusion or exclusion of various industry groups in Maryland's general inspection universe unless corresponding industries are treated identically in other States. As was specifically discussed in the **Federal Register** notice of June 13, 1985, dealing with approval of revised benchmarks for the Kentucky State plan (50 FR 24884), the concept of universal general schedule coverage has been replaced by more sophisticated targeting systems which deploy enforcement resources where they are most needed, and universal coverage is as inappropriate a concept for benchmarks formulation as it is for inspection scheduling. The possible effect of new hazards or future standards cannot be ascertained with any precision, and in any case both OSHA and the States have generally been able to effectively enforce new standards with no additions to staff for that purpose. As to the need for "uniformity," OSHA believes the greatest strength of the current formula is that it takes into account actual State program needs as shown by State data and experience. OSHA has found that the formula used to derive benchmarks for Maryland and other States involved in the 1984 revision process employs the best information and techniques currently available, properly takes into account each of the factors set forth in the District Court Order in *AFL–CIO* v. *Marshall*, and is an appropriate means of establishing fully effective benchmarks which provide proper program coverage in the context of each State's specific program needs. A more detailed discussion of the general concerns raised by the AFL–CIO and the Steelworkers can be found in the June 13, 1985, **Federal Register** notice on Kentucky.

The comments filed by the AFL–CIO also addressed several specific issues relating to calculation of the benchmarks for Maryland. The union commented that although Maryland added both hazardous non-manufacturing and small high hazard establishments to its initial safety inspection universe, the specific Standard Industrial Classification (SICs) added were not identified. Rather than specifying the number of establishments in each industry group to be added, Maryland added a percentage of all non-manufacturing establishments based on the degree of hazardousness (proportion of not-in-compliance inspections) found during State inspections. For example, historically State inspections in SICs 52–59 produced 40% of the total number of not-in-compliance inspections in all non-manufacturing SICs. Therefore, provision is made in the benchmark estimates for staffing sufficient to inspect 40% of these establishments biennially.

It must be remembered that assumptions made in determining a State's theoretical workload for benchmark purposes are not binding on the State in scheduling specific employers for an enforcement visit. The initial universe is not in itself a targeting system but rather a method for determining a reasonable estimate of workplaces with industrial exposures likely to produce hazards. The same principles and methodology were used for estimating the proportion of workload to be devoted to small high hazard establishments. As the State indicated in its response, benchmark estimates do not intend that "inspections won't be done in these areas" (Ex. 3–5).

The AFL–CIO also objected to the State's exclusion of firms in low rate industries but with high hazard experience, regardless of size, and stated that any firm with a lost workday case incidence rate (LWCIR) higher than the State average should be included in the State's inspection universe. As the AFL–CIO is aware, BLS injury/illness incidence rates are not available on an establishment level basis. As an alternative, Maryland conducted a full analysis of its establishment inspection history and found that there was no incidence of significantly high violation rates in any of the low rate SICs. The State reasonably determined that the comparatively lower likelihood of identifying and correcting violations in this group of establishments did not justify inclusion in the universe of general schedule inspections. All such worksites will receive coverage in response to complaints and accidents.

Both the AFL–CIO and the Steelworkers expressed concern that the State has not allocated general schedule health inspection resources to many industries with serious health hazards, such as meat packing, auto repair, secondary non-ferrous metals, and hospitals. Most of the industries listed by the AFL–CIO are already included in the State's safety inspection universe and would receive wall-to-wall inspection coverage by safety compliance personnel cross-trained in the recognition of health hazards. Where complex health hazards are identified, a health inspection would result. Moreover, in these industry groups, as in all workplaces covered by the Maryland plan, the State responds to employee complaints of unsafe or unhealthful conditions. OSHA concurs that inclusion of these industries in the initial health universe is not required for proper program coverage.

The AFL–CIO asserted that Maryland's allocation of enforcement resources to health inspections in the public sector and the construction industry, which the State based on past experience, is inadequate. The State responded that its experience reflects the State's concerns regarding health hazards in the construction industry and the public sector. Maryland devotes a high percentage (21.8%) of its health inspection resources to construction and has promulgated a unique standard regarding lead in construction. The State also devotes 7% of its health inspection resources to the public sector and has instituted a Public Sector Asbestos Program.

Finally, both the AFL–CIO and the Steelworkers allege that the number of

enforcement personnel now found appropriate for a fully effective program

benchmarks and supporting documentation and carefully considered

In order to qualify for final State plan approval, a State program must be found

1902.37(b)(6)); temporary variances granted must assure compliance as early

enforcement personnel now found appropriate for a fully effective program in Maryland and other States is lower than the staffing levels allocated by the States in 1980 or projected in the benchmarks issued by OSHA during its first effort to implement the *AFL–CIO* v. *Marshall* Court Order in 1980. (It should be noted that Maryland's proposed revised safety benchmark is actually higher than the 1980 estimate.) However, the District Court Order on which the revision process has been based does not assume or require that revised benchmarks must provide a comparative increase over past levels. The adequacy of the revised benchmarks cannot be determined by whether they are greater or smaller than the 1980 benchmarks or earlier enforcement levels. Such direct numerical comparison of staffing levels is no more valid than was the direct comparison of State to Federal staffing levels under the "at least as effective" test rejected by the Court of Appeals in 1978. The objective assigned to OSHA by the Court of Appeals decision and District Court order was, in sum, to measure the workload assumed by each State under its plan and to determine, using the best available information and techniques but avoiding direct numerical comparison, the staffing levels needed for fully effective coverage. This is precisely what has been done in the present revision process. The review of each State's illness and injury data, industrial mix, demographics and enforcement history has been far more detailed than was the case when benchmarks were first issued in 1980. As discussed above, the concept of universal routine inspections has been replaced by far more sophisticated targeting, devoting resources to the relative minority of industries where the majority of enforcement preventable injuries occur. These factors have resulted in the more realistic enforcement staffing requirements embodied in the revised benchmarks for Maryland.

For these reasons, OSHA believes application of the current benchmark formula for Maryland has resulted in staffing levels which result in fully effective enforcement in the State of Maryland.

Findings and Conclusions

Maryland Benchmarks

As provided in the 1978 Court Order in *AFL–CIO* v. *Marshall*, Maryland, in conjunction with OSHA, has undertaken to revise the compliance staffing benchmarks originally established in 1980 for Maryland. OSHA has reviewed the State's proposed revised benchmarks and supporting documentation and carefully considered the public comments received with regard to this proposal, and determined that compliance staffing levels of 36 safety and 18 health compliance officers meet the requirements of the Court and provide staff sufficient to ensure a fully effective enforcement program.

Maryland Final Approval

As required by 29 CFR 1902.41, in considering the granting of final approval to a State plan, OSHA has carefully and thoroughly reviewed all information available to it on the actual operation of the Maryland State plan. This information has included all previous evaluation findings since certification of completion of the State plan's developmental steps, especially data for the period of October 1982 through March 1984 and information presented in written submissions. Findings and conclusions in each of the areas of performance are as follows.

(1) *Standards.* Section 18(c)(2) of the Act requires State plans to provide for occupational safety and health standards which are at least as effective as Federal standards. Such standards where not identical to the Federal must be promulgated through a procedure allowing for consideration of all pertinent factual information and participation of all interested persons (29 CFR 1902.4(b)(2)(iii)); must, where dealing with toxic materials or harmful physical agents, assure employee protection throughout his or her working life (29 CFR 1902.4(b)(2)(i)); must provide for furnishing employees appropriate information regarding hazards in the workplace through labels, posting, medical examinations, etc. (29 CFR 1902.4(b)(2)(vi)); must require suitable protective equipment, technological control, monitoring, etc. (29 CFR 1902.4(b)(2)(vii)); and where applicable to a product must be required by compelling local conditions and not pose an undue burden on interstate commerce (29 CFR 1902.3(c)(2)).

As documented in the approved Maryland State plan and OSHA's evaluation findings made a part of the record in this 18(e) determination proceeding, and as discussed in the January 16 notice, the Maryland plan provides for the adoption of standards and amendments thereto which are identical to or at least as effective as Federal standards. The State's law and regulations, previously approved by OSHA and made a part of the record in this proceeding (Exs. 2–2 and 2–3), include provisions addressing all of the structural requirements for State standards set out in 29 CFR Part 1902.

In order to qualify for final State plan approval, a State program must be found to have adhered to its approved procedures (29 CFR 1902.37(b)(2)); to have timely adopted identical or at least as effective standards, including emergency temporary standards and standards amendments (29 CFR 1902.37(b)(3)); to have interpreted its standards in a manner consistent with Federal interpretations and thus to demonstrate that in actual operation State standards are at least as effective as the Federal (29 CFR 1902.37(b)(4)); and to correct any deficiencies resulting from administrative or judicial challenge of State standards (29 CFR 1902.37(b)(5)).

As noted in the "18(e) Evaluation Report" and summarized in the January 16, 1985 **Federal Register** notice, Maryland has generally adopted standards which are identical to Federal standards and additionally has adopted State standards for conditions, not covered by Federal standards, such as confined spaces, kepone, and lead in construction. The Maryland General Assembly enacted and subsequently amended, in response to OSHA comments, legislation on hazard communication which is comparable to the Federal standard.

When a State adopts Federal standards, the State's interpretation and application of such standards must ensure consistency with Federal interpretation and application. Maryland also adopts standards interpretations which are identical to the Federal. OSHA's monitoring has found that the State's application of its standards is comparable to Federal standards application. No challenges to standards have occurred in Maryland.

Therefore, in accordance with section 18(c)(2) of the Act and the pertinent provisions of 29 CFR 1902.3, 1902.4 and 1902.37, OSHA finds the Maryland program in actual operation to provide for standards adoption, correction when found deficient, interpretation and application, in a manner at least as effective as the Federal program.

(2) *Variances.* A State plan is expected to have the authority and procedures for the granting of variances comparable to those in the Federal program (29 CFR 1902.4(b)(2)(iv)). The Maryland State plan contains such provisions in both law and regulations which have been previously approved by OSHA. In order to qualify for final State plan approval permanent variances granted must assure employment equally as safe and healthful as would be provided by compliance with the standard (29 CFR

1902.37(b)(6)); temporary variances granted must assure compliance as early as possible and provide appropriate interim employee protection (29 CFR 1902.37(b)(7)). As noted in the 18(e) Evaluation Report and the January 16 notice, the one permanent variance granted by the Maryland plan was deemed to provide equivalent protection. No temporary variances were requested during this evaluation period [Evaluation Report, p. 5]. However, past years' experience indicates that the State's procedures were properly applied when granting permanent and temporary variances.

Accordingly, OSHA finds that the Maryland program effectively grants variances from its occupational safety and health standards.

(3) *Enforcement.* Section 18(c)(2) of the Act and 29 CFR 1902.3(d)(1) require a State program to provide a program for enforcement of State standards which is and will continue to be at least as effective in providing safe and healthful employment and places of employment as the Federal program. The State must require employer and employee compliance with all applicable standards, rules and orders (29 CFR 1902.3(d)(2)) and must have the legal authority for standards enforcement including compulsory process (29 CFR 1902.4(c)(2)).

The Maryland Occupational Safety and Health Law (Annotated Code of Maryland, Article 89, Sections 28–49D) and implementing regulations previously approved by OSHA establish employer and employee compliance responsibility and contain legal authority for standards enforcement in terms substantially identical to those in the Federal Act. In order to be qualified for final approval, the State must have adhered to all approved procedures adopted to ensure an at least as effective compliance program (29 CFR 1902.37(b)(2)). The "18(e) Evaluation Report" data show no lack of adherence to such procedures.

(a) *Inspections.* A plan must provide for inspection of covered workplaces, including in response to complaints, where there are reasonable grounds to believe a hazard exists (29 CFR 1902.4(c)(2)(i)). As noted in the January 16, 1985 **Federal Register** notice, Maryland follows a policy of responding to all employee complaints by conducting inspections. Data contained in the 18(e) Evaluation Report indicates that 57.6% of the safety complaints and 53.2% of the health complaints resulted in inspections (Evaluation Report, p. 14). The AFL–CIO in its written comments alleged that the State had insufficient staff to adequately respond to complaints, citing the fact that the Evaluation Report showed that only 27.4% of the complaints alleging serious violations were responded to within five days (Ex. 3–3). The Report explained that the low percentage of complaints responded to in a timely manner was caused by the State's having incorrectly classified a large number of complaints as serious. Had the complaints been correctly classified as other-than-serious, all serious complaints would have been responded to in a timely manner. In its response, the State reports that it has improved its implementation of complaint handling procedures and that the timeliness of its response to complaints is now comparable to Federal performance (Ex. 3–6).

In order to qualify for final approval, the State program, as implemented, must allocate sufficient resources toward high-hazard workplaces while providing adequate attention to other covered workplaces (29 CFR 1902.37(b)(8)). The 18(e) Evaluation Report indicates that 90.9% of State programmed safety and 97.2% of programmed health (general schedule) inspections during October 1982 through March 1984 were conducted in high-hazard industries which compares favorably with Federal performance. During the evaluation period Maryland utilized a high-hazard list to schedule programmed inspections, as does OSHA. Maryland supplements its safety lists with information from injury reports and prior establishment history data. The State does not conduct records inspections.

(b) *Employee Notice and Participation in Inspections.* In conducting inspections the State plan must provide an opportunity for employees and their representatives to point out possible violations through such means as employee accompaniment or interviews with employees (29 CFR 1902.4(c)(2)(ii)). The State's procedures require compliance officers to provide this opportunity. The 18(e) Evaluation Report indicates that employee representatives accompanied Maryland's compliance officers in 5% of the State's initial inspections (Evaluation Report, p. 18). There was no data available on the number of employees interviewed. However, previous evaluation reports show that the State utilizes employee interviews extensively and OSHA has concluded that employee representation is properly provided in State inspections.

In addition, the State plan must provide that employees be informed of their protections and obligations under the Act by such means as the posting of notices, (29 CFR 1902.4(c)(2)(iv)) and provide that employees have access to information on their exposure to regulated agents and access to records of the monitoring of their exposure to such agents (29 CFR 1902.4(c)(vi)).

To inform employees and employers of their protections and obligations, Maryland requires that a poster, which was previously approved by OSHA (40 FR 25207) for employers in the private sector and a separate poster for State and local government employers, be displayed in all covered workplaces. Requirements for the posting of the poster and other notices such as citations, contests, hearings and variance applications, are set forth in the previously approved State law and regulations which are substantially identical to Federal requirements. Information on employee exposure to regulated agents and access to medical and monitoring records is provided through State standards, including the Access to Employee Exposure and Medical Records standard. Federal OSHA evaluation concluded that the State performance is satisfactory.

(c) *Nondiscrimination.* A State is expected to provide appropriate protection to employees against discharge or discrimination for exercising their rights under the State's program including provision for employer sanctions and employee confidentiality (29 CFR 1902.4(c)(2)(v)). The Maryland law and regulations provide for discrimination protection which is at least as effective as the Federal. The State received 14 complaints and investigated 10 complaints during the evaluation period. The State settled administratively the one complaint found meritorious. Average lapse time between receipt of a complaint and the notification to the complainant of the investigation results by the State was 117 days. The AFL–CIO commented that the State took more than 90 days to notify a complainant of the results of a discrimination investigation in 80% of the cases and that this contributed to the fact that only 10% of the discrimination complaints were found meritorious during the evaluation period (Ex. 3–3). The Evaluation Report noted that the delay in discrimination complaint response was attributable to delays within the Attorney General's office and that the problem had been resolved at the close of the evaluation period. The State response indicated that the State has reorganized its system for the investigation of discrimination cases and that newly opened discrimination cases are now being processed within 50 days (Ex. 3–5).

Further, the union provides no evidence of a correlation between the State's lapse time and the percentage of

procedures was found to be proper (Evaluation Report, p. 18).

The 18(e) Evaluation Report attributed the longer safety citation issuance time

reviewed by the Commissioner of Labor and Industry. The Commissioner's

and local government all case rate and 5.7 combined State and local

Standards for a Merit System of Personnel Administration by the U.S.

Further, the union provides no evidence of a correlation between the State's lapse time and the percentage of discrimination complaints found meritorious, a correlation OSHA finds irrelevant considering the nature of discrimination cases. Federal evaluation of the cases indicates that the State action was satisfactory (Evaluation Report, p. 25).

(d) *Restraint of Imminent Danger; Protection of Trade Secrets.* A State plan is required to provide for the prompt restraint of imminent danger situations, (29 CFR 1902.4(c)(2)(vii)) and to provide adequate safeguards for the protection of trade secrets (29 CFR 1902.4(c)(2)(viii)). The State has provisions concerning imminent danger and protection of trade secrets in its law, regulations and field operations manual which are similar to the Federal. The 18(e) Evaluation Report indicates that there were no problems with Maryland's imminent danger procedures. No Complaints About State Program Administration (CASPA's) have been received concerning trade secrets (Evaluation Report, p. 18).

(e) *Right of Entry; Advance Notice.* A State program is expected to have authority for right of entry to inspect and compulsory process to enforce such right equivalent to the Federal program (section 18(c)(3) of the Act and 29 CFR 1902.3(e)). Likewise, a State is expected to prohibit advance notice of inspection, allowing exception thereto no broader than in the Federal program (29 CFR 1902.3(f)). Section 35(a) of the Maryland Occupational Safety and Health Law authorizes the Commissioner of Labor and Industry to enter and inspect all covered workplaces in terms substantially indentical to those in the Federal Act. In addition, section 2A authorizes the Commissioner to petition the Maryland district courts for an order to permit entry into such establishments that have refused entry for the purpose of inspection or investigation. The Maryland law also prohibits advance notice, and implementing procedures for exceptions to this prohibition are substantially identical to the Federal.

In order to be found qualified for final approval, a State is expected to take action to enforce its right of entry when denied (29 CFR 1902.37(b)(9)) and to adhere to its advance notice procedures. The 18(e) Evaluation Report shows that Maryland received 24 denials of entry and warrants were obtained for 12 of these refusals. Entry was gained in the other 12 cases after negotiation with the employers. The 18(e) Evaluation Report shows that there was one instance of advance notice. The State's use of its procedures was found to be proper (Evaluation Report, p. 18).

(f) *Citations, Penalties, and Abatement.* A State plan is expected to have authority and procedures for promptly notifying employers and employees of violations identified during inspection, for the proposal of effective first-instance sanctions against employers found in violation of standards and for prompt employer notification of such penalities (29 CFR 1902.4(c)(2) (x) and (xi)). The Maryland plan through its law, regulations and field operations manual, which have all been previously approved by OSHA, has established a system similar to the Federal for prompt issuance of citations to employers delineating violations and establishing reasonable abatement periods requiring posting of such citations for employee information and proposing penalties.

In order to be qualified for final approval, the State, in actual operation, must be found to conduct competent inspections in accordance with approved procedures and to obtain adequate information to support resulting citations (29 CFR 1902.37(b)(10)), to issue citations, proposed penalties and failure-to-abate notifications in a timely manner (29 CFR 1902.37(b)(11)), to propose penalties for first instance violations that are at least as effective as those under the Federal program (29 CFR 1902.37(b)(12)), and to ensure abatement of hazards including issuance of failure to abate notices and appropriate penalties (29 CFR 1902.37(b)(13)). As discussed in the 18(e) Evaluation Report, the State finds an average of .8 violations per initial inspection. Additionally, data showed that the State percentage of not-in-compliance programmed inspections for safety (42.3%) was lower than Federal OSHA whereas health (49.5%) exceeded Federal OSHA (Evaluation Report, p. 12). The report attributed the lower averages primarily to the State's high safety penetration rate, with establishments on the State's high hazard safety list being inspected on an average of once every three years, and to the State's effective voluntary compliance program. In addition, monitoring has indicated that the State does effectively identify and cite violations, and that inspectors recognize and properly classify violations (Evaluation Report, p. 19).

The AFL–CIO's written comments suggest that a shortage of adequate staff is a factor in the State's longer lapse time from inspection to issuance of citation and proposed penalty (23 days for safety; 59 days for health) (Ex. 3–3). The 18(e) Evaluation Report attributed the longer safety citation issuance time to the fact that inspection reports are prepared in the State's four regional offices and all citations are issued from the Baltimore central office. Maryland in its written response agreed that the health citation issuance time was excessive and has implemented procedures whereby the State Attorney General's office no longer reviews most health cases prior to citation issuance (Ex. 3–5). Maryland concluded that although each of the aforementioned issues has some bearing on its lapse time, the size of its compliance staff, as purported by the AFL–CIO, has no significant bearing on this issue. The 18(e) Evaluation Report concludes that the States' overall performance relative to this area is satisfactory and as effective as the Federal OSHA program (p. 26).

Neither the data nor any comments suggest that the State has any problem in adequately documenting inspections to support citations.

During the 18(e) evaluation period penalty levels for serious violations were higher than Federal ($357 safety, $389 health). Maryland conducts a higher proportion of follow-up inspections than does Federal OSHA (14.4% of not-in-compliance inspections). Abatement periods are generally shorter than Federal (3 days for safety, 9.3 days for health). Maryland attempt to document abatement within 30 days for all serious, willful and repeat violations. The 18(e) Evaluation Report indicates acceptable performance (pp. 20–21).

(g) *Contested Cases.* In order to be considered for initial approval and certification, a State plan must have authority and procedures for employer contest of citations, penalties and abatement requirements at full administrative or judicial hearings. Employees must also have the right to contest abatement periods and the opportunity to participate as parties in all proceedings resulting from an employer's contest (29 CFR 1902.4(c)(2)(xii)). Maryland's procedures for contest of citations, penalties and abatement requirements and for ensuring employee rights are contained in the law, regulations and field operations manual made a part of the record in this proceeding. Unlike the Federal system of review, citations and penalties are first reviewed by the agency with overall responsibility for administering the plan rather than by an independent agency. Appeals of citations, penalties and abatement periods are first heard by a hearing examiner, whose decision may be reviewed by the Commissioner of Labor and Industry. The Commissioner's decision may be appealed to the appropriate circuit court. One hundred ninety-three (193) inspections resulted in contests during October 1982 through March 1984. OSHA evaluation of these cases supported the conclusion that the State's enforcement actions are adequately supported (Evaluation Report, p. 23).

To qualify for final approval, the State must seek review of any adverse adjudications and take action to correct any enforcement program deficiencies resulting from adverse administrative or judicial determinations (29 CFR 1902.37(b)(14)). The State had no adverse decisions which would require review or corrective astion. Accordingly, OSHA finds that the Maryland plan effectively reviews contested cases.

(h) *Enforcement Conclusion.* In summary, the Assistant Secretary finds that enforcement operations provided under the Maryland plan are competently planned and conducted, and are overall at least as effective as Federal OSHA enforcement.

(4) *Public Employee Program.* Section 18(c)(6) of the Act requires that a State which has an approved plan must maintain an effective and comprehensive occupational safety and health program applicable to all employees of public agencies of the State and its political subdivisions, which program must be as effective as the standards contained in an approved plan. 29 CFR 1902.3(j) requires that a State's program for public employees be as effective as the State's program for private employees covered by the plan.

Maryland's plan provides a program in the public sector which is comparable to that in the private sector, with the exception that the State does not propose penalties and that the State supplements its compliance personnel with Public Sector Self Inspectors (PSSI's). The PSSI's are employed by State agencies or political subdivisions and are empowered to conduct inspections of their employers. There are 30 PSSI's in the 24 State agencies or political subdivisions participating in the program. During the evaluation period, the State conducted 188 inspections in the public sector and cited 242 violations. The proportion of inspections dedicated to the public sector (5% of total inspections during the evaluation period) was considered appropriate to the needs of public employees (Evaluation Report, p. 8). Injury and illness rates in the public sector in Maryland are higher than those in the private sector (8.8 combined State and local government all case rate and 5.7 combined State and local government lost workday case rate in 1982). The Evaluation Report notes that the differences in the public and private sector rates are explained by the unique character of public employment as well as the lower number of hours worked in the public sector (p. 11). The AFL–CIO commented on the fact that the State's lost workday case rate for the private sector in higher than the State's private sector rate (Ex. 3–3). In its response the State noted that the public sector rate reflects correctional institutions, police, fire and mental hospitals, which have working conditions not comparable to the private sector, and that current safety and health standards do not address many of the unique conditions found in these workplaces (Ex. 3–5). In addition, the Evaluation Report notes that the Maryland public sector rates are somewhat inflated by the more liberal leave policies of State and local governments which may serve as incentive for claims of illness or injury (p. 10).

Because the State treats the public sector in a manner comparable to the private sector, as evidenced by its written procedures, which are applicable to all covered employees, public or private, and since monitoring indicates similar performance in the public and private sectors, OSHA concludes that the Maryland program meets the criterion in 29 CFR 1902.3(j).

(5) *Staffing and Resources.* Section 18(c)(4) of the Act requires State plans to provide the qualified personnel necessary for the enforcement of standards. In accordance with 29 CFR 1902.37(b)(1), one factor which OSHA must consider in evaluating a plan for final approval is whether the State has a sufficient number of adequately trained and competent personnel to discharge its responsibilities under the plan.

Maryland has committed itself to funding the State share of salaries for 42 safety inspectors and 19 health enforcement officers as evidenced by the FY 1984 Application for Federal Assistance (Ex. 2–6). In its subsequent FY 1985 application, the State has committed itself to the funding of 40 safety and 20 health enforcement officers. These compliance staffing levels exceed the revised benchmarks proposed for Maryland.

As noted in the Federal Register notice announcing certification of the completion of developmental steps for Maryland (45 FR 10335) all personnel under the plan meet civil service requirements under the State merit system, which was found to be in substantial conformity with the Standards for a Merit System of Personnel Administration by the U.S. Civil Service Commission.

The State provides continuing training for its staff. The 18(e) Evaluation Report noted that the State provided formal training for all professional employees (Evaluation Report, p. 8).

Because Maryland has allocated sufficient enforcement staff to meet the revised benchmarks for that State, and personnel are trained and competent, the requirements for final approval set forth in 29 CFR 1902.37(b)(1), and in the 1978 Court Order in *AFL–CIO* v. *Marshall*, supra, are being met by the Maryland plan.

Section 18(c)(5) of the Act requires that the State devote adequate funds to administration and enforcement of its standards. The Maryland plan was funded at $4,652,462 in FY 1984. (50% of the funds were provided by Federal OSHA and 50% were provided by the State.)

As noted in the Evaluation Report, Maryland's funding appears sufficient in absolute terms; moreover, the State compares favorably to Federal OSHA with respect to expenditures per covered employee (Evaluation Report, p. 27). On this basis, OSHA finds that Maryland has provided sufficient funding for the various activities carried out under the plan.

(6) *Records and Reports.* State plans must assure that employers in the State submit reports to the Secretary in the same manner as if the plan were not in effect (section 18(c)(7) of the Act and 29 CFR 1902.3(k)). The plan must also provide assurances that the designated agency will make such reports to the Secretary in such form and containing such information as he may from time to time require (section 18(c)(8) of the Act and 29 CFR 1902.3(1)).

Maryland's employer recordkeeping requirements are substantially identical to those of Federal OSHA, and the State participates in the BLS Annual Survey of Occupational Illnesses and Injuries. As noted in the January 16 proposal, the State participates and has assured its continuing participation with OSHA in the Federal-State Unified Management Information System as a means of providing reports on its activities to OSHA.

For the foregoing reasons, OSHA finds that Maryland has met the requirements of sections 18(c) (7) and (8) of the Act on employer and State reports to the Secretary.

(7) *Voluntary Compliance Program.* A State plan is required to undertake programs to encourage voluntary compliance by employers by such

means as conducting training and consultation with employers and

rates, OSHA finds a favorable comparison between Maryland's trends

provides that upon making this determination "the provisions of

In accordance with section 18(e), this determination relinquishes Federal

approval of the plan. The new paragraph

Signed at Washington, D.C., this 18th day

VOL 50 ISS 138 JL 18 1985 UMI

means as conducting training and consultation with employers and employees (29 CFR 1902.4(c)(2)(xiii)).

During the 18(e) evaluation period, Maryland provided training to 2420 employers and supervisors and 9500 employees. Of the employees trained, 27.4% were in high hazard industries (Evaluation Report, p. 8).

Maryland provides public sector on-site consultative services to employers under its approved State plan. During the 18(e) evaluation period, 118 public sector on-site consultative visits were conducted in Maryland. In the private sector, Maryland provides on-site consultative services to employers under a cooperative agreement with OSHA made pursuant to section 7(c)(1) of the Act and 29 CFR Part 1908.

Accordingly, OHSA finds that Maryland has established and is administering an effective voluntary compliance program.

(8) *Injury and Illness Statistics.* As a factor in its 18(e) determination, OSHA must consider the Bureau of Labor Statistics Annual Occupational Safety and Health Survey and other available Federal and State measurements of program impact on worker safety and health (29 CFR 1902.37(b)(15)). As noted in the 18(e) Evaluation Report, Maryland's injury and illness all case rate was lower than the Federal average while the State's lost workday case rate was higher than the Federal average. It should be noted, however, that this comparative difference existed at the time of the inception of the Maryland plan in 1973. The overall trend in worker safety and health injury and illness rates since the State began enforcement of its plan compares favorably to that under the Federal program. For example, from 1973 through 1982, the injury and illness all case rate declined 27.7% for all industry, and the lost workday rate for all industry declined 2.6%

The AFL–CIO's comments expressed concern regarding Maryland's higher injury and illness lost workday case rate (Ex. 3–3). The Evaluation Report noted that Maryland had an overall lost workday case rate of 3.7 in all industries which does slightly exceed the Federal rate. However, an overall decreasing trend is evident as noted above.

Maryland, in its response to the AFL–CIO's comments, noted that the difference between the State and Federal lost workday case rates was very small and not significant. In addition, the State pointed out that the State's average lost workdays per lost workday case (18) was almost identical to the Federal average.

Considering the State's overall substantial decline in injury and illness rates, OSHA finds a favorable comparison between Maryland's trends in injury and illness statistics and those in States with Federal enforcement.

Decision

OSHA has carefully reviewed the record developed during the above described proceedings, including all comments received thereon. The present **Federal Register** document sets forth the findings and conclusions resulting from this review.

In light of all the facts presented on the record, the Assistant Secretary has determined that (1) the revised compliance staffing levels proposed for Maryland meet the requirements of the 1978 Court Order in *AFL–CIO* v. *Marshall* in providing the number of safety and health compliance officers necessary for a "fully effective" enforcement program, and (2) that the Maryland State plan for occupational safety and health in actual operation, which has been monitored for at least one year subsequent to certification, is at least as effective as the Federal program and meets the statutory criteria for State plans in section 18(e) of the Act and implementing regulations at 29 CFR 1902. Therefore, the revised compliance staffing benchmarks of 36 safety and 18 health are approved and the Maryland State plan is hereby granted final approval under section 18(e) of the Act and implementing regulations at 29 CFR Part 1902, effective

Under this 18(e) determination, Maryland will be expected to maintain a State program which will continue to be at least as effective as operations under the Federal program in providing employee safety and health at covered workplaces. This requirement includes submitting all required reports to the Assistant Secretary as well as submitting plan supplements documenting State initiated program changes, changes required in response to adverse evaluation findings, and responses to mandatory Federal program changes. In addition, Maryland must continue to allocate sufficient safety and health enforcement staff to meet the benchmarks for State staffing established by the Department of Labor, or any revision to those benchmarks.

Effect Of Decision

The determination that the criteria set forth in section 18(c) of the Act and 29 CFR Part 1902 are being applied in actual operations under the Maryland plan terminates OSHA authority for Federal enforcement of its standards in Maryland, in accordance with section 18(e) of the Act, in those issues covered under the State plan. Section 18(e) provides that upon making this determination "the provisions of sections 5(a)(2), 8 (except for the purpose of carrying out subsection (f) of this section), 9, 10, 13, and 17, and standards promulgated under section 8 of this Act, shall not apply with respect to any occupational safety or health issues covered under the plan, but the Secretary may retain jurisdiction under the above provisions in any proceeding commenced under section 9 or 10 before the date of determination."

Accordingly, Federal authority to issue citations for violation of OSHA standards (sections 5(a)(2) and 9); to conduct inspections (except those necessary to conduct evaluations of the plan under section 18(f), and other inspections, investigations or proceedings necessary to carry out Federal responsibilities which are not specifically preempted by section 18(e)) (section 8); to conduct enforcement proceedings in contested cases (section 10); to institute proceedings to correct imminent dangers (section 13); and to propose civil penalties or initiate criminal proceedings for violations of the Federal Act (section 17) is relinquished as of the effective date of this determination. (Because of the effectiveness of the Maryland plan, there has been no exercise of concurrent Federal enforcement authority in issues covered by the plan since the signing of the Operational Status Agreement in August 1976.)

Federal authority under provisions of the Act not listed in section 18(e) are unaffected by this determination. Thus, for example, the Assistant Secretary retains his authority under section 11(c) of the Act with regard to complaints alleging discrimination against employees because of the exercise of any right afforded to the employee by the Act although such complaints may be initially referred to the State for investigation. Jurisdiction over any proceeding initiated by OSHA under sections 9 and 10 of the Act prior to the date of this final determination remains a Federal responsibility. The Assistant Secretary also retains his authority under section 6 of the Act to promulgate, modify or revoke occupational safety and health standards which address the working conditions of all employees, including those in States which have received an affirmative 18(e) determination. In the event that a State's 18(e) status is subsequently withdrawn and Federal authority reinstated, all Federal standards, including any standards promulgated or modified during the 18(e) period, would be Federally enforceable in the State.

In accordance with section 18(e), this determination relinquishes Federal OSHA authority only with regard to occupational safety and health issues covered by the Maryland plan, and OSHA retains full authority over issues which are not subject to State enforcement under the plan. Thus, for example, Federal OSHA retains its authority to enforce all provisions of the Act, and all Federal standards, rules or orders which relate to safety or health in private sector maritime employment since these issues are excluded from coverage under the Maryland plan. In addition Federal OSHA may subsequently initiate the exercise of jurisdiction over any issue (hazard, industry, geographical area, operation or facility) for which the State is unable to provide effective coverage for reasons not related to the required performance or structure of the State plan.

As provided by section 18(f) of the Act, the Assistant Secretary will continue to evaluate the manner in which the State is carrying out its plan. Section 18(f) and regulations at 29 CFR Part 1955 provide procedures for the withdrawal of Federal approval should the Assistant Secretary find that the State has substantially failed to comply with any provision or assurance contained in the plan. Additionally, the Assistant Secretary is required to initiate proceedings to revoke an 18(e) determination and reinstate concurrent Federal authority under procedures set forth in 29 CFR 1902.47 *et seq.*, if his evaluations show that the State has substantially failed to maintain a program which is at least as effective as operations under the Federal program, or if the State does not submit program change supplements to the Assistant Secretary as required by 29 CFR Part 1953.

Explanation of Changes to 29 CFR Part 1952

29 CFR Part 1952 contains, for each State having an approved plan, a subpart generally describing the plan and setting forth the Federal approval status of the plan. 29 CFR 1902.43(a)(3) requires that notices of affirmative 18(e) determinations be accompanied by changes to Part 1952 reflecting the final approval decision. This notice makes several changes to Subpart O of Part 1952 to reflect the final approval of the Maryland plan.

A new § 1952.213, Compliance staffing benchmarks, has been added to reflect the approval of the 1984 revised benchmarks for Maryland.

A new § 1952.214, Final approval determination, has been added to reflect the determination granting final approval of the plan. The new paragraph contains a more accurate description of the scope of the plan than the one contained in the initial approval decision.

Newly redesignated § 1952.215, Level of Federal enforcement, has been revised to reflect the State's 18(e) status. The new paragraph replaces former § 1952.212, which described the relationship of State and Federal enforcement under an Operational Status Agreement which was entered into on August 16, 1976. Federal concurrent enforcement authority has been relinquished as part of the present 18(e) determination for Maryland, and the Operational Status Agreement is no longer in effect. § 1952.215 describes the issues where Federal authority has been terminated and the issues where it has been retained in accordance with the discussion of the effects of the 18(e) determination set forth earlier in the present **Federal Register** notice.

While most of the existing Subpart O has been retained, paragraphs within the subpart have been rearranged and renumbered so that the major steps in the development of the plan (initial approval, developmental steps, certification of completion of developmental steps and final plan approval) are set forth in chronological order. Related editorial changes to the subpart include modification of the heading of § 1952.210, to clearly identify the 1973 initial plan approval decision to which it relates. The addresses of locations where State plan documents may be inspected have been updated and are found in § 1952.216.

Regulatory Flexibility Act

OSHA certifies pursuant to the Regulatory Act of 1980 (5 U.S.C. 601, *et seq.*) that this rulemaking will not have a significant economic impact on a substantial number of small entities. Final approval will not place small employers in Maryland under any new or different requirements nor would any additional burden be placed upon the State government beyond the responsibilities already assumed as part of the approved plan. Certification to this effect was previously forwarded to the Chief Counsel for Advocacy, Small Business Administration.

List of Subjects in 29 CFR Part 1952

Intergovernmental relations, Law enforcement, Occupational safety and health.

(Sec. 18, 84 Stat. 1608 (29 U.S.C. 667); 29 CFR Part 1902, Secretary of Labor's Order No. 9–83 (48 FR 35736))

Signed at Washington, D.C., this 18th day of July 1985.

Patrick R. Tyson,

Acting Assistant Secretary.

PART 1952—[AMENDED]

Accordingly, Subpart O of 29 CFR Part 1952 is hereby amended as follows:

1. The authority citation for Part 1952 continues to read:

Authority: Sec. 18, 84 Stat. 1608 (29 U.S.C. 667); 29 CFR Part 1902, Secretary of Labor's Order No. 9–83 (48 FR 35736).

2. Section 1952.210 is amended by revising the heading to read:

§ 1952.210 "Description of the plan as initially approved."

§§ 1952.211, 1952.212, 1952.213, and 1952.214 [Redesignated as 1952.216, 1952.215, 1952.211, and 1952.212 Respectively].

3. Section 1952.211 [Redesignated as § 1952.216] Section 1952.211 is redesignated as § 1952.216.

4. Section 1952.212 [Redesignated as § 1952.215] Section 1952.212 is redesignated as § 1952.215.

5. Section 1952.213 [Redesignated as § 1952.211] Section 1952.213 is redesignated as § 1952.211.

6. Section 1952.214 [Redesignated as § 1952.212] Section 1952.214 is redesignated as § 1952.212.

7. The Table of Contents for Part 1952, Subpart O is revised to read as follows:

Subpart O—Maryland

Sec.

1952.210 Description of the plan as initially approved.
1952.211 Developmental schedule.
1952.212 Completion of developmental steps and certification.
1952.213 Compliance staffing benchmarks.
1952.214 Final approval determination.
1952.215 Level of Federal enforcement.
1952.216 Where the plan may be inspected.

8. New §§ 1952.213 and 1952.214 are added to read as follows:

§ 1952.213 Compliance staffing benchmarks.

Under the terms of the 1978 Court Order in *AFL–CIO* v. *Marshall* compliance staffing levels (benchmarks) necessary for a "fully effective" enforcement program were required to be established for each State operating an approved State plan. In September 1984 Maryland, in conjunction with OSHA, completed a reassessment of the levels initially established in 1980 and proposed revised compliance staffing benchmarks of 36 safety and 18 health compliance officers. After opportunity for public comment and service on the AFL–CIO, the Assistant Secretary

approved these revised staffing requirements on July 18, 1985.

DEPARTMENT OF THE TREASURY

21 CFR Part 4

procedure and a delayed effective date are impracticable and unnecessary.

SUPPLEMENTARY INFORMATION: On April 25, 1985, the Coast Guard published a

VOL 50 ISS 138 JL 18 1985 UMI

approved these revised staffing requirements on July 18, 1985.

§ 1952.214 Final approval determination.

(a) In accordance with section 18(e) of the Act and procedures in 29 CFR Part 1902, and after determination that the State met the "fully effective" compliance staffing benchmarks as revised in 1984 in response to a Court Order in *AFL–CIO* v. *Marshall* (CA 74–406), and was satisfactorily providing reports to OSHA through participation in the Federal-State Unified Management Information System, the Assistant Secretary evaluated actual operations under the Maryland State plan for a period of at least one year following certification of completion of developmental steps (45 FR 10335). Based on the 18(e) Evaluation Report for the period of October 1982 through March 1984, and after opportunity for public comment, the Assistant Secretary determined that in operation the State of Maryland's occupational safety and health program is at least as effective as the Federal program in providing safe and healthful employment and places of employment and meets the criteria for final State plan approval in section 18(e) of the Act and implementing regulations at 29 CFR Part 1902. Accordingly, the Maryland plan was granted final approval and concurrent Federal enforcement authority was relinquished under section 18(e) of the Act effective July 18, 1985.

(b) The plan which has received final approval covers all activities of employers and all places of employment in Maryland except for private sector maritime and on military bases.

(c) Maryland is required to maintain a State program which is at least as effective as operations under the Federal program; to submit plan supplements in accordance with 29 CFR Part 1953; to allocate sufficient safety and health enforcement staff to meet the benchmarks for State staffing established by the U.S. Department of Labor, or any revisions to those benchmarks; and, to furnish such reports in such form as the Assistant Secretary may from time to time require.

9. Newly designated §§ 1952.215 and 1952.216 are revised to read as follows:

§ 1952.215 Level of Federal Enforcement.

(a) As a result of the Assistant Secretary's determination granting final approval to the Maryland plan under section 18(e) of the Act, effective July 18, 1985, occupational safety and health standards which have been promulgated under section 6 of there Act do not apply with respect to issues covered under the Maryland plan. This determination also relinquishes concurrent Federal OSHA authority to issue citations for violations of such standards under sections 5(a)(2) and 9 of the Act; to conduct inspections and investigations under section 8 (except those necessary to conduct evaluation of the plan under section 18(b) and other inspections, investigations, or proceedings necessary to carry out Federal responsibilities not specifically preempted by section 18(e)); to conduct enforcement proceedings in contested cases under section 10; to institute proceedings to correct imminent dangers under section 13; and to propose civil penalties or initiate criminal proceedings for violations of the Federal Act under section 17. The Assistant Secretary retains jurisdiction under the above provisions in any proceeding commenced under sections 9 or 10 before the effective date of the 18(e) determination.

(b) In accordance with section 18(e), final approval relinquishes Federal OSHA authority only with regard to occupational safety and health issues covered by the Maryland plan. OSHA retains full authority over issues which are not subject to State enforcement under the plan. Thus, Federal OSHA retains its authority relative to safety and health in private sector maritime activities and will continue to enforce all provisions of the Act, rules or orders, and all Federal standards, current or future, specifically directed to private sector maritime employment (29 CFR Part 1915, shipyard employment; Part 1917, marine terminals; Part 1918, longshoring; Part 1919, gear certification as well as provisions of general industry standards (29 CFR Part 1910) appropriate to hazards found in these employments) and employment on military bases. Federal jurisdiction is also retained with respect to Federal government employers and employees.

In addition, any hazard, industry, geographical area, operation or facility over which the State is unable to effectively exercise jurisdiction for reasons not related to the required performance or structure of the plan shall be deemed to be an issue not covered by the finally approved plan, and shall be subject to Federal enforcement. Where enforcement jurisdiction is shared between Federal and State authorities for a particular area, project, or facility, in the interest of administrative practicability Federal jurisdiction may be assumed over the entire project or facility. In either of the two aforementioned circumstances, Federal enforcement may be exercised immediately upon agreement between Federal and State OSHA.

(c) Federal authority under provisions of the Act not listed in section 18(e) is unaffected by final approval of the plan. Thus, for example, the Assistant Secretary retains his authority under section 11(c) of the Act with regard to complaints alleging discrimination against employees because of the exercise of any right afforded to the employee by the Act, although such complaints may be referred to the State for investigation. The Assistant Secretary also retains his authority under section 6 of the Act to promulgate, modify or revoke occupational safety and health standards which address the working conditions of all employees, including those in States which have received an affirmative 18(e) determination, although such standards may not be Federally applied. In the event that the State's 18(e) status is subsequently withdrawn and Federal authority reinstated, all Federal standards, including any standards promulgated or modified during the 18(e) period, would be Federally enforceable in that State.

(d) As required by section 18(f) of the Act, OSHA will continue to monitor the operations of the Maryland State program to assure that the provisions of the State plan are substantially complied with and that the program remains at least as effective as the Federal program. Failure by the State to comply with its obligations may result in the revocation of the final determination under section 18(e), resumption of Federal enforcement, and/or proceedings for withdrawal of plan approval.

§ 1952.216 Where the plan may be inspected.

A copy of the principal documents comprising the plan may be inspected and copied during normal business hours at the following locations: Office of State Programs, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue, NW., Room N3476, Washington, D.C. 20210; Regional Administrator, Occupational Safety and Health Administration, U.S. Department of Labor, Gateway Building—Suite 2100, and Office of the Commissioner, Maryland Division of Labor and Industry, Department of Licensing and Regulation, 501 St. Paul Place, Baltimore, Maryland 21202.

[FR Doc. 85–16832 Filed 7–17–85; 8:45 am]

BILLING CODE 4510–26–M

DEPARTMENT OF THE TREASURY

31 CFR Part 4

Amendment to Implementing Regulations Military and Civilian Employees' Claims Act

AGENCY: Department of the Treasury.

ACTION: Final rule.

SUMMARY: The Department of the Treasury is amending 31 CFR 4.1 to conform those regulations to a recently enacted amendment to the Military and Civilian Employees' Claims Act.

EFFECTIVE DATE: July 18, 1985.

FOR FURTHER INFORMATION CONTACT: Alexandra B. Keith, Attorney-Advisor, Office of the Assistant General Counsel (Administration, Legislation and Regulations), Department of the Treasury, Room 1414, Main Treasury Building, 1500 Pennsylvania Avenue NW., Washington, D.C. 20220, (202) 566–2327.

SUPPLEMENTARY INFORMATION:

Background

The Military Personnel and Civilian Employees' Claims Act of 1964, 31 U.S.C. 3721 *et seq.* (formerly 31 U.S.C. 240–243) authorizes the Secretary of the Treasury to settle and pay claims of officers or employees of the Department of the Treasury, for damage to or loss of, personal property incident to their service.

On January 12, 1983, Pub. L. 97–452, an act to codify without substantive changes recent laws related to money and finance and to improve the United States Code, was signed into law. Section 17 of the Act substituted $25,000 for $15,000 in 31 U.S.C. 3721(b). This substitution raised the amount which the Secretary of the Treasury is authorized to settle employee claims.

Section 4.1 of 31 CFR is hereby amended to reflect these changes in the law.

Notice and Comment; Delayed Effective Dates

Because this rule relates to agency management and personnel, notice of proposed rulemaking pursuant to 5 U.S.C. 553(b) and a delayed effective date pursuant to 5 U.S.C. 553(d) are not required. Moreover, the amended regulations are necessitated by, and are in conformity with, a Federal statute. There is no discretion vested in, or exercised by, the Secretary in implementing the statutory provisions they are incorporated into the regulations without change. Accordingly, the Department of the Treasury finds that notice and public procedure and a delayed effective date are impracticable and unnecessary.

Special Analysis

Because this rule relates to agency management and personnel, it is not subject to Executive Order 12291. Because no notice of proposed rulemaking is required for this final rule, it is not subject to the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*).

Authority and Issuance

The Department of the Treasury issues this rule under the authority of the Military Personnel and Civilian Employees' Claims Act of 1964, 31 U.S.C. 3721 *et seq.* (formerly 31 U.S.C. 240–243), and subsection 17 of Pub. L. 97–452 (January 12, 1983).

List of Subjects in 31 CFR Part 4

Claims, Government employees.

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 100

[CGD3 85–08]

Regatta; Night in Venice, Great Egg Harbor Bay, Ocean City, NJ

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: Special Local Regulations are being adopted for the Annual Night in Venice Boat Parade sponsored by the City of Ocean City, New Jersey. This regulation is needed to provide for the safety of participants and spectators on navigable waters during this event.

EFFECTIVE DATE: This regulation becomes effective on July 27, 1985.

FOR FURTHER INFORMATION CONTACT: Lt. D.R. Cilley, (212) 668–7974.

SUPPLEMENTARY INFORMATION: On April 25, 1985, the Coast Guard published a notice of proposed rule making in the **Federal Register** for this regulation (50 FR 16315). Interested persons were requested to submit comments and one comment was received.

Drafting Information

The drafters of this notice are Lt. D.R. Cilley, Project Officer, Third Coast Guard District Boating Safety Division, and Ms. MaryAnn Arisman, Project Attorney, Third Coast Guard District Legal Office.

Discussion of Regulations

The Annual Night in Venice Boat Parade is a Marine Parade to be held on Great Egg Harbor Bay. It is sponsored by the City of Ocean City, New Jersey and is well known to the boaters and residents of this area. This event is traditionally held each year on the fourth Saturday in July. Because of the annual nature of this event, the Coast Guard has decided to promulgate a permanent amendment to Part 100 of Title 33, Code of Federal Regulations. Thereafter the Coast Guard will provide the public with full and adequate notice of this annual boat parade by publication in the Third District Local Notice to Mariners. Approximately 800 spectator craft are expected to watch the 125 participating vessels in the boat parade. The sponsor is providing in excess of 6 patrol vessels in conjunction with Coast Guard and local resources to partol this event. In order to provide for the safety of life and property, the Coast Guard will restrict vessel movement in the marine parade area and will establish spectator anchorages for what is expected to be a large spectator fleet.

Discussion of Comments

One comment was received from the City of Ocean City, New Jersey. The event sponsor requested to change the start time for this event from 6:00 p.m. to 7:00 p.m. The later start time would give those vessels which had been decoratively lighted a better chance of being seen later in the day. The Coast Guard is concerned about the safety of both participants and spectators. Over the years some problems have developed with this event involving the drinking of alcohol. The New Jersey Marine Police intends to enforce the New Jersey boating-while-intoxicated law this year during the event. The Coast Guard feels that the later start time will only add to the problem of trying to control a large spectator fleet during and after this event. Accordingly,

no changes have been made in the regulation as proposed.

(3) Spectator vessels must be at anchor within a designated spectator

2. Part 100 is amended to add a temporary § 100.35–0916 to read as

no changes have been made in the regulation as proposed.

Economic Assessment and Certification

This regulation is considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979). The economic impact of this proposal is expected to be so minimal that a full regulatory evaluation is unnecessary. This event will draw a large number of spectator craft into the area for the duration of the parade. This should have a favorable impact on commercial facilities providing services to the spectators. This area is used primarily by recreational boaters; any impact on commercial traffic in the area will be negligible.

Since the impact of this regulation is expected to be minimal, the Coast Guard certifies that it will not have a significant economic impact on a substantial number of small entities.

Final Regulation

PART 100—[AMENDED]

In consideration of the foregoing, Part 100 of Title 33, Code of Federal Regulations is amended as follows:

1. The authority citation for Part 100 continues to read as follows:

Authority: 33 U.S.C. 1233; 49 CFR 1.46 and 33 CFR 100.35.

2. Part 100 is amended by adding§ 100.303 to read as follows:

§ 100.303 Night in Venice, Great Egg Harbor Bay, City of Ocean City, NJ.

(a) *Regulated Area:* The southwest side of Ship Channel from Buoy C, seaward to Board Thorofare Buoy No. 17 (black can) to Ocean City-Longport Bridge, thence south to Great Egg Waterway Daybeacon 28.

(b) *Effective Period:* This regulation will be effective from 4:30 p.m. to 11:45 p.m. on July 27, 1985 and thereafter annually on the fourth Saturday in July unless otherwise specified in the Third District Local Notice to Mariners and in a Federal Register notice.

(c) *Special Local Regulations:*

(1) All persons or vessels not registered with sponsor as participants or not part of the regatta patrol are considered spectators.

(2) No person or vessel may enter or remain in the regulated area unless participating in the event, or authorized to be there by the sponsor or Coast Guard patrol personnel.

(3) Spectator vessels must be at anchor within a designated spectator area or moored to a waterfront facility within the regulated area prior to the start of the parade in such a way that they shall not interfere with mariners transiting Great Egg Harbor Bay. The spectator fleet shall be held behind buoys or committee boats provided by the sponsor in the following areas:

(i) Northwestward of a line marked by a patrol vessel in position 39 degrees 17 minutes 45 seconds North latitude; 074 degrees 33 minutes 45 seconds West longitude to the 9th Street Route 52 Bridge in Ocean City, New Jersey, including Great Egg Waterway Red Buoy No. 2, but shall not extend northwestward of the Great Egg Waterway Point Buoy.

(ii) Westward of a line of buoys between Great Egg Waterway Buoys 10 and 14.

(iii) Within the area around the shoals and islands in Beach Thorofare between Great Egg Waterway Buoys 15 and 21. This area shall at no point be closer that 150 yards from the line of bulkheads and lagoon entrances in Ocean City, New Jersey.

(4) All persons and vessels shall comply with the instructions of U.S. Coast Guard patrol personnel. Upon hearing five or more blasts from a U.S. Coast Guard vessel, the operator of a vessel shall stop immediately and proceed as directed. U.S. Coast Guard patrol personnel include commissioned, warrant and petty officers of the Coast Guard. Members of the Coast Guard Auxiliary may be present to inform vessel operators of this regulation and other applicable laws.

(5) For any violation of this regulation, the following maximum penalties are authorized by law:

(i) $500 for any person in charge of the navigation of a vessel.

(ii) $500 for the owner of a vessel actually on board.

(iii) $250 for any other person.

(iv) Suspension or revocation of a license for a licensed officer.

Dated: June 20, 1985.

P.A. Yost,

Vice Admiral, U.S. Coast Guard, Commander, Third Coast Guard District.

33 CFR Part 100

[CGD 09-85-16]

Special Local Regulations: Stroh Signature Classic, Lake Erie

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: Special local regulations are being adopted for the Stroh Signature Classic. This event will be held on 3 August 1985 at Sandusky Bay, Lake Erie. The regulations are needed to provide for the safety of life on navigable waters during the event.

EFFECTIVE DATE: These regulations become effective and terminate on 3 August 1985.

FOR FURTHER INFORMATION CONTACT: MSTC Cary H. Lindsay, Office of Search and Rescue, Ninth Coast Guard District, 1240 E 9th St., Cleveland, OH 44199, (216) 522-4420.

SUPPLEMENTARY INFORMATION: A notice of proposed rule making has not been published for these regulations and they are being made effective in less than 30 days from the date of publication. Following normal rulemaking procedures would have been impractical. The application to hold this event was not received until July 2, 1985, and there was not sufficient time remaining to publish proposed rules in advance of the event or to provide for a delayed effective date. This has been an annual event for many years and no negative comments have been received concerning the holding of the event in the past.

Drafting Information

The drafters of this regulation are MSTC Cary H. Lindsay, project officer, Office of Search and Rescue and Lcdr A.R. Butler, project attorney, Ninth Coast Guard District Legal Office.

Discussion of Regulations

The Stroh Signature Classic will be conducted on Sandusky Bay on 3 August 1985. This event will have an estimated 30 powerboats which could pose hazards to navigation in the area. Vessels desiring to transit the regulated area may do so only with prior approval of the Patrol Commander (Commanding Officer, Coast Guard Station Marblehead, OH).

List of Subjects in 33 CFR Part 100

Marine safety, Navigation (water).

Regulations

PART 100—[AMENDED]

In consideration of the foregoing, Part 100 of Title 33, Code of Federal Regulations, is amended as follows:

1. The authority for Part 100 continues to read as follows:

Authority: 33 U.S.C. 1233; 49 CFR 1.46(c)(5) and 33 CFR 100.35.

2. Part 100 is amended to add a temporary § 100.35-0916 to read as follows:

§ 100.35-0916 Stroh Signature Classic, Lake Erie.

(a) *Regulated Area:* (1) That portion of Sandusky Bay from position 41 degrees 26.9 minutes North 082 degrees 45.5 minutes West to 41 degrees 29.6 minutes North 082 degrees 48.6 minutes West to 41 degrees 30.1 minutes North 082 degrees 48.2 minutes West to 41 degrees 28.6 minutes North 082 degrees 42.7 minutes West.

(b) *Special Local Regulations:* (1) The above area will be closed to vessel navigation or anchorage from 1030 (local time) until 1300 on 3 August 1985.

(2) Vessels desiring to transit the restricted area may do so only with prior approval of the Patrol Commander and when so directed by that officer. Vessels will be operated at a no wake speed to reduce the wake to a minimum and in a manner which will not endanger participants in the event or any other craft. These rules shall not apply to participants in the event or vessels of the patrol in the performance of their assigned duties.

(3) A succession of sharp, short signals by whistle or horn from vessels patrolling the areas under the direction of the U.S. Coast Guard Patrol Commander shall serve as a signal to stop. Vessels signaled shall stop and shall comply with the orders of the Patrol Vessel; failure to do so may result in expulsion from the area, citation for failure to comply, or both.

Dated: July 10, 1985.

B.K. Scheeffer,

Captain, U.S. Coast Guard, Chief of Staff, Ninth Coast Guard District.

33 CFR Part 100

[CGD3 85-18]

Regatta; Connecticut River Raft Race

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: Special Local Regulations are being adopted for the Annual Connecticut River Raft Race being sponsored by the Connecticut River Raft Race Inc., of Norwich, Connecticut. The purpose of this regulation is to provide for the safety of participants and spectators on navigable waters during the event.

EFFECTIVE DATE: This regulation is effective on August 3, 1985.

FOR FURTHER INFORMATION CONTACT: Lt. D.R. Cilley, (212) 668-7974.

SUPPLEMENTARY INFORMATION: On May 16, 1985, the Coast Guard published a Notice of Proposed Rulemaking in the Federal Register for this regulation (50 FR 20444). Interested persons were requested to submit comments and no comments were received. The regulation is being made effective in less than 30 days from the date of publication. There was not sufficient time remaining in advance of the event to provide for a delayed effective date.

Drafting Information

The drafters of this regulation are Lt. D.R. Cilley, Project Officer, Third Coast Guard District Boating Safety Division, and Ms. MaryAnn Arisman, Project Attorney, Third Coast Guard District Legal Office.

Discussion of Regulations

The Annual Connecticut River Raft Race is a marine event to be held on the Connecticut River between Hurd and Haddam Meadows State Parks. It is sponsored by the Connecticut River Raft Race Inc., of Norwich, CT, and is well known to the boaters and residents of this area. This event is traditionally held each year on the first Saturday in August. Because of the annual nature of this event, the Coast Guard has decided to promulgate a permanent amendment to Part 100 of Title 33, Code of Federal Regulations. Thereafter the Coast Guard will provide the public with full and adequate notice of this annual event by publication in the Third District Local Notice to Mariners. Over 100 self-propelled homemade rafts will cruise down a 2.5 mile section of the Connecticut River. Vessels provided by the State of Connecticut State Police, and Department of Environmental Protection will work in conjunction with approximately 12 vessels provided by the sponsor to patrol this event. Specific requirements have been imposed upon the sponsor to ensure that all participants wear personal flotation devices throughout the event for their own safety. In order to provide for the safety of life and property, the Coast Guard will restrict vessel movement prior to and during this event on this section of the river. A Coast Guard patrol vessel will be located at strategic locations on the river both above and below the regulated area to stop vessel traffic.

Discussion of Comments

No comments were received.

Economic Assessment and Certification

This regulation is considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979). The economic impact of this proposal is expected to be so minimal that a full regulatory evaluation is unnecessary. This event will draw a large number of spectator craft into the area for the duration of the race. This should have a favorable impact on commercial facilities providing services to the spectators. This area is used primarily by recreational boaters; any impact on commercial traffic in the area will be negligible. Since the impact of this regulation is expected to be minimal, the Coast Guard certifies that it will not have a significant economic impact on a substantial number of small entities.

Final Regulation

PART 100—[AMENDED]

In consideration of the foregoing, Part 100 of Title 33, Code of Federal Regulations is amended as follows:

1. The authority citation for Part 100 continues to read as follows:

Authority: 33 U.S.C. 1233; 49 CFR 1.46 and 33 CFR 100.35.

2. Part 100 is amended by adding § 100.305 to read as follows:

§ 100.305 Connecticut River Raft Race.

(a) *Regulated Area:* That section of the Connecticut River between the Salmon River (Marker no. 48) and Middle Haddam (Marker no. 72).

(b) *Effective Period:* This regulation will be effective from 9:00 a.m. to 2:00 p.m. on August 3, 1985 and thereafter annually on the first Saturday in August unless otherwise specified in the Third District Local Notice to Mariners and in a Federal Register Notice.

(c) *Special Local Regulations:*

(1) The regulated area shall be closed to all vessels in excess of 20 meters (65.6 feet) in length during the effective period.

(2) All persons or vessels not registered with the sponsor as participants or not part of the regatta patrol are considered spectators.

(3) All spectator vessels shall be moored or anchored prior to the start of the event in such a way as to not interfere with the passage of the race participants. They shall remain

anchored or moored until the end of the race or until directed by a patrol vessel.

Drafting Information: The drafters of these regulations are Ensign G.H. Burns,

anchorage will be borne by the commercial marina interests benefiting

North (16 feet North of the North face of the Northeast guidewall) and 590 feet

construction personnel from safety hazards associated with the drilling

the drilling rig will signal its intention to

anchored or moored until the end of the race or until directed by a patrol vessel.

(4) All persons and vessels shall comply with the instructions of U.S. Coast Guard patrol personnel. Upon hearing five or more blasts from a U.S. Coast Guard vessel, the operator of a vessel shall stop immediately and proceed as directed. U.S. Coast Guard patrol personnel include commissioned, warrant and petty officers of the Coast Guard. Members of the Coast Guard Auxiliary may be present to inform vessel operators of this regulation and other applicable laws.

(5) For any violation of this regulation, the following maximum penalties are authorized by law:

(i) $500 for any person in charge of the navigation of a vessel.

(ii) $500 for the owner of a vessel actually on board.

(iii) $250 for any other person.

(iv) Suspension or revocation of a license for a licensed officer.

Dated: July 8, 1985.

BILLING CODE 4910-14-M

---

33 CFR Part 110

[CGD9-85-01]

Anchorage Grounds; Chicago Harbor, IL

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: The Coast Guard is establishing two new commercial vessel anchorages and disestablishing one existing commercial vessel anchorage in Chicago Harbor. The existing anchorage known as "Anchorage F Filtration Plant Slip" conflicts with plans for a large recreational vessel marina. The effect of this rule will be accommodation of the marina development and continued availability of anchorage areas suitable for lakegoing barge tows without anchors.

EFFECTIVE DATE: August 19, 1985.

FOR FURTHER INFORMATION CONTACT: Ensign G.H. Burns, Marine Port and Environmental Safety Branch, Ninth Coast Guard District, Telephone number (216) 522-3919.

SUPPLEMENTARY INFORMATION: On 16 April, 1985, the Coast Guard published a notice of proposed rule making in the **Federal Register** for these regulations (50 FR 15460). Interested persons were requested to submit comments and 3 comments were received.

Drafting Information: The drafters of these regulations are Ensign G.H. Burns, project officer, Marine Port and Environmental Safety Branch, and Lieutenant Raymond A. Pelletier, project attorney, Ninth Coast Guard District Legal Office.

Discussion of Comments

There were three comments received concerning this regulation. Two of the comments received were from the developer of the proposed marina, and the association that represents the commercial towing industry in this area. Both organizations were supportive of the Notice of Proposed Rulemaking and had no objections to the proposal.

A third comment was received from the local Park District. This commenter objected to the proposal based upon their view that the area north of the locks (anchorage E) could restrict access to future recreation boating developments south of the Navy pier, and secondly that they also had plans to develop the slip north of Navy pier which is in the same location of the proposed marina. The first objection of this commenter is viewed as unlikely. The old Dime pier structure is located between anchorage E and Navy pier. The three hundred feet of channel separating anchorage E and Dime Pier should provide more than adequate navigational access for any boating development in the area. Additionally, the waters of Chicago Harbor are not for the exclusive use of recreational boating needs. The needs of commercial vessels must be considered in any development. These needs are addressed by this regulation.

In the second objection the Park Authority also states their desire to develop the area north of Navy Pier. The development of the area north of Navy pier is what creates the need to accommodate commercial vessels in new Anchorage areas E and D. This is the case regardless of who controls the development.

Economic Assessment and Certification

These regulations are considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979). The economic impact has been found to be so minimal that a full regulatory evaluation is unnecessary. The proposed action simply relocates an existing anchorage. The new locations will provide a slight transit time advantage to the marine towing industry. The cost of establishing the protective pile clusters for each anchorage will be borne by the commercial marina interests benefiting from this relocation. The marine towing industry's cost of compliance with the continual surveillance requirements will be negligible. Anchorages D and E will be utilized as temporary mooring areas for towing vessels and tows during inclement weather or while awaiting a change of towing vessels. These towing vessels are normally manned while moored and would provide the surveillance required by the rule. This corresponds with current practice and the inclusion of this requirement in the rule will insure a rapid response to breakaways which might damage the adjacent lock structure or passing vessels. Preliminary discussions with industry personnel confirm that the formal surveillance requirement will not impose significant additional costs.

Since the impact of these regulations is expected to be minimal the Coast Guard certifies that they will not have a significant economic impact on a substantial number of small entities.

List of Subjects in 33 CFR Part 110

Anchorage grounds.

Final Regulations

PART 110—[AMENDED]

In consideration of the foregoing, Part 110 of Title 33, Code of Federal Regulations, is amended as follows:

1. The authority Citation for Part 110 continues to read as follows:

Authority: 33 U.S.C. 471, 2030, 2035, and 2071; 49 CFR 1.46 and 33 CFR 1.05-1 (g).

§ 110.205 [Amended]

2. Part 110, § 110.205 is amended by removing paragraph (a)(6), adding paragraphs (a)(4) and (a)(5), and revising paragraph (b)(7), to read as follows:

(a) * * *

(4) Anchorage D, Chicago Harbor Lock South, Beginning at a point 35.5 feet South (16 feet South of the South face of the Southeast guidewall) and 28.0 feet West of the SE Guide Wall Light; thence Westerly and parallel to the guidewall 800 feet to a point that is 16 feet South of the South face of the Southeast guidewall; thence Southerly 80 feet to a point that is 96 feet South of the South face of the Southeast guidewall; thence Easterly 800 feet to a point that is 96 feet South of the south face of the southeast guidewall; thence Northerly 80 feet to the point of beginning.

(5) Anchorage E, Chicago Harbor Lock North. Beginning at a point 156.75 feet North (16 feet North of the North face of the Northeast guidewall) and 590 feet West of the SE Guidewall Light; thence Westerly and parallel to the guidewall 600 feet to a point that is 16 feet North of the North face of the Northeast guidewall; thence Northerly 80 Feet to a point that is 96 feet North of the North face of the Northeast guidewall; thence Easterly 600 feet to a point that is North of the North face of the Northeast guidewall; thence Southerly 80 feet to the point of beginning.

(b) * * *

(7) No vessel may use anchorages A, B, D, and E except commercial vessels operated for profit. No person may place floats or buoys for making moorings or anchors in place in anchorages A and B. No person may place fixed moorings piles or stakes in anchorages A and B. (Mooring facilities are available adjacent to the lakeside guidewalls of the Chicago Harbor Lock in anchorages D and E.) All vessels using anchorages D and E shall moor against pile clusters adjacent to the respective anchorage.

Any time barges are moored in anchorage D or E, a manned towing vessel shall be present in one of these anchorages. Exceptions to this surveillance requirement are allowable for periods not to exceed one hour.

Dated: July 5, 1985.

A. M. Danielsen,

Rear Admiral, U.S. Coast Guard Commander, Ninth Coast Guard District.

33 CFR Part 165

[COTP Miami, Florida Regulation CCGD7-85-36]

Safety Zone Regulations: On the Intracoastal Waterway (ICW) at Ft. Lauderdale, FL, at a Position Approximately 800 Feet North of Dry Marina Canal and Extending to The Dania Cut Off Canal

AGENCY: Coast Guard, DOT.

ACTION: Emergency rule.

SUMMARY: The Coast Guard is establishing a safety zone for the drilling, blasting and dredging operations in an area starting from approximately 800 feet north of Dry Marina Canal extending south to the Dania Cut Off Canal on the Intracoastal Waterway (ICW) at Ft. Lauderdale, Florida and extending 750 feet into the Dry Marina Canal and 800 feet into the Dania Cut Off Canal. The zone is needed to protect swimmers, pleasure boaters, commercial traffic and construction personnel from safety hazards associated with the drilling, blasting and dredging operations. Entry into this zone is prohibited unless authorized by the Captain of the Port.

EFFECTIVE DATES: This regulation becomes effective on 9 July 1985. It terminates on 20 September 1985 unless completion of the drilling, blasting and dredging operation occurs first.

FOR FURTHER INFORMATION CONTACT: CWO3 P.J. MacDonald, c/o Commanding Officer, U.S. Coast Guard, Marine Safety Office, Miami, Fl. 33130, Tel (305) 350-5691.

SUPPLEMENTARY INFORMATION: A notice of proposed rulemaking was not published for this regulation and it is being made effective in less than 30 days after **Federal Register** publication. Publishing a NPRM and delaying its effective date would be contrary to the public interest since immediate action is needed to prevent potential hazards to personnel and vessels involved.

Drafting Information:

The drafters of this regulation are CWO3 P.J. MacDonald, project officer for the Captain of the Port, and Lcdr K.E. Gray, project attorney, Seventh Coast Guard District Legal Office.

Discussion of Regulation

The event requiring this regulation is the drilling, blasting and dredging operation on the Intracoastal Waterway between a position approximately 800 feet north of Dry Marina Canal and extending to the Dania Cut Off Canal on the Intracoastal Waterway (ICW) at Ft. Lauderdale, Florida and 750 feet into Dry Marina Canal and 800 feet into the Dania Cut Off Canal. Operations will commence on 9 July 1985 and continue until 20 September 1985 unless completion of the drilling, blasting and dredging operation occurs first. This operation is necessary to effect deepening and widening of the Intracoastal Waterway in the aforementioned area. During the period of 9 July 1985 through 20 September 1985, between sunrise and sunset, Monday through Saturday, blasting operations will be conducted. Five minutes prior to each blast, the drilling rig will signal its intention to blast with a series of 10 long horn signals. At this time the Intracoastal Waterway will be closed to all traffic between a position approximately 800 feet north of Dry Marina Canal and extending to the Dania Cut Off Canal on the Intracoastal Waterway (ICW) at Ft. Lauderdale, Florida and 750 feet into Dry Marina Canal and 800 feet into the Dania Cut Off Canal. One minute prior to blasting, the drilling rig will signal its intention to blast with a series of 3 long horn signals. After the blast, 1 long horn singal will be given as an "All Clear". During the same period (9 July 1985 through 20 September 1985) drilling and dredging operations will be conducted seven days a week, twenty-four hours a day. All vessels are restricted from penetrating a fifty foot radius of the dredge Illinois and the barge Drill 8. There will be approximately 3000 feet to 6000 feet of floating pipeline behind the dredge which will be marked with yellow flashing lights. Vessels transitting this area should minimize the effects of their wake.

List of Subjects in 33 CFR Part 165

BILLING CODE 4910-14-M

VETERANS ADMINISTRATION

38 CFR Part 1

Security at VA Facilities

AGENCY: Veterans Administration.

ACTION: Final regulation amendments.

SUMMARY: The Veterans Administration in consultation with the Department of Justice, is amending its general series of regulations (38 CFR Part 1) to implement provisions of Pub. L. 98-528, the Veteran's Health Care Act of 1984. These regulation amendments provide for increased security and protection of persons and property at VA facilities, grant authority to the Administrator of Veterans Affairs to increase rates of pay for police officers when needed to enhance recruitment and retention, and provide police officers with an allowance for uniforms.

EFFECTIVE DATE: These regulation amendments are effective July 10, 1985.

FOR FURTHER INFORMATION CONTACT: James Fasone, Director, Security Service (132), Department of Medicine & Surgery, Veterans Administration, 810 Vermont Avenue, NW, Washington, DC 20420, 202-376-8858.

SUPPLEMENTARY INFORMATION: Pub. L. 98-528 makes extensive modifications to section 218, Title 38, United States Code, to clarify the scope of authority of VA police officers. These modifications include an increase in the maximum penalty for violations of rules prescribed for the protection of persons and property from a $50 fine and one month imprisonment to a $500 fine and imprisonment not to exceed six months. The law also requires the VA to prescribe regulations which include law enforcement policies to be followed by VA police officers in their exercise of this authority, the scope and duration of their training with particular emphasis on dealing with situations involving patients, and rules limiting the carrying and use of weapons. The law also authorizes an initial uniform allowance of $400 for VA police officers and a recurring annual allowance of $200. It amends section 4107(g) of Title 38, U.S.C. to authorize the Administrator to increase the rates of pay of VA police officers on a nationwide, local or other geographic basis in order to recruit or retain police officers. These regulation amendments clarify and update the rules governing the standards of conduct on property under the charge and control of the VA and increase the penalties for their violation. Penalty increases are based on the gravity of the respective offenses and their anticipated effect towards deterring violations of the rules of conduct. These regulation amendments also provide the authority for VA police officers to enforce these rules and other Federal laws in accordance with the policies and procedures issued by respective VA Department Directors and requires that VA police officers successfully complete required training courses. These regulations are fully contained in § 1.218, and Part 17 is amended by removing §§ 1.219 and 1.220. Remaining provisions of Pub. L. 98-528 such as increasing the police officer uniform allowance; including the police officer occupation under section 4107(g) of Title 38, U.S.C.; defining law enforcement and weapon use policies and procedures; and specifying police officer training requirements will be implemented through appropriate internal VA policy manuals.

These amendments conform the existing regulations to the requirements of Pub. L. 98-528. Since these regulation amendments simply complete statutory changes to the internal VA security program, the VA is not seeking public participation in promulgating these regulation amendments. The intent of the legislation is clear, and prior publication for public comment is unnecessary. Accordingly, these changes come within exceptions to the general VA policy of prior publication of proposed regulatory development as set forth in 38 CFR 1.12.

Because a proposed notice is not necessary and will not be published, these amendments do not come within the definition of the term "rule" under the Regulatory Flexibility Act (5 U.S.C. 601(2)), and are not subject to the requirements of that Act. In any case these amendments will not have a significant economic impact on a substantial number of small entities as defined in that Act because they deal with internal VA security matters at VA facilities.

These amendments have been reviewed under Executive Order 12291, Federal Regulation, and are not considered major as defined therein. The regulations will not impact on the public or private sectors as a major rule would. They will not have an annual effect on the economy of $100 million or more, cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or have significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States based enterprises to compete with foreign-based enterprises in domestic or export markets.

There is no Catalog of Federal Domestic Assistance Number involved.

List of Subjects in 38 CFR Part 1

Administrative practice and procedure, Cemeteries, Employment, Government employees, Government property, Security, Law enforcement.

Approved: July 10, 1985.

By direction of the Administrator.

Everett Alvarez, Jr.,

Deputy Administrator.

§ 1.219 [Removed]

38 CFR Part 1, GENERAL, is amended by removing §§ 1.219 and 1.220 and by revising the undesignated center heading and § 1.218 to read as follows:

Security and Law Enforcement at Veterans Administration Facilities

§ 1.218 Security and law enforcement at VA facilities.

(a) *Authority and rules of conduct.* Pursuant to 38 U.S.C. 218, the following rules and regulations apply at all property under the charge and control of the VA (and not under the charge and control of the General Services Administration) and to all persons entering in or on such property. The head of the facility is charged with the responsibility for the enforcement of these rules and regulations and shall cause these rules and regulations to be posted in a conspicuous place on the property.

(1) *Closing property to public.* The head of the facility, or designee, shall establish visiting hours for the convenience of the public and shall establish specific hours for the transaction of business with the public.

The property shall be closed to the public during other than the hours so established. In emergency situations, the property shall be closed to the public when reasonably necessary to ensure the orderly conduct of Government business. The decision to close a property during an emergency shall be made by the head of the facility or designee. The head of the facility or designee shall have authority to designate areas within a facility as closed to the public.

(2) *Recording presence.* Admission to property during periods when such property is closed to the public will be limited to persons authorized by the head of the facility or designee. Such persons may be required to sign a register and/or display identification documents when requested to do so by the VA police, or other authorized individual. No person, without authorization, shall enter upon or remain on such property while the property is closed. Failure to leave such premises by unauthorized persons shall constitute an offense under this paragraph.

(3) *Preservation of property.* The improper disposal of rubbish on property; the spitting on the property; the creation of any hazard on property to persons or things; the throwing of articles of any kind from a building; the climbing upon the roof or any part of the building, without permission; or the willful destruction, damage, or removal of Government property or any part thereof, without authorization, is prohibited. The destruction, mutilation, defacement, injury, or removal of any monument, gravestone, or other structure within the limits of any national cemetery is prohibited.

(4) *Conformity with signs and emergency conditions.* The head of the facility, or designee, shall have authority to post signs of a prohibitory and directory nature. Persons, in and on property, shall comply with such signs of a prohibitory or directory nature, and during emergencies, with the direction of police authorities and other authorized officials. Tampering with, destruction, marring, or removal of such posted signs is prohibited.

(5) *Disturbances.* Conduct on property which creates loud or unusual noise; which unreasonably obstructs the usual use of entrances, foyers, lobbies, corridors, offices, elevators, stairways, or parking lots; which otherwise impedes or disrupts the performance of official duties by Government employees; which prevents one from obtaining medical or other services provided on the property in a timely manner; or the use of loud, abusive, or otherwise improper language; or unwarranted loitering, sleeping, or assembly is prohibited. In addition to measures designed to secure voluntary terminations of violations of this paragraph the head of the facility or designee may cause the issuance of orders for persons who are creating a disturbance to depart the property. Failure to leave the premises when so ordered constitutes a further disturbance within the meaning of this rule, and the offender is subject to arrest and removal from the premises.

(6) *Gambling.* Participating in games for money or for tangible or intangible things, or the operating of gambling devices, the conduct of a lottery or pool, or the selling or purchasing of numbers tickets, in or on property is prohibited.

(7) *Alcoholic beverages and narcotics.* Operating a motor vehicle on property by a person under the influence of alcoholic beverages, narcotic drugs, hallucinogens, marijuana, barbiturates, or amphetamines is prohibited. Entering property under the influence of any narcotic drug, hallucinogen, marijuana, barbiturate, amphetamine, or alcoholic beverage (unless prescribed by a physician) is prohibited. The use on property of any narcotic drug, hallucinogen, marijuana, barbiturate, or amphetamine (unless prescribed by a physician) is prohibited. The introduction or possession of alcoholic beverages or any narcotic drug, hallucinogen, marijuana, barbiturate, and amphetamine on property is prohibited, except for liquor or drugs prescribed for use by medical authority for medical purposes. Provided such possession is consistent with the laws of the State in which the facility is located, liquor may be used and maintained in quarters assigned to employees as their normal abode, and away from the abode with the written consent of the head of the facility which specifies a special occasion for use and limits the area and period for the authorized use.

(8) *Soliciting, vending, and debt collection.* Soliciting alms and contributions, commercial soliciting and vending of all kinds, displaying or distributing commercial advertising, or collecting private debts in or on property is prohibited. This rule does not apply to (i) national or local drives for funds for welfare, health, or other purposes as authorized under Executive Order 12353, Charitable Fund Raising (March 23, 1982), as amended by Executive Order 12404 (February 10, 1983), and regulations issued by the Office of Personnel Management implementing these Executive Orders; (ii) concessions or personal notices posted by employees on authorized bulletin boards; and (iii) solicitation of labor organization membership or dues under 5 U.S.C. chapter 71.

(9) *Distribution of handbills.* The distributing of materials such as pamphlets, handbills, and/or flyers, and the displaying of placards or posting of materials on bulletin boards or elsewhere on property is prohibited, except as authorized by the head of the facility or designee or when such distributions or displays are conducted as part of authorized Government activities.

(10) *Photographs for news, advertising, or commercial purposes.* Photographs for advertising or commercial purposes may be taken only with the written consent of the head of the facility or designee. Photographs for news purposes may be taken at entrances, lobbies, foyers, or in other places designated by the head of the facility or designee.

(11) *Dogs and other animals.* Dogs and other animals, except seeing-eye dogs, shall not be brought upon property except as authorized by the head of the facility or designee.

(12) *Vehicular and pedestrian traffic.* Drivers of all vehicles in or on property shall drive in a careful and safe manner at all times and shall comply with the signals and directions of police and all posted traffic signs. The blocking of entrances, driveways, walks, loading platforms, or fire hydrants in or on property is prohibited; parking in unauthorized locations or in locations reserved for other persons or contrary to the direction of posted signs is prohibited. Creating excessive noise on hospital or cemetery premises by muffler cut out, the excessive use of a horn, or other means is prohibited. Operation of a vehicle in a reckless or unsafe manner, drag racing, bumping, overriding curbs, or leaving the roadway is prohibited.

(13) *Weapons and explosives.* No person while on property shall carry firearms, other dangerous or deadly weapons, or explosives, either openly or concealed, except for official purposes.

(14) *Demonstrations.* (i) All visitors are expected to observe proper standards of decorum and decency while on VA property. Toward this end, any service, ceremony, or demonstration, except as authorized by the head of the facility or designee, is prohibited. Jogging, bicycling, sledding and other forms of physical recreation on cemetery grounds is prohibited.

(ii) For the purpose of the prohibition expressed in this paragraph, unauthorized demonstrations or services shall be defined as, but not limited to,

picketing, or similar conduct on VA property; any oration or similar conduct to assembled groups of people, unless

(3) Throwing of articles from a building or the unauthorized climbing upon any part of a building, $50.

(23) Unauthorized photography on premises, $50.

(24) Failure to comply with traffic

(43) Soliciting for, or the act of, prostitution, $250.

ACTION: Final rule.

4. Changes to Section 22a-174-20(k) removing restrictions on certain

picketing, or similar conduct on VA property; any oration or similar conduct to assembled groups of people, unless the oration is part of an authorized service; the display of any placards, banners, or foreign flags on VA property unless approved by the head of the facility or designee; disorderly conduct such as fighting, threatening, violent, or tumultuous behavior, unreasonable noise or coarse utterance, gesture or display or the use of abusive language to any person present; and partisan activities, i.e., those involving commentary or actions in support of, or in opposition to, or attempting to influence, any current policy of the Government of the United States, or any private group, association, or enterprise.

(15) *Key security.* The head of the facility of designee, will determine which employees, by virtue of their duties, shall have access to keys or barrier-card keys which operate locks to rooms or areas on the property. The unauthorized possession, manufacture, and/or use of such keys or barrier cards is prohibited. The surreptitious opening or attempted opening of locks or card-operated barrier mechanisms is prohibited.

(16) *Sexual misconduct.* Any act of sexual gratification on VA property involving two or more persons, who do not reside in quarters on the property, is prohibited. Acts of prostitution or solicitation for acts of prostitution on VA property is prohibited. For the purposes of this paragraph, an act of prostitution is defined as the performance or the offer or agreement to perform any sexual act for money or payment.

(b) *Schedule of offenses and penalties.* Conduct in violation of the rules and regulations set forth in paragraph (a) of this section subjects an offender to arrest and removal from the premises. Whomever shall be found guilty of violating these rules and regulations while on any property under the charge and control of the VA is subject to a fine as stated in the schedule set forth herein or, if appropriate, the payment of fixed sum in lieu of appearance (forfeiture of collateral) as may be provided for in rules of the United States District Court. Violations included in the schedule of offenses and penalties may also subject an offender to a term of imprisonment of not more than six months, as may be determined appropriate by a magistrate or judge of the United States District Court:

(1) Improper disposal of rubbish on property, $200.

(2) Spitting on property, $25.

(3) Throwing of articles from a building or the unauthorized climbing upon any part of a building, $50.

(4) Willful destruction, damage, or removal of Government property without authorization, $500.

(5) Defacement, destruction, mutilation or injury to, or removal, or disturbance of, gravemarker or headstone, $500.

(6) Failure to comply with signs of a directive and restrictive nature posted for safety purposes, $50.

(7) Tampering with, removal, marring, or destruction of posted signs, $150.

(8) Entry into areas posted as closed to the public or others (trespass), $50.

(9) Unauthorized demonstration or service in a national cemetery or on other VA property, $250.

(10) Creating a disturbance during a burial ceremony, $250.

(11) Disorderly conduct which creates loud, boisterous, and unusual noise, or which obstructs the normal use of entrances, exits, foyers, offices, corridors, elevators, and stairways or which tends to impede or prevent the normal operation of a service or operation of the facility, $250.

(12) Failure to depart premises by unauthorized persons, $50.

(13) Unauthorized loitering, sleeping or assembly on property, $50.

(14) Gambling-participating in games of chance for monetary gain or personal property; the operation of gambling devices, a pool or lottery; or the taking or giving of bets, $200.

(15) Operation of a vehicle under the influence of alcoholic beverages or nonprescribed narcotic drugs, hallucinogens, marijuana, barbiturates, or amphetamines, $500.

(16) Entering premises under the influence of alcoholic beverages or narcotic drugs, hallucinogens, marijuana, barbiturates or amphetamines, $200.

(17) Unauthorized use on property of alcoholic beverages or narcotic drugs, hallucinogens, marijuana, barbiturates, or amphetamines, $300.

(18) Unauthorized introduction on VA controlled property of alcoholic beverages or narcotic drugs, hallucinogens, marijuana, barbiturates, or amphetamines or the unauthorized giving of same to a patient or beneficiary, $500.

(19) Unauthorized solicitation of alms and contributions on premises, $50.

(20) Commercial soliciting or vending, or the collection of private debts on property, $50.

(21) Distribution of pamphlets, handbills, and flyers, $25.

(22) Display of placards or posting of material on property, $25.

(23) Unauthorized photography on premises, $50.

(24) Failure to comply with traffic directions of VA police, $25.

(25) Parking in spaces posted as reserved for physically disabled persons, $50.

(26) Parking in no-parking areas, lanes, or crosswalks so posted or marked by yellow borders or yellow stripes, $25.

(27) Parking in emergency vehicle spaces, areas and lanes bordered in red or posted as EMERGENCY VEHICLES ONLY or FIRE LANE, or parking within 15 feet of a fire hydrant, $50.

(28) Parking within an intersection or blocking a posted vehicle entrance or posted exit lane, $25.

(29) Parking in spaces posted as reserved or in excess of a posted time limit, $15.

(30) Failing to come to a complete stop at a STOP sign, $25.

(31) Failing to yield to a pedestrian in a marked and posted crosswalk, $25.

(32) Driving in the wrong direction on a posted one-way street, $25.

(33) Operation of a vehicle in a reckless or unsafe manner, too fast for conditions, drag racing, overriding curbs, or leaving the roadway, $100.

(34) Exceeding posted speed limits:

(i) By up to 10 mph, $25.

(ii) By up to 20 mph, $50.

(iii) By over 20 mph, $100.

(35) Creating excessive noise in a hospital or cemetery zone by muffler cut out, excessive use of a horn, or other means, $50.

(36) Failure to yield right of way to other vehicles, $50.

(37) Possession of firearms, carried either openly or concealed, whether loaded or unloaded except by Federal or State law enforcement officers on official business, $500.

(38) Introduction or possession of explosives, or explosive devices which fire a projectile, ammunition, or combustibles, $500.

(39) Possession of knives which exceed a blade length of 3 inches; switchblade knives; any of the variety of hatchets, clubs and hand-held weapons; or brass knuckles, $300.

(40) The unauthorized possession of any of the variety of incapacitating liquid or gas-emitting weapons, $200.

(41) Unauthorized possession, manufacture, or use of keys or barrier card-type keys to rooms or areas on the property, $200.

(42) The surreptitious opening, or attempted opening, of locks or card-operated barrier mechanisms on property, $500.

(43) Soliciting for, or the act of, prostitution, $250.

(44) Any unlawful sexual activity, $250.

(45) Jogging, bicycling, sledding or any recreational physical activity conducted on cemetery grounds, $50.

(c) *Enforcement procedures.* (1) VA Department Directors will issue policies and operating procedures governing the proper exercise of arrest and other law enforcement actions, and limiting the carrying and use of weapons by VA police officers. VA police officers found qualified under respective VA department directives and duly appointed heads of facilities for the purposes of 38 U.S.C. 218(b)(1), will enforce these rules and regulations and other Federal laws on VA property in accordance with the policies and operating procedures issued by respective VA Department Directors and under the direction of the head of the facility.

(2) VA Department Directors will prescribe training for VA police officers of the scope and duration necessary to assure the proper exercise of the law enforcement and arrest authority vested in them and to assure their abilities in the safe handling of situations involving patients and the public in general. VA police officers will successfully complete prescribed training in law enforcement procedures and the safe handling of patients as a condition of their retention of statutory law enforcement and arrest authority.

(3) Nothing contained in the rules and regulations set forth in paragraph (a) of this section shall be construed to abrogate any other Federal laws or regulations, including assimilated offenses under 18 U.S.C. 13, or any State or local laws and regulations applicable to the area in which the property is situated.

(38 U.S.C. 218; Pub. L. 98-528)

BILLING CODE 8320-01-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[A-1- FRL-2866-9]

Approval and Promulgation of Implementation Plans, Connecticut; RACT Regulations for Gasoline Tank Trucks and External Floating Roof Storage Vessels; and Miscellaneous Revisions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is approving State Implementation Plan (SIP) revisions submitted by the State of Connecticut. These revisions require reasonably available control technology (RACT) for gasoline tank trucks and external floating roof storage vessels in order to reduce volatile organic compound (VOC) emissions. This action also approves revisions to exempt seven nonreactive compounds from the definition of VOC, and revisions to remove restrictions on certain materials used in cutback asphalt. The intent of this action is to approve revisions adopted pursuant to Part D of the Clean Air Act in accordance with Section 110 of that Act.

EFFECTIVE DATE: August 19, 1985.

ADDRESSES: Copies of the submittal are available for public inspection at Room 2311, JFK Federal Building, Boston, MA 02203; Public Information Reference Unit, EPA Library, 401 M Street, SW., Washington, DC 20460; Office of the Federal Register, 1100 L Street NW., Room 8401, Washington, DC 20408; and the Department of Environmental Protection, State Office Building, 165 Capitol Avenue, Hartford, CT 06106.

FOR FURTHER INFORMATION CONTACT: Marcia L. Spink, (617) 223-4868, FTS 223-4868.

SUPPLEMENTARY INFORMATION: On December 19, 1984 (49 FR 49310), EPA published a Notice of Proposed Rulemaking (NPR) for draft revisions to the Connecticut SIP. Those revisions have been adopted by the State, and on April 22, 1985 were formally submitted to EPA by the Department of Environmental Protection (DEP). The revisions and EPA's rationale for approving them were explained in the NPR, and will not be restated here. No public comments were received on the NPR.

Final Action:

EPA is approving the following revisions to the Connecticut SIP as submitted April 22, 1985:

1. Changes to Section 22a-174-20(a) requiring gasoline storage facilities equipped with external floating roofs to install secondary seals.

2. Changes to Section 22a-174-20(b) requiring gasoline tank trucks to be tested yearly.

3. Changes to Section 22a-174-1 exempting from the definition of "volatile organic compounds" seven chlorofluorocarbons and fluorocarbons determined by EPA to be nonreactive.

4. Changes to Section 22a-174-20(k) removing restrictions on certain materials used in cutback asphalts which EPA has determined do not evaporate at or above 500 °F.

5. A narrative requirement that only persons who attended the Gasoline Tank Truck Certification Workwshop conducted in Hartford on September 14, 1984 will be permitted to certify test results; and a related narrative requirement that if a persons did not attend the workshop and wants to perform such tests, the DEP will provide a copy of the Workshop Manual and will oversee the test to insure that it is being conducted correctly. (A copy of the Workshop Manual has been submitted for approval as part of the SIP narrative.)

6. A narrative requirement that the procedures outlined in Appendix B of *Control of Volatile Organic Compound Leaks from Gasoline Tank Trucks and Vapor Collection System* (EPA-450/2-78-051) be used to confirm continued leak tight conditions in tank trucks as required by Section 22a-174-20(b)(11)(D)(ii). (A copy of Appendix B has been submitted for the SIP narrative.)

7. A narrative requirement that sources notify the DEP thirty days prior to conducting a test in accordance with *Source Test Guidelines and Procedures.* (A copy of that document has been submitted for approval as part of the SIP narrative.)

The Office of Management and Budget has exempted this rule from the requirements of Section 3 of Executive Order 12291.

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by September 16, 1985. This action may not be challenged later in proceedings to enforce its requirements (see 307(b)(2)).

BILLING CODE 6560–50–M

DEPARTMENT OF THE INTERIOR

Office of the Secretary

43 CFR Part 2

Records and Testimony; Freedom of Information Act; Fee Schedule Changes

AGENCY: Office of the Secretary, Interior.

ACTION: Final rule.

SUMMARY: The Department is amending its fee schedule for processing Freedom of Information Act requests in order to depict the current costs of such services.

EFFECTIVE DATE: August 19, 1985.

FOR FURTHER INFORMATION CONTACT: Richard A. Stephan, (202) 343–6191.

SUPPLEMENTARY INFORMATION: The Department's uniform fee schedule for making records available to the public under the Freedom of Information Act (FOIA) was last revised in 1981. The schedule, published as Appendix A to 43 CFR Part 2, as it presently exists does not accurately reflect the cost of making records available to the public. Therefore, on January 3, 1985 (50 FR 286; correction notice published January 9, 1985; 50 FR 1072), the Department published a proposed rule to amend its fee schedule.

One comment from the public was received in response to the proposed rule. In that comment, the view was expressed that no fees should be waived under any circumstance. However, the FOIA itself provides, in part, that "[d]ocuments shall be furnished without charge or at a reduced charge where the agency determines that waiver or reduction of the fee is in the public interest . . ." (5 U.S.C. 552(a)(4)(A)). Therefore, the suggestion that fees never be waived has not been adopted in this final rule.

The commenter also felt that copying fees should be considerably higher than those proposed; again, the Department is bound by the language of the FOIA, which provides in part, that ". . . fees shall be limited to reasonable standard charges for document search and duplication and provide for recovery of *only the direct costs of such search and duplication*" (5 U.S.C. 552(a)(4)(A)) (Emphasis added). Accordingly, the fee schedule, which was designed to meet the statutory requirement, has been adopted as proposed.

The Department has determined that this document is not a major rule under Executive Order 12291 and certifies that it will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act. This document merely reflects an effort by the Department to recover some of the increased costs of administering the FOIA, as permitted by the FOIA. We do not perceive any significant economic effect upon any small entity resulting from the relatively small increase in fees.

This rule does not contain information collection requirements which require approval by the Office of Management and Budget under 44 U.S.C. 3501 *et seq.*

The principal author of this document is Richard A. Stephan, Office of Information Resources Management.

List of Subjects in 43 CFR Part 2

Freedom of information, Privacy.

PART 2—[AMENDED]

Accordingly, 43 CFR Part 2 is amended as set forth below.

1. The authority citation for 43 CFR Part 2 is revised to read as follows:

Authority: 5 U.S.C. 301, 552 and 552a; 31 U.S.C. 9701 and 43 U.S.C. 1460, unless otherwise noted.

2. In § 2.19, paragraph (c)(3) introductory text is revised and a new paragraph (f) is added to read as follows:

§ 2.19 Fees.

* * * * * *

(c) * * *

(3) Fees otherwise chargeable for document search and duplication costs incurred in responding to requests shall be waived if the total amount of the fee does not exceed $15.00 or may be waived or reduced if the request involves:

* * * * *

(f) *Billing procedures.* A Bill for Collection, Form DI–1040, shall be prepared for each request which requires the collection of search and duplication costs. The requester shall be provided the first sheet of the DI–1040. The Accounting Copy of the Form shall be transmitted to the agency's finance office for entry into accounts receivable records. Upon receipt of payment from the requester, the recipient shall forward the payment along with a copy of the DI–1040 to the finance office.

3. Appendix A to 43 CFR Part 2 is revised to read as follows:

Appendix A—Fees

The following uniform fee schedule is applicable to all constituent units of the Department. It states the fees to be charged to members of the public for services performed in searching for and duplicating records in connection with requests made under the Freedom of Information Act. The fees are also applicable to services provided in duplicating and making available records in response to requests made under the Privacy Act. It also states the fees to be charged for certification of documents.

(1) *Copies, basic fee.* For copies of documents reproduced on a standard office copying machine in sizes up to 8½" x 14", the charge will be $0.13 per copy.

Examples: For one copy of a three-page document, the fee would be $0.39. For two copies of a three page document, the fee would be $0.78. For one copy of a 60-page document, the fee would be $7.80.

(2) *Copies, documents requiring special handling.* For copies of documents which require special handling because of their age, size, etc., cost will be based on direct costs of reproducing the materials.

(3) [Reserved]

(4) [Reserved]

(5) *Clerical searches.* For each quarter hour, or portion thereof, spent by clerical personnel in locating a requested record or records: $2.25

(6) *Nonclerical searches.* For each quarter hour, or portion thereof, spent by professional or managerial personnel in locating a requested record or records where the search cannot be performed by clerical personnel: $4.50

(7) [Reserved]

(8) *Certification.* For each certificate of verification attached to authenticated copies of records furnished to the public the charge will be $0.25.

(9) [Reserved]

(10) *Computerized records.* Charges for services in processing requests for records maintained in computerized form will be calculated in accordance with the following criteria:

(a) Costs for processing a data request will be calculated using the same standard direct costs charged to other users of the facility, and/or as specified in the user's manual or handbook published by the computer center in which the work will be performed.

(b) An itemized listing of operations required to process the job will be prepared (i.e., time for central processing unit, input/output, remote terminal, storage, plotters, printing, tape/disc mounting, etc.) with related associated costs applicable to each operation.

(c) Material costs (i.e., paper, cards, tape, etc.) will be calculated using the latest acquisition price paid by the facility.

(d) ADP facility managers must assure that all cost estimates are accurate, and if challenged, be prepared to substantiate that the rates are not higher than those charged to other users of the facility for similar work. Upon request, itemized listings of operations and associated costs for processing the job may be furnished to members of the public.

(11) *Postage/mailing costs.* Return postage/mailing fees may be added to charges for records if the postage/mailing fee exceeds $1.00.

(12) [Reserved]

(13) [Reserved]

(14) *Other services.* When a response to a request requires services or materials other than those described in this schedule, the direct cost of such services or materials to the Government may be charged, but only if the requester has been notified of such cost before it is incurred.

(15) *Effective date.* This schedule applies to all requests made under the Freedom of Information Act and Privacy Act after August 19, 1985.

Dated: July 11, 1985.

Joseph E. Doddridge, Jr.,

Deputy Assistant Secretary—Policy, Budget and Administration.

GENERAL SERVICES ADMINISTRATION

Board of Contract Appeals; Rules of Procedure

48 CFR Part 6101

AGENCY: GSA Board of Contract Appeals.

ACTION: Final rule and interim rule; correction.

SUMMARY: This document corrects the General Services Administration Board of Contract Appeals rules of procedure.

FOR FURTHER INFORMATION CONTACT: James J. Regan, General Services Administration Board of Contract Appeals, (202) 566–0890.

In FR Doc 85–878 beginning on page 1756 in the issue of Friday, January 11, 1985, make the following corrections:

1. On page 1760, in 6101.5(b)(3)(iii), in the first column, second paragraph, next-to-the-last line, add "s" to the word "limit".

2. On page 1761 in 6101.8(c)(4), in the third column, first paragraph, add "and" after semi-colon at the end of the paragraph.

3. On page 1765, in 6101.16(c)(3)(i)–(iii), in the first and second columns, remove "or" at end of each paragraph after each semi-colon.

4. On page 1765, in 6101.17(d), in the third column, fourth paragraph, remove "," after "service" in the next to the last line.

5. On page 1766, in 6101.18(b)(2)(v), in the first column, last paragraph, add "and" after semi-colon at the end of the paragraph.

6. On page 1770, in 6101.35(b), in the second column, in the seventh paragraph line six, add "," after the word "accuracy".

In FR Doc 85–15351 beginning on page 26764 in the issue of Friday, June 28, 1985, make the following corrections:

1. On page 26765, in 6101.19 (Rule 19), in the second column, add a semi-colon after the word "notice" in the title.

2. On page 26766, in 6101.5, in the first column, "(n) * * *" should read "(b) * * *".

3. On page 26766, in 6101.5(b)(3)(i), in the second column, remove "; and" and replace with "." at the end of the paragraph.

4. On page 26766, in the second column, in 6101.5(d), in the twenty-first line, "(XMA)" should read "(KMA)".

In the FR correction beginning on page 27969 in the issue of Tuesday, July 9, 1985, make the following correction:

1. On page 27970, the Subpoena form, in the upper left hand side under the title heading, remove the line "Appeal/Protest/Petition of :" from the form in its entirety.

Dated: July 12, 1985.

Leonard J. Suchanek,

Chairman, Board of Contract Appeals.

Proposed Rules

Federal Register
Vol. 50, No. 138
Thursday, July 18, 1985

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

FEDERAL ELECTION COMMISSION

11 CFR Part 110

[Notice 1985-10]

Contribution and Expenditure Limitations and Prohibitions; Contributions by Persons and Multicandidate Political Committees

AGENCY: Federal Election Commission.

ACTION: Notice of Hearing on Proposed Rules.

SUMMARY: On April 17, 1985 the Federal Election Commission published a Notice of Proposed Rulemaking to revise its regulations governing contributions by persons and multicandidate political committees at 11 CFR 110.1 and 110.2 (50 FR 15169). The Commission will hold a public hearing on these proposed rules.

DATES: The hearing will be held on October 16, 1985 at 10:00 a.m. Persons or organizations wishing to testify at the hearing should notify the Commission and should submit written comments by October 1, 1985, if they have not previously submitted comments on these proposed rules.

ADDRESSES: The hearing will be held in the Commission's fifth floor meeting room, 1325 K Street, NW., Washington, D.C. Those wishing to testify at the hearing should address their requests and comments to Ms. Susan E. Propper, Assistant General Counsel, 1325 K Street, NW., Washington, D.C. 20463.

FOR FURTHER INFORMATION CONTACT: Ms. Susan E. Propper, Assistant General Counsel, (202) 523-4143 or (800) 424-9530.

Dated: July 12, 1985.

John Warren McGarry,

Chairman, Federal Election Commission.

BILLING CODE 6715-01-M

DEPARTMENT OF COMMERCE

International Trade Administration

DEPARTMENT OF THE INTERIOR

Office of Territorial and International Affairs

15 CFR Part 303

[Docket No. 50691-5091]

Watch Duty-Exemption Program

AGENCY: Import Administration, International Trade Administration, Commerce, Office of Territorial and International Affairs, Interior.

ACTION: Proposed rule.

SUMMARY: This document sets forth a proposed revision to 15 CFR Part 303, which governs the allocation of duty-free benefits among watch producers in the insular possessions (the Virgin Islands, Guam, and American Samoa) and the Northern Mariana Islands pursuant to Pub. L. 97-446.

The proposed revision is necessary in order to provide a territorial share of the duty exemption for the Northern Mariana Islands ("NMI"). Pub. L. 94-241, which prescribes among other things that NMI shall be entitled to the same tariff privileges afforded to Guam, authorizes the establishment of such a share. We are proposing to take this action now in response to a request from the Governor of the NMI and to an expression of interest in receiving an allocation by a potential producer in the NMI.

We also propose to change § 303.14 by raising the maximum value of components for watches (from $40 to $80) and watch movements (from $20 to $30). This change will afford producers increased flexibility in producing and marketing insular watches and watch movements.

Section 303.12(a)(1) requires producers to certify that they intend and shall be able to continue operations beyond the current calendar year prior to issuance of their production incentive certificates. When we adopted this requirement in 1983 we were concerned that producers might use the certificates but nevertheless cease operations, i.e., take advantage of the incentive without fulfilling its purpose. In our judgment, the additional incentives have been effective and there is no longer any reason for this transitional safeguard.

Finally, we are proposing minor editorial changes in §§ 303.1 (a) and (b), 303.6 (c) and (d), and 303.7(b)(6).

DATE: Comments must be received on or before August 19, 1985.

ADDRESS: Address comments to: Statutory Import Programs Staff, Rm. 1523, International Trade Administration, U.S. Department of Commerce, Washington, D.C. 20230.

FOR FURTHER INFORMATION CONTACT: Faye Robinson, (202) 377-1660.

SUPPLEMENTARY INFORMATION: In accordance with Executive Order 12291 dated February 17, 1981, the Departments of Commerce and the Interior have determined that these rules do not constitute a "major rule" as defined by section 1(b) of the Order. They are not likely to result in:

(1) Annual effect on the economy of $100 million or more;

(2) A major increase in costs or prices in either the public or private sector; or

(3) Significant adverse impact on the domestic economy or on the ability of U.S. enterprise to compete with foreign enterprises.

In accordance with the Regulatory Flexibility Act, 5 U.S.C. 601 et seq., the General Counsel of the Department of Commerce has certified that this action will not have a significant economic impact on a substantial number of small entities. Fewer than ten entities are directly affected by this action. The commercial benefits of the program governed by these regulations, for entities both directly and indirectly affected, are less than $10 million per year.

Pursuant to the requirements of the Paperwork Reduction Act of 1980, the Departments have determined that the proposed amendment will not significantly increase the information collection burden on the public. The collections of informatioon involved with this rule have been approved by the Office of Management and Budget under control numbers 9625-0040 and 0625-0134.

List of Subjects in 15 CFR Part 303

Imports, Customs duties and inspection, Watches and jewelry, Marketing quotas, Administrative practice and procedure, Reporting and recordkeeping requirements, American Samoa, Guam, Virgin Islands, Northern Mariana Islands.

PART 303—[AMENDED]

For reasons set forth above, the following amendments of Part 303 are made:

1a. The authority section is revised to read as follows:

Authority: Pub. L. 97-446, 96 Stat. 2329 (19 U.S.C. 1202); Pub. L. 94-241, 90 Stat. 263 (48 U.S.C.A 1681, note)

1b. Section 303.1 (a) and (b) are revised to read as follows:

§ 303.1 Purpose.

(a) This part implements the responsibilities of the Secretaries of Commerce and the Interior ("the Secretaries") under Pub. L. 97-446, enacted on 12 January 1983, which substantially amended Pub. L. 89-805, enacted 10 November 1966, amended by Pub. L. 94-88, enacted 6 August 1975, and amended by Pub. L. 94-241, enacted 24 March 1976. The law provides for exemption from duty of watches and watch movements produced or manufactured in a United States insular possession, without regard to the value of the foreign materials they contain, if they conform with the provisions of Headnote 6, Schedule 7, Part 2, Subpart E of the Tariff Schedules of the United States ("Headnote 6"). Headnote 6 denies this benefit to articles containing any material which is the product of any country with respect to which Column 2 rates of duty apply; authorizes the Secretaries to establish the total quantity of such articles, provided that the quantity so established does not exceed 10,000,000 units or one-ninth of apparent domestic consumption, whichever is greater, and provided also that the quantity is not decreased by more than ten percent nor increased by more than twenty percent (or to more than 7,000,000 units, whichever is greater) or the quantity established in the previous year.

(b) The law directs the International Trade Commission to determine apparent domestic consumption for the preceding calendar year in the first year U.S. insular imports of watches and watch movements exceed 9,000,000 units Headnote 6 authorizes the Secretaries to establish territorial shares of the overall duty-exemption within specific limits; and provides for the annual allocation of the duty-exemptions among insular watch producers equitably and on the basis of allocation criteria, including minimum assembly requirements, that will reasonably maximize the net amount of direct economic benefits to the insular possessions.

* * * * *

2. Section 303.2 is amended by revising paragraph (a)(6).

§ 303.2 Definitions and forms.

(a) * * *

(6) *Territories, territorial, and insular possessions* refer to the insular possessions of the United States (i.e., the U.S. Virgin Islands, Guam, and American Samoa) and the Northern Mariana Islands.

* * * * *

§ 303.2, 303.3, 303.5, 303.7, 303.9, 303.10, 303.14 [Amended]

3. The terms "insular possession" and "insular possessions" are changed to read "territory" and "territories," respectively, each time they appear in §§ 303.2(a)(14); 303.3 (b)(3) and (c)(1); 303.5(b)(7); 303.7(b)(1); 303.9(b)(4); 303.10(a)(2); and 303.14(b)(2).

§ 303.6 [Amended]

4. Section 303.6 is amended by changing the word "initial" to "interim" each time it appears in paragraphs (c) and (d).

§ 303.7 [Amended]

5. Section 303.7 is amended by taking out the words "as prescribed in the annual rules" in the first sentence of paragraph (b)(6).

6. Section 303.12 is amended by revising paragraph (a)(1).

§ 303.12 Issuance and use of Production incentive certificates.

(a) *Issuance of certificates.* (1) Certificates of Entitlement, Form ITA-360, shall be issued before March 1 of the current year.

* * * * *

7. Section 303.14 is amended by revising paragraph (b)(3), (d)(1), and (e).

§ 303.14 Allocation factors and miscellaneous provisions.

* * * * *

(b) * * *

(3) The maximum value of components referred to in Section 303.10(a)(1) shall be $30 for watch movements and $80 for watches.

* * * * *

(d) *New Entrant Invitations.* (1) Applications from new firms are invited for the territorial shares of American Samoa and the Northern Mariana Islands.

* * * * *

(e) *Territorial shares.* The shares of the total duty exemption are 3,500,000 for the Virgin Islands, 1,000,000 for Guam, 500,000 for American Samoa, and 500,000 for the Northern Mariana Islands.

(Approved by the Office of Management and Budget under control numbers 0625-0040 and 0625-0134.)

Dated: July 10, 1985.

John L. Evans,

Deputy to the Deputy Assistant Secretary for Import Administration.

Kittie Baier,

Deputy Assistant Secretary for Territorial and International Affairs.

BILLING CODE 3510-DS 4310-10-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 109, 110, 225, 226, 500, and 509

[Docket No. 80N-0128]

Current Good Manufacturing Practice Relating to Poisonous and Deleterious Substances in Food, Feed, and Food-Packaging Materials Plants; Withdrawal of Proposed Rule

AGENCY: Food and Drug Administration.

ACTION: Withdrawal of proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is withdrawing its proposed rule that would have prohibited or limited the amount of polychlorinated biphenyls (PCB's) in sealed electrical transformers or capacitors used or stored in or around food, feed, and food- and feed-packaging materials plants or storage facilities. FDA has concluded that a final rule recently published by the Environmental Protection Agency (EPA) adequately protects the public health in this area, and that, therefore, the proposed rule is no longer necessary.

FOR FURTHER INFORMATION CONTACT: F. Leo Kauffman, Center for Food Safety and Applied Nutrition (HFF-214), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-485-0107.

SUPPLEMENTARY INFORMATION:

Background

The industrial uses of PCB's are subject to the Toxic Substances Control Act (TSCA) (15 U.S.C. 2605(e)), which is administered by EPA, as well as the Federal Food, Drug, and Cosmetic Act (the act), which is administered by FDA. TSCA authorizes EPA to allow PCB's to be used in a "totally enclosed manner." On May 31, 1979, EPA issued a rule that designated PCB-containing industrial transformers as totally enclosed and thus not subject to the TSCA prohibition.

In light of the EPA rule, FDA published in the **Federal Register** of May 9, 1980 (45 FR 30964), a proposed rule

concentration of 500 parts per million (ppm) or greater posing an exposure risk

21 CFR Part 110

Good manufacturing practices

21 CFR Part 170

State program amendment procedures, revised regulations

are directly responsible, for the use of

In light of the EPA rule, FDA published in the **Federal Register** of May 9, 1980 (45 FR 30984), a proposed rule that would have prohibited or limited the amount of PCB's in sealed electrical transformers and capacitors used or stored in or around food, feed, and food- and feed-packaging materials plants or storage facilities (21 CFR 109.15, 110.40, 225.1, 226.1, 500.45, and 509.15). FDA requested that comments submitted in response to that proposal include information regarding: (1) The number, types, and location of PCB-containing transformers or capacitors used or stored in or around FDA-regulated food, feed, or food-packaging materials plants and storage materials plants and storage facilities; (2) a reasonable time estimate for replacing such electrical equipment or replacing the PCB fluid in such equipment; and (3) an estimate of the cost involved.

Interested persons were requesterd to submit comments by July 7, 1980. After receiving a number of requests for extensions, FDA extended the comment period to November 4, 1980, by notice published in the **Federal Register** of July 1, 1980 (45 FR 44325); to December 4, 1980, by notice published in the **Federal Register** of October 28, 1980 (45 FR 71364); and to March 4, 1981, by notice published in the **Federal Register** of December 2, 1980 (45 FR 79856).

On October 30, 1980, the U.S. Court of Appeals for the District of Columbia ruled, in relevant part, that regulations issued by EPA that characterized intact, nonleaking transformers, capacitors, and electromagnets containing PCB's as "totally enclosed" for purposes of TSCA were unsupported by the rulemaking record and remanded the regulations to EPA for further consideration (see *Environmental Defense Fund* v. *Environmental Protection Agency*, No. 79-180 (D.C. Cir., October 30, 1980)).

In response to a motion by EPA and certain other parties to the case, the court issued an order on February 12, 1981, requiring EPA to undertake rulemaking concerning the use of PCB's. Because FDA's proposal was based in large part on EPA's regulation, and because of the uncertainties concerning the impact of the actions of the Court of Appeals on FDA's proposal, FDA decided to hold in abeyance the May 9, 1980 proposal. A notice of abeyance of the proposed rule was published in the **Federal Register** of March 6, 1981 (46 FR 15518).

In response to the court order of February 12, 1981, EPA published a final rule in the **Federal Register** of August 25, 1982 (47 FR 37342), that, among other things, prohibits the use of PCB transformers with a dielectric fluid PCB concentration of 500 parts per million (ppm) or greater posing an exposure risk to food or feed, after October 1, 1985, and requires a weekly inspection of this equipment for leaks of dielectric fluid until that date. The record compiled during the EPA rulemaking establishes that the 500 ppm limitation is reasonable and protective of the public health. The final rule also prohibits the use of large PCB capacitors after October 1, 1988, unless they are located in restricted-access electrical substations or in contained and restricted-access indoor installations for the remainder of their useful lives.

Comments Received by FDA

FDA received 160 comments in response to the May 9, 1980 proposal from utility companies, suppliers, manufacturers and processors, trade associations, consumers, and other interested persons. Most of the comments from industry said that the proposed regulations would have an adverse impact on their businesses. Several comments asserted that the proposal was overly broad. The food-packaging materials industry asked that their plants be excluded from the coverage of the proposed rule because, in the industry's view, there is no reason to believe that food or feed would be contaminated from any leak in such a plant. Many consumers, however, supported: (1) A ban on installation of any equipment containing PCB's in any plants that process food and (2) a prohibition of the use of currently installed equipment that contains PCB's.

Withdrawal of the Proposal

FDA has considered the comments and has carefully reviewed EPA's final rule of August 25, 1982. EPA's requirements apply to the uses and conditions that FDA sought to regulate in its proposed rule. FDA believes that EPA's new requirements place reasonable limitations on the industrial use of electrical transformers and capacitors and provide adequate safeguards against the risk of contamination of the food and feed supply from PCB-containing electrical equipment. Accordingly, FDA believes that the revisions to §§ 109.15, 110.40, 110.80(k), 225.1, 226.1, 500.45, and 509.15 proposed in the **Federal Register** of May 9, 1980, are no longer necessary and is withdrawing its proposal.

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 917

Consideration of Amendments to the Kentucky Program Under the Surface Mining Control and Reclamation Act 1977

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Reopening of public comment period.

SUMMARY: OSM is reopening the period for review and comment on certain amendments submitted by the Commonwealth of Kentucky to its program for the regulation of surface coal mining and reclamation in the State. The amendments related to Kentucky's revised regulations pertaining to use of explosives and the blaster training and certification program.

DATES: Written comments, data or other relevant information must be received on or before 4:00 p.m. August 2, 1985 to be considered. Comments not received by this date will not necessarily be considered.

ADDRESSES: Comments should be sent or hand-delivered to: W.H. Tipton, Director, Lexington Field Office, Office of Surface Mining, 340 Legion Drive, Suite 28, Lexington, Kentucky 40504.

FOR FURTHER INFORMATION CONTACT: W.H. Tipton, Director, Lexington Field Office, Office of Surface Mining, 340 Legion Drive, Lexington, Kentucky 40504; Telephone: (606) 233-7327.

SUPPLEMENTARY INFORMATION: by a letter dated December 4, 1984, OSM received, pursuant to the 30 CFR 732.17 State program amendment procedures, revised regulations amending the Kentucky program. On January 3, 1985, OSM published a notice in the **Federal Register** (50 FR 283) announcing receipt of the amendments to the Kentucky program and inviting public comment thereon. The public comment period closed February 4, 1985. A public hearing scheduled for January 28, 1985, was not held because no one expressed a desire to testify.

On May 22, 1985, OSM received additional material from Kentucky pertaining to use of explosives and the blaster training and certification program. This material consists of further revisions to the Kentucky Administrative Regulations (KAR) at 405 KAR 7:070, 16:120 and 16:120.

OSM is reopening the comment period for an additional 15 days to allow the public sufficient time to review and comment on the above Kentucky amendments. Written comments should be specific, pertain only to the issues proposed in this rulemaking and include explanations of why the commenter believes or does not believe that the proposed amendments are in accordance with SMCRA and no less effective than its implementing regulations. Pursuant to 30 CFR 732.17(h)(2)(ii), each requestor may receive, free of charge, one single copy of the proposed amendment by contacting OSM's Lexington Field Office listed under "**ADDRESSES.**"

List of Subjects in 30 CFR Part 917

Coal mining, Intergovernmental relations, Surface mining, Underground mining.

Dated: July 11, 1985.

Charles B. Kenehan,

Assistant Director, Program Operations and Inspection.

[FR Doc. 85-17051 Filed 7-17-85; 8:45 am]

BILLING CODE 4310-05-M

30 CFR Part 926

Permanent State Regulatory Program of Montana

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Proposed rule.

SUMMARY: OSM is seeking comment on Montana's request to further extend the deadline for Montana: (1) To promulgate rules governing the training, examination and certification of blasters and (2) to develop and adopt a program to examine and certify all persons who are directly responsible, for the use of explosives in a surface coal mining operation. On March 6, 1984, Montana requested an extension of time, until May 31, 1984, for the development of a blaster certification program. On May 14, 1984, the Director, OSM announced his decision to extend Montana's deadline to May 31, 1984 (49 FR 20288). On June 18, 1985, Montana requested an additional extension of time, until October 31, 1985, to develop the training portion of its blaster certification program.

DATE: Comments not received by August 19, 1985 the address below, will not necessarily be considered.

ADDRESSES: Written comments should be mailed or hand delivered to Mr. William Thomas, Field Office Director, Casper Field Office, Office of Surface Mining, Freden Building, 935 Pendell Boulevard, Mills, Wyoming 82644.

FOR FURTHER INFORMATION CONTACT: Mr. William Thomas, Field Office Director, Casper Field Office, Office of Surface Mining, Freden Building, 935 Pendell Boulevard, Mills, Wyoming 82644; Telephone: (307) 328-5830.

SUPPLEMENTARY INFORMATION: On March 4, 1983, OSM issued final rules effective April 14, 1983, establishing the Federal standards for the training and certification of blasters at 30 CFR Chapter M (48 FR 9486). Section 850.12 of these regulations stipulates that the regulatory authority in each State with an approved program under SMCRA shall develop and adopt a program to examine and certify all persons who are directly responsible for the use of explosives in a surface coal mining operation within 12 month after approval of a State program or within 12 months after publication date of OSM's rule at 30 CFR Part 850, whichever is later. In the case of Montana's program, the applicable date is 12 months after publication date of OSM's rule, or March 4, 1984.

On January 3, 1984, the State of Montana submitted to OSM two amendments to its permanent regulatory program. One amendment was intended to implement the provisions of 30 CFR Part 850 relating to blaster training, examination and certification.

OSM announced in the February 6, 1984 **Federal Register** (49 FR 4385), receipt of the proposed program amendment and procedures for the public comment period and public hearing on the adequacy of the proposed amendments.

The State of Montana conducted on February 2, 1984, a public hearing to

communications received and determine a course of final action on this proposal. The proposed regulations may be

bridges can be placed on four hours advance notice for an opening. This will

of Title 33, Code of Federal Regulations as follows:

The State of Montana conducted on February 2, 1984, a public hearing to receive comments on the adequacy of Montana's proposed regulations. As a result of substantive comments received at the hearing, the State decided to revise its amendment package and reopen the comment period until April 13, 1984.

To accommodate the revised schedule, the State submitted to OSM on March 6, 1984, a request for an extension until May 31, 1984, to submit final rules addressing the blaster certification program. On May 25, 1984, the State on Montana submitted to OSM a proposed blaster certification program amendment. OSM published notification of receipt of the State's submission and announced a public comment period on the proposed amendment in the June 14, 1984 Federal Register (49 FR 24542). On August 20, 1984, the State of Montana was notified of deficiencies that were identified as a result of OSM's review of the May 25, 1985 submission. Montana responded, on September 20, 1984, to OSM's concerns by providing additional material that appeared to adequately address the issues raised in OSM's letter of August 20, 1984.

On October 29, 1984, the Director of OSM's Casper Field Office informed the State of Montana that he was prepared to recommend to the Director that he approve Montana's blaster certification program pending review and approval of the State's blaster training course and blaster certification examination as required by 30 CFR Part 850.

OSM evaluated the State's blaster certification examination and blaster training program and identified deficiencies in the training program. As a result, the State of Montana requested on June 18, 1985 an additional extension of time, until October 31, 1985, to develop the training portion of its blaster certification program.

Therefore, OSM is seeking comment on the State's request for additional time to develop and adopt a blaster certification program. Section 850.12(b) of OSM's regulations provides that the Director, OSM, may approve an extension of time for a State to develop and adopt a program upon a demonstration of good cause.

Additional Determinations

1. *Compliance with the National Environmental Policy Act:* The Secretary has determined that, pursuant to section 702(d) of SMCRA, 30 U.S.C. 1292(d), no environmental impact statement need be prepared on this rulemaking.

2. *Executive Order No. 12291 and the Regulatory Flexibility Act:* On August 28, 1981, the Officer of Management and Budget (OMB) granted OSM an exemption from sections 3, 4, 7, and 8 of Executive Order 12291 for actions directly related to approval or conditional approval of State regulatory program. Therefore, this action is exempt from preparation of a Regulatory Impact Analysis and regulatory review by OMB.

The Department of the Interior has determined that this would not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). This rule would not impose any new requirements; rather, it would ensure that existing requirements established by SMCRA and the Federal rules would be met by the State.

3. *Paperwork Reduction Act:* This rule does not contain information collection requirements which require approval by the Office of Management and Budget under 44 U.S.C. 3507.

BILLING CODE 4310-05-M

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 117

[CGD8-85-13]

Drawbridge Operation Regulations; Vermilion River, LA

AGENCY: Coast Guard, DOT.

ACTION: Proposed rule.

SUMMARY: At the request of the Louisiana Department of Transportation and Development (LDOTD) and Vermilion Parish, the Coast Guard is considering a change to the regulations governing the operation of four state owned drawbridges and one parish owned drawbridge over the Vermilion River, Louisiana, as follows:

(1) The lift span bridge, mile 22.4, on LA82 at Perry, Vermilion Parish.

(2) The lift span bridge, mile 25.4, on LA14 at Abbeville, Vermilion Parish.

(3) The lift span bridge, mile 26.0, on LA14 Bypass at Abbeville, Vermilion Parish.

(4) The swing span bridge, mile 34.2, near Milton, Vermilion Parish, (parish owned).

(5) The lift span bridge, mile 37.6, on LA92 at Milton, Lafayette Parish.

This proposed change would require that the draw of the bridge at Perry, mile 22.4, open on at least four hours advance notice from 9 p.m. to 5 a.m., and that the draws of the other four bridges open on at least four hours advance notice from 6 p.m. to 10 a.m. The draws would open on signal outside these hours. Presently, the draws are required to open on at least 12 hours advance notice from 9 p.m. to 5 a.m. and to open on signal from 5 a.m. to 9 p.m.

This proposal to extend the advance notice period for four bridges from eight to 16 hours (6 p.m. to 10 a.m.) is being made because of the infrequent requests for opening the draws during that period. This proposal does not change the existing advance notice period for the Perry bridge, but it does reduce the advance notice time to be given for an opening for that bridge from 12 to four hours, to be consistent with the other bridges. This action should relieve the bridge owners of the burden of having a person constantly available at each of the four bridges from 6 p.m. to 10 a.m., while still providing for the reasonable needs of navigation.

DATE: Comments must be received on or before September 3, 1985.

ADDRESS: Comments should be mailed to Commander (obr), Eighth Coast Guard District, 500 Camp Street, New Orleans, Louisiana 70130. The comments and other material referenced in this notice will be available for inspection and copying in Room 1115 at this address. Normal office hours are between 8:00 a.m. and 3:30 p.m., Monday through Friday, except holidays. Comments may also be hand-delivered to this address.

FOR FURTHER INFORMATION CONTACT: Perry Haynes, Chief, Bridge Administration Branch, at the address given above, telephone (504) 589-2965.

SUPPLEMENTARY INFORMATION: Interested parties are invited to participate in this proposed rulemaking by submitting written views, comments, data or arguments. Persons submitting comments should include their names and addresses, identify the bridge, and give reasons for concurrence with or any recommended change in the proposal. Persons desiring acknowledgement that their comments have been received should enclose a stamped, self-addressed postcard or envelope.

The Commander, Eighth Coast Guard District, will evaluate all communications received and determine a course of final action on this proposal. The proposed regulations may be changed in light of comments received.

Drafting Information

The drafters of this notice are Perry Haynes, project officer, and Steve Crawford, project attorney.

Discussion of Proposed Regulations

Vertical clearance of the bridges in the closed position range from 4.0 to 15.0 feet above high water and 9.0 to 18.0 feet above low water. Navigation through the bridges consists of commercial and pleasure boats. Data submitted by the LDOTD show that this traffic is infrequent during the proposed advance notice period as reviewed below:

(1) *Perry bridge (mile 22.4).* In 1984, between 9 p.m. and 5 a.m., the existing advance notice period, there were 138 bridge openings—an average of 11.5 openings per month or an average of one opening every three days. In 1983, for the same period, there was 96 bridge openings. No change is being proposed to the existing eight hour period during which the bridge opens on advance notice. However, the amount of advance notice time to be given for an opening is being reduced from 12 to four hours.

(2) *Abbeville bridge (mile 25.4).* In 1984, between 6 p.m. and 10 a.m., the proposed advance notice period, there were 254 bridge openings—an average of 21.0 openings per month or an average of two openings every three days. In 1983, for the same period, there were 216 bridge openings.

(3) *Abbeville by-pass bridge (mile 26.0).* In 1984, between 6 p.m. and 10 a.m., the proposed advance notice period, there were 230 bridge openings—an average of 19.0 openings per month or an average of two openings every three days. In 1983, for the same period, there were 198 bridge openings.

(4) *Vermilion Parish bridge (mile 34.2).* In 1984 and 1983, between 6 p.m. and 10 a.m., the proposed advance notice period, there were as many bridge openings each year as for the Milton bridge upsteam at mile 37.6.

(5) *Milton bridge (mile 37.6).* In 1984, between 6 p.m. and 10 a.m., the proposed advance notice period, there were 225 bridge openings—an average of 19.0 openings per month or an average of two openings every three days. In 1983, for the same period, there were 181 bridge openings.

Considering the few openings involved for each bridge, the Coast Guard feels that the current on site attendance at the four bridges (mile 25.4 through mile 37.6) between 6 p.m. and 10 a.m. is not warranted, and that the bridges can be placed on four hours advance notice for an opening. This will allow relief to the bridge owners, while still reasonably providing for the needs of navigation. Outside this period, the bridges will continue to open on signal. The only change to the operation of the Perry bridge (mile 22.4) is to reduce the advance notice time to be given for an opening from 12 to four hours.

The advance notice for opening the draws would be given by placing a collect call at any time to the LDOTD District Office at Lafayette, Louisiana, telephone (318) 233-7304, for state bridges; and, to Vermilion Parish at Abbeville, Louisiana (318) 893-0108, for the parish bridge. From afloat, this contact may be made by radiotelephone through a public coast station.

The LDOTD and Vermilion Parish recognize that there may be an unusual occasion to open the bridges on less than four hours notice for an emergency or to operate the bridges on demand for an isolated but temporary surge in waterway traffic, and has committed to doing so if such an event should occur.

Economic Assessment and Certification

These proposed regulations are considered to be non-major under Executive Order 12291 on Federal Regulation and nonsignificant under the Department of Transportation regulatory policies and procedures (44 FR 11034; February 26, 1979).

The economic impact of this proposal is expected to be so minimal that a full regulatory evaluation is unnecessary. The basis for this conclusion is that few vessels pass the bridges during the proposed advance notice periods, as evidenced by the bridge openings for 1984 and 1983. In those years, each bridge averaged well below one opening per day for those periods. These vessels can reasonably give four hours advance notice for a bridge opening by placing a collect call to the bridge owner at any time. Mariners requiring the bridge openings are mainly repeat users and scheduling their arrival at any of the bridges at the appointed time should involve little or no additional expense to them. Since the economic impact of this proposal is expected to be minimal, the Coast Guard certifies that, if adopted, it will not have a significant economic impact on a substantial number of small entities.

List of Subjects in 33 CFR Part 117

Bridges.

Proposed Regulations

In consideration of the foregoing, the Coast Guard proposes to amend Part 117 of Title 33, Code of Federal Regulations as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

1. The authority citation for Part 117 continues to read as follows:

Authority: 33 U.S.C. 499; and 49 CFR 1.46(c)(5) and 33 CFR 1.05-1(g).

2. Section 117.509 is amended by revising paragraph (a), designating existing paragraph (b) as paragraph (c), and adding new paragraph (b) and (d) to read as follows:

§ 117.509 Vermilion River.

(a) The draw of the S82 bridge, mile 22.4 at Perry, shall open on signal; except that, from 9 p.m. to 5 a.m. the draw shall open on signal if at least four hours notice is given.

(b) The draws of the following bridges shall open on signal; except that, from 6 p.m. to 10 a.m. the draws shall open on signal if at least four hours notice is given:

(1) S14 bridge, mile 25.4 at Abbeville.

(2) S14 Bypass bridge, mile 26.0 at Abbeville.

(3) Vermilion Parish bridge, mile 34.2 near Milton.

(4) S92 bridge, mile 37.6 at Milton.

(c) * * *

(d) During the advance notice periods, the draws of the bridges listed in this section shall open on less than four hours notice for an emergency and shall open on signal should a temporary surge in waterway traffic occur.

Dated: July 10, 1985.

Clyde T. Lusk, Jr.,

Rear Admiral, U.S. Coast Guard, Commander, Eighth Coast Guard District.

40 CFR Part 52

[EPA Docket Numbers AM064/065 MD]

Approval and Promulgation of Implementation Plans, Correction to the Maryland State Implementation Plan Revision

AGENCY: Environmental Protection Agency.

ACTION: Correction to proposed rulemaking notice.

SUMMARY: This notice announces a correction to the proposed rulemaking notice regarding a revision to the Maryland State Implementation Plan

(SIP) under the Clean Air Act. On May 3, 1985, EPA published a proposed rulemaking notice (50 FR 18889), has presented substantial information that the requested action may be warranted. Review of the status of those commercial information, a finding be made within 12 months of the date of

distinct species that lives only in the Spruce Creek estuarine system of

precluded because of other pending proposals to list, delist, or reclassify

from immediate proposal by other pending proposals to list, delist, or

(SIP) under the Clean Air Act. On May 3, 1985, EPA published a proposed rulemaking notice (50 FR 18889), proposing approval of a generic visible emissions exception rule (AM084–MD). EPA inadvertently stated that this generic visible emissions exception rule would not be applicable in Air Quality Control Regions III and IV (Baltimore and Washington). The sentence should read, "The proposed revision is only applicable in Air Quality Control Regions III and IV (Baltimore and Washington metropolitan areas.") This **Federal Register** Notice also extends the comment/period for this proposed SIP revision.

EFFECTIVE DATE: Comments must be submitted on or before August 2, 1985.

ADDRESSES: Written comments on the proposed rule should be addressed to Mr. David L. Arnold at the EPA Region III address shown below. Copies of Maryland's request for amendments to their visible emissions regulations are available for public inspection during business hours at the following location:

U.S. Environmental Protection Agency, Region III, Air Programs Branch (3AM10), 841 Chestnut Building, Philadelphia, PA 19107, Attn: Ms. Patricia Gaughan (3AM11)

BILLING CODE 6560–50–M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Findings on Petitions and Initiation of Status Review

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of petition findings and status review.

SUMMARY: The Service announces 90-day findings on two petitions to add species to the List of Endangered and Threatened Wildlife. A petition to list six cave-adapted invertebrate species has presented substantial information that the requested action may be warranted. Review of the status of those six species begins herewith. A petition to list the Spruce Creek king's crown snail has not presented substantial information that the requested action may be warranted. The Service also announces its 12-month findings with respect to five pending petitions to add species to the List of Endangered and Threatened Wildlife. Petitioned actions to list the blackside dace, orangefin madtom and Roanoke logperch, flattened musk turtle, Concho water snake, and Florida scrub jay were found to be warranted but precluded by other efforts to revise the lists. The petition to list the Concho water snake included a request to list also a related subspecies, the Brazos water snake, an action found not to be warranted.

DATES: The findings announced in this notice were made between October 12, 1984, and April 28, 1985. Comments and information may be submitted until further notice.

ADDRESSES: Information, comments, or questions should be submitted to the Associate Director—Federal Assistance (OES), U.S. Fish and Wildlife Service, Washington, DC 20240. The petitions, findings, supporting data, and comments are available for public inspection, by appointment, during normal business hours at the Service's Office of Endangered Species, Suite 500, 1000 North Glebe Road, Arlington, Virginia.

FOR FURTHER INFORMATION CONTACT: Mr. John L. Spinks, Jr., Chief, Office of Endangered Species, U.S. Fish and Wildlife Service, Washington, DC 20240 (703/235–2771 or FTS 235–2771).

SUPPLEMENTARY INFORMATION:

Background

Section 4(b)(3)(A) of the Endangered Species Act of 1973, as amended in 1982 (16 U.S.C. 1531 *et seq.*), requires that the Service make a finding on whether a petition to list, delist, or reclassify a species presents substantial scientific or commercial information to demonstrate that the petitioned action may be warranted. To the maximum extent practicable, this finding is to be made within 90 days of the receipt of the petition, and the finding is to be published promptly in the **Federal Register**. If the finding is positive, the Service is also required to promptly commence a review of the status of the involved species.

Section 4(b)(3)(B) of the Act, as amended, requires that, for any petition to revise the Lists of Endangered and Threatened Wildlife and Plants that contains substantial scientific or commercial information, a finding be made within 12 months of the date of receipt of the petition on whether the petitioned action is: (a) Not warranted, (b) warranted, or (c) warranted, but precluded from immediate proposal by other pending proposals. Section 4(b)(3)(C) requires that petitions for which the action requested is found to be warranted but precluded should be treated as though resubmitted on the date of such finding, i.e. requiring a subsequent finding to be made within 12 months. Such 12-month findings are also published promptly in the **Federal Register**.

Initial 90-day findings were announced for the blackside dace on September 4, 1984 (49 FR 34878); for the orangefin madtom and Roanoke logperch on January 16, 1984 (49 FR 1919); for the flattened musk turtle on April 5, 1984 (49 FR 13558); for the Concho and Brazos water snakes (as Harter's water snake) on May 18, 1984 (49 FR 21089); and for the Florida scrub jay on July 13, 1984 (49 FR 28583). The Concho water snake (*Nerodia harteri paucimaculata*) and Brazos water snake (*Nerodia harteri harteri*) have been referred to together in the previous notices as Harter's water snake (*Nerodia harteri*). Status review for the flattened musk turtle began with a notice of review on June 6, 1977 (42 FR 28903). Status review for the other species mentioned commenced with the December 30, 1982, vertebrate notice of review (47 FR 58454).

Findings

1. A petition from Travis Audubon Society, dated February 8, 1985, and received by the Service on February 12, 1985, requested listing as endangered species the following six cave organisms: *Microcreagris texana, Leptoneta myopica, Texella reddelli, Rhadine persephone, Texamaurops reddelli,* and *Cylindropsis* species (Tooth Cave blind rove beetle, undescribed species). These animals are found only in a limited set of caves in northwest Travis County and adjacent Williamson County, Texas, within or near an area known as the Parke that has been proposed for commercial and residential development. The Service has made the finding that this petition does present substantial information that the requested action may be warranted.

2. A petition from Mr. John K. Tucker, dated January 22, 1985, and received by the Service on January 28, 1985, requested listing as an endangered species an undescribed *Melongena* (king's crown) snail he considers a

distinct species that lives only in the Spruce Creek estuarine system of Volusia County, Florida. The Service found that the petition did not present substantial information that the requested action may be warranted.

3. A pending petition to list the blackside dace, *Phoxinus cumberlandensis,* dated May 11, 1984, was received by the Service on May 16, 1984, from Mr. George Burgess on behalf of the Southeastern Fishes Council. The blackside dace is a rare minnow restricted to small upland streams of the upper Cumberland River drainage in Kentucky and Tennessee, above and just below Cumberland Falls. On the basis of the best scientific information available the Service has found that the action requested by this petition is warranted, but precluded from immediate proposal because of other pending proposals to list, delist, or reclassify species.

4. A pending petition to list two fish species, the orangefin madtom, *Noturus gilberti,* and the Roanoke logperch, *Percina rex,* as threatened species, dated September 29, 1983, was received by the Service on October 6, 1983, from Mr. Noel M. Burkhead. The orangefin madtom is known only from the Roanoke River drainage in Virginia and North Carolina and one tributary of the James River in Virginia. The Roanoke logperch is known only from the Roanoke River drainage, including the Dan and Chowan Rivers, all within the State of Virginia. On October 12, 1984, the Service made the 12-month finding that both actions requested are warranted, but precluded from immediate proposal because of other pending proposals to list, delist or reclassify species. Through an oversight, the announcement of this finding was omitted from the notice of petition findings published May 10, 1985 (50 FR 19761).

5. A pending petition to list the flattened musk turtle as threatened, dated November 30, 1983, was received by the Service on December 1, 1983, from Mr. Michael Bean and Mr. Bruce Manheim on behalf of the Environmental Defense Fund. The flattened musk turtle is known only from the upper Black Warrior River system above Bankhead Dam in Alabama. Status surveys have been conducted under contract with the Service and separately under the sponsorship of Alabama Coal Association. The Service's review of the best scientific and commercial information available indicates that the action requested by this petition is warranted. An immediate propoasl to implement listing is precluded because of other pending proposals to list, delist, or reclassify species.

6. A pending petition to list the Concho water snake, *Nerodia harteri paucimaculata,* as threatened, dated February 14, 1984, was received by the Service on February 28, 1984, from Mr. Ted L. Brown of the New Mexico Herpetological Society. The Concho water snake is known only from the Concho and upper Colorado Rivers of west central Texas. An earlier survey of its status was conducted under cooperative agreement with John W. Flury and Terry C. Maxwell of Angelo State University and supplemented with additional information from surveys by Norman J. Scott and Lee A. Fitzgerald of the Service's Denver Wildlife Research Center. After review of the best scientific information available, the Service has fund that the action requested by the petitioner in respect to the Concho water snake is warranted. An immediate proposal to implement listing is precluded because of other pending proposals to list, delist, or reclassify species.

7. The pending petition just described dated February 14, 1984, and received by the Service on February 28, 1984, from Mr. Ted L. Brown of the New Mexico Herpetological Society, also requested listing as threatened the Brazos water snake, *Nerodia harteri, harteri.* This snake is known from the Brazos River of central Texas. On the basis of the scientific information available in 1982, the Brazos water snake was considered with the Concho water snake (as Harter's water snake) in the comprehensive vertebrate notice of review. Additional information secured in recent surveys indicates the Brazos water snake is neither as rare nor as patchy in distribution as originally believed. The Service has found that the action requested by the petitioner with respect to the Brazos water snake is not warranted by its present status.

8. A pending petition to list the Florida scrub jay as threatened, date March 16, 1984, was received by the Service on March 22, 1984, from Dr. Jeffrey A Cox. The supporting data, with population estimates and past and present distribution, was developed in his University of Florida doctoral dissertation, "Conservation and Ecology of the Florida Scrub Jay." This bird is known only from pockets of scrub oak on sand ridges in central and coastal Florida, isolated from other scrub jay subspecies by about 1000 miles of unsuitable habitat. The Service has found that the action requested by this petitioner is warranted, but precluded from immediate proposal by other pending proposals to list, delist, or reclassify species.

Section 4(b)(3)(B)(iii) of the Act states that petitioned actions may be found to be warranted but precluded by other listing actions when it is also found that the Service is making expeditious progress in revising the lists. Expeditious progress in listing endangered and threatened species is being made, and is reported annually in the **Federal Register**. The most recent progress report was published on May 10, 1985 (50 FR 19761).

The Service would appreciate any additional data, comments, and suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party concerning the six Texas cave invertebrate species under status review. They include: (1) *Microreagris texana* Muchmore (Arachnida; Pseudoscorpionida; Neobisiidae), (2) *Leptoneta myopica* Gertsch (Arachnida; Araneae; Leptonetidae), (3) *Texella reddelli* Goodnight and Goodnight (Arachnida; Opilionida; Phalangodidae, (4) *Rhadine persephone* Barr (Insecta; Coleoptera; Carabidae), (5) *Texamaurops reddelli* Barr and Steeves (Insecta; Coleoptera; Pselaphidae), and (6) *Cylindropsis* species undescribed, Tooth Cave blind rove beetle (Insecta; Coleoptera, Staphylinidae). The sixth species represents the first New World blind staphylinid beetle, and apparently the first North American record of a genus previously known only from Europe.

Author

Foreign Fishing; Groundfish of the Bering Sea and Aleutian Islands

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of availability of an amendment to a fishery management plan and request for comments.

SUMMARY: NOAA issues this notice that the North Pacific Fishery Management Council has submitted to the Secretary of Commerce for his review Amendment #9 to the fishery management plan for the Bering Sea and Aleutian Islands groundfish fishery (FMP) and is requesting comments from the public.

DATE: Comments on the amendment should be submitted on or before September 27, 1985.

ADDRESSES: Send comments to Robert W. McVey, Director, Alaska Region, National Marine Fisheries Service, P.O. Box 1668, Juneau, AK 99802. Copies of the amendment, the environmental assessment, and the regulatory impact review/initial regulatory flexibility analysis may be obtained from North Pacific Fishery Management Council, P.O. Box 103136, Anchorage, AK 99501.

FOR FURTHER INFORMATION CONTACT: Janet E. Smoker (Resource Management Specialist, NMFS), 907–586–7230; or the Council staff (Jim Glock), 907–274–4563.

SUPPLEMENTARY INFORMATION: The Magnuson Fishery Conservation and Management Act requires that when a fishery management plan or plan amendment is submitted by a regional fishery management council to the Secretary for review, he must publish a notice that the plan or amendment is available for public review and comment. The Secretary will consider the public comments in determining whether to approve the plan or amendment.

Amendment 9 to the FMP proposes three measures to better manage and protect groundfish stocks in the Bering Sea and Aleutian Islands area as follows:

1. Prohibit foreign trawling within 20 miles of the Aleutian Islands.

This measure would greatly reduce the foreign incidental catch of near-shore species which are fully utilized by the U.S. fishing industry. Its effect on the ability of foreign nations to harvest their groundfish allocations would be insignificant.

2. Establish a system for domestic catcher/processor vessels to submit a written catch report within one week of the date of catch and to check in and check out of fishing areas.

This measure would provide timely catch data to fisheries managers to assure that optimum yields are not exceeded. It was not needed before onboard processing and freezing, when small boats landed their catch within a few days.

3. Implement the NMFS habitat conservation policy. In addition to implementing broad new policy, this measure would require fishing vessel operators not to discard or abandon fishing gear or other items in the sea and to make a reasonable attempt to retrieve such items if encountered or report the location to an appropriate official.

An environmental assessment, required under the National Environmental Policy Act, and a regulatory impact review/initial regulatory flexibility analysis, required under Executive Order 12291 and the Regulatory Flexibility Act, were prepared for this amendment and are available from the Council at the address above.

Regulations proposed by the Council and based on this amendment are scheduled to be published in 30 days.

BILLING CODE 3510–22–M

50 CFR Part 650

Atlantic Sea Scallop Fishery

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of availability of a fishery management plan amendment and request for comments.

SUMMARY: NOAA issues this notice that the New England Fishery Management Council has submitted an amendment (Amendment 1) to the Fishery Management Plan for the Atlantic Sea Scallop Fishery for review by the Secretary of Commerce, and is requesting comments from the public. The amendment proposes to replace the current maximum average meat count/minimum shell height with a four-ounce standard corresponding to a minimum scallop size of 40 meat count. The amendment also proposes to eliminate the adjustable meat count standard, and extend enforcement of the four-ounce standard beyond the point of first transaction in the United States. Copies of the amendment may be obtained from the address below.

DATE: Comments on the amendment should be submitted on or before September 30, 1985.

ADDRESS: All comments should be sent to Mr. Richard H. Schaefer, Acting Regional Director, National Marine Fisheries Service, Northeast Regional Office, 14 Elm Street, Gloucester, MA 01930. Clearly mark, "Comments for Sea Scallop Amendment 1" on the envelope.

Copies of the amendment are available upon request from Mr. Douglas G. Marshall, Executive Director, New England Fishery Management Council, Suntaug Office Park, 5 Broadway (Route 1), Saugus, MA 01906.

FOR FURTHER INFORMATION CONTACT: Carol J. Kilbride, Scallop Management Coordinator, 617–281–3600, ext. 244.

SUPPLEMENTARY INFORMATION: The Magnuson Fishery Conservation and Management Act, as amended (16 U.S.C. 1801 *et seq.*), requires that each regional fishery management council submit any fishery management plan or amendment it prepares to the Secretary of Commerce (Secretary) for review and approval or disapproval. This act also requires that the Secretary, upon receiving the plan or amendment, must immediately publish a notice that the plan or amendment is available for public review and comment. The Secretary will consider the public comments in determining whether or not to approve the plan or amendment.

The proposed amendment establishes a four-ounce standard for Atlantic sea scallops, which becomes the minimum that the smallest tens sea scallops in a one-pound sample may weigh. Enforcement of this measure will be accomplished through a prohibition against the possession of non-conforming sea scallops at all times. The amendment is intended to improve the conservation program for Atlantic sea scallops by reducing the mortality of small, immature sea scallops which now occur when those scallops are mixed with larger scallops in technical compliance with the maximum average meat count.

Regulations proposed by the Council and based on this amendment are scheduled to be published within 30 days.

(16 U.S.C. 1801 *et seq.*)

Dated: July 15, 1985.

BILLING CODE 3510–22–M

50 CFR Part 651

Atlantic Groundfish (Cod, Haddock, and Yellowtail Flounder)

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of availability of a Secretarial Amendment to the Interim Fishery Management Plan for Atlantic Groundfish and request for comments.

SUMMARY: NOAA issues this notice that the Secretary of Commerce has submitted to the New England Fishery Management Council a Secretarial Amendment to the Interim Fishery Management Plan for Atlantic Groundfish (FMP) and is requesting comments from the public. The Secretarial Amendment would extend the FMP which is currently effective until September 30, 1985, for an additional year (September 30, 1986) or until the FMP is replaced by an approved Northeast Multi-Species Fishery Management Plan; whichever time period is shorter. Copies of the Secretarial Amendment may be obtained from the address below.

DATE: Comments on the Amendment should be submitted on or before September 30, 1985.

ADDRESS: All comments should be sent to Richard B. Roe, Director, Office of Fisheries Management, 3300 Whitehaven St. NW., Washington, D.C. 20235. Mark the outside of the envelope "Comments on Atlantic Groundfish Secretarial Amendment."

Copies of the Secretarial Amendment to the Interim Fishery Management Plan for Atlantic Groundfish are available from W.P. Jensen, Chief, Fisheries Management Operations, 3300 Whitehaven St. NW., Washington, D.C. 20235.

FOR FURTHER INFORMATION CONTACT: Mark Millikin, 202–634–7449.

SUPPLEMENTARY INFORMATION: The Magnuson Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*) requires that the Secretary of Commerce prepare a fishery management plan or amendment, in accordance with the national standards and any other applicable law, if the appropriate council fails to develop and submit to the Secretary, after a reasonable period of time, a fishery management plan for such fishery. Since the current FMP remains effective until September 30, 1985, a continuation of management measures prescribed by the FMP is necessary for regulating harvest of these species while preparation and review of a new management plan is underway.

No new regulations are proposed by the Secretary to implement this Amendment. The regulations for the FMP are described in 50 CFR Part 651 at 47 FR 43709 (October 4, 1982).

Medicine Bow National Forest Grazing Advisory Board; Meeting

The Medicine Bow National Forest Grazing Advisory Board will meet August 5, 1985, at 7:30 a.m. at the Vee-Bar Ranch on Highway 130 six miles east of Centennial, Wyoming. The Board, Forest Service personnel and interested public will then proceed to review range improvements, range condition and allotment management on the Laramie Ranger District.

The Board will make recommendations concerning range analysis development of Allotment Management Plans, utilization of Range Betterment Funds and discuss Advisory Board By-laws.

The meeting will be open to the public. Persons who wish to attend and participate should notify Range Staff Officer, Ladd G. Frary, Medicine Bow National Forest (307/745-8971) prior to the meeting date. Public members may participate in discussions during the tour at any time or may file a written statement following the meeting.

Dated: July 8, 1985.

Agency Form Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Economic Development Administration (EDA)
Title: Application for Financial Assistance—Lender's Request for Guarantee
Form Number: Agency—ED-201; OMB—0610-0025
Type of Request: New collection
Burden: 50 respondents; 8,000 reporting hours
Needs and Uses: This application is intended to provide EDA with a more comprehensive analysis of the borrower's financial condition and its ability to repay the proposed loan
Affected Public: Businesses or other for-profit institutions, non-profit institutions, small businesses or organizations
Frequency: On occasion
Respondent's Obligation: Required to obtain or retain a benefit
OMB Desk Officer: Timothy Sprehe, 395-4814

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals (202) 377-4217, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington, D.C. 20230.

Written comments and recommendations for the proposed information collections should be sent to Timothy Sprehe, OMB Desk Officer, Room 3235, New Executive Office Building, Washington, D.C. 20503.

Dated: July 12, 1985.
Edward Michals,
Departmental Clearance Officer.

DOC has submitted to OMB for clearance the following proposals for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: Bureau of the Census
Title: Census of Tampa—AHS Match Reconciliation Record
Form Number: Agency—TACM-3; OMB—NA
Burden: 200 respondents; 27 reporting hours
Type of Request: This questionnaire will be used to assess and resolve differences in household reporting for three basic housing characteristics between the pretest of the Census being conducted in Tampa, Florida, and the American Housing Survey.
Affected Public: Individuals or households
Frequency: One time
Respondent's Obligation: Voluntary
OMB Desk Officer: Timothy Sprehe, 395-4814

Agency: Bureau of the Census
Title: 1986 Census of Central Los Angeles County and East Central Mississippi
Form Number: Agency—DC-102A-R, DC-102-A-U; OMB—NA
Type of Request: New collection
Burden: 100,000 respondents; 3,333 reporting hours
Needs and Uses: This survey will be a precanvass before the enumeration and consists primarily of verifying and updating address listings.
Affected Public: Individuals or households
Frequency: One time
Respondent's Obligation: Mandatory
OMB Desk Officer: Timothy Sprehe, 395-4814

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals (202) 377-4217, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington D.C. 20230.

Applications for Duty-Free Entry of Scientific Instruments; Western Research Institute et al.

Pursuant to section 6(c) of the Educational, Scientific and Cultural Materials Importation Act of 1966 (Pub. L. 89-651; 80 Stat. 897; 15 CFR Part 301), we invite comments on the question of whether instruments of equivalent scientific value, for the purposes for which the instruments shown below are intended to be used, are being manufactured in the United States.

Comments must comply with § 301.5(a)(3) and (4) of the regulations and be filed within 20 days with the Statutory Import Programs Staff, U.S. Department of Commerce, Washington, D.C. 20230. Applications may be examined between 8:30 A.M. and 5:00 P.M. in Room 1523, U.S. Department of Commerce, 14th and Constitution Avenue, NW., Washington, D.C.

Docket number: 84-279R. Applicant: Western Research Institute, Laramie, WY 82070. Instrument: Data System, Pyrolysis Probe & Desorption Chemical Ionization Probe. Original notice of this resubmitted application was published in the Federal Register of September 7, 1984.

Docket number: 85-213. Applicant: U.S. Army Institute of Dental Research, Walter Reed Army Medical Center, Washington, DC 20307-5300. Instrument: Mass Spectrometer, Model 8230B and Accessories. Manufacturer: Finnigan MAT, West Germany. Intended use: The instrument is intended to be used for the following research objectives:

(1) Structure elucidation of biological compounds.

(2) Characterization of degradation mechanisms of organic compounds.

(3) Elucidation of fragmentation mechanisms of novel organic compounds.

(4) Detection of and the application of item (2), above, to analysis of trace levels of compounds in biological samples.

Application received by Commissioner of Customs: May 31, 1985.

Docket number: 85-215. Applicant: The Pennsylvania State University, Purchasing Services, 152 Davey Laboratory, University Park, PA 16802. Instrument: Interferometric Spectrophotometer, Model; 1ZMO5 with Accessories. Manufacturer: Bomem, Inc., Canada. Intended use: The instrument is intended to be used to perform high resolution spectroscopy of gases including: (1) Resonance studies of rovibrational levels of polyatomic molecules, (2) infrared studies of small clusters, (3) Spectroscopy of light polyatomic molecules, (4) overtone spectroscopy and intramode interactions and (5) infrared laser photochemistry of silanes, germanes and phosphines. The instrument will also be used for intermediate resolution studies of condensed phase systems where its high sensitivity and signal averaging capabilities will be utilized. The gas phase studies will make it possible to extend the research programs of a number of faculty into new areas that are not accessible with present instrumentation. In addition, students in Chemistry 600—Research will use the instrument to learn how to do research. Application received by Commissioner of Customs: June 4, 1985.

Docket number: 85-216. Applicant: Unversity of Pittsburgh, Chemistry Department, 219 Parkman Avenue, Pittsburgh, PA 15260. Instrument: GC/Mass Spectrometer, Model MM7250E with Accessories. Manufacturer: VG Instruments, United Kingdom. Intended use: Studies of organic compounds having molecular weights from about 100 amu to about 3000 amu. The organic synthetic intermediates and products such as pseudomonic acid, rubradirins, polymixin B, chuangxinmycin, antitumor agents (jatrophatrione, bactobolin), cell enzyme agents (Vitamin B_{12}, methyl malonyl coenzyme A), and important natural products (mitosene, rugulovasine, guaiazulene, chamazulene, (±)-B-methylene-aspartic acid, etc.) are to be analyzed using mass spectrometry. In addition, the instrument will be used in conjunction with the course CHEM 271, Graduate Research and CHEM 171, Undergraduate Research for the training of students in the use and understanding of the techniques of chemical research. Application received by Commissioner of Customs: June 4, 1985.

Docket number: 85-223. Applicant: David Taylor Naval Ship Research and Development Center, Annapolis, MD 21402-1198. Instrument: Electron Microscope-STEM System. Manufacturer: N.V. Philips, The Netherlands. Intended use: The instrument is intended to be used to evaluate the metallurgical aspects of microstructures, defect structures, chemical composition and lattice structure of a variety of metals and alloy systems. Application Received by Commissioner of Customs: June 11, 1985.

Docket number: 85-224. Applicant: Oakland University, Rochester, MI 48063. Instrument: Electron Microscope, Model EM 410LS with Accessories. Manufacturer: N.V. Philips, The Netherlands. Intended use: The instrument is intended to be used for the following research projects:

(1) Morphological studies in experimental cataracts, (2) control of cell division in the ocular lens, (3) regulation of cell proliferation in mammalian heart, cell biology of aging fat body in *Drosophila*, the role of ethylene in abscission, studies on the cytoskeleton and cell membrane in regenerating corneal endothelium, hormonal control of $\alpha\zeta\mu$ globulin synthesis. In addition, the instrument will be used for educational purposes in a graduate program. Application received by Commissioner of Customs: June 11, 1985.

Docket number: 85-225. Applicant: Hospital of the University of Pennsylvania, 3400 Spruce Street/G1, Philadelphia, PA 19104. Instrument: Extracorporeal Shock Wave Lithotripter. Manufacturer: Dornier-System GmbH, West Germany. Intended use: The instrument is intended to be used for studies to determine its usefulness for the following:

(1) Treatment of lower ureteral stones and bladder stones.

(2) The effects of extracorporeal shock waves on benign and malignant renal tumors.

(3) The evaluation of side effects of extracorporeal shock wave on the kidney through the use of magnetic resonance imaging.

(4) Testing and developing new anesthesia techniques. In addition, the instrument will be used for educational purposes in the course Surgery 200 and for instructing medical, surgical and radiological house staff and established practitioners, in the current management of urinary tract stone disease. Application received by Commissioner of Customs: June 13, 1985.

Docket number: 85-226. Applicant: University of Utah, Salt Lake City, UT 84112. Instrument: Mass Spectrometer, Model VG 7070F wigh Accessories. Manufacturer: Vacuum Generators Analytical, Ltd., United Kingdom. Intended use: The instrument is intended to be used for investigation of the collision-induced dissociation (CID)

properties of positive and negative ions. Specifically, the energy and collision gas dependencies, angular-scattering

origin commodities for the Federal Republic of Germany, through Sweden and Finland, with an ultimate

BILLING CODE 3510-DS-M

[Case No. 669]

Order Temporarily Denying Export Privileges; Anton Elzar et al.

In the Matter of: Anton Elzar, individually and doing business as Development and Consultant Elzar ECO AB Grinnekullegatan 160, Goteborg, Sweden; Helmut Keck, individually and doing business as OTC Mess–unD Videoteknik GmbH, Eifferstra 598, Hamburg, Federal Republic of Germany; Paul Nurminen OY, Posylank 2, Helsinki, Finland; Metrab, Mellen Trading AB, Fridkullagatan 19, Goteborg, Sweden.

The United States Department of Commerce (the Department), pursuant to the provisions of § 388.19 of the Export Administration Regulations (15 CFR Parts 368–399 (1985)) (the Regulations), has petitioned the Hearing Commissioner for an order temporarily denying all export privileges to: Anton Elzar of Goteborg, Sweden; Helmut Keck of Hamburg, Federal Republic of Germany; Development and Consultant Elzar of Gotebory, Sweden; OTC Mess-Und Videoteknik GmbH of Hamburg, Federal Republic of Germany; Paul Nurminen Oy of Helsinki, Finland; and Metab, Mellen Trading AB of Goteborg, Sweden (hereinafter collectively referred to as respondents).

The Department states that respondents are under investigation for violating the Regulations. The Department states further that the investigation gives it reason to believe: (1) That respondents have engaged in a continuing conspiracy to reexport U.S.-origin commodities for the Federal Republic of Germany, through Sweden and Finland, with an ultimate destination of the U.S.S.R. without the proper authorization from the Department; (2) that respondents misrepresented, on export control documents, the ultimate destination of U.S.-origin vibration test equipment, claiming that the equipment was being export from the United States of resale in the Federal Republic of Germany, when respondents knew the equipment was intended for an ultimate destination in the U.S.S.R.: (3) that respondents failed to obtain the validated export license necessary to export U.S.-origin equipment to the U.S.S.R.; and (4) that respondents may seek in the future to divert U.S.-origin goods and technical data to the US.S.R. without the required authorization.

Based on the showing made by the Department, I find that an order temporarily denying all export privilege to respondents, and to parties related to them, is required in the public interest to facilitate enforcement of the Export Administration Act of 1979, as amended (50 U.S.C. app. 2401–2420 (1982)),[1] and the Regulations, and to permit completion of the investigation.

Anyone who is now or may in the future be dealing with any of the above-named respondents, or with anyone who is now or may be subsequently named as a related party, in transactions that in any way involve U.S.-origin commodities or technical data is specifically alerted to the provisiona set forth in Paragraph IV below.

Accordingly, it is hereby Ordered:

I. All outstanding validated export licenses in which any respondent appears or participates, in any manner or capacity, are hereby revoked and shall be returned forthwith to the Office of Export Administration for cancellation.

II. Respondents, their successors or assigness, officers, partners, representatives, agents, and employees hereby are denied all privileges of participating, directly or indirectly, in any manner or capacity, in any transaction involving commodities or technical data exported from the United States in whole or in part, or to be exported, or that are otherwise subject to the Regulations. Without limitation of the generality of the foregoing, participation prohibited in any such transactions, either in the United States or abroad, shall include participation, directly or indirectly, in any manner or capacity: (a) As a party or as a representative of a party to a validated export license application, (b) in preparing or filing any export license application or reexport authorization, or any document to be submitted therewith, (c) in obtaining or using any validated or general export license or other export control document, (d) in carrying on negotiations with respect to, or in receiving, ordering, buying, selling, delivering, storing, using, or disposing of, in whole or in part, any commodities or technical data exported from the United States, or to be exported, and (e) in the financing, forwarding, transporting, or other servicing of such commodities of technical data. such denial of export privileges shall extend only to those commodities and technical data which are subject to the Act and the Regulations.

III. Such denial of export privileges shall extend not only to respondents, but also to their agents and employees and to any successors. After notice and opportunity for comment, such denial may also be made applicable to any person, firm, corporation, or business organization with which any respondent is now or hereafter may be related by affiliation, ownership, control, position of responsibility, or other connection in the conduct of export trade or related services.

IV. No person, firm corporation, partnership or other business organization, whether in the United States or elsewhere, without prior disclosure to and specific authorization from the Office of Export Administration, shall, with respect to U.S.-origin commodities and technical data, do any of the following acts, directly or indirectly, or carry on negotiations with respect thereto, in any manner or capacity, on behalf of or in any association with any respondent or any related party, or whereby any respondent or any related party may obtain any benefit therefrom or have any interest or participation therein, directly or indirectly: (a) Apply for, obtain, transfer, or use any license, Shipper's Export Declaration, bill of lading, or other export control document relating to any export, reexport, transshipment, or diversion of any commodity or technical data exported in whole or in part, or to be exported by, to, or for any respondent or any related party denied export privileges; or (b) order, buy, receive, use, sell, deliver, store, dispose of, forward, transport, finance, or

[1] The authority granted by the Act terminated on March 30, 1984. The Regulations have been continued in effect by virtue of E.O. 12470, 49 FR 13099, Aril 3, 1984, and Presidential Notice of March 28, 1985, 50 FR 12513, March 29, 1985, under the authority of the International Emergency Economic Powers Act (50 U.S.C. 1701–1706 (1982)).

otherwise service or participate in any export, reexport, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States.

V. In accordance with the provisions of § 388.19(b) of the Regulations, any respondent may move at any time to vacate or modify this temporary denial order by filing with the Hearing Commissioner, International Trade Administration, U.S. Department of Commerce, Room 6716, 15th Street and Constitution Avenue, NW., Washington, D.C. 20230, an appropriate motion for relief and may also request an oral hearing thereon, which, if requested, shall be held before the Hearing Commissioner at the earliest convenient date.

VI. This order is effective immediately. It remains in effect until the final disposition of any administrative or judicial proceedings initiated against the respondents as a result of the ongoing investigation. A copy of this order and Parts 387 and 388 of the Regulations shall be served upon each respondent.

Dated: July 11, 1985.

Thomas W. Hoya,

Hearing Commissioner.

[FR Doc. 85-17105 Filed 7-17-85; 8:45 am]

BILLING CODE 3510-DT-M

[Case No. 668]

Order Temporarily Denying Export Privileges; Rudolphe Agnese et al.

In the Matter of Rudolphe Agnese, individually and doing business as Developing Engineering and Electronics S.A.R.L., 91 Rue du Faubourg St. Denis, Paris 75010, France and Allimex A.G., Poststrasse 30, 5201 Zug, Switzerland, Respondents.

The United States Department of Commerce (Department), pursuant to the provisions of § 388.019 of the Export Administration Regulations (15 CFR Parts 368–399) (1985)) (the Regulations), has petitioned the Hearing Commissioner for an order temporarily denying all export privileges to Allimex A.G. and Rudolphe Agnese, individually and doing business as Development Engineering and Electronics S.A.R.G.

The Department states that an investigation has shown that Rudolphe Agnese, at the direction of and using money provided by Allimex A.G., a Swiss company, established a French company, Development Engineering and Electronics S.A.R.L. (DEE), in Paris, France, DEE, on behalf of Allimex A.G., purchased a U.S.-origin integrated circuit test system for export from the United States to France. To support that export, Agnese informed the U.S. exporter that the test system was ultimately destined for a French company. The exporter applied for an export license indicating the French company as the ultimate consignee, and the Department issued the export license based on the representations made by the exporter. Based on the investigation, the Department believes that the test system was ultimately destined for Suin, S.A., a Spanish firm which is currently denied all U.S. export privileges (47 FR 46976, (October 21, 1982)). The Department states that, at its request, the test system was seized as Allimex attempted to reexport it, without the required reexport authorization, from French territory to Swiss territory at the Mulhouse/Basel Airport

Based on the representations made by the Department, I find that an order temporarily denying all export privileges to the respondents, and to parties related to them, is required in the public interest to facilitate enforcement of the Export Administration Act of 1979, as amended (currently codified at 50 U.S.C. app. 2401–2420 (1982)),[1] and the Regulations, and to permit completion of the investigation and of any subsequent judicial or administrative proceeding that might result from the investigation.

Anyone who is not or may in the future be dealing with any of the above-mentioned respondents, or with anyone who is now or may be subsequently named as a related party, in transactions that in any way involve U.S.-origin commodities or technical data is specifically alerted to the provisions set forth in Paragraph IV below.

Accordingly, it is hereby Ordered:

I. All outstanding validated export licenses in which any respondent or any related party appears or participates, in any manner or capacity, are hereby revoked and shall be returned forthwith to the Office of Export Administration for cancellation.

II. The respondents, their successors or assignees, Officers, partners, representatives, agents, and employees hereby are denied all privileges of participating, directly or indirectly, in any manner or capacity, in any transaction involving commodities or technical data exported from the United States in whole or in part, or to be exported, or that are otherwise subject to the Regulations. Without limitation of the generality of the foregoing, participation prohibited in any such transaction, either in the United States or abroad, shall include participation, directly or indirectly, in any manner or capacity: (a) As a party or as a respresentative of a party to a validated export license application, (b) in preparing or filing any export license application or reexport authorization, or any document to be submitted therewith, (c) in obtaining or using any validated or general export license or other export control document, (d) in carrying on negotiations with respect to, or in receiving, ordering buying, selling, delivering, storing, using or disposing of, in whole or in part, any commodities or technical data exported from the United States, or to be exported, and (e) in the financing, forwarding, transporting, or other servicing of such commodities or technical data. Such denial of export privileges shall extend only to those commodities and technical data which are subject to the Act and the Regulations.

III. Such denial of export privileges shall extend not only to the respondents, but also to their agents and employees and to any successors. After notice and opportunity for comment, such denial may also be made applicable to any person, firm, corporation, or business organization with which any respondent is not or hereafter may be related by affiliation, ownership, control, position of responsibility, or other connection in the conduct of export trade or related services. Those parties now known to be affiliated with one or more of the respondents, and which are accordingly subject to the provisions of this order, are:

Saba Agnese, a/k/a Saba Ambaye, 37 Rue de la Quintine, Paris 75015, France

Andree Agnese, 22 Rue du 11 November 1918, Pantin, France

Helene Agnese, 37 Rue de la Quintinie, Paris 75015, France

Yarra Anstalt A.G., Gagostrasse 863, Fl 9496 Balzers, Liechtenstein.

IV. No person, firm, corporation, partnership or other business organization, whether in the United States or elsewhere, without prior disclosure to and specific authorization from the Office of Export Administration, shall, with respect to U.S.-origin commodities and technical data, do any of the following acts, directly or indirectly, or carry on negotiations with respect thereto, in any

manner or capacity, on behalf of or in any association with any respondent or any related party, or whereby any respondent or any related party may obtain any benefit therefrom or have any interest or participation therein, directly or indirectly: (a) Apply for, obtain, transfer, or use any license, Shipper's Export Declaration, bill of lading, or other export control document relating to any export, reexport, transshipment, or diversion of any commodity or technical data exported in whole or in part, or to be exported by, to, or for any respondent or any related party denied export privileges; or (b) order, buy, receive, use, sell, deliver, store, dispose of, forward, transport, finance, or otherwise service or participate in any export, reexport, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States.

B. In accordance with the provisions of § 388.19(b) of the Regulations, any respondent or any related party may move at any time to vacate or modify this temporary denial order by filing with the Hearing Commissioner, International Trade Administration, U.S. Department of Commerce, Room 6716, 14th Street and Constitution Avenue NW., Washington, D.C. 20230, an appropriate motion for relief and may also request an oral hearing thereon, which, if requested, shall be held before the Hearing Commissioner at the earliest convenient date.

VI. This order is effective immediately. It remains in effect until the final disposition of any administrative or judicial proceedings initiated against the respondents as a result of the ongoing investigation. A copy of this order and Parts 387 and 388 of the Regulations shall be served upon each respondent and each above-named related party.

Dated: July 11, 1985.

BILLING CODE 3510-DT-M

[Case No. 670]

Order Temporarily Denying Export Privileges; Sandor Ivady et al.

In the matter of: Sandor Ivady, individually and doing business as Electronic Products GmbH Sankt Johanngasse 1-5 A-1050 Vienna, Austria Stefan Ludwig Borbas, individually and doing business as Austro-Montan Warenhandelsgesellschaft Trattnerhoff 1 A-1010 Vienna, Austria and Friedrich Roedler, individually and doing business as Austro-Montan Warenhandelsgesellschaft Trattnerhoff 1 A-1010 Vienna, Austria

The United States Department of Commerce (Department), pursuant to the provisions of § 388.19 of the Export Administration Regulations (currently codified at 15 CFR 368-399 (1985)) (the Regulations), has petitioned the Hearing Commissioner for an order temporarily denying all export privileges to Sandor Ivady, individually and doing business as Electronic Products GmbH, and Stefan Ludwig Borbas and Friedrich Rodler, both individually and doing business as Austro-Montan Warenhandelsgesellschaft (herein collectively referred to as respondents).

The Department states that the respondents are under investigation for violating the Regulations. The Department states further that its investigation gives it reason to believe: (1) That the respondents conspired and acted in concert to violate the Regulations; (2) that the respondents indirectly caused the filing of false and misleading information with the Department for the purpose of effecting exports from the United States; (3) that Ivady made false and misleading statements of material fact to the Department in the course of an investigation being conducted by the Department; (4) that the respondents reexported U.S.-origin equipment, including fiber optic data transmissions systems, a semiconductor test system, a laser trimming system, and a computer and related parts and components, to proscribed destinations without authorization from the Department; and (5) that the respondents may seek in the future to reexport U.S.-origin equipment to proscribed destinations without the required authorization.

Based on the showing made by the Department, I find that an order temporarily denying all export privileges to the respondents, and to parties related to them, is required in the public interest to facilitate enforcement of the Export Administration Act of 1979, as amended (50 U.S.C. app. 2401-2420 (1982)), and the Regulations,[1] and to permit completion of the investigation.

Anyone who is now or may in the future be dealing with the above-named respondents, or with anyone who is now or may be subsequently named as a related party, in transactions that in any way involve U.S.-origin commodities or technical data is specifically alerted to the provisions set forth in Paragraph IV below.

Accordingly, it is hereby Ordered:

I. All outstanding validated export licenses in which any respondent or any related party appears or participates, in any manner or capacity, are hereby revoked and shall be returned forthwith to the Office of Export Administration for cancellation.

II. The respondents, their successors, or assignees, officers, partners, representatives, agents, and employees hereby are denied all privileges of participating, directly or indirectly, in any manner or capacity, in any transaction involving commodities or technical data exported from the United States in whole or in part, or to be exported, or that are otherwise subject to the Regulations. Without limitation of the generality of the foregoing, participation prohibited in any such transaction, either in the United States or abroad, shall include participation, directly or indirectly, in any manner or capacity: (a) As a party or as a representative of a party to a validated export license application, (b) in preparing or filing any export license application or reexport authorization, or any document to be submitted therewith, (c) in obtaining or using any validated or general export license or other export control document, (d) in carrying on negotiations with respect to, or in receiving, ordering, buying, selling, delivering, storing, using, or disposing of, in whole or in part, any commodities or technical data exported or to be exported from the United States, and (e) in financing, forwarding, transporting, or other servicing of such commodities or technical data. Such denial of export privileges shall extend only to those commodities and technical data which are subject to the Act and the Regulations.

III. Such denial of export privileges shall extend not only to the respodents, but also to their agents and employees and to any successors. After notice and opportunity for comment, such denial may also be made applicable to any person, firm, corporation, or business organization with which the respondents are not or hereafter may be related by affiliation, ownership, control, position of responsibility, or other connection in the conduct of export trade or related services. Business organizations and individuals now known to be owned by or affiliated with the one or more of the above-named respondents, and which are accordingly subject to the provisions of this order, are:

[1] The authority granted by the Act terminated on March 30, 1984. The Regulatiocs have been continued in effect by virtue of E.O. 12470, 49 FR 13099, April 3, 1984, and Presidential Notice of March 28, 1985, 50 FR 12513, March 29, 1985, under the authority of the International Emergency Economic Powers Act (50 U.S.C. 1701-1706 (1982)).

Maria Ivady, c/o Electronic Products GmbH, Sankt Johanngasse 1-5, A-1050 Vienna, Austria

Klemens Urpani, c/o Seigfried Einoehrl, Trattnerhoff 1, A-1010 Vienna, Austria

and

Seigfried Einoehrl, Trattnerhoff 1, A-1010 Vienna, Austria

IV. No person, firm, corporation, partnership or other business organization, whether in the United States or elsewhere, without prior disclosure to and specific authorization from the Office of Export Administration, shall, with respect to U.S.-origin commodities and technical data, do any of the following acts, directly or indirectly, or carry on negotiations with respect thereto, in any manner or capacity, on behalf of or in any association with the respondents or any related party, or whereby the respondents or any related party may obtain any benefit therefrom or have any interest or participation therein, directly or indirectly: (a) Apply for, obtain, transfer, or use any license, Shipper's Export Declaration, bill of lading, or other export control document relating to any export, reexport, transshipment, or diversion of any commodity or technical data exported in whole or in part, or to be exported by, to, or for any respondent or any related party denied export privileges; or (b) order, buy, receive, use, sell, deliver, store, dispose of, forward, transport, or otherwise service or participate in any export, reexport, transshipment, or diversion of any commodity or technical data exported or to be exported from the United States.

V. In accordance with the provisions of § 388.19(b) of the Regulations, any respondent or any related party may move at any time to vacate or modify this temporary denial order by filing with Hearing Commissioner, International Trade Administration, U.S. Department of Commerce, Room 6716, 14th Street and Constitution Avenue NW., Washington, D.C. 20230, an appropriate motion for relief, and may also request an oral hearing thereon, which, if requested, shall be held before the Hearing Commissioner at the earliest convenient date.

VI. This order is effective immediately. It remains in effect until the final disposition of any administrative or judicial proceedings initiated against the respondents as a result of the ongoing investigation. A copy of this order and Parts 387 and 388 of the Regulations shall be served upon each respondent and each above-named related party.

Dated: July 11, 1985.

Thomas W. Hoya,

Hearing Commissioner.

BILLING CODE 3510-DT-M

National Oceanic and Atmospheric Administration

Marine Mammals; Proposed Permit Modification No. 1; the West Coast Whale Research Foundation (P349)

Notice is hereby given that The West Coast Whale Research Foundation, Applied Sciences 273, Center for Marine Studies, University of California at Santa Cruz, Santa Cruz, California 95064 has requested a modification to Permit No. 493 issued on February 28, 1985 (50 FR 9481), under the authority of the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361-1407), the Endangered Species Act of 1973 (16 U.S.C. 1531-1543), the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR Part 216) and the regulations governing endangered species permits (50 CFR Part 217-222).

The Permit Holder is requesting to change the authorized location of humpback whale (*Megaptera novaeangliae*) research from Hawaii to Alaska.

Concurrent with the publication of this notice in the **Federal Register**, the Secretary of Commerce is forwarding copies of the modification request to the Marine Mammal Commission and the Committee of Scientific Advisors.

Written data reviews, or requests for a public hearing on this modification request should be submitted to the Assistant Administrator for Fisheries, National Marine Fisheries Service, U.S. Department of Commerce, Washington, D.C. 20235 within 30 days of the publication of this notice.

Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular modification request would be appropriate. The holding of such hearing is at the discretion of the Assistant Administrator for Fisheries.

All statements and opinions contained in this request are summaries of those of the Applicant and do not necessarily reflect the views of the National Marine Fisheries Service.

Documentation pertaining to the above modification request is available for review in the following offices:

Assistant Administrator for Fisheries, National Marine Fisheries Service, 3300 Whitehaven Street, NW., Washington, D.C.;

Regional Director, Alaska Region, National Marine Fisheries Service, P.O. Box 1668, Juneau, Alaska 99802;

Regional Director, Northwest Region, National Marine Fisheries Service, 7600 Sand Point Way, NE., BIN C15700, Seattle, Washington 98115; and

Regional Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island, California 90731.

Dated: July 15, 1985.

Richard B. Roe,

Director, Office of Protected Species and Habitat Conservation, National Marine Fisheries Service.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Amending the Import Restraint Limits for Certain Wool and Man-Made Fiber Textile Products Produced or Manufactured in Taiwan; Correction

July 15, 1985.

On January 25, 1985 a notice was published in the **Federal Register** (50 FR 3585) which established specific limits for certain wool and man-made fiber textile products in Categories 659 pt. (bodysuits and bodyshirts in T.S.U.S.A. numbers 383.1815 and 383.8022) and 438 (knit shirts and blouses), produced or manufactured in Taiwan and exported during 1985. The restraint limits in the letter to the Commissioner of Customs which followed that notice should have been stated in pounds for Category 659 pt. and dozens for Category 438.

Walter C. Lenahan,

Chairman, Committee for the Implementation of Textile Agreements.

BILLING CODE 3510-DR-M

Changes in Officials of the Government of Thailand Authorized To Issue Export Visas for Certain Cotton, Wool, and Man-Made Fiber Textile Products

July 15, 1985.

The Government of Thailand has notified the United States Government under the terms of the Bilateral Cotton, Wool, and Man-Made Fiber Textile Agreement, effected by exchange of notes dated July 27, and August 8, 1983, that the following officials have been authorized by the Government of Thailand to issue export visas for textile and apparel products produced or manufactured in Thailand and exported to the United States. These officials will replace those previously designated (48 FR 44605).

Boontipa Simaskul
Kumnung Phutasiri
Patom Punpatanavicha
Prapis Tantisira
Arbchit Nukulrak

The purpose of this notice is to advise the public of this change.

Walter C. Lenahan,

Chairman, Committee for the Implementation of Textile Agreements.

[FR. Doc. 85-17124 Filed 7-17-85; 8:45 am]

BILLING CODE 3510-DR-M

Request for Public Comment on Bilateral Textile Consultations on Trade in Categories 352, 360, 361, 363, 369pt., 436 and 611 from Taiwan

July 15, 1985.

In June 1985, the American Institute in Taiwan (AIT), under Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854), requested the Coordination Council for North American Affairs (CCNAA) to enter into consultations concerning exports to the United States of underwear (Cat. 352), pillowcases (Cat. 360), sheets (Cat. 361), terry and other pile towels (Cat. 363), luggage in TSUSA numbers 706.3200, 706.3650, and 706.4111 (Cat. 369 pt.), dresses (Cat. 436), and woven fabrics (Cat. 611), produced or manufactured in Taiwan.

The purpose of this notice is to advise that, if no solution is agreed upon in consultations, the Committee for the Implementation of Textile Agreements may later establish limits for the entry and withdrawal from warehouse for consumption of textile and apparel products in these categories, produced or manufactured in Taiwan and exported to the United States during the twelve-month period which began on January 1, 1985 and extends through December 31, 1985.

Anyone wishing to comment or provide data or information regarding the treatment of these Categories is invited to submit such comments or information in ten copies to Mr. Walter C. Lenahan, Chairman, Committee for the Implementation of Textile Agreements, International Trade Administration, U.S. Department of Commerce, Washington D.C. 20230. Since the exact timing of the consultations is not yet certain, comments should be submitted promptly.Comments or information submitted in response to this notice will be available for public inspection in the Office of Textiles and Apparel, Room 3100, U.S. Department of Commerce, 14th and Constitution Avenue, N.W., Washington, D.C., and may be obtained upon written request.

Further comment may be invited regarding particular comments or information received from the public which the Committee for the Implementation of Textile Agreements considers appropriate for further consideration.

The solicitation of comments regarding any aspect of the agreement or the implementation thereof is not a waiver in any respect of the exemption contained in 5 U.S.C. 553(a)(1) relating to matters which constitute "a foreign affairs function of the United States."

Walter C. Lenahan,

Chairman, Committee for the Implementation of Textile Agreements.

Intent To Prepare a Draft Environmental Impact Statement (DEIS) for Kahului Small Boat Harbor, Kahului, Maui, HI

July 9, 1985.

AGENCY: U.S. Army Corps of Engineers, DOD Honolulu District.

ACTION: Notice of Intent to Prepare a Draft Environmental Impact Statement.

SUMMARY:

1. The US Army Corps of Engineers is studying improvements for small boat navigation in the Kahului area, Kahului, Maui, Hawaii.

2. The Corps is studying six alternative plans including no action which provides for an improved boating launching ramp with a protected area for temporary mooring of approximately 10-20 boats. The plans generally include an entrance channel, mooring area, turning area, and parking and shoreside facilities.

3. On June 13, 1985, a public workshop was held at Kahului Public Library to discuss the proposed action. Local, State and Federal agencies were contacted as well as local interest groups and private organizations and parties. At this time, the draft EIS will address the impacts of the project on fish and wildlife resources, historic resources, aesthetic values and lifestyles. Coordination with the U.S. Fish and Wildlife Service, National Marine Fisheries Service, U.S. Environmental Protection Agency, State of Hawaii Department of Land and Natural Resources, State Department of Health, State Department of Planning and Economic Development, State Department of Transportation and other local agencies will be done.

4. A scoping meeting is not planned at this time.

If there are any questions regarding the draft EIS, please contact: Dr. James E. Maragos, Chief, Environmental Resources Section, US Army Engineer District, Honolulu, Building T-1, Ft. Shafter, Hawaii 96858-5440. Telephone: (808) 438-2263/2264.

Dated: July 10, 1985.

Department of the Navy

Chief of Naval Operations, Executive Panel Advisory Committee, Technology Base Task Force; Closed Meeting

Pursuant to the provisions of the Federal Advisory Committee Act (5 U.S.C. app.), notice is hereby given that the Chief of Naval Operations (CNO) Executive Panel Advisory Committee Technology Base Task Force will meet August 6-7, 1985, from 9 a.m. to 5 p.m. each day, at 2000 North Beauregard Street, Alexandria, Virginia. All sessions will be closed to the public.

The purpose of this meeting is to explore the relationship between Navy strategic planning process and the Technology Base. The entire agenda for the meeting will consist of discussions of key issues regarding the integration of technology management with strategic planning and requirements definition and related intelligence. These matters constitute classified information that is specifically authorized by Executive order to be kept secret in the interest of national defense and is, in fact, properly classified pursuant to such Executive order. Accordingly, the Secretary of the Navy has determined in writing that the public interest requires that all sessions of the meeting be closed to the public because they will be concerned with matters listed in section 552b(c)(1) of title 5, United States Code.

For further information concerning this meeting, contact Lieutenant Thomas E. Arnold, Executive Secretary of the CNO Executive Panel Advisory Committee, 2000 North Beauregard Street, Room 392, Alexandria, Virginia 22311. Phone (703) 756-1205.

Dated: July 11, 1985.

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Federal Acquisition Regulation; Information Collection Activities Under OMB Review

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice.

SUMMARY: Under the provisions of the Paperwork Reduction Act of 1980 (44 U.S.C. Chapter 35), the Federal Acquisition Regulation (FAR) Secretariat has submitted to the Office of Management and Budget (OMB) a request to review and approve a new information collection.

ADDRESSES: Send comments to Franklin S. Reeder, FAR Desk Officer, Room 3235, NEOB, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Mr. Owen Green, Defense Acquisition Regulatory Council, 703-697-7268.

SUPPLEMENTARY INFORMATION:

a. *Purpose:* This request covers the collection of information to be used to invite offerors to state an opinion on whether the quantity of supplies on which bids, proposals, or quotes are requested in solicitations is economically advantageous to the Government. Each offeror who believes that acquisitions in different quantities would be more advantageous will be invited to (a) recommend an economic purchase quantity, and quote a recommended unit and total price, and (b) identify the different quantity points where significant price breaks occur.

The information will be used by contracting officers, inventory managers, and requirements development activities to avoid acquisitions in disadvantageous quantities and to develop a data base for future acquisitions of the items of supply. This information is required by sec. 205 of Pub. L. 98-577 "Small Business and Federal Procurement Competition Enhancement Act of 1984", and sec. 1233 of Pub. L. 98-525 "Defense Procurement Reform Act of 1984".

b. *Annual reporting burden:* This is estimated as follows: Respondents, 2,252; responses, 78,820; and reporting and recordkeeping hours, 65,421.

Obtaining Copies of Proposals: Requestors may obtain copies from the FAR Secretariat (VRS), Room 4041, GS Building, Washington, DC 20405.

Dated: July 11, 1985.

Margaret A. Willis,

FAR Secretariat.

Issued at Washington, DC, July 8, 1985.

Donald L. Bauer,

VOL 50 ISS 138 JL 18 1985 UMI

SUPPLEMENTARY INFORMATION:

a. *Purpose.* This request covers the collection of information to be used to require offerors who have met the qualification requirement to identify the offeror's name, the manufacturer's name, the item name, and the test number. This information will be used by contracting officers to identify those offerors who have already met the qualification requirement. The solicitation provision and the contract clause addresses how agencies will establish and enforce qualification requirements, encourage additional sources and products to become qualified, bear the costs under certain circumstances for small businesses to become qualified, and periodically examine the need to continue the use of each qualification requirement. This information is required by sec. 202(a) of Pub. L. 98–577 "Small Business and Federal Procurement Competition Enhancement Act of 1984", and sec. 2319 of Pub. L. 98–525 "Defense Procurement Reform Act of 1984".

b. *Annual reporting burden:* This is estimated as follows: Respondents, 7,882; responses, 788,200; and reporting and recordkeeping hours, 66,209.

Obtaining Copies of Proposals: Requestors may obtain copies from the FAR Secretariat (VRS), Room 4041, GS Building, Washington, DC 20405.

DEPARTMENT OF EDUCATION

Office of Special Education and Rehabilitative Services

Training Personnel for the Education of the Handicapped; Proposed Annual Funding Priority

AGENCY: Department of Education.

ACTION: Notice of Proposed Annual Funding Priority.

SUMMARY: The Secretary proposes to establish an annual priority for the Training Personnel for the Education of the Handicapped—Preparation of Regular Educators.

DATE: Comments must be received on or before August 19, 1985.

ADDRESS: Comments should be addressed to: Dr. Max Mueller, Division of Personnel Preparation, Special Education Programs, Department of Education, 400 Maryland Avenue, SW., (Switzer Building, Room 3511—M/S 2313), Washington, D.C. 20202.

FOR FURTHER INFORMATION CONTACT: Dr. Max Mueller. Telephone (202) 732–1068.

SUPPLEMENTARY INFORMATION: The Training Personnel for the Education of the Handicapped program, authorized by sections 631, 632, and 634 of Part D of the Education of the Handicapped Act, provides financial assistance through grants to State educational agencies, institutions of higher education, and other appropriate nonprofit agencies or organizations to increase the quantity and improve the quality of personnel available to educate handicapped children and youth. This Notice of Funding Priority, however, addresses awards for Fiscal Year 1986 only under Section 632 of the Act which limits eligible applicants to State educational agencies. In accordance with the Education Department General Administrative Regulations (EDGAR) at 34 CFR 75.105(b)(2) and 75.105(c)(3)(i), and subject to available funds, the Secretary proposes to give an absolute preference to each application under this priority which provides satisfactory assurance that the recipient will use the funds made available for these projects to conduct the activities in paragraph 2 below.

1. *Eligible applicants.* In accordance with Section 632 of the Act, awards under this priority are limited to State educational agencies.

2. *Activities.* The Preparation of Regular Educators priority supports projects for training regular educators to assist with the identification and delivery of special education and related services to children with learning disabilities. The objective of these projects is to develop personnel training programs for regular educators which will facilitate the Statewide delivery of comprehensive educational services to learning disabled children and youth. Projects must provide regular education teachers with innovative approaches to referral, assessment, placement, service delivery, and placement review processes for learning disabled children and youth. Projects will also provide training designed to improve the accuracy of the identification of learning disabled children. The content and scope of the training models is limited only by a focus on State-wide efforts to improve identification of learning disabled children, and by emphasis on innovative approaches to serving this population through improved training of regular educators. Further, such training will enhance regular educators' ability to maintain in the regular classroom those children who are in need of educational assistance but who are not classified as handicapped.

This notice of an annual priority is necessary to allow for the implementation of the OSERS' initiative on regular education. This initiative addresses the need to improve the quality of education for learning disabled children and youth in the least restrictive environment, *see* 34 CFR 300.550–300.556, and train regular education personnel in the skills, techniques, and strategies that will assist them in addressing the educational needs of children with mild learning problems who are referred to special education programs.

Invitation To Comment

Interested persons are invited to submit comments and recommendations regarding the proposed priority.

All comments submitted in response to this proposed priority will be available for public inspection during and after the comment period, in Room 4628, Switzer Building, 330 C Street SW., Washington, D.C. between the hours of 8:30 a.m. and 4:00 p.m., Monday through Friday each week except Federal holidays.

Assessment of Educational Impact

The Secretary particularly requests comments on whether the proposed funding priority would require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

(Catalog of Federal Domestic Assistance No. 84.029; Training Personnel for the Education of the Handicapped)

(20 U.S.C. 1432)

Dated: July 15, 1985.

William J. Bennett,

Secretary of Education.

BILLING CODE 4000–01–M

DEPARTMENT OF ENERGY

National Petroleum Council; Worldwide Refining Trends Task Group; Meeting

Notice is hereby given that the Worldwide Refining Trends Task Group will meet in July 1985. The National Petroleum Council was established to provide advice, information, and recommendations to the Secretary of Energy on matters relating to oil and natural gas or the oil and natural gas industries. The Worldwide Refining Trends Task Group will address previous Council refining studies and evaluate future refinery operations and their impact on petroleum markets. Its analysis and findings will be based on information and data to be gathered by the various task groups.

The Worldwide Refining Trends Task Group will hold its sixth meeting on Thursday, July 25, 1985, starting at 9:00 a.m., in the Conroe Room of the Four Seasons Hotel, Houston Center, 1300 Lamar Street, Houston, Texas.

The tentative agenda for the Worldwide Refining Trends Task Group meeting follows:

1. Opening remarks by the Chairman and Government Cochairman.
2. Discuss the individual study assignments of the Worldwide Refining Trends Task Group.
3. Discuss any other matters pertinent to the overall assignment from the Secretary of Energy.

The meeting is open to the public. The Chairman of the Worldwide Refining Trends Task Group is empowered to conduct the meeting in a fashion that will, in his judgment, facilitate the orderly conduct of business. Any member of the public who wishes to file a written statement with the Worldwide Refining Trends Task Group will be permitted to do so, either before or after the meeting. Members of the public who wish to make oral statements should inform Ms. Carolyn Klym, Office of Oil, Gas, Shale and Coal Liquids, Fossil Energy, 301/353–2709, prior to the meeting and reasonable provisions will be made for their appearance on the agenda.

Summary minutes of the meeting will be available for public review at the Freedom of Information Public Reading Room, Room 1E–190, DOE Forrestal Building, 1000 Independence Avenue, SW., Washington, DC, between the hours of 9:00 a.m. and 4:00 p.m., Monday through Friday, except Federal holidays.

Issued at Washington, DC, on July 10, 1985.

Jeremiah E. Walsh, Jr.,

Acting Assistant Secretary for Fossil Energy.

[FR Doc. 85–17141 Filed 7–17–85; 8:45 am]

BILLING CODE 6450–01–M

National Petroleum Council; U.S. Refinery Capability Task Group; Meeting

Notice is hereby given that the U.S. Refinery Capability Task Group will meet in August 1985. The National Petroleum Council was established to provide advice, information, and recommendations to the Secretary of Energy on matters relating to oil and natural gas or the oil and natural gas industries. The U.S. Refinery Capability Task Group will address previous Council refining studies and evaluate future refinery operations and their impact on petroleum markets. Its analysis and findings will be based on information and data to be gathered by the various task groups.

The U.S. Refinery Capability Task Group will hold its eighth meeting on Thursday, August 1, 1985, starting at 9:00 a.m., in the Harris Room of the Houston Airport Marriott Hotel, 18700 Kennedy Boulevard, Houston, Texas.

The tentative agenda for the U.S. Refinery Capability Task Group meeting follows:

1. Opening remarks by the Chairman and Government Cochairman.
2. Review of the work of the Task Group.
3. Discuss any other matters pertinent to the overall assignment from the Secretary of Energy.

The meeting is open to the public. The Chairman of the U.S. Refinery Capability Task Group is empowered to conduct the meeting in a fashion that will, in his judgment, facilitate the orderly conduct of business. Any member of the public who wishes to file a written statement with the U.S. Refinery Capability Task Group will be permitted to do so, either before or after the meeting. Members of the public who wish to make oral statements should inform Ms. Carolyn Klym, Office of Oil, Gas, Shale and Coal Liquids, Fossil Energy, 301/353–2709, prior to the meeting and reasonable provisions will be made for their appearance on the agenda.

Summary minutes of the meeting will be available for public review at the Freedom of Information Public Reading Room, Room 1E–190, DOE Forrestal Building, 1000 Independence Avenue, SW., Washington, DC between the hours of 9:00 a.m. and 4:00 p.m., Monday through Friday, except Federal holidays.

Issued at Washington, DC, on July 10, 1985.

Jeremiah E. Walsh, Jr.,

Acting Assistant Secretary for Fossil Energy.

[FR Doc. 85–17142 Filed 7–17–85; 8:45 am]

BILLING CODE 6450–01–M

National Petroleum Council; U.S. Petroleum Refining; Coordinating Subcommittee on U.S. Petroleum Refining; Meeting Cancellation

The seventh meeting of the Coordinating Subcommittee on U.S. Petroleum Refining, (50 FR 27652, 7–5–85) scheduled for July 18, 1985, at the Four Seasons Hotel, Houston, Texas, has been cancelled. The meeting will be rescheduled for late August.

Issued at Washington, DC, July 8, 1985.

Donald L. Bauer,

Acting Assistant Secretary for Fossil Energy.

BILLING CODE 6450–01–M

Economic Regulatory Administration

[Docket No. ERA–FC–85–016; OFP Case No. 67043–9280–20–22]

Acceptance of Petition for Exemption and Availability of Certification From the City of Santa Clara, CA for a Peaking Facility

AGENCY: Economic Regulatory Administration, DOE.

ACTION: Notice.

SUMMARY: On May 28, 1985, the city of Santa Clara (Santa Clara) California, filed a petition with the Economic Regulatory Administration (ERA) of the Department of Energy (DOE) for an order permanently exempting a proposed new powerplant from the provisions of the Powerplant and Industrial Fuel Use Act of 1978 ((FUA or the Act) 42 U.S.C. 8301 *et seq.*) which (1) prohibit the use of petroleum and natural gas as a primary energy source in new electric powerplants and (2) prohibit the construction of a new powerplant without the capability to use an alternate fuel as a primary energy source. The final rule containing the criteria and procedures for petitioning for exemptions from the prohibitions of FUA was published in the Federal Register at 46 FR 59872 (December 7, 1981).

Santa Clara requested a permanent peakload exemption under 10 CFR 503.41 for a simple-cycle combustion turbine installation consisting of one 29.4 MW gas turbine, generator auxiliaries and associated facilities. The proposed unit is to be installed in the northwest portion of the city of Santa Clara, California. The powerplant will be capable of burning natural gas and petroleum.

ERA has determined that the petition and certification for the requested exemption is complete in accordance with the final rules under 10 CFR 501.3 and 501.63. ERA hereby accepts the filing of the petition for the permanent exemption as adequate for filing. ERA retains the right to request additional relevant information from Santa Clara at any time during these proceedings where circumstances or procedural requirements may so require. A review of the petition is provided in the

SUPPLEMENTARY INFORMATION section below.

Under the requirements of 10 CFR 503.41(a)(2)(ii), if a petitioner proposes

submitted by Santa Clara pursuant to 10 CFR § 503.13, together with other

SUPPLEMENTARY INFORMATION: In

Decision and Order of the Department of

owned service stations, by reducing the

SUPPLEMENTARY INFORMATION section below.

As provided for in section 70.1 (c) and (d) of FUA and 10 CFR 501.31 and 501.33 of the final rule, interested persons are invited to submit written comments in regard to this petition and any interested person may submit a written request that ERA convene a public hearing.

The public file containing a copy of this Notice of Acceptance and Availability of Certification and other documents and supporting materials on this proceeding is available upon request from DOE, Freedom of Information Reading Room, 1000 Independence Avenue, SW., Room 1E-190, Washington, DC 20585, Monday through Friday, 9:00 a.m. to 4:00 p.m.

ERA will issue a final order granting or denying the petition for exemption from the prohibitions of the Act within six months after the end of the public comment period provided for in this notice, unless ERA extends such period. Notice of any extension, together with a statement of reasons for such extension will be published in the **Federal Register.**

DATES: Written comments are due on or before September 3, 1985. A request for public hearing must also be made within this 45-day public comment period.

ADDRESSES: Fifteen copies of written comments or a request for a public hearing should be submitted to the Department of Energy, Economic Regulatory Administration, Office of Fuels Programs, Case Control Unit, Room GA-007, 1000 Independence Avenue, SW., Washington, DC 20585.

Docket No. ERA-FC-85-016 should be printed on the outside of the envelope and the document contained therein.

FOR FURTHER INFORMATION CONTACT:

John Boyd, Office of Fuels Programs, Economic Regulatory Administration, 1000 Independence Avenue, SW., Room GA-045, Washington, DC 20585. Telephone (202) 252-4523.

Steve E. Ferguson, Esq., Office of the General Counsel, Department of Energy, 1000 Independence Avenue, SW., Room 6A-113, Washington, DC 20585. Telephone (202) 252-6947.

SUPPLEMENTARY INFORMATION: FUA prohibits the use of natural gas or petroleum in certain new powerplants unless an exemption for such use has been granted by ERA. Santa Clara has filed a petition for a permanent peakload powerplant exemption to use petroleum or natural gas as a primary energy source in its proposed simple-cycle combustion turbine installation facility.

Under the requirements of 10 CFR 503.41(a)(2)(ii), if a petitioner proposes to use natural gas or to construct a powerplant to use natural gas in lieu of an alternate fuel as a primary energy source, the Administrator of the Environmental Protection Agency or the director of the appropriate state air pollution control agency must certify the ERA that the use by the powerplant of any available alternate fuel as a primary energy source will not cause or contribute to a concentration, in an air quality control region or any area within the region, of a pollutant for which any national air quality standard is or would be exceeded. However, since ERA has determined that there are no presently available alternate fuels which may be used in the proposed powerplant, no such certification can be made. The certification requirement is therefore waived with respect to the Santa Clara petition.

Santa Clara submitted a certified statement by a duly authorized officer to the effect that the proposed oil or gas fired combustion turbine generator will be operated solely as a peakload powerplant.

Santa Clara stated in its petition that the manufacturer of the proposed combustion turbine will be General Electric. The net rating of the unit is 29.4 MW and the maximum generation will be 29,400 MW hours during any 12-month period. Annual natural gas consumption is not expected to exceed 3.6×10^9 cubic feet. The maximum fuel input will be approximately 380×10^6 Btu/hr with a heat rate of 12,550 Btu/kilowatt hour (LHV).

On February 23, 1982, DOE published in the **Federal Register** (47 FR 7676) a notice of the amendment to its guidelines for compliance with the National Environmental Policy Act of 1969 (NEPA). Pursuant to the amended guidelines, including the permanent exemption for peakload powerplants, is among the classes of action that DOE had categorically excluded from the requirement to prepare an Environmental Impact Statement or an Environment Assessment pursuant to NEPA (categorical exclusion).

The classification raises a rebuttable presumption that the grant or denial of the exemption will not significantly effect the quality of the human environment. Santa Clara has certified that it will secure all applicable permits and approvals prior to commencement of operation of the new unit under exemption.

DOE's Office of Environment, in consultation with the Office of the General Counsel, will review the completed environmental checklist submitted by Santa Clara pursuant to 10 CFR § 503.13, together with other relevant information. Unless it appears during the proceeding on Santa Clara's exemption that the grant or denial of the exemption will significantly affect the quality of the human environment, it is expected that no additional environmental review will be required.

As provided in 10 CFR 501.3(b)(4), the acceptance of the petition by ERA does not constitute a determination that Santa Clara is entitled to the exemption requested. That determination will be made on the basis of the entire record of these proceedings, including any comments received in response to this document.

Issued in Washington, DC, on July 11, 1985.

Richard Ransom,

Acting Director, Coal & Electricity Division, Office of Fuels Programs, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Office of Hearings and Appeals

Red Triangle Oil Co.; Implementation of Special Refund Procedures

AGENCY: Office of Hearings and Appeals, DOE.

ACTION: Notice of Implementation of Special Refund Procedures.

SUMMARY: The Office of Hearings and Appeals of the Department of Energy announces the procedures for the disbursement of $45,354.76 ultimately to be obtained as a result of a consent order which the DOE entered into with Red Triangle Oil Company, a reseller of petroleum products located in Fresno, California. The money is being held in escrow fillowing the settlement of enforcement proceedings brought by the DOE's Economic Regulatory Administration.

DATE AND ADDRESS: Applications for refund of a portion of the Red Triangle consent order funds must be filed in duplicate and must be received within 90 days of publication of this notice in the **Federal Register.** All applications should refer to Case Number HEF-0162 and should be addressed to: Office of Hearings and Appeals, Department of Energy, 1000 Independence Avenue, SW, Washington, DC 20585.

FOR FURTHER INFORMATION CONTACT: Douglas Friedman, Office of Hearings and Appeals, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 252-6602.

SUPPLEMENTARY INFORMATION: In accordance with § 205.282(c) of the procedural regulations of the Department of Energy, 10 CFR 205.282(c), notice is hereby given of the issuance of the Decision and Order set out below. The Decision relates to a consent order entered into by the DOE and Red Triangle Oil Company, which settled possible pricing violations in Red Triangle's sales of motor gasoline to its customers during the consent order period, November 1, 1973, through December 31, 1978..

The Decision sets forth procedures and standards that the DOE has formulated to distribute the contents of the escrow account funded by Red Trianble pursuant to the consent order. The DOE has decided that a portion of the consent order funds should be distributed to 46 wholesale customers which the DOE's audit of Red Triangle indicated may have been overcharged, after each has filed an application for refund. These purchasers were identified by the DOE audit and alloted funds based on findings and presumptions of injury which the DOE has used in past proceedings. Applications for refund will also be accepted from purchasers not identified by the DOE audit. These purchasers will be required to provide specific documentation concerning the date, place, price, and volume of product purchased, the name of the firm from which the purchase was made, and the extent of any injury alleged.

A Proposed Decision and Order tentatively establishing refund procedures and soliciting comments from the public concerning the distribution of the Red Triangle consent order funds was issued on April 2, 1985. 50 FR 14148 (April 20, 1985).

As the Decision and Order published with this Notice indicates, applications for refunds may now be filed by customers who purchased motor gasoline from Red Triangle during the consent order period. Applications will be accepted provided they are filed in duplicate and are received no later than 90 days after publication of this Decision and Order in the Federal Register. The specific information required in an application for refund is set forth in the Decision and Order.

Dated: July 5, 1985.

George B. Breznay,

Director, Office of Hearings and Appeals.

July 5, 1985.

Decision and Order of the Department of Energy

Implementation of Special Refund Procedures

Name of Firm: Red Triangle Oil Company.

Date of Filing: October 13, 1983.

Case Number: HEF-0162.

Under the procedural regulations of the Department of Energy (DOE), the Economic Regulatory Administration (ERA) may request that the Office of Hearings and Appeals (OHA) formulate and implement special procedures to distribute funds received as a result of an enforcement proceeding in order to remedy the effects of actual or alleged violations of the DOE regulations. *See* 10 CFR Part 205, Subpart V. In accordance with the provisions of Subpart V, on October 13, 1983, ERA filed a Petition for the Implementation of Special Refund Procedures in connection with a consent order entered into with Red Triangle Oil Company (Red Triangle).

I. Background

Red Triangle is a "reseller-retailer" of refined petroleum products as that term was defined in 10 CFR 212.31 and is located in Fresno, California. A DOE audit of Red Triangle's records revealed possible violations of the Mandatory Petroleum Price Regulations. 10 CFR Part 212, Subpart F. The audit alleged that between November 1, 1973, and December 31, 1978, Red Triangle committed possible pricing violations amounting to $91,345.68 with respect to its sales of motor gasoline.

In order to settle all claims and disputes between Red Triangle and the DOE regarding the firm's sales of motor gasoline during the period covered by the audit, Red Triangle and the DOE entered into a consent order on March 24, 1980. The consent order refers to ERA's allegations of overcharges, but notes that there was no finding that violations occurred. Additionally, the consent order states that Red Triangle does not admit that it violated the regulations.

Under the terms of the consent order, Red Triangle agreed to make refunds amounting to $59,993. Separate processes were established by which Red Triangle would refund money to injured parties. First, $2,043, representing alleged overcharges on sales to Red Triangle's Bulk Retailer class of purchasers, was to be refunded directly to those purchasers. Second, Red Triangle was to refund $21,834, representing alleged overcharges on sales of motor gasoline at company-owned service stations, by reducing the price of gasoline at those stations by two cents per gallon until the full amount had been refunded. On January 23, 1982, Red Triangle remitted $9,238.76 to the DOE. This sum represents the amount Red Triangle was unable to refund to its retail customers due to the decontrol of gasoline. [1] *See* Memorandum of Telephone Conversation of June 6, 1985, between Eugene Guziewicz of ERA's Settlements Division and Douglas Friedman, OHA Staff Analyst. Finally, to account for alleged overcharges to service stations, Red Triangle was supposed to deposit $36,116 into an interest-bearing escrow account for ultimate distribution by the DOE. The payments were to be made quarterly with each payment equal to $.005 per gallon of motor gasoline sold by Red Triangle during the quarter. Red Triangle did not make any of the required payments. However, on December 5, 1984, the firm remitted $10,000 to the DOE and agreed to pay $2,000 per month until it has discharged its liability. The agreement stipulates that interest will continue to accrue on the unpaid balance of the settlement and that part of each $2,000 payment will represent accrued interest. *See* Memoranda of Telephone Conversations of December 26, 1984, and June 6, 1985, between Eugene Guziewicz and Douglas Friedman. Thus far, Red Triangle has remained current in its payments. This decision concerns the $45,354.76 plus interest that should ultimately be available for distribution.[2]

On April 2, 1985, we issued a Proposed Decision and Order (PD&O) setting forth a tentative plan for the distribution of refunds to parties who are injured by Red Triangle's alleged violations in the sale of motor gasoline during the consent order period, November 1, 1973, through December 31, 1978. 50 Fed. Reg. 14,148 (April 20, 1985). We stated in the PD&O that the basic purpose of a special refund proceeding is to make restitution for injuries which were probably suffered as a result of actual or alleged violations of the DOE

[1] Motor gasoline was decontrolled effective January 27, 1981. Executive Order 12,287 (January 28, 1981).

[2] Once we have analyzed all applications for refund, we will authorize disbursement of whatever funds are in escrow. In the event that valid claims exceed the amount in escrow at the time, each successful claimant will receive a pro rata share and will receive the remainder of its refunds if and when additional funds are received by the DOE. *See* Appalachian Flying Service, Inc., Case No. HEF-0028 (May 10, 1985) (proposed decision), slip op. at 4, n.4.

regulations. In order to effect restitution in this proceeding, we tentatively determined that we would rely in part

persons' injuries. For a more detailed discussion of Subpart V and the

claimants to participate in the refund process without incurring inordinate

Texas Oil & Gas Corp.; Office of Special Counsel, 11 DOE ¶ 85,226 (1984) (*Conoco*), and cases cited therein. The

the claimant.[3] The volumetric refund amount is the average per gallon refund

Decision and Order in the **Federal Register.**[3]

regulations. In order to effect restitution in this proceeding, we tentatively determined that we would rely in part on the information contained in ERA's audit file. We observed that our experience with similar cases supports the use of this approach in Subpart V cases where all or most of the purchasers of a firm's product are identified in the audit file. *See, e.g., Marion Corp.*, 12 DOE ¶ 85,014 (1984) (*Marion*). We also noted that under such circumstances, a more precise determination regarding the identities of the allegedly overcharged first purchasers was possible. At the same time, we recognized that there may have been other purchasers not identified by the ERA audit who may have been injured by Red Triangle's pricing practices during the audit period who would also be entitled to a portion of the consent order funds. Therefore, procedures by which such purchasers could establish a claim were also proposed.

A copy of the PD&O was published in the **Federal Register** and comments were solicited regarding the proposed refund procedures. In addition, a copy of the PD&O was mailed to each purchaser identified in the audit file whose address was available. Copies were also sent to various service station dealers' associations. None of Red Triangle's customers submitted comments on the proposed procedures. Comments were submitted by the State of California and, collectively, on behalf of the States of Arkansas, Delaware, Iowa, Louisiana, North Dakota, Rhode Island, and West Virginia. Both sets of comments concern the distribution of any funds remaining after refunds have been made to injured parties. The purpose of this Decision is to establish procedures for filing and processing claims in the first stage of the Red Triangle refund proceeding. Any procedures pertaining to the disposition of any monies remaining after this first stage will necessarily depend on the size of the fund. *See Office of Enforcement*, 9 DOE ¶ 82,508 (1981). Therefore, it would be premature for us to address the issues raised by the states' comments at this time.

II. Refund Procedures

The procedural regulations of the DOE set forth general guidelines to be used by OHA in formulating and implementing a plan of distribution for funds received through enforcement proceedings. 10 CFR Part 205, Subpart V. The Subpart V process is used in situations where the DOE is unable to identify readily those persons who likely were injured by alleged overcharges or to ascertain readily the amount of such persons' injuries. For a more detailed discussion of Subpart V and the authority of OHA to fashion procedures to distribute refunds, *see Office of Enforcement*, 9 DOE ¶ 82,508 (1981), *and Office of Enforcement*, 8 DOE ¶ 82,597 (1981) (*Vickers*).

A. Refunds to Wholesale Customers

In the PD&O we stated that during the DOE's audit of Red Triangle, 46 first purchasers were identified as having allegedly been overcharged. We recognize that the DOE audit files do not necessarily provide conclusive evidence regarding the identity of all possible refund recipients or the appropriate refund for a particular firm. However, the information contained in those audit files may reasonably be used for guidance. *See Armstrong and Associates/City of San Antonio*, 10 DOE ¶ 85,050 at 88,259 (1983). In *Marion*, we stated that "the information contained in the . . . audit file can be used for guidance in fashioning a refund plan which is likely to correspond more closely to the injuries probably experienced than would a distribution plan based solely on a volumetric approach." 12 DOE at 88,031. In previous cases of this type, we have proposed that the funds in the escrow account be apportioned among the customers identified by the audit and/or their downstream customers. *See, e.g., Bob's Oil Co.*, 12 DOE ¶ 85,024 (1984); *Richards Oil Company*, 12 DOE ¶ 85,150 (1984). The first purchasers identified by the audit, with the share of the settlement allotted to each by ERA, are listed in Appendices 1 and 2.

Identification of first purchasers is only the first step in the distribution process. We must also determine whether the first purchasers were injured or were able to pass through the alleged overcharges. Besides considering the information which the audit file provides, we will adopt a presumption in order to determine the level of a purchaser's injury and thereby distribute funds in the escrow account in this case. Presumptions in refund cases are specifically authorized by applicable DOE procedural regulations. § 205.282(e) of those regulations states that:

> [i]n establishing standards and procedures for implementing refund distributions, the Office of Hearings and Appeals shall take into account the desirability of distributing the refunds in an efficient, effective and equitable manner and resolving to the maximum extent practicable all outstanding claims. In order to do so, the standards for evaluation of individual claims may be based upon appropriate presumptions.

10 CFR 205.282(e). The presumption we will adopt in this case is used to permit claimants to participate in the refund process without incurring inordinate expenses and to enable OHA to consider the refund applications in the most efficient way possible in view of the limited resources available. Therefore, as in previous special refund proceedings, we wil adopt a presumption that claimants seeking small refunds were injured by Red Triangle's pricing practices.

There are a variety of reasons for adopting this presumption. *See, e.g., Uban Oil Co.*, 9 DOE ¶ 82,541 (1982). Firms which will be eligible for refunds were in the chain of distribution where the alleged overcharges occurred and therefore bore some impact of the alleged overcharges, at least initially. In order to support a specific claim of injury, a firm would have to compile and submit detailed factual information regarding the impact of alleged overcharges which took place many years ago. This procedure is generally time-consuming and expensive. With small claims, the cost to the firm of gathering the necessary information and the cost to OHA of analyzing it could exceed the expected refund. Failure to allow simplified procedures could therefore deprive injured parties of the opportunity to receive a refund. This presumption eliminates the need for a claimant to submit and OHA to analyze detailed proof of what happened downstream of the initial impact.

Under the small-claims presumption, a claimant who is a reseller or retailer will not be required to submit any additional evidence of injury beyond purchase volumes if its refund claim is based on purchases below a certain level. Other refund decisions have expressed this threshold in terms of either purchase volumes or refund dollar amounts. In *Texas Oil & Gas Corp.*, 12 DOE ¶ 85,069 (1984), we noted that describing the threshold in terms of a refund dollar amount rather than a purchase volume figure would more readily facilitate disbursements to applicants seeking relatively small refunds. *Id.* at 88,210. This case merits the same approach. Several factors determine the value of the threshold below which a claimant is not required to submit any further evidence of injury beyond volumes purchased. One of these factors is the concern that the cost to the applicant and the government of compiling and analyzing information sufficient to show injury not exceed the amount of the refund to be gained. In this case, where the refund amount is fairly low and the early months of the consent order period are many years past, $5,000 is a reasonable value for the threshold. *See Texas Oil & Gas Corp.; Office of Special Counsel*, 11 DOE ¶ 85,226 (1984) (*Conoco*), and cases cited therein. The record indicates that 45 of the 46 identified customers made small purchases. The one firm whose potential refund falls above the threshold bought almost four times as much fuel as the second-largest purchaser.

A reseller or retailer which claims a refund in excess of $5,000 will be required to document its injury. While there are a variety of methods by which a firm can make such a showing, a firm is generally required to demonstrate that it maintained a "bank" of unrecovered costs, in order to show that it did not pass the alleged overcharges through its own customers, and to show that market conditions would not permit it to pass through those increased costs.[3]

As in previous cases, only claims for at least $15 will be processed. This minimum has been adopted in prior refund cases because the cost of processing claims for refunds of less than $15 outweighs the benefits of restitution in those situations. *See, e.g., Uban Oil Co.*, 9 DOE at 85,225. *See also* 10 CFR 205.286(b). The same principle applies here.

Finally, as indicated in the PD&O, if additional meritorious claims are filed, we will adjust the figures listed in the Appendices accordingly. Actual refunds will be determined only after all appropriate claims have been analyzed.[4]

B. Refunds to Retail Customers

Since the PD&O was issued, it has come to our attention that the $9,238.76 payment Red Triangle made on January 23, 1982, represents the amount it was unable to refund to its customers and not the first installment of its other obligations as we had originally thought. We will use a volumetric system to distribute this portion of the escrow account to individuals and firms who purchased motor gasoline from Red Triangle's service stations. Under a volumetric system, a successful claimant's refund is determined by multiplying a factor, known as the volumetric refund amount, by the number of gallons of fuel purchased by the claimant.[5] The volumetric refund amount is the average per gallon refund and in this case equals $0.005300 per gallon.[6] Potential applicants may use this figure to estimate the refunds to which they may be entitled. We will not require any evidence of injury beyond purchase volumes for customers in this group. Since the fuel was pumped into the gasoline tanks of consumers' automobiles, these customers would have absorbed the effects of the alleged overcharges. *See Thornton Oil Corp.*, 12 DOE ¶ 85,112 (1984).

III. Applications for Refund

We have determined that by using the procedures described above, we can distribute the Red Triangle consent order funds as equitably and efficiently as possible. Accordingly, we will now accept applications for refund from individuals and firms who purchased motor gasoline from Red Triangle between November 1, 1973, and December 31, 1978. As we proposed, the consent order funds will be distributed to those firms listed in Appendices 1 and 2 who file applications for refund providing they make any necessary demonstrations of injury.[7] We will also grant refunds to any other eligible customers of Red Triangle's which apply for a refund.

No valid addresses are available for those firms listed in Appendix 2. In some cases no addresses at all are available; in others, copies of the PD&O sent to the firms' last known addresses were returned by the Post Office. In an attempt to locate those firms, we will provide Red Triangle and various petroleum dealers' associations in California with copies of this Decision and will publish a notice in the **Federal Register**. We will accept information regarding the identity and present location of these firms for a period of 90 days from the date of publication of this Decision and Order in the **Federal Register**.[8]

In order to receive a refund, each claimant will be required to submit either a schedule of its monthly purchases of motor gasoline from Red Triangle or a statement verifying that it purchased motor gasoline from Red Triangle and is willing to rely on the data in the audit file. Purchasers not identified by the ERA audit will be required to provide specific information as to the date, place, price, and volume of motor gasoline purchased, the name of the firm from which the purchase was made, and the extent of any injury alleged.

In addition, all applications must state:.

(1) whether the applicant has previously received a refund, from any source, with respect to the alleged overcharges identified in the ERA audit underlying this proceeding;

(2) whether there has been a change in ownership of the firm since the audit period. If there has been a change in ownership, the applicant must provide the names and addresses of the other owners, and should either state the reasons why the refund should be paid to the applicant rather than to the other owners or provide a signed statement from the other owners indicating that they do not claim a refund;

(3) whether the applicant is or has been involved as a party in DOE enforcement or private, § 210 actions. If these actions have been concluded the applicant should furnish a copy of any final order issued in the matter. If the action is still in progress, the applicant should briefly described the action and its current status. The applicant must keep OHA informed of any change in status while its Application for Refund is pending. *See* 10 CFR 205.9(d); and

(4) the name and telephone number of person who may be contacted by this Office for additional information.

Finally, each application must include the following statement: "I swear [or affirm] that the information submitted is true and accurate to the best of may knowledge and belief." *See* 10 CFR 205.283(c); 18 U.S.C. 1001.

All applications must be filed in duplicate and must be received within 90 days from the date of publication of this Decision and Order in the **Federal Register**. A copy of each application will be available for public inspection in the Public Docket Room of the Office of

[3] Resellers or retailers who claim a refund in excess of $5,000 but who cannot establish that they did not pass through the price increases will be eligible for a refund of up to the $5,000 threshold, without being required to submit further evidence of injury. Firms potentially eligible for greater refunds may choose to limit their claims to $5,000 in order to avoid having to prove their injury. *See* Vickers, 8 DOE at 85,396. *See also* Office of Enforcement, 10 DOE ¶ 85,029 at 88,125 (1982) (Ada).

[4] Purchasers identified in the ERA audit as having allegedly been overcharged may also submit information to show thet they should receive refunds larger than those indicated.

[5] A volumetric approach is appropriate in special refund proceedings where the DOE is unable to identify readily those persons who may be eligible to receive refunds. It has proved to be an administratively efficient method for determining what proportion of the available settlement funds should be awarded to each successful claimant. It also serves as a useful approximation of injury in the treatment of overcharged claimants who are unable to quantify their alleged injury, thereby allowing applicants to recover a meaningful refund for the volumes of product they have purchased.

[6] This figure is obtained by dividing $9,238.76 by the 1,743,016 gallons of motor gasoline sold by Red Triangle through its service stations during the consent order period.

[7] The share of the escrow fund allocated to each firm listed in Appendices 1 and 2 represents 60 percent of the amount each was allegedly overcharged. This is consistent with the terms of the consent order, which settled for 60 percent of the total amount of alleged overcharges to service stations.

[8] If we are unable to locate any firm listed in Appendix 2, we will reserve any funds allocated to that firm for distribution in a subsequent proceeding.

Hearings and Appeals. Any applicant which believes that its application contains confidential information must

BILLING CODE 6450-01-M

Implementation of Special Refund Procedures

AGENCY: Office of Hearings and Appeals, DOE.

ACTION: Notice of Implementation of Special Refund Procedures.

SUMMARY: The Office of Hearings and Appeals of the Department of Energy solicits comments concerning the appropriate procedures to be followed in refunding $33,199.83 in consent order funds to members of the public. This money is being held in escrow following the settlement of an enforcement proceeding involving Peterson Petroleum, Inc. a reseller-retailer of petroleum products located in Hudson, N.Y.

DATE AND ADDRESS: Comments must be filed within 30 days of publication of this notice in the Federal Register and should be addressed to the Office of Hearings and Appeals, Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585. All comments should conspicuously display a reference to case number HEF-0149.

FOR FURTHER INFORMATION CONTACT: Angela Foster, Office of Hearings and Appeals, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 252-6602.

SUPPLEMENTARY INFORMATION: In accordance with § 205.282(b) of the procedural regulations of the Department of Energy, 109 CFR 205.282(b), notice is hereby given of the issuance of the Proposed Decision and Order set out below. The Proposed Decision relates to a consent order entered into by Peterson Petroleum, Inc. (Peterson) and the DOE. The Peterson consent order settled alleged pricing violations in the firm's sales of motor gasoline to customers during the period May 1, 1979 through June 30, 1979.

The Proposed Decision sets forth the procedures and standards that the DOE has tentatively formulated to distribute the contents of the escrow account funded by Peterson pursuant to the consent order. The DOE has tentatively decided that the consent order funds should be distributed in two stages. In the first stage, funds will be distributed to claimants who satisfactorily demonstrate that they have been adversely affected by Peterson's alleged pricing violations. Although the information available to us at this time regarding the firm's operations provides the names and addresses of potential claimants, that information does not indicate the amount of gallons purchased by them. We will also accept information regarding the identity and present locations of purchasers for a period of 90 days following publication of a final Decision and Order in this proceeding. In the event money remains in the escrow account after all first stage claims have been disposed of, the DOE will determine an alternative plan for distributing these funds. Applications for Refund should not be filed at this time. Appropriate public notice will be given when the submission of claims is authorized.

Any member of the public may submit written comments regarding the proposed refund procedures. Commenting parties are requested to submit two copies of their comments. Comments should be submitted with 30 days of publication of this notice in the Federal Register, and should be sent to the address set forth at the beginning of this notice. All comments received in this proceeding will be available for public inspection between the hours of 1:00 to 5:00 p.m., Monday through Friday, except federal holidays, in the Public Docket Room of the Office of Hearings and Appeals, located in Room 1E-234, 1000 Independence Avenue, SW., Washington, DC 20585.

Dated: July 9, 1985.

George B. Breznay,

Director, Office of Hearings and Appeals.

July 9, 1984.

PROPOSED DECISION AND ORDER OF THE DEPARTMENT OF ENERGY

Implementation of Special Refund Procedures

Name of Firm: Peterson Petroleum, Inc.

Date of Filing: October 13, 1983.

Case Number: HEF-0149.

Under the procedural regulations of the Department of Energy (DOE), the Economic Regulatory Administration (ERA) may request that the DOE Office of hearings and Appeals (OHA) formulate and implement special procedures to distribute funds received as a result of enforcement proceedings in order to remedy the effects of actual or alleged violations of the DOE regulations. *See* 10 C.F.R. Part 205, Subpart V. The Subpart V process may be used in situations where DOE is unable to identify readily those persons who likely were injured by alleged overcharges or to ascertain readily the extent of such persons' injuries. For a more detailed discussion of Subpart V, *see Office of Enforcement*, 9 DOE ¶ 82,508 (1982), *and Office of Enforcement*, 8 DOE ¶ 82,597 (1981).

I. Background

In accordance with the provisions of Subpart V, on October 13, 1983, ERA filed a Petition for the Implementation of Special Refund Procedures in connection with a consent order which it entered into with Peterson Petroleum, Inc. (Peterson). Peterson is a "reseller-retailer" of "covered" products as those terms were defined in 10 CFR 212.31, and is located in Hudson, N.Y. A DOE audit of the firm's records revealed possible violations of the Mandatory Petroleum Price and Allocation Regulations with respect to sales of motor gasoline during the period May 1, 1979 through June 30, 1979 (audit period). In order to settle all claims and disputes between Peterson and the DOE regarding the firm's sales of motor gasoline during the audit period, Peterson and the DOE entered into a consent order on October 27, 1980. The consent order refers to ERA's allegations of overcharges, but notes that no findings of violation were made. Additionally, the consent order states that Peterson does not admit that it committed any such violations. Finally, according to the Peterson consent order, the firm agreed to deposit $32,816.16, plus interest, into an interest-bearing escrow account for ultimate distribution by DOE.[1] This decision concerns the distribution of the consent order amount plus accrued interest to date.

II. Proposed Refund Procedures

We have considered ERA's Petition for the Implementation of Special Refund Procedures and have determined that it is appropriate to establish such a proceeding with respect to the Peterson consent order fund. Since the ERA indicated in its petition that it is unable to readily identify persons who were injured or to ascertain the degree of their injury, we find the use of Subpart V procedures appropriate. Therefore, we will grant ERA's petition and assume jurisdiction over the distribution of the Peterson consent order funds.

As we have stated in previous decisions, refunding moneys obtained through DOE enforcement proceedings is the focus of Subpart V proceedings. *See generally Office of Enforcement*, 8 DOE ¶ 82,597 (1981) (hereinafter cited as *Vickers*.) Based upon our experience with Subpart V cases, we believe that the distribution of refunds in the present case should take place in two stages. The first stage will attempt to provide refunds to identifiable purchasers of motor gasoline who may have been injured by Petersons's pricing practices during the audit period. After meritorious claims are paid in the first stage, a second stage refund procedure may become necessary if any funds remain. *See generally Office of Special Counsel*, 10 DOE ¶ 85,048 (1982) (hereinafter cited as *Amoco*) (refund procedures established for first stage applicants, second stage refund procedures proposed).

A. *Refunds to Injured Purchasers:* We propose that the Peterson consent order funds be distributed to claimants who satisfactorily demonstrate that they have been adversely affected by Peterson's alleged pricing violations. The information available to us at this time regarding the firm's operations does not provide the names, addresses or sales figures of the firm's customers during the audit period.[2] Our experience with Subpart V proceedings indicates that the likely claimants in this proceeding, when more fully identified, will fall into two categories: (1) resellers (including retailers) of Peterson motor gasoline and (2) firms, individuals, or organizations that were consumers (end-users) of gasoline purchased from Peterson. The products purchased by these claimaints were purchased either directly from Peterson or from other firms in a chain of distribution leading back to the firm.

As in many prior special refund cases, we propose to adopt certain presumptions in order to determine a purchaser's level of injury and thereby distribute the escrow account in this case. Presumptions in refund cases are specifically authorized by applicable DOE procedural regulations. Section 205.282(e) of those regulations states that:

[i]n establishing standards and procedures for implementing refund distributions, the Office of Hearings and Appeals shall take into account the desirability of distributing the refunds in an efficient, effective and equitable manner and resolving to the maximum extent practicable all outstanding claims. In order to do so, the standards for evaluation of individual claims may be based upon appropriate presumptions.

10 CFR 205.282(e). The presumptions we propose to adopt in this case are used to permit claimants to participate in the refund process without incurring disproportionate expenses, and to enable the OHA to consider the refund applications in the most efficient way possible in view of the limited resources available. Therefore, as in previous special refund proceedings, in this case we propose to adopt a presumption that the alleged overcharges were dispersed equally in all sales of products made by Peterson during the consent order period. OHA has referred to this presumption in the past as a volumetric refund amount. In addition, we propose to adopt a presumption of injury with respect to small claims.

The pro rata, or volumetric, refund presumption assumes that alleged overcharges were spread equally over all gallons of product marketed by a particular firm. In the absence of better information, this assumption is sound because the DOE price regulations generally required a regulated firm to account for increased costs on a firm-wide basis in determining its prices. However, we also recognize that the impact on an individual purchaser may have been greater than the pro rata amount determined by the volumetric presumption. Certain purchasers may believe that they suffered

[1] Due to the accumulated interest on late deposits, however, Peterson paid $33,199.83 into the escrow account. The amount of money in the Peterson escrow account was $50,397.24 as of May 31, 1985.

[2] We do, however, have the names of some customers who may have purchased gasoline from Peterson during the audit period. Their names appear in the Appendix to this Decision. In addition to publishing this Proposed Decision in the Federal Register, we will attempt to contact these customers directly. We will also accept information regarding the identity and present locations of these purchasers for a period of 90 days following publication of a final Decision and Order in this proceeding.

disproportionate injury as a result of Peterson's pricing practices during the

efficiently. Finally, these smaller claimants did purchase covered

Vickers at 85,396-97. We believe the same rationale holds true in the present

order to demonstrate that it did not subsequently recover those costs by

Environmental Policy Act of 1969 (NEPA), the Western Area Power

For Further Information Contact: Doris

VOL 50 ISS 138 JL 18 1985 UMI

disproportionate injury as a result of Peterson's pricing practices during the consent order period. Any such purchaser may file a refund application for an amount greater than that calculated using the volumetric presumption, provided that the claimant documents the disproportionate impact of the alleged overcharges. *See, e.g., Sid Richardson Carbon and Gasoline Co. and Richardson Products Co./Siouxland Propane Co.*, 12 DOE ¶ 85,054 (1984), and cases cited therein at 88,164.

Under the method we are proposing, a successful refund applicant will receive a refund amount which is calculated by dividing the settlement amount by the total gallonage of the products covered by the consent order. In the present case, based on the information available to us at this time, the volumetric refund amount is $.007235 per gallon ($33,199.83 received from Peterson divided by 4,588,620 gallons of motor gasoline sold by the firm during the audit period).

Successful claimants will receive refunds based on their eligible purchase volumes multiplied by the volumetric refund amount, plus a proportionate share of the interest accrued on the escrowed funds. Consequently, a successful claimant who purchased, for example, 100,000 gallons of motor gasoline from Peterson during each of the months of the consent order period will receive a refund of $1,447 (100,000 gallons times 2 months times $.007235), plus interest.

The presumption that claimants seeking smaller refunds were injured by the pricing practices settled in the Peterson consent order is based on a number of considerations. *See, e.g., Uban Oil Co.*, 9 DOE ¶ 82,541 (1982). As we have noted in many previous refund decisions, there may be considerable expense involved in gathering the types of data needed to support a detailed claim of injury. In order to prove such a claim, an applicant must compile and submit detailed factual information regarding the impact of alleged overcharges which took place many years ago. This procedure can be time-consuming and expensive. In the case of small claims, the cost to the firm of gathering this factual information, and the cost to the OHA of analyzing it, may exceed the expected refund amount. Failure to allow simplified application procedures for small claims could therefore deprive injured parties of the opportunity to obtain a refund. The use of presumptions is also desirable from an administrative standpoint, because it allows the OHA to process a large number of routine refund claims quickly, and to use its limited resources more efficiently. Finally, these smaller claimants did purchase covered products from Peterson and were in the chain of distribution where the alleged overcharges occurred. Therefore, they were affected by the alleged overcharges, at least initially. The presumption eliminates the need for a claimant to submit, and the OHA to analyze, detailed proof of what happened downstream of that initial impact.

Under the presumptions we propose to adopt, a claimant who is a reseller or retailer would not be required to submit any additional evidence of injury beyond purchase volumes if its refund claim is based on purchases below a threshold level. Other refund decisions have expressed the threshold either in terms of purchase volumes or dollar amounts. However, in *Texas Oil & Gas Corp.*, 12 DOE ¶ 85,069 (1984), we noted that describing the threshold in terms of a dollar amount rather than a purchase volume figure would more readily facilitate disbursements to applicants seeking relatively small refunds. *Id.* at 88,210. This case merits the same approach. Several factors determine the threshold value below which a claimant is not required to submit any further evidence of injury beyond volumes purchased. One of these factors is the concern that the cost to the applicant and the government of compiling and analyzing information sufficient to show injury not exceed the amount of the refund to be gained. In this case, where the consent order fund is small, and the time period of the consent order is many years past, establishing a presumption of injury for all claims of $5,000 would be reasonable.[3] *See Texas Oil & Gas Corp.; Office of Special Counsel: In the Matter of Conoco, Inc.*, 11 DOE ¶ 85,226 (1984), and cases cited therein.

If a reseller or retailer made only spot purchases from Peterson, however, we propose that it should not receive a refund because it presumably suffered no injury. As we have previously stated with respect to spot purchasers:

> [T]hose customers tend to have considerable discretion in where and when to make purchases and would therefore not have made spot market purchases of [the firm's product] at increased prices unless they were able to pass through the full amount of [the firm's] quoted selling price at the time of purchase to their own customers.

Vickers at 85,396–97. We believe the same rationale holds true in the present case. Accordingly, a spot purchaser that files a claim should submit additional evidence to establish that it was unable to recover the increased prices it paid for Peterson motor gasoline. *See* Amoco at 88,200.

In addition to the presumptions we propose to adopt, we are making a finding that end-users or ultimate consumers whose business is unrelated to the petroleum industry were injured by the alleged overcharges settled in the consent order. Unlike regulated firms in the petroleum industry, members of this group generally were not subject to price controls during the consent order period, and they were not required to keep records which justified selling price increases by reference to cost increases. For these reasons, an analysis of the impact of the alleged overcharges on the final prices of non-petroleum goods and services would be beyond the scope of a special refund proceeding. *See Office of Enforcement, Economic Regulatory Administration: In the Matter of PVM Oil Associates, Inc.*, 10 DOE ¶ 85,072 (1983); *see also Texas Oil & Gas Corp.*, 12 DOE ¶ 85,069, and cases cited therein. We have therefore concluded that end-users of Peterson petroleum products need only document their purchase volumes from Peterson to make a sufficient showing that they were injured by the alleged overcharges.

Finally, we propose to establish a minimum refund amount of $15.00 for refund claims. We have found through our experience in prior refund cases that the cost of processing claims in which refunds are sought for amounts less than $15.00 outweighs the benefits of restitution in those situations. *See, e.g., Uban, supra* at 85,225. *See also* 10 CFR 205.286(b).

In order to receive a refund, each claimant will be required to submit a schedule of monthly purchases of covered products from Peterson for the period May 1, 1979 through June 30, 1979. If the products were not purchased directly from Peterson, the claimant will be required to include a statement setting forth his or her reason for believing the product originated with the firm. *See, e.g., Standard Oil Co. (Indiana)/Union Capm Comp.*, 11 DOE ¶ 85,007 (1983). In addition, a reseller or retailer of refined petroleum products that files a claim generally will be required to establish that it absorbed the alleged overcharges and was thereby injured. To make this showing, each reseller or retailer will be required to show that it maintained "banks" of unrecovered increased product costs in order to demonstrate that it did not subsequently recover those costs by increasing its prices. *See Conoco* at 88,388. In addition, it will have to demonstrate that, at the time it purchased covered products from Peterson, market conditions would not permit it to increase its prices to pass through the additional costs associated with the alleged overcharges.

B. *Distribution of the Remainder of the Consent Order Funds.* In the event that money remains in the Peterson escrow account after all first stage claims have been disposed of, undistributed funds could be distributed in a number of ways in a subsequent proceeding. However, we will not be in a position to decide what should be done with any remaining funds until the first stage refund procedure is completed. We encourage the submission by interested parties of proposals which address alternative methods of distributing any remaining refunds.

It Is Therefore Ordered That:

The refund amount remitted to the Department of Energy by Peterson Petroleum, Inc., pursuant to the consent order executed on October 27, 1980, will be distributed in accordance with the foregoing decision.

Western Area Power Administration

Conrad-Shelby 230-kV Transmission Line Project, Montana; Intent To Prepare Environmental Impact Statement

AGENCY: Western Area Power Administration, DOE.

ACTION: Notice of intent to prepare an Environmental Impact Statement.

SUMMARY: Notice is hereby given that in accordance with the National Environmental Policy Act of 1969 (NEPA), the Western Area Power Administration (Western) intends to prepare an Environmental Impact Statement (EIS) regarding a proposed action to construct, operate, and maintain a new high voltage 230-kV electric transmission line from Conrad to Shelby, Montana, including a new 230/115-kV substation near Shelby, in Pondera and Toole Counties.

The objectives of the subject EIS and related environmental activities will be to study and assess the possibilities of locating structures within floodplains or wetlands, impacting Federal or State listed or proposed threatened or endangered species or critical habitats, esthetic impacts, crossing irrigated or irrigable land, and possibly causing adverse effects on historic or cultural properties that are included or eligible for inclusion on the National Register of Historic Places.

Public scoping meetings will be held during October or November of 1985. Notice will be given in the Federal Register, and local news media via press releases and paid advertisements at least 15 days prior to the meetings. Federal and State agencies, and local government units will also be requested to provide Western their concerns and issues which should be addressed in the EIS.

A draft EIS is tentatively scheduled to be released to the public for review and comment in November 1986. The final EIS is tentatively scheduled for release in August 1987.

FOR FURTHER INFORMATION CONTACT: Stephen A. Fausett, Assistant Area Manager for Engineering, Billings Area Office, Western Area Power Administration, Department of Energy, P.O. Box EGY, Billings, MT 59101, (406) 657–6042.

Issued in Golden, Colorado, July 1, 1985.

Willian H. Clagett,
Administrator.

[Docket No. 85–18]

Member Lines of the Transpacific Westbound Rate Agreement—Possible Violations of the Shipping Act of 1984; Order of Investigation and Hearing

The Transpacific Westbound Rate Agreement (TWRA or Agreement) became effective on January 5, 1985.[1] Since that date, issues have been raised as to whether the TWRA lines have been operating in a manner inconsistent with or outside the scope of the terms of their Agreement, contrary to sections 10(a)(2) or 10(a)(3) of the Shipping Act of 1984 (1984 Act or the Act) (46 U.S.C. app. 1709), and whether the operation of TWRA has produced or threatens to produce an unreasonable increase in transportation costs, contrary to the injunctive standard set forth in section 6(g) of the Act (46 U.S.C. app. 1705).

By this Order, issued pursuant to section 11(c) of the Act (46 U.S.C. app. 1710), the Commission sets down for investigation certain issues raised under sections 10(a)(2) and 10(a)(3) regarding the relationship between the TWRA lines' establishment and maintenance of minimum tariff and service contract rates and the lines' right of independent action, and the lines' authority under their Agreement to agree on minumum rates applying to service contracts between an individual carrier, or a combination of carriers, and a shipper. In addition, by this Order the Commission advises that it has decided not to seek at this time an injunction against TWRA under the standard of section 6(g). The reasons for that determination are set forth briefly below.

Background

I. The Filing of TWRA

TWRA was filed with the Commission for processing under the 1984 Act on November 21, 1984. The Agreement represented a major restructuring of liner common carrier service in the United States westbound Pacific trades. In addition to replacing the Pacific Westbound Conference, which had disbanded on November 1, 1984, TWRA replaced the Far East Conference, the Atlantic & Gulf/Singapore, Malaya & Thailand Conference, the Atlantic & Gulf/Indonesia Conference, the Pacific-Straits Conference and the Pacific/Indonesia Conference. TWRA gives its members broad authority to agree on rates, rules and practices covering the movement of liner cargo from points and ports in the United States and Canada, from or via ports on the Atlantic, Gulf and Pacific Coasts (including Alaska) of the United States, or via ports on the Atlantic and Pacific Coasts of Canada, and destined to a wide range of ports and points in the Far East, including Japan, Korea, Taiwan, Hong Kong and the Philippines. As of the effective date of the Agreement, there were 20 signatory lines. Barber Blue Sea Line subsequently submitted its resignation on January 15, 1985, effective March 16, 1985.

Notice of TWRA's filing with the Commission had been widely discussed in the industry press and was formally published in the **Federal Register** on November 30, 1984.[2] No comments or protests were received from any person. Nevertheless, in analyzing the Agreement and the extensive supporting material provided by the parties, the Commission's staff was aware that the member lines controlled among them a substantial share of the total liner capacity in the relevent market areas and an even greater share of the total container capacity. For that reason, TWRA required and received careful scrutiny under the standard of section 6(g).[3]

According to the parties, there are several purposes to TWRA. One objective is to reduce materially the administrative costs of the old conference structure and associated costs of the member lines by combining separate structures, simplifying the duties of the Agreement's employees, eliminating neutral body and cargo inspection programs and reducing regulatory and legal costs. A second stated objective is to permit more individual line competitive flexibility than the prodecessor conference structures could. A third objective is to stabilize rates in the westbound trades, which the parties characterized as having deteriorated to below-cost levels as a result of excess capacity. The parties also hoped to reduce the proliferation of overlapping tariffs by an evolution to common tariffs. Finally, the parties hope that TWRA could provide a stable long-term competitive structure in the Pacific trades, which would help some carriers avoid business failure during a period of anticipated severe overtonnaging.

In explaining how TWRA would achieve these objectives, the parties gave central importance to the competitive flexibility and reponsiveness to shipper demands permitted to the individual lines by the Agreement. The old conferences were described as too inflexible and slow moving to permit the members to operate with the quick response to market conditions that the parties

[3] Section 6(g) provides in relevant part:

(g) Substantially Anticompetitive Agreements.—If, at any time after the filing or effective date of an agreement, the Commission determines that the agreement is likely, by a reduction in competition, to produce an unreasonable reduction in transportation service or an unreasonable increase in transportation cost, it may, after notice to the person filing the agreement, seek appropriate injunctive relief. . . .

characterized as necessary in the westbound trades. Also, according to the parties, it was necessary to guarantee maximum price flexibility in order to attract enough carriers into the Agreement so that stabilization of rates was a reasonable goal. Rate flexibility was also necessary to achieve the desired reduction in administrative and regulatory costs.

There are three primary articles in TWRA that provide rate flexibility to the individual members. First, Article 13 gives the parties their statutory right to take independent action on ten days' notice "on any rate or service item within the scope of [TWRA]."[4] No limit on this right is stated in the Article. Article 13 also states that "[p]rior to giving notice of any independent action hereunder, each party is encouraged, but is not required, first to propose to the Agreement that the Agreement itself take the action and to permit the Agreement to act thereon at a meeting." Second, Article 5(c) of the Agreement permits the members to negotiate and adopt their own service contracts at whatever rate levels they choose. By the terms of Article 13, the independent action provisions of TWRA also apply to service contracts. Third, Article 8(a) provides for a procedure known as "rate initiative." According to the parties, this procedure is designed to produce the same result as independent action, only faster (three to five days) and with less work and expense. Its stated purpose is to provide even more market responsiveness than independent action and to give shipper added assurance that a rate negotiated with a carrier will actually be "delivered" by the carrier.

The parties argued that the rate initiative feature of TWRA, together with TWRA's provisions permitting members total freedom with regard to service contracts, provides for substantially more individual member competitive freedom and flexibility than the provisions of the Shipping Act of 1984 require. The Agreement in Article 12 also makes provision for "promptly and fairly" considering shippers' requests and complaints and for meeting with shippers "to promote the commercial resolution of disputes,"[5] and otherwise expresses the parties' intention to promote and develop "close communications and working relationships with shippers and consignees."

The Commission took note of these provisions and of the present and anticipated rate and tonnage conditions in the Pacific trades. We determined that the Agreement members' response to shipper rate needs should be kept under surveillance. Accordingly, the Commission obtained the parties' agreement to file quarterly reports on their use of the rate initiative and independent action procedures. Otherwise, the Commission determined that the information before us at that time did not provide a basis for contending to a federal district court that TWRA would likely result in unreasonable reductions in service or increase in costs to shippers. Accordingly, no injunction against TWRA was sought and the Agreement went into effect on January 5, 1985, 45 days after filing with the Commission, as provided by section 6(c)(1) of the Act (46 U.S.C. app. 1705(c)(1)).

II. The TWRA Rate Actions

The TWRA members met in Vancouver, British Columbia, on January 30–31, 1985. At that meeting, the nineteen member lines[6] agreed to a "Revenue Stabilization Program" that provided for a general rate increase of per container rate on nonrefrigerated cargoes by amounts ranging from $150 to $300, the precise figure dependent on container size and destination. Rates for refrigerated cargoes were scheduled to increase by ten percent. Further, all tariffs of all members were to be amended to reflect the establishment of minimum charges scaled from $750 to $5,000 per container. Tariffs were subsequently filed at the Commission that reflected both the agreed-upon general rate increase and minimum per container rate levels, to become effective March 6, 1985.

The member lines also agreed that effective January 31, 1985, there would be a minimum charge established for any new service contract or renewal of existing contracts entered into by any individual line, any combination of lines, or the TWRA itself. These minimum charges ranged from $2,250 to $5,000 per container. Finally, the TWRA lines filed minimum boxcar rates, effective March 22, 1985.

The Commission began to receive complaints and inquiries from shippers almost immediately after the TWRA meeting on January 30–31. The complaints generally were from shippers in the Pacific Northwest of low-rated commodities, such as lumber, hay and wastepaper. With some exceptions, they focused on the minimum revenue requirements rather than on the general rate increase. Some protests contended that the container minimums constituted *de facto* rate increases of 35 to 150 percent. Some shippers stated that such increases might cause the bankruptcy of segments of the lumber industry. Others stated that imposition of the rate charges as scheduled would force them to break existing contracts with overseas buyers or face huge losses. Cotton shippers based in Texas complained that previous ocean freight increases had always been scheduled by the carriers to allow for the fact that cotton export contracts generally expire in late August of each year.

In addition to complaints regarding the specific rate levels announced by TWRA, there were widespread shipper allegations that the TWRA members had reached certain tacit understandings designed to reinforce their agreed-upon minimum rates. These were alleged to include understandings that TWRA members would not enter into any service contracts for a period of 90 days from January 30, 1985; that the members would not grant shipper requests for independent action or rate initiatives that would result in rates below the minimums; that any such action by a member must be "approved" by the entire Agreement; that the members similarly would not negotiate service contracts for rates below the minimums; and that negotiations on service contracts were broken off after the TWRA January 30–31 meeting because the particular carriers involved felt themselves bound by the minimums.

In repsonse to the shippers' complaints, the Commission sent a telex on February 21, 1985 to the Agreement's representatives requesting a postponement of the tariff increases pending further discussion of them. After several meetings on February 26 involving Commission personnel, carrier representatives and shippers, TWRA announced a postponement of the increases until March 20. Further, after meeting in Honolulu, Hawaii, on March 6–8, the TWRA lines informed the

---

[4] Section 5(b) of the 1984 Act (46 U.S.C. app. 1704(b)) requires, *inter alia*, that:

Each conference agreement must—

. . . . . .

(8) Provide that any member of the conference may take independent action on any rate or service item required to be filed in a tariff under section 8(a) of this Act upon not more than 10 calendar days' notice to the conference and that the conference will include the new rate or service item in its tariff for use by that member, effective no later than 10 calendar days after receipt of the notice, and by any other member that notifies the conference that it elects to adopt the independent rate or service item on or after its effective date, in lieu of the existing conference tariff provision for that rate or service item.

[5] The consultation and shipper requests and complaints provisions are mandated by sections 5(b) (6) and (7) of the 1984 Act (46 U.S.C. app. 1704(b)).

[6] Barber Blue Sea Line did not attend the meeting, having resigned from TWRA two weeks earlier.

justified. However, we reiterate that

Commission that further adjustments in the per-container minimums had been made. Effective March 20, the minimums for nonrefrigerated cargo moving from West Coast ports were to be $600 per 20-foot container and $800 per 40-foot container (reduced from $750 and $1,000, respectively). Corresponding adjustments were made to the other minimums. The full minimums were to go into effect on June 20, 1985. No action was taken at that meeting on the minimum charges on service contracts.

On March 12, 1985, the Commission issued an Order pursuant to section 15 of the 1984 Act (46 U.S.C. app. 1714) to TWRA and its member lines.[7] The section 15 order noted that while the postponement by the TWRA lines of the minimums might ease the difficulties some shippers apparently would have faced in meeting current contracts, the postponement did not resolve the issue whether the mimimum rates represented an unreasonable increase in transportation cost or whether the establishment and maintenance of the minimums were consistent with the terms of TWRA and otherwise lawful under the 1984 Act. The section 15 Order therefore directed TWRA and the member lines to respond on or before April 2, 1985 to a series of detailed questions and demands for documents concerning the minimum rates and the lines' responses to shippers' complaints and requests for service contracts and independent rate actions. The purpose of the Order was to develop a factual record sufficient to permit the Commission to determine the appropriate regulatory course of action, if any, to be taken regarding TWRA and its members. In addition, in early April the Commission's Bureau of Agreements and Trade Monitoring contacted approximately 40 shippers in the TWRA trades by letter, soliciting their views on the TWRA rate actions. The letter was designed to help the Commission develop a reasonably complete picture of shipper attitudes regarding TWRA, particularly of those shippers who had not thus far commented on the Agreement and its rate actions.

In the meantime, on March 27, 1985, the TWRA lines again made adjustments to the minimums. The imposition of the full minimums was postponed until September 1. A minimum of $700 on 40-foot nonrefrigerated containers from the West Coast went into effect on March 27, which was to increase to $800 on July 1 and to $1000 on September 1. The TWRA lines also voted on March 27 to reduce the minimums on service contract rates to not less than the rate that is provided for in the TWRA tariffs at the time the contract is entered into, but still subject to specified minimums. The lines noted that the service contract minimums agreed to at the Vancouver meeting on January 30–31 were, in some instances, actually higher than present tariff rates.

Finally, according to recent press reports, the TWRA lines have decided in a meeting in Hong Kong to make still more adjustments to the minimums. For 40-foot containers of eight historically low-rated commodities—lumber, woodpulp, kraft liner board, scrap metal, raw cotton, wastepaper, hay cubes and hides—bound for North Asia destinations, the current minimum of $700 was suspended. An $800 minimum previously postponed to July 1 will now go into effect on November 1. The $1,000 minimum previously scheduled for September 1 was postponed until January 1, 1986. For containers of the same eight commodities bound for South Asia destinations, the current $700 miuninum was suspended until November 1. An $800 minimum will go into effect on January 1.

For all other dry commodities bound for North Asia, the $800 per-container minimum scheduled for July 1 was reportedly postponed until September 1 and the previously scheduled $1,000 September 1 minimum will be delayed until December 1. Similar postponements were applied to the rates applicable to other dry commodities bound for South Asia destinations.

As noted above, complaints regarding the minimums have come mainly from West Coast shippers of low-rated cargo such as wastepaper, hay cubes and woodpulp. According to the TWRA members, the average revenue per forty-foot container of such cargo realized before their rate actions had dropped below $500. The lines first proposed to establish a minimum on such containers of $1,000, an increase of more than 100 percent, effective March 6, 1985, on slightly more than thirty days' notice. After the various postponements and adjustments, the full increase to $1,000 will not go into effect for any such cargo until December 1, *i.e.*, over ten months rather than one.

In addition, by Agreement No. 202–010689–005, filed June 19, 1985, the lines propose to amend their Agreement to prohibit the further offering of new service contracts or renewals of existing contracts either on an Agreement-wide basis or by individual carriers.

Discussion

All of the persons addressed by the section 15 Order submitted responses; these include the TWRA chairman, its executive director and the nineteen member lines.[8] The material submitted is voluminous and includes many internal company documents. In addition, in late April counsel for the TWRA lines submitted an unsolicited package of materials that they requested also be considered by the Commission. This package consisted of tabulations of independent rate actions taken under the Agreement, a memorandum of counsel on certain issues of law and statements of various persons employed by TWRA lines.

As discussed below, the information before the Commission does not establish that there have been no violations of the 1984 Act by the TWRA lines; on the contrary, the record justifies a formal adjudicatory investigation of certain of the lines' actions at Vancouver and afterwards. However, before discussing the TWRA responses to the section 15 Order, the Commission will address briefly the question of an injunction under section 6(g) of the Act.

I. TWRA's Rate Action Under Section 6(g)

The determination whether a particular concerted rate action by the parties to an agreement has violated the standard contained in section 6(g) involves two distinct tests: (1) Whether the agreement is one that can be categorized as substantially

[7] Section 15 provides, in relevant part, that:

The Commission may require any common carrier, or any officer, receiver, trustee, lessee, agent, or employee thereof, to file with it any periodical or special report or any account, record, rate, or charge, or memorandum of any facts and transactions appertaining to the business of that common carrier. The report, account, record, rate, charge, or memorandum shall be made under oath whenever the Commission so requires, and shall be furnished in the form and within the time prescribed by the Commission.

[8] As noted above, the due date for responses to the Section 15 Order was Tuesday, April 2, 1985. On the evening of April 2, TWRA's attorneys filed pleadings in U.S. District Court in San Francisco seeking an extension until April 9. At a hearing held on Wednesday, April 3, the court denied TWRA's request but retained jurisdiction over the case for the apparent purpose of reviewing any assessment by the Commission of civil penalties against TWRA for failure to comply with the April 2 deadline. *Transpacific Westbound Rate Agreement* v. *Dombrowski*, N.D. Ca. Civ. No. C–85–2888. The responses by TWRA and its members to the section 15 Order were submitted in a series of mailings. The first batch of material was mailed by air courier from San Francisco on April 2; it arrived at the Commission on April 4. The remaining material arrived over the following week. Nothwithstanding the fact that the responses to the section 15 Order were not all timely filed, the Commission has determined, given the circumstances, not to access penalties.

anticompetitive; and (2) if so, whether such an agreement is likely to produce (or has produced) an unreasonable increase in transportation cost or an unreasonable reduction in transportation services.[9]

Clearly, only agreements that pass the first test are subject to the second. The existence of substantially anticompetitive conditions in a trade requires a finding that the parties to an agreement have acquired significant market power. Market power means that a firm, or group of firms acting in concert, control a sufficient share of the market for their productr so that it is theoretically possible for them to set a price for their product in excess of the price that would be set by the interaction of supply and demand in a competitive market. The traditional antitrust concern with market power is sharpened where, as in ocean transportation regulated by the 1984 Act, the act of agreeing on prices is protected from antitrust attack (assuming the procedures required by the Act have been followed). In such circumstances, rate and service actions by carriers that collectively control a major market share in their trades must be scrutinized carefully so that shippers are not subjected to behavior that deviates significantly from that which could be expected in the absence of market power. At the same time, the Commission must be mindful of Congress's instructions to us, expressed in the legislative history of section 6(g), that a negative impact on shippers caused by an agreement rate increase or service reduction may be offset by the agreement's benefits, including the agreement's ability "to address problems of overcapacity and rate instability."[10]

It seems clear that the TWRA carriers hold as a group significant market power in nearly all of the TWRA sub-trades, measured by tonnage as applied to U.S. coastal districts. In fact, in their original submissions to the Commission in November 1984 in support of the Agreement, the parties argued that it was necessary for them to hold a large market share in order to achieve the Agreement's goals. The Commission's own calculations, based upon Bureau of Census data, show that the TWRA lines control 75 percent or more of liner tonnage in nearly all the subtrades they serve; the exceptions are largely confined to U.S. Gulf ports at which few of the parties call. For this reason, TWRA demonstrably passes the application of the first test. The Agreement is therefore a potential candidate for a section 6(g) injunction. Whether such an injunction is actually called for depends upon whether the TWRA carriers have used or are likely to use the market power conferred by their Agreement to unreasonably increase the rates that they charge.

It is the Commission's opinion that a section 6(g) injunctive action at this time would be inapproprate. While it does appear that TWRA was, in its January rate hike, attempting to take full advantage of its considerable market power, a number of mitigating circumstances led us to decide against invoking section 6(g). Among these circumstances was the fact that even if the TWRA carriers manage to maintain the rate increase they are currently phasing in (which is by no means certain in view of the continuing problems of overtonnaging and trade imbalance they face), they will only be returning to the levels of ten years ago.[11] Furthermore, as noted above, the TWRA lines have stretched out the increases so that they will go into effect over ten months rather than one. As a result, any possible adverse impact of the originally filed rate increases has been considerably ameliorated. Recent shipper communications to the Commission confirm that this action by the carriers has facilitated the shippers' adjustment to the increases.

In light of these facts and Congress's generally favorable view of agreements designed to combat overtonnaging and rate instability, we believe that section 6(g) injunctive action at this time is not justified. However, we reiterate that TWRA remains a potential target of a section 6(g) action by virtue of its market power. The Agreement's rate activities will be monitored closely so that the Commission will be in a position to seek an injunction expeditiously, if evidence appears of abuse of market power by the TWRA lines.

II. The Establishment and Maintenance of the Minimum Tariff Rates

The responses to the section 15 Order raise serious issues as to whether the establishment and subsequent maintenance of the minimum tariff rates by the TWRA lines were products of an unfiled agreement in violation of section 10(a)(2) of the 1984 Act, or represent conduct inconsistent with the provisions of the Agreement providing for unfettered independent action by individual members, in violation of section 10(a)(3) of the Act. The documents indicate that the January 30–31 TWRA meeting in Vancouver followed a pre-arranged agenda and that the establishment of minimum rates was part of that agenda. A carrier telex dated January 11, 1985 states in part:[12]

[R]evenue improvement is most important to the carriers and has been the prime objective for the principals . . . Two items will be discussed to achieve revenue improvement, GRI [general rate increase] and minimum rates. . . .

* * * * *

The minimum rates will be established with the aid that a certain minimum rate level will be observed strictly by members so that neither conference actions or independent actions will bring rates below such agreed minima . . .

To the same effect, a telex dated January 22 from a carrier's overseas headquarters to its United States offices states in part:

TWRA owners meeting in Vancouver: although final agenda not yet available Gottshall has in previous telex indicated a number of items which will be docketed. . . . Consider most important items for all members will be rate structure, general rate levels, minimum rates on major commodities, reefer rates and establishment of separate TWRA tariff. . . .

At the Vancouver meeting, the senior executives of each line formed an "Owners Special Committee." These persons have been identified by the TWRA response to the section 15 Order.

[9] In this regard the Conference Report states in relevant part as follows:

As suggested by the title of subsection (g), a likely reduction in competition should be substantial before triggering Commission intercession under the general standard. Unless the competitive threat is substantial, any reduction in service or increase in cost would not be unreasonable, as required by the general standard.

* * * * *

Even if an agreement is likely to cause the requisite reduction in competition, the Commission can obtain injunctive relief only if the likely net result will be an unreasonable increase in costs of shippers, or an unreasonable reduction in the frequency or quality of service available to shippers.

Committee of Conference, *Shipping Act of 1984*, H.R. Rep. 98–600, 98th Cong., 2d Sess. 34, 35 (1984).

[10] Committee of Conference, *Shipping Act of 1984*, H.R. Rep. No. 600, 98th Cong., 2d Sess. 35 (1984). The Conference Committee recognized that combined market share would be major, though not sole, determinant of whether an agreement was substantially anticompetitive, *Id.* at 34–35.

[11] In 1984, the rates published by the Pacific Westbound Conference (PWC), TWRA's predecessor, fell so precipitously that even in absolute terms, the rates were lower by the end of the year than they had been in 1978. This decline, caused by excess capacity and depressed U.S. exports, appears to have been the proximate cause of the dissolution of PWC.

[12] In quoting from telexes, some editing and punctuation has been provided to make them easier to read.

A telex of February 4 provides the details of the Committee's work:

A telex of February 4 provides the details of the Committee's work:

> The establishment of minimums, GRI and freight forwarders compensation was discussed at a one-to-one meeting with highest executives of each line attending. The lines committed not to invoke I.A. against the minimums (even if so-called commitments are involved). Exception: existing service contracts (which considering the number of lines and tonnage involved in TWRA are minimal). However, renewal of such service contracts or new service contracts must take the agreed minimums into account. . . . It was felt that TWRA carrying 90 percent of available cargo . . . is now in a position to not only prevent further deterioration of rates (which presently very depressed) but to improve the revenue position of the participants. Some lines * * * stated that if there are deviations from established minimums they will resign from TWRA. We understand that the established minimums are a considerable increase over the present going market rate and while we anticipate market's pressure (although the market expected high increase) and difficulties our sales personnel will encounter, it is hoped that this action will improve the westbound revenue to more profitable levels. So good luck to all of us.

A telex of February 1 pointed out that the approval of the minimums was unanimous and stated that "even though basic Agreement requires a simple majority to carry, it was the consensus of all members that any revenue improvement would not be successful unless all members were in agreement."

The TWRA carriers appear to have taken a number of steps to enforce the minimums. A February 1 telex from a carrier's headquarters to all U.S. and Far East agents stated: "It is a prerequisite for the future existence/survival of the TWRA that the minima . . . are strictly adhered to. . . ." The carriers had agreed at Vancouver that a carrier proposing independent action or "rate initiative" should be "encouraged" (though not required) to include in its proposal the name of the shipper and a justification for the proposal. It appears that in responding to actual shipper requests for rates below the minimums, the carriers usually declined, often with specific reference to the TWRA action at Vancouver but sometimes with more vague reference to "internal guidelines." The carriers' headquarters were under intense pressure for relief from the minimums from their regional sales offices, which in turn were under pressure from shippers. The carrers' submissions include many letters, telexes and memoranda of conversations with shippers protesting the announced rate actions. An exchange of telexes between a carrier's headquarters and its Boston office appears to provide a sample of the atmosphere prevailing at this time. On February 6, the Boston office wrote to headquarters:

> As you are aware during past couple of months we have received substantial support from [shipper X]. . . . This due to [our] aggressive pricing and service capabilities in Boston. . . . Shipper has learned of proposed March 5 rate increase and is extremely upset with lack of rate sensitivity to their business. . . . We have worked too hard to capture and protect his business to see it discarded so easily. . . . We strongly recommend that we exempt this commodity for [sic] the March 5th increase. . . .

On February 7, headquarters replied:

> Your concern appreciated and understood. Precondition for future existence of TWRA is that minima . . . are being strictly adhered to and in such circumstances regret unable deviate from set minima. . . .

On February 14, a carrier sent a telex to its offices in New York and Oakland reminding its agents that the minimums applied to exempted commodities:

> Minimum charges is [sic] the key to the stability of rate levels. The trade stability will be impaired and thus the whole TWRA will break once the [minimum] is violated. It was the unanimous determination of the senior executives of all members in the [Vancouver] meeting that the minimum charge would be strictly observed and no one would take exceptions to the minimums, even on exempted commodities and service contracts. In this regard, we cannot agree or compromise to any suggestion on exceptions to the minimums.

As noted above, the package of additional materials submitted by TWRA counsel to the Commission in late April included several statements by persons employed by TWRA lines. One of those statements addresses the February 4 telex quoted above with regard to the "Owners Special Committee." The statement acknowledges that the telex states that the TWRA lines had agreed not to exercise independent action against the minimums. In denying that his employer is actually a party to such an agreement, the carrier executive attributes the February 4 telex to his desire to provide a shield for sales personnel against shipper pressure:

> I knew that shippers would be importuning my company's sales personnel to create exceptions to minima. Such pressures are extraordinarily difficult to resist, since they may be coupled with a threat to withhold cargo. Since I had decided, at least for the time being, that our company would not take IA below the minima, I knew that it would be much easier for our sales people to refer to the TWRA minima as a reason why they could not grant requests for such rate reductions. Stating that the company couldn't take IA would reduce commercial pressures.

By the time of their meeting in Honolulu on March 6–8, at which the minimums were reduced and delayed, the lines apparently had realized that their use of TWRA to shield themselves from shipper pressure could have undesirable consequences. A March 12 telex states:

> It is of the utmost importance for the future of the TWRA that no shipper be given to believe that there is any reason whatsoever to think that TWRA itself might be in any way responsible for commercial decisions taken by members * * * as matter of individual company policy to implement . . . minima and GRI. It remains the policy of the TWRA that it is the sole responsibility of each individual member line to follow its own commercial interests acting in strict accordance with the Transpacific Westbound Rate Agreement as filed with the FMC and in total conformity with the U.S. Shipping Act of 1984.

Most recently, on March 27, the following resolution was adopted by the TWRA lines:

> 1. Resolved, that contrary to allegations made by shippers and government officials, every member has and always has had the absolute and unqualified right of independent action as to any TWRA rate or service item including, but not limited to GRI's, minimum rates, commodity rates or tariff rules governing the application of same.
>
> Resolved further that, in the event any employee or agent of any TWRA member may have conveyed any contrary impression to any shipper, employee or other agent of the member, the member should convey the text of the foregoing resolution to such person to correct any misimpression.
>
> 2. The executive in each company, responsible for westbound transpacific pricing, should, in implementing the resolution, send a communication to each person who previously has received company or agency communications respecting the Vancouver action, which affirms that the particular member's policy respecting the exercise of independent action is in all respects a matter of internal company policy. The member can state, if it wishes, what that policy is, if there is such a policy.

The TWRA lines contend that nothing in the Agreement or the 1984 Act precludes them from discouraging each other from taking independent action by threatening to leave the agreement. This is termed an exercise of "commercial speech". It is argued that members may discuss, reach consensus on or agree as to their future intentions regarding the independent action process because, notwithstanding any such agreements, a TWRA member may always change its mind and exercise its right of independent action to the contrary.

There are several issues of fact and law raised by the TWRA carriers' imposition of minimum rates that require full investigation. Any activity that threatens the viability of the concept of independent action must be viewed by the Commission with the utmost seriousness. Congress indicated in writing the Shipping Act of 1984 that independent action was to be a counterweight against the possibility that carriers might use their ability to form agreements more easily and their expanded antitrust immunity to extract unreasonably high rates from shippers.[13] Independent action is particularly important in the case of agreements, such as TWRA, that hold a high degree of market power.[14] The TWRA carriers stated in their November 1984 submissions in support of the Agreement that one of the central purposes of the Agreement was to permit more individual line competitive flexibility than the old conference structures, and that this would be achieved by the Agreement articles providing for independent action, reinforced by the novel concept of "rate initiative." An unfiled agreement not to invoke independent action below certain rate levels would—even if such an agreement was short-lived—be contrary to those representations, inconsistent with specific provisions of TWRA and directly against the intent of Congress and the 1984 Act. The Commission must investigate whether such an agreement was reached and whether it is still in effect despite the resolution adopted on March 27.

Perhaps more important, we believe that an investigation is necessary as to whether the publication and enforcement of a broad, comprehensive minimum rate program, such as that approved at the Vancouver meeting, by a ratemaking body with significant market power such as TWRA is, in and of itself, consistent with the statutory requirement of independent action. Certainly, the use of minimum rates is a long-standing commercial practice, usually designed to improve container utilization and deployment. But when a major rate agreement publishes a general rate increase and reinforces that with minimum rates that apply to essentially all types of cargo moving to all destinations served by the agreement, and when the approval of those minimums is accompanied by "commercial speech" of the sort used at Vancouver, and when the agreement members regard the raising of rates and revenues as a life-or-death proposition for the agreement, the existence of the minimums takes on new dimensions and the fact that the agreement members still have the right on paper to take independent action below the minimums may no longer have any real meaning. The Commission wishes a full and complete development of the record on this new and important issue whether the TWRA minimum rate program has unlawfully frustrated or undermined the individual member's right of independent action.

[13] House Committee on Merchant Marine and Fisheries, *International Ocean Commerce Transportation*, H.R. Rep. No. 53, 98th Cong., 1st Sess. 15–16 (1983).

[14] Congress stated:

> In the case of conference agreements, including those with intermodal ratemaking authority, the conferees believe that potential reductions in competition will be at least partially offset by a member carrier's right of independent action. . . ." H.R. Rep. No. 600, n. 9, *supra*, at 34.

III. Service Contracts

There are two distinct issues regarding service contracts raised by the TWRA actions at Vancouver and afterwards: (1) whether the Agreement permitted the establishment of minimum rates on individual carrier service contracts, and (2) whether the TWRA lines agreed not to take independent action against the established minimum rates.

A. The Establishment of Minimum Service Contract Rates on Other Than Agreement-Wide Contracts

There is no factual dispute that the lines agreed on minimum rates on individual contracts at the Vancouver meeting. The question is whether the Agreement authorized them to do so. Article 5(d) of TWRA states:

> *Service Contracts.* Any party which, as of the effective date of this Agreement (or the date it becomes a Party, whichever is later), has entered into a service contract(s) may, during the term thereof, continue such contract(s) and continue separately to publish the essential terms thereof. After the effective date of this Agreement:
>
> (i) Any Party may enter into a service contract(s), but must furnish a copy of its essential terms to the Manager and do so no later than the date such terms are filed with the Federal Maritime Commission;
>
> (ii) Any two or more Parties may jointly enter into a service contract(s), but such Parties must furnish a copy of the essential terms of such contract(s) to the Manager and do so no later than the date such terms are filed with the Federal Maritime Commission;
>
> (iii) The Agreement may, with the consent of any Party or Parties, enter into a service contract(s) on behalf of such Party or Parties.

This provision appears to permit Agreement-wide accord on service contract terms only in the circumstance described in subpart (d)(iii), where the Agreement itself is a party to the contract. Otherwise, individual carriers or groups of carriers appear free to negotiate contracts of their own under subparts (d)(i) and (d)(ii), the only restriction being that they must furnish the Agreement's executive office with informational copies of the contracts after they have been negotiated. Article 5(d) does not appear to authorize concerted activity on service contracts, such as the agreement reached at Vancouver, through which the parties attempt to control what individual lines or combinations of lines charge for carriage under a service contract. This interpretation appears to be consistent with the carriers' submissions in support of TWRA in November 1984, in which they stated:

> Another major feature of the TWRA, which distinguishes it from most traditional conference-type agreements, is that it does not prohibit *or create Agreement control over the terms of* individual carriers' service contracts. Moreover, the independent action clause of the TWRA also applies to service contracts. In this respect, as with rate initiative, the Agreement provides for substantially more individual member competitive freedom than the 1984 Shipping Act requires." (emphasis supplied).

The parties also said that service contracts were to be "left up to members." In his affidavit in support of the Agreement, Mr. Ronald Gottshall stated:

> The other basic decision under TWRA was not to prohibit or assume control in the Agreement over service contracts by individual carriers. Probably needlessly service contracts are also subject to independent action. Service contracts are proliferating in the trade and constitute an entire new and separate competitive force.

In informal submissions to the Commission, the TWRA carriers have denied that the Vancouver action on service contracts was inconsistent with their November 1984 statements or constituted the operation of an unfiled agreement or activity inconsistent with the TWRA. Nevertheless, a formal investigation is necessary as to whether the TWRA lines violated section 10(a)(2) of the 1984 Act by operating an agreement required to be filed under section 5 of the Act that has not become effective under section 6, and/or section 10(a)(3) by activity not in accordance with the provisions of their Agreement.

B. The Establishment and Maintenance of Minimum Service Contract Rates Generally

The issue whether the carriers agreed not to exercise their right of independent action against the service contract minimums does involve disputed facts. A carrier telex of February 4, 1985, summarizes the parties' understanding as follows:

All service contracts filed with the Federal Maritime Commission on or after [January 24] effect." The January 24 reply from the service contracts for a defined period.[15]

the Transpacific Westbound Rate Agreement;

It is further Ordered, that any person,

Nippon Yusen Kaisha, K. Miyaoka, President,

All service contracts filed with the Federal Maritime Commission on or after [January 31] must observe the new minimum charges. A contract filed with the Commission before this date even if the effective date of the contract is after January 31 is not a violation of this Agreement. Contracts below the minimums which are filed with the Federal Maritime Commission on or after January 31, even if signed by the parties or negotiated before January 31, are not within the spirit of the Agreement.

At a meeting held on February 22, 1985, the TWRA lines adopted the following resolution regarding service contracts and rate minimums:

It is the decision of TWRA that there may be no deviation from the rate increase and/or minima except for a commitment made on or before 30 January 1985 which agreement counsel concludes would be enforced. This conclusion would be based upon explanation and documentation presented by individual line seeking this conclusion. Initial requests to be submitted to counsel no later than 28 February 1985.

A telex of February 26 comments on this resolution as follows:

While there are still unclear points on this resolution, we interpret it as that Agreement counsel be authorized to evaluate each case submitted by member lines based upon explanation and supporting documents thereof as to whether each commitment made between carriers and shippers (or consignees) before January 31, 1985, has been legally binding in light of relative laws and once he concludes that such a commitment is to be enforced, rate action to exempt from the rate increase and/or minima will not be deemed as a deviation from owners' resolution adopted as the meeting in Vancouver on January 30 and 31, 1985.

There might have been various commitments based upon informal agreement by letter from carrier to shipper . . . and simple verbal agreement backed up by history of booking and rate application. We, however, expect that the Agreement counsel will not conclude that such commitments would be legally binding at least as far as cargo originating in the United States is concerned. . . . We, therefore, are quite doubtful if such submission make some sense.

One allegation made to the Commission was that the member lines had also agreed that no member would enter into any service contracts for a period of 90 days from January 30, 1985. Some documents apparently relevant to this allegation were submitted in response to the section 15 Order. A January 23 telex from a carrier's headquarters to its offices in the United States set forth several ideas for discussion at the upcoming Vancouver meeting. One was that all members should "freeze freight (no further reductions) . . . effective immediately or say February first for a three-month period or until common tariff goes into effect." The January 24 reply from the same carrier's U.S. office for conference matters supported this idea "subject to the understanding that member lines are free to match any confirmed filing of a TWRA co-member." Finally, another carrier's telex dated January 31 and reporting on the results of the first day, January 30, of the Vancouver meeting states that the lines agreed that:

No service contract [sic] will be allowed for the next 90 days unless they are above $3,000/40 foot for West Coast and $5,000/40 foot for East Coast.

Note.—Service contract [sic] will be further negotiated in tomorrow (January 31, 1985) meeting.

No further reference to the apparent January 30 agreement could be located in the Section 15 Order submissions. It is not clear whether it was superseded by the January 31 agreement on minimums, or whether the 90-day ban continued in effect—even for a short time—as a supplement to the January 31 minimums.

As with the minimum tariff rates, the service contract minimums engendered protests from shippers, particularly since the service contract minimums were higher at that time than the prevailing tariff rates. A March 20 telex to the TWRA offices in San Francisco from a major Japanese shipper, is representative:

Minimum charge of service contracts should be cancelled. Our strongest protest lies with minimum charge for service contracts. Current minimum charge . . . far exceeds prevailing freight rate and is prohibitive for us to negotiate service contracts. . . .

As noted above, on March 27, the TWRA lines reduced the service contract minimums to prevailing tariff rates. In addition, a telex was sent, a copy of which was provided to the Commission by TWRA, which states that the minimums are a matter of "voluntary adherence by the members and are not binding upon any member carrier which decides to withdraw its adherence." This is a markedly different tone from that expressed in the earlier telexes quoted above, which referred to contracts below the minimums as "violations of the Agreement" and "contrary to the spirit of the Agreement."

Although the TWRA carriers have denied that they agreed not to use their independent action rights to negotiate service contracts for rates below the Vancouver minimums, the internal documents quoted above justify further investigation of this issue. There must also be a resolution of whether there was a secret agreement to ban all new service contracts for a defined period.[15] Finally, the undisputed agreement on service contract minimums raises the same broad concerns discussed above, regarding the effect of such minimums on the right of independent action, as did the establishment of tariff rate minimums. As described by the carrier telexes, the service contract minimums were apparently enforced by a "clearance" procedure involving Agreement counsel; this additional factor casts further doubt on the true pertinence and effectiveness of TWRA's independent action provisions.

Therefore, it is ordered, that pursuant to section 11 of the Shipping Act of 1984 (46 U.S.C. app. 1710) a proceeding is hereby instituted to determine whether the Transpacific Westbound Rate Agreement and its member lines:

(1) Have violated sections 10(a)(2) or 10(a)(3) of the Shipping Act of 1984 [46 U.S.C. app. 1709(a) (2) or (3)] by agreeing not to exercise independent action at levels below their minimum tariff rates, which agreement was subject to the filing requirements of section 5 of the Shipping Act of 1984 [46 U.S.C. app. 1704], or inconsistent with the independent action provisions of the Transpacific Westbound Rate Agreement as required by section 5(b)(8) of the Act [46 U.S.C. app. 1704(b)(8)];

(2) Have violated section 10(a)(3) of the Shipping Act of 1984 by establishing and maintaining a program of minimum tariff rates in a manner inconsistent with the independent action provisions of the Transpacific Westbound Rate Agreement required by section 5(b)(8) of the Act;

(3) Have violated sections 10(a)(2) or 10(a)(3) of the Shipping Act of 1984 by agreeing on minimum rates applicable to service contracts between individual carriers, or combinations of carriers, and shippers, which agreement was subject to the filing requirements of section 5 of the Shipping Act of 1984, or inconsistent with the service contract and independent action provisions of the Transpacific Westbound Rate Agreement;

(4) Have violated sections 10(a)(2) or 10(a)(3) of the Shipping Act of 1984 by agreeing not to exercise independent action at levels below their minimum service contract rates, which agreement was subject to the filing requirements of section 5 of the Shipping Act of 1984, or inconsistent with the service contract and independent action provisions of the Transpacific Westbound Rate Agreement;

(5) Have violated section 10(a)(3) of the Shipping Act of 1984 by maintaining a system of minimum service contract rates in a manner inconsistent with the service contract and independent action provisions of the Transpacific Westbound Rate Agreement;

(6) Have violated sections 10(a)(2) or 10(a)(3) of the Shipping Act of 1984 by agreeing not to negotiate or execute new or renewed service contracts for a period of time, which agreement was subject to the filing requirements of section 5 of the Shipping Act of 1984, or inconsistent with the service contract and independent action provisions of the Transpacific Westbound Rate Agreement;

It is further Ordered, that in the event any of the violations described above are found to have occurred, it should be determined whether the Respondents:

(1) Should be assessed civil penalties and, if so, the amount of such penalties; and/or

(2) Should have their Transpacific Westbound Rate Agreement disapproved, cancelled or modified by the Commission; and/or

(3) Should be ordered to cease and desist from such activity;

It is further Ordered, that a public hearing be held in this proceeding and that the matter be assigned for hearing by an Administrative Law Judge of the Commission's Office of Administrative Law Judges at a date and place to be hereafter determined by the Presiding Administrative Law Judge.

The hearing shall include oral testimony and cross-examination in the discretion of the Presiding Officer only upon a proper showing that there are genuine issues of material fact that cannot be resolved on the basis of sworn statements, affidavits, depositions, or other documents or that the nature of the matters in issue is such that an oral hearing and cross-examination are necessary for the development of an adequate record;

It is further Ordered, that the Transpacific Westbound Rate Agreement and its member lines, as identified in the Appendix to this Order, are hereby made Respondents in this proceeding;

It is further Ordered, that in accordance with Rule 42 of the Commission's Rules of Practice and Procedure (46 CFR 502.42), the Bureau of Hearing Counsel shall be a party to this proceeding;

It is further Ordered, that notice of this Order be published in the Federal Register, and a copy be served upon all parties of record;

It is further Ordered, that any person, other than parties of record, having an interest and desiring to participate in this proceeding shall file a petition for leave to intervene in accordance with Rule 72 of the Commission's Rules of Practice and Procedure (46 CFR 502.72);

It is further Ordered, that all future notices, orders, and/or decisions issued by or on behalf of the Commission in this proceeding, including notice of the time and place of hearing or prehearing conference, shall be mailed directly to all parties of record;

It is further Ordered, that all documents submitted by any party of record in this proceeding shall be filed in accordance with Rule 118 of the Commission's Rules of Practice and Procedure (46 CFR 502.118), as well as being mailed directly to all parties of record;

Finally, it is Ordered, that pursuant to the terms of section 11(d) of the Shipping Act of 1984 (46 U.S.C. app. 1710(d)) and Rule 61 of the Commission's Rules of Practice and Procedure (46 CFR 502.61), the initial decision of the Presiding Officer in this proceeding shall be issued by July 15, 1986 and the final decision of the Commission shall be issued by November 17, 1986.

By the Commission.

Bruce A. Dombrowski,

Acting Secretary.

Date: July 26, 1985.
Time: 9 a.m.–12 noon.
Place: Conference Room 3A, Appalachian Laboratory for Occupational Safety and Health, 944 Chestnut Ridge Road, Morgantown, West Virginia 26505–2888.

Purpose: To discuss the research protocol of a project which will identify some of the important biomechanical and physiological stresses associated with asymmetrical lifting. Viewpoints and suggestions from industry, organized labor, academia, other government agencies, and the public are invited.

Additional information may be obtained from: Tim Pizatella, Division of Safety Research, NIOSH, CDC, 944 Chestnut Ridge Road, Morgantown, West Virginia 26505–2888, Telephones: FTS: 923–4807, Commercial: 304/291–4807.

Dated: July 10, 1985.

Robert L. Foster,

Acting Associate Director for Policy Coordination.

BILLING CODE 4160-19-M

Food and Drug Administration

[Docket No. 83D-0247]

Animal Drugs, Feeds, and Related Products; Efficacy Evaluation of Canine/Feline Anthelmintics; Availability of a Guideline

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a guideline prepared by its Center for Veterinary Medicine (CVM) entitled "Guideline for Efficacy Evaluation of Canine/Feline Anthelmintics." The guideline reflects consideration of those comments received in response to publication of a notice of availability of the draft guideline.

ADDRESS: The December 1984 revised guideline and related materials are available for public examination at, additional written comments may be submitted to, and requests for single copies may be sent to, the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Bob C. Griffith, Center for Veterinary Medicine (HFV–110), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–3430.

SUPPLEMENTARY INFORMATION: The Federal Food, Drug, and Cosmetic Act (the act) requires that a new animal drug be the subject of an approved new animal drug application (NADA) before it may be marketed in interstate commerce. Section 512(b)(1) of the act (21 U.S.C. 360b(b)(1)) requires that each NADA include full reports of investigations that show that the drug is safe and effective for use. Section 512(d) of the act (21 U.S.C. 360b(d)) describes the criteria that must be met before a new animal drug may be approved, including that it be safe and effective for use as labeled. Section 514.1(b)(8) of the animal drug regulations (21 CFR 514.1(b)(8)) describes the effectiveness requirements for an NADA.

In the **Federal Register** of September 13, 1983 (48 FR 41095), FDA published a notice of availability of a draft guideline for effectiveness evaluation of canine/feline anthelmintics. Comments were received from the Animal Health Institute, the Canadian Health and Welfare Bureau of Veterinary Drugs, and several independent parasitologists. Following evaluation of the comments, the guideline was revised. CVM's responses to the comments have been filed with the Dockets Management Branch. The "Guideline for Efficacy Evaluation of Canine/Feline Anthelimintics," dated December 17, 1984, describes studies an NADA sponsor may conduct to obtain information needed to evaluate effectiveness of anthelmintic new animal drugs for dogs and cats. This notice of availability is issued under § 10.90(b) (21 CFR 10.90(b)), which provides for use of guidelines to establish procedures of general applicability that are not legal requirements but are acceptable to the agency. If an applicant believes that alternative procedures also apply, a guideline does not preclude the applicant from pursuing those alternative procedures. Under such circumstances, however, the agency encourages applicants to discuss the alternative procedures in advance with CVM to prevent the expenditure of resources and effort for work that may later be found to be unacceptable.

Requests for single copies of the guideline may be sent to the Docket Management Branch (address above). Interested persons may, at any time, submit additional written comments on the guideline to the Dockets Management Branch. Such comments will be considered in determining if further revisions of the guideline are required. Two copies of any comments should be submitted, except that individuals may submit one copy. Submissions should be identified with Docket No. 83D–0247. Received comments and all related materials may be seen in the Docket Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Dated: July 11, 1985.

Mervin H. Shumate,

Acting Associate Commissioner for Regulatory Affairs.

[FR Doc. 85-17021 Filed 7-17-85; 8:45 am]

BILLING CODE 4160-01-M

[Docket No. 81D-0300]

Anti-Infective Bovine Mastitis Product Development; Availability of Guideline

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of a guideline entitled "Guideline for Anti-Infective Bovine Mastitis Product Development" prepared by FDA's Center for Veterinary Medicine (CVM). The guideline describes the type of data required to establish target animal safety and effectiveness of anti-infective drugs used for treatment and control of infectious bovine mastitis. This guideline is a revision of a 1981 draft guideline entitled "Antimicrobial Drugs for Intramammary Infusion" which described such required data. The agency is issuing the revised guideline under a different title to be consistent with current terminology.

ADDRESS: The draft and final revised guideline and comments are available for public examination at, further written comments may be submitted to, and requests for single copies may be sent to, the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Donald A. Gable, Center for Veterinary Medicine (HFV–130), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–1414.

SUPPLEMENTARY INFORMATION: The Federal Food, Drug, and Cosmetic Act (the act) requires that a new animal drug be the subject of an approved new animal drug application (NADA) before it may be marketed in interstate commerce. Section 512(b)(1) of the act (21 U.S.C. 360b(b)(1)) requires that each NADA include full reports of investigations that show that the drug is safe and effective for use. Section 512(d) of the act (21 U.S.C. 360b(d)) describes the criteria that must be met before a new animal drug may be approved, including that it be safe and effective for use as labeled. Section 514.1(b)(8) of the animal drug regulations (21 CFR 514.1(b)(8)) describes the effectiveness requirements for an NADA.

In the **Federal Register** of October 9, 1981 (46 FR 50152), FDA published a notice of availability of a draft revised guideline concerning the evaluation of antimicrobial drugs for intramammary infusion (infectious bovine mastitis) as related to target animal safety and effectiveness. The notice solicited comments by December 7, 1981. FDA published a notice in the **Federal Register** of December 4, 1981 (46 FR 59309), extending the time for comment to February 5, 1982, based on a request by the Animal Health Institute (AHI) in a letter dated November 3, 1981 (on file with the Dockets Management Branch).

In a letter dated February 4, 1982 (on file with the Dockets Management Branch), AHI requested a further extension of time and a meeting with CVM to discuss the guideline. CVM believed it would be beneficial to hold an open public meeting, and FDA published a notice in the **Federal Register** of March 2, 1982 (47 FR 8857), announcing a meeting to be held on May 19, 1982, in Rockville, MD, and extending the time for comment to July 6, 1982. The meeting was held and is summarized in memoranda that are on file with the Dockets Management Branch.

Twelve letters containing comments were received from drug manufacturers, professional organizations, the AHI, and the National Mastitis Council. A summary of the significant comments and the agency's responses is on file with the Dockets Management Branch.

The guideline replaces a guideline entitled "Guideline for Bovine Anti-Mastitis Products: 1973 Revised."

This notice of availability is issued under 21 CFR 10.90(b), which provides for use of guidelines to establish procedures of general applicability that are not legal requirements but are acceptable to the agency. Sponsors may rely upon a guideline with the assurance that it represents procedures acceptable to the agency (see 21 CFR 10.90). If a sponsor believes that alternative procedures are also applicable, a guideline does not preclude a sponsor from pursuing the alternative procedures. Under such circumstances, however, the agency encourages sponsors to discuss the alternative procedures in advance with FDA to prevent the expenditure of money and effort for work that may later be found unacceptable.

Interested persons may, at any time, submit additional written comments on the guideline to the Dockets Management Branch. Such comments will be considered in determining if further revisions of the guideline are required. Respondents should submit two copies (except that individuals may submit single copies) identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch from 9 a.m. to 4 p.m., Monday through Friday.

Dated: July 11, 1985.

Mervin H. Shumate,

Acting Associate Commissioner for Regulatory Affairs.

Office of Human Development Services

Intent To Reallot Basic Support and Protection and Advocacy Funds to States for Developmental Disabilities Expenditures

AGENCY: Administration on Developmental Disabilities, Office of Human Development Services, HHS.

ACTION: Notice of intent to reallot funds.

SUMMARY: The Administration on Developmental Disabilities herein gives notice of intent to reallot funds which will not be used by the Trust Territories of the Pacific and any other States prior to September 30, 1985, in accordance with section 125(d) of the Developmental Disabilities Assistance and Bill of Rights Act of 1984, Pub. L. 98–527. To be considered for receipt of additional funds under this reallotment, each State must provide the following information in writing:

(1) The amount of funds that will not be obligated prior to September 30, 1985, under its approved State Plan. If all funds will be obligated, provide a statement to that effect;

(2) If additional funds could be used and obligated prior to September 30, 1985; or

(3) A statement that no additional funds are needed.

The information provided will be used to calculate the amounts to be reallotted and this information should be submitted no later than (30 days from date of publication) to: Betty J. Mobley, Grants and Contracts Management Division, Office of Human Development Services, Department of Health and Human Services, 200 Independence

Avenue SW., Room 341F.4 HHH Bldg., Washington, D.C. 20201.

If a State fails to provide written

Building 31, Room 3B19, 9000 Rockville Pike, Bethesda, Maryland 20205, (301)

liver. In femal F334/N rats, there was *some evidence of carcinogenicity*

injustices resulting from the administration of laws and regulations.

to be part of the personnel records maintained by the Commissioned

Seven routine uses are proposed for

Avenue SW., Room 341F.4 HHH Bldg., Washington, D.C. 20201.

If a State fails to provide written notice as indicated above by August 19, 1985, that State will not receive additional funds under the fiscal year 1985 reallocation of funds.

FOR FURTHER INFORMATION CONTACT: Bettye J. Mobley, (202) 245–7220.

(Catalog of Federal Domestic Assistance Program No. 13–630 Developmental Disabilities-Basic Support and Advocacy Grants)

Dated: July 11, 1985.

Jean K. Elder,

Commissioner, Administration on Developmental Disabilities.

BILLING CODE 4140–01–M

Commercial/Industrial Activities Review Schedule

AGENCY: National Institutes of Health, DHHS.

ACTION: Notice of Review Schedule.

SUMMARY: This notice identifies a cost comparison study for a commercial/industrial activity by the National Institutes of Health during Fiscal Year 1986. This study will be in accordance with Office of Management and Budget Circular A–76.

FOR FURTHER INFORMATION CONTACT: Ana Kennedy, Division of Management Policy, National Institutes of Health, Building 31, Room 3B19, 9000 Rockville Pike, Bethesda, Maryland 20205, (301) 496–2461.

SUPPLEMENTARY INFORMATION: In accordance with OMB Circular A–76, a cost comparison is scheduled for the elevator maintenance and related services to be completed by January 1986. This activity includes administration, maintenance, repair, inspections and emergency service work for elevators, escalators, dumbwaiters, automatic doors, window washing scaffolds and automated materiel handling systems.

The activity is located at the National Institutes of Health, Bethesda, Maryland.

Dated: July 9, 1985.

BILLING CODE 4140–01–M

Public Health Service

National Toxicology Program; Availability of Technical Report on Toxicology and Carcinogenesis Studies of Telone II®

The HHS' National Toxicology Program today announces the availability of the technical report described toxicology and carcinogenesis studies of Telon II® (Technical-Grade 1,3-Dichloropropene containing 1.0% epichlorohydrin as a Stablilizer). Telone II® is widely used in agriculture as a soil fumigant for parasitic plant nematodes. 1.3-Dichloropropene, a mixture of *cis and trans* isomers, is a clear, light straw-colored liquid with a penetrating, irritating, chloroform-like odor and is also found in D-D® and Vorlex® soil fumigants.

Toxicology and carcinogenesis studies of Telone II® were conducted by administering the commercial-grade formulation in corn oil by gavage to groups of 52 male and 52 female F334/N rats at does of 0, 25, or 50 mg/kg and to groups of 50 male and 50 female B6C3F$_1$ mice at doses of 0, 50, or 100 mg/kg. Doses were administered three times per week for 104 weeks. Ancillary studies were conducted in which dose groups containing five male and five female rats were killed after Telone II® for 9, 16, 21, 24, or 27 months.

Under the conditions of these gavage studies, there was *clear evidence of carcinogenicity* for male F344/M rats, as indicated by Telone II®-related increased incidence of squamous cell papillomas and caricinomas of the forestomach, as well as an increased incidence of neoplastic nodules of the liver. In femal F334/N rats, there was *some evidence of carcinogenicity* because Telone II® caused an increased incidence of squamous cell papillomas of the forestomach. The experiment in male B6C3F$_1$ mice was considered to be an *inadequote study of carcinogenicity* because of reduced survival in the vehicle control group. However, there was some indication in the male mice of Telone II®-related increases of transitional cell carcinomas of the urinary bladder, squamous cell papillomas of the forestomach, and alveolar/bronchiolar adenomas and carcinomas of the lung. There was *clear evidence of carcinogenicity* for female B6C3F$_1$ mice, since Telone II® caused increased incidences of transitional cell carcinomas of the urinary bladder; Telone II® also increased the incidences of alveolar/bronchiolar adenomas of the lung and of squamous cell papillomas or carcinomas of the forestomach in the female mice. Telone II®-related non-neoplastic lesions included basal cell or hyperplasia in the forestomach of male and femal rats and male and female mice and epithelial hyperplasia of the urinary bladder in male and famale mice.

Copies of *Toxicology and Corcinogenesis Studies of Telone II®* in F344/N Rats and B6C3F$_1$ *Mice (Gavage Studies)* (*T.R. 269*) are available without charge from the NTP Public Information Office, M.D. B2–04, P.O. Box 12233, Research Triangle Park, NC, 27709. Telephone (919) 541–3991, FTS: 629–3991.

Dated: July 10, 1985.

David P. Rall,

Director.

[FR Doc. 85–17034 Filed 7–17–85; 8:45 am]

BILLING CODE 4101–01–M

Privacy Act of 1974; System of Records

AGENCY: Department of Health and Human Services, (HHS); Public Health Service, (PHS).

ACTION: Notification of establishment of a new Privacy Act system of records .

SUMMARY: In accordance with the requirements of the Privacy Act, the Office of the Assistant Secretary for Health (OASH) is publishing notice of a proposal to establish a new Privacy Act system of records 09–37–0017, "Proceedings of the Board for Correction of Public Health Service Commissioned Corps Records, HHS/OASH/OM." This system, which has been a subsystem under another system of records, will continue to be used to review and act on requests to correct alleged errors or

injustices resulting from the administration of laws and regulations. We are also proposing new routine uses for this system. PHS invites interested persons to submit comments:

(1) On the proposal to establish a separate system of records;

(2) On two proposed new routine uses (#6 and #7 of the accompanying system notice) on or before August 19, 1985.

DATES: PHS has sent a Report of the New System to the Congress and to the Office of Management and Budget (OMB) on July 10, 1985. The system of records will become effective 60 days from the date submitted to OMB unless PHS receives comments which would result in a contrary determination. A Notice of Proposed Rulemaking to exempt the system from the access provisions of the Privacy Act under subsections (k)(5) and (k)(6) has been submitted to the Secretary of the Department. These exemptions will become effective after the Secretary's approval and after the exemption have been published separately in the **Federal Register** for public comment. The proposed exemptions are included in the accompanying system notice solely for public information.

ADDRESS: Comments should be addressed to the Chairperson, Board for Correction of PHS Commissioned Corps Records, HHS/OASH/OM, Room 17–51, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857. Comments received will be available for inspection from 9:00 a.m. to 4:00 p.m. Monday through Friday, at the above address.

FOR FURTHER INFORMATION CONTACT: Dr. Thomas E. White, Executive Secretary, Board for Correction of PHS Commissioned Corps Records, Room 17–79, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, or call (301) 443–6268. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: The Office of Management (OM) in the Office of the Assistant Secretary for Health (OASH) proposes to establish a new system of records: 09–37–0017, "Proceedings of the Board for Correction of Public Health Service Commissioned Corps Records, HHS/OASH/OM." To date, these records have been maintained as a discrete subsystem under system of records 09–37–0005, "PHS Commissioned Corps Board Proceedings, HHS/OASH/OM." OM has decided to create a new, separate system of records for the Board for Correction of PHS Commissioned Corps Records, hereafter referred to as the Board for Correction, to allay a concern that the records of the Board for Correction may be incorrectly perceived to be part of the personnel records maintained by the Commissioned Personnel Operations Division (CPOD), since CPOD's decisions about officers' rights, benefits and privileges are the substance of appeals made to the Board for Correction.

As soon as the proposed new system has been approved and the requested exemptions have been granted, the Board for Correction subsystem will be deleted from system 09–37–0005.

The purposes of the proposed new system are the same as those of the original subsystem:

1. To process requests from present or former Commissioned Corps officers for the correction of alleged errors or injustices resulting from the administration of laws and regulations;

2. To review and adjudicate these requests;

3. To disclose the decisions of the Board for Correction to CPOD for appropriate action;

4. To document all actions and activities of the Board for Correction.

Such actions and activities include correspondence with applicants regarding their requests; case summaries; findings, conclusions and Board for Correction members' recommendations; and final decisions made on these recommendations. Copies of records maintained by CPOD is personnel systems of records are used for verification and documentation. Applicants are informed that the disclosure of their Social Security Number is mandatory when the applicant requests a correction of a financial record such as payroll or leave, or when it is anticipated that a favorable resolution of a request would result in a financial settlement.

Hard-copy records are stored securely in a manner compatiable with the sensitivity of the records. Microfiche technology will be used where appropriate, to facilitate the storage and retrieval of data.

The System Manager, who is also the Chairperson of the Board for Correction, and/or the Executive Secretary of the Board for Correction, control access to the data. Additional authorized personnel having access to the data are the Director, Office of Mangement, who has been delegated authority by the Assistant Secretary for Health (ASH) to oversee operations of the Board for Correction, and specifically designated clerical support staff in the offices of the System Manager and the Executive Secretary. Board for Correction members have access to records only on a need-to-know basis subject to the final decision of ASH.

Seven routine uses are proposed for this system.

Routine uses #1, 2, and 3 are the same as in the original subsystem. Routine use #1 permits disclosure of information to a congressional office to allow subject individuals to obtain assistance from their representatives in Congress. Such disclosure will be made only pursuant to a request of the individual. Routine use #2 permits disclosure of information to the Department of Justice (DOJ) in the case of litigation arising from actions of the Board for Correction, to allow DOJ to defend the Federal Government, the Department, or employees of the Department in case of such lawsuits.

Routine uses #3 permits disclosure of information to appropriate Federal, State, or local agencies as well as international agencies or foreign governments if the Board for Correction becomes aware of evidence a potential violation of civil or criminal law on the part of subject individuals.

Routine uses #4 and #5 were also in the original subsystem (although routine use # 5 here was #8 there) but are being modified here solely for the purpose of greater specificity (#4) and clarity (#5).

Routine uses #4 permits disclosure of information to a private contractor assisting the Board for correction in recording and transcribing tapes of Board for Correction meetings. The contractor is required to comply with Privacy Act safeguards, and the HHS Privacy Act Regulations, with respect to such records. These are explained in the system notice.

Routine uses #5 permits disclosure of information to properly indentified attorneys of subject individuals or their personaly designated representatives to court-appointed representatives of mentally incompetent or otherwise legally handicapped subject individuals and to guardians to the extent necessary to assure attainment of rights or payment of benefits to which such individuals would be entitled.

Routine uses #6 and #7 are new. If adopted, routine use #6 will permit disclosure of information to federal, State or local government agencies, or public interest organizations, when the subject individual's request for correction indicates that such agencies may have information which will assist the Board for Correction in clarifying the individual's entitlement to rights or benefits. By resulting in information which will help the Board for Correction to arrive at an equitable decision, this proposed new routine use is compatible with the purpose of the system, which is to support a process for assuring that subject individuals have available to

them an appeal procedure for correcting alleged errors or injustices

specified under Record Source Categories below.

4. Disclosure of information may be made to private contractors who record

access to the data are: (1) The Director, Office of Management; (2) Designated

Records are destroyed by the WNRC after 20 years by pulping

If the subject individual is deceased,

them an appeal procedure for correcting alleged errors or injustices.

Proposed routine use #7 will permit disclosure of information to consultants in a Federal agency or in the private sector if the Board for Correction has determined that it needs such opinions to arrive at an equitable decision concerning the subject individual's request. By making certain that expert opinion is available to the Board for Correction, this proposed new routine use is compatible with the purpose of the system, which is to support a process for assuring that subject individuals have avaliable to them an appeals procedure for correcting alleged errors or injustices.

The proposed system of records will not become effective until 60 days after the date it was reported to OMB, as discussed above. Until then it will remain a discrete subsystem under system of records 09–37–0005.

Dated: July 12, 1985.

Wilford J. Forbush,

Deputy Assistant Secretary for Health Operations and Director, Office of Management.

09–37–0017

SYSTEM NAME:

Proceedings of the Board for Correction of Public Health Service Commissioned Corps Records, HHS/OASH/OM

SECURITY CLASSIFICATION:

None.

SYSTEM LOCATION:

Board for Correction of PHS Commissioned Corps Records, HHS/OASH/OM Room 17–79, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857; and Washington National Records Center, 4205 Suitland Road, Suitland, Maryland 20409. Records also may be located at the contractor site. The names and addresses of contractors used by the Board for Correction can be obtained from the System Manager.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Commissioned Officers of the PHS Commissioned Corps, and former officers.

CATEGORIES OF RECORDS IN THE SYSTEM:

Commissioned Officer case files consisting of applications requesting corrections of alleged errors or injustices, administrative reports, case summaries, findings, conclusions, recommendations, Board decisions, and related documents, including copies of records from other systems of records as specified under Record Source Categories below.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

10 U.S.C. 1552 "Correction of Military Records"; Public Health Service Act, 42 U.S.C. 213a(a)(12); Executive Order 9397, "Numbering System for Federal Accounts Relating to Individual Persons."

PURPOSE(S):

This system of records in used:

1. To process requests from present or former Commissioned Officers for the correction of alleged errors or injustices resulting from the administration of laws and regulations;

2. To review and adjudicate these requests;

3. To disclose the decisions of the Board for Correction to the Commissioned Personnel Operations Division (CPOD) for appropriate action;

4. To document all actions and activities of the Board for Correction.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

1. These records may be used to disclose information to a congressional office from the record of an individual in response to an inquiry from the congressional office made at the request of that individual.

2. In the event of litigation where the defendant is:

a. The Department, any component of the Department, or any employee of the Department in his or her official capacity;

b. The United States where the Department determines that the claim, if successful, is likely to directly affect the operations of the Department or any of its components; or

c. Any Department employee in his or her individual capacity where the Department of Justice (DOJ) has agreed to represent such employee, the Department may disclose such records as it deems desirable or necessary to the DOJ to enable that Department to present an effective defense, provided such disclosure is compatible with the purpose for which the records were collected.

3. These records may be used to disclose pertinent information to appropriate Federal, State, or local agencies; international agencies; or foreign governments responsible for investigating, prosecuting, enforcing, or implementing statutes, rules, regulations, or orders, when PHS becomes aware of evidence of a potential violation of civil or criminal law.

4. Disclosure of information may be made to private contractors who record and transcribe tapes of Board for Correction meetings. Contractors are required to comply with Privacy Act safeguards and the HHS Privacy Act Regulations with respect to such records. These safeguards are explained in the section entitled "Safeguards."

5. Disclosure of information may be made to properly identified attorneys of subject individuals or their personally designated representatives, to court-appointed representatives of mentally incompetent or otherwise legally handicapped subject individuals and to guardians to the extent necessary to assure attainment of rights or payment of benefits to which such individuals would be entitled.

6. Disclosure of information may be made to Federal, State or local government agencies (such as those concerned with disability compensation, health and human services, hospitals, and legal affairs) or to public interest organizations (such as the American Red Cross, the American Civil Liberties Union, Disabled American Veterans, and the Legal Aid Society) when the subject individual's request for correction will affect the individual's entitlement to rights or benefits, and when such agencies may have information which will assist the Board for Correction in clarifying that entitlement.

7. Disclosure of information may be made to authorized experts or consultants in a Federal agency or in the private sector if the Board for Correction has determined that it needs such opinions to arrive at an equitable decision concerning the subject individual's request. Consultants or experts are required to comply with Privacy Act safe-guards and the HHS Privacy Act Regulations with respect to such records.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, SAFEGUARDING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

File folders, word processing disks and microfiche.

RETRIEVABILITY:

Alphabetically by name, by service number, and by Social Security Number (SSN).

SAFEGUARDS:

1. *Authorized Users:* The System Manager, and/or the Executive Secretary of the Board for Correction, will control access to the data. Additional authorized personnel having access to the data are: (1) The Director, Office of Management; (2) Designated clerical support staff in the offices of the System Manager and the Executive Secretary; (3) Board for Correction members on a need-to-know basis; and (4) Experts, consultants or private contractors when approved by the System Manager.

2. *Physical Safeguards:* Hard-copy records, word processing disks and microfiche are stored in a locked metal file cabinet located in an inner office occupied continuously during working hours and locked at all other times. The doors to the inner and outer offices are secured with combination locks. The building has a 24-hour security guard, and entry into the building is controlled before and after normal working hours. A contractor who is given records must maintain the records in a secured area, allow only those individuals immediately involved in the processing of the records to have access to them, prevent any unauthorized persons from gaining access to the records, caution employees about the confidentiality of the records, and return the records to the System Manager immediately upon completion of the work specified in the contract.

3. *Administrative Safeguards:* Authorized personnel have been trained to comply with provisions of the Privacy Act and the HHS Privacy Act Regulations. Records are transmitted in sealed envelopes and are identified as confidential material. When copying records for authorized purposes, care is taken to ensure that no imperfect or extra pages are left in the reproduction room. These pages are disposed of by shredding. Contractor compliance is assured through inclusion of privacy requirements in contract clauses, and through monitoring by contract and project officers. Contractors who maintain records are instructed to make no disclosure of the records except as authorized by the System Manager.

4. *Implementation Guidelines:* These safeguards have been developed in accordance with chapter 45–13, "Safeguarding Records Contained in Systems of Records," of the HHS General Administration Manual, and supplementary chapter PHS.hf:45–13.

RETENTION AND DISPOSAL:

Records are transferred to the Washington National Records Center (WNRC) one year after CPOD has implemented the Board for Correction's (favorable) decision, or three years after the Board for Correction has denied the applicant's request, whichever applies to the final disposition of a case. Records are destroyed by the WNRC after 20 years by pulping.

SYSTEM MANAGERS AND ADDRESS:

Chairperson, Board for Correction of PHS Commissioned Corps Records, Room 17–51, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857.

NOTIFICATION PROCEDURES:

To determine if a record exists, the subject individual should contact the System Manager at the above address. A subject individual who appears in person is required to provide his/her name and at least one piece of tangible identification (e.g., PHS Commissioned Corps Identification Card, driver's license, Social Security card, or discharge or separation papers). An individual making a written inquiry is required to sign the request mailed to the System Manager. The signature given is compared with the signature on file prior to release of the material requested.

If the subject individual is represented by an attorney, other than the one shown on the application to the Board for Correction, it would be necessary to have in the case file a dated letter signed by the subject individual giving the name of the attorney and stating that he/she has been authorized access to the case file. If the subject individual is represented by another person, it would also be necessary to have in the case file a dated letter signed by the individual giving the name of the representative and stating that he/she has been authorized access to the case file. In both instances, the persons representing the subject individual would be required to present documentation identifyng him/herself as being the person mentioned in the application or in a letter on file with the Board for Correction.

If the subject individual is judged to be mentally incompetent to handle his/her personal affairs, a court order should have been issued to that effect. The person identifying him/herself as representing the subject individual in this circumstance would be required to present a copy of the court order and to personally identify him/herself as being the person mentioned in the order.

If the subject individual is physically incapacitated, a medical statement certifying to the physical disability would be required, signed and dated by a licensed physician. The person presenting this statement would be required to personally identify him/herself and provide documentation of his/her relationship to the subject individual (e.g., marriage license, birth certificate, etc.).

If the subject individual is deceased, proof of death would be required, signed and dated by the appropriate certifying agency of Government. The person presenting this document would be required to personally identify him/herself and provide documentation of his/her relationship to the deceased (e.g., marriage license, birth certificate, etc.).

If a determination is made that the material sought contains medical information that is likely to have an adverse effect on either the subject individual or the determination of his/her request, the requester (whether the subject individual, his/her personal representative, an attorney other than the one shown on the application to the Board for Correction, a court appointed representative, or a guardian) shall be asked to designate in writing a physician or other health professional who is willing to review the material and inform the requester of its contents, at the discretion of the health professional. The person designated to evaluate the medical information must provide proof that he/she is duly authorized by the requester to review the material.

RECORD ACCESS PROCEDURES:

Same as Notification Procedures. The requester is required to specify reasonably the contents of the records being sought. Access to records granted exemptions from the Privacy Act access requirement is made at the discretion of the System Manager subject to the appropriate approvals. Denial of access is ultimately appealable to the Assistant Secretary for Health, Room 716G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, D.C. 20201.

The requester may also ask for an accounting of disclosures that have been made of his/her records, if any.

CONTESTING RECORD PROCEDURES:

If access has been granted, the requester shall contact the System Manager above, reasonably identify the records, specify the information being contested, and state the corrective action sought, with supporting documentation to show how the record is inaccurate, incomplete, untimely, or irrelevant.

RECORD SOURCE CATEGORIES:

Records are obtained from applicants; reports of findings and recommendations made by Board for Correction members; Board for Correction decisions; supervisors; private and Government physicians;

hospitals and clinics rendering treatment; investigative reports; death

Secretary—Indian Affairs by 209 DM 8.3A.

Judgment on Declaration of Taking, Civil Number 184 C.D., dated January 21,

Parcel 5

line of said SW¼SW¼ to a point on the

of, will be inserted in the conveyance or

hospitals and clinics rendering treatment; investigative reports; death certificates and reports of death; survivors and executors of estates; private and Government agency reports on service delivery, compensation, disability and legal opinions; and records contains in systems 09–37–0002, "PHS Commissioned Corps Personnel Records, HHS/OASH/OM"; 09–37–0003, "PHS Commissioned Officer Medical Records, HHS/OASH/OM"; 09–37–0005, "PHS Commissioned Corps Board Proceedings, HHS/OASH/OM"; 09–37–0006, "PHS Commissioned Corps Grievance; Non-Board and Pre-Board Involuntary Retirement/Separation, and Disciplinary Files, HHS/OASH/OM"; 09–37–0008, "PHS Commissioned Corps Unofficial Personnel Files and other Station Files, HHS/OASH/OM."

SYSTEMS EXEMPTED FROM CERTAIN PROVISIONS OF THE ACT:

Applicants may obtain information from the proposed record system except for the the exemption allowed in accordance with the provisions of 5 U.S.C. 552a(k)(5). The exemption includes investigatory material compiled by the Board for Correction or obtained from CPOD to the extent that disclosure of such material would reveal the identity of a confidential source when an express promise has been given to withhold that identity. This exemption applies only in those cases where the source provides expert opinion related to the subject individual's suitability, eligibility or qualification for Federal civilian employment or military service.

Additionally, in accordance with exemption (k)(6) of 5 U.S.C. 552a, the Board for Correction will protect from disclosure testing and examination materials relating to determining the qualifications of PHS Commissioned Corps officers for appointment or promotion, if disclosure of such materials could compromise the objectivity or fairness of the testing and examination process.

BILLING CODE 4610–17–M

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Crow Creek Sioux Tribe; Crow Creek Sioux Indian Reservation, Fort Thompson, South Dakota; Transfer of Federally Owned Lands

July 9, 1985.

This notice is published in exercise of authority delegated by the Secretary of the Interior to the Deputy Assistant Secretary—Indian Affairs by 209 DM 8.3A.

On September 28, 1984, pursuant to authority contained in the Federal Property and Administrative Services Act of 1949 as amended by Public Law 93–599 dated January 2, 1975 (88 Stat. 1954), the below described property was transferred by the Administrator of the General Services Administration to the Secretary of the Interior without reimbursement to be held in trust by the United States for the benefit and use of the Crow Creek Sioux Tribe, Crow Creek Sioux Indian Reservation, Fort Thompson, South Dakota.

5th Principal Meridian

Parcel 1

A tract of land situated in the SE¼SW¼ of Section 24, Township 107 North, Range 72 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said SE¼SW¼; thence Southerly along the East line of said SE¼SW¼, 318.70 feet, more or less, to the centerline of existing highway; thence Northwesterly along said centerline to a point on the North line of said SE¼SW¼, said point being 490.90 feet Westerly of said Northeast corner; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of the Crow Creek Tribe of Sioux Indians, et al., all mineral rights as described in Judgment on Declaration of Taking, Civil Number 184 C.D., dated January 21, 1955, United States District Court, Sioux Falls, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 2

A tract of land situated in the S½SW¼SE¼ of Section 24, Township 107 North, Range 72 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said S½SW¼SE¼; thence Southerly along the East line of said S½SW¼SE¼ to a point on the centerline of existing highway, said point being 170.20 feet Northerly of the Southeast corner of said S½SW¼SE¼; thence Northwesterly along a curve to the right, having a radius of 5,729.62 feet, a central angle of 04°58'00", 496.67 feet tangent to said curve being North 63°13'00" West, said curve being said centerline of existing highway; thence North 58°15'00" West to the North line of said S½SW¼SE¼; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of the Crow Creek Tribe of Sioux Indians, et al., all mineral rights as described in Judgment on Declaration of Taking, Civil Number 184 C.D., dated January 21, 1955, United States District Court, Sioux Falls, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 3

A tract of land situated in the NE¼NE¼ of Section 25, Township 107 North, Range 72 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said Section 25; thence Southerly along the East line of said Section 25, 522.91 feet, more or less, to the centerline of the existing highway; thence Northwesterly along said centerline to a point on the North line of said Section 25, said point being 985.70 feet Westerly of said Northeast corner; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of Dell Menzie and Rose Menzie for all oil and gas rights as described in Warranty Deed dated April 25, 1953, and recorded April 27, 1953, Book 8M of Misc. Records on page 3–4, records of Buffalo County, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 4

A tract of land situated in the S½NW¼NW¼ of Section 30, Township 107 North, Range 71 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said S½NW¼NW¼; thence Southerly along the East line of said S½NW¼NW¼ to a point on the centerline of the existing highway, said point being 132.50 feet Northerly of the Southeast corner of said S½NW¼NW¼; thence North 62°20'00" West along said centerline to the North line of said S½NW¼NW¼; thence Easterly along said centerline to the point of beginning.

Subject to a reservation in favor of L.P. Christensen, Victor D. Christensen, and Margery A. Christensen, all oil and gas rights as described in Warranty Deed dated August 11, 1953, and recorded August 13, 1953, in Book 17 of Deeds at Page No. 174, records of Buffalo County, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 5

A tract of land situated in the SE¼NW¼ of Section 30, Township 107 North, Range 71 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said SE¼NW¼; thence Southerly along the East line of said SE¼NW¼ to a point on the centerline of the existing highway, said point being 773.58 feet more or less Northerly of the Southeast corner of said SE¼NW¼; thence Northwesterly along said centerline to a point on the North line of said SE¼NW¼, said point being 290.10 feet Easterly of the Northwest corner of said SE¼NW¼; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of the Crow Creek Tribe of Sioux Indians, et al., all mineral rights as described in Judgment on Declaration of Taking, Civil Number 184 C.D., dated January 21, 1955, United States District Court, Sioux Falls, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 6

A tract of land situated in the S½NE¼SE¼ of Section 30, Township 107 North, Range 71 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said S½NE¼SE¼; thence Southerly along the East line of said S½NE¼SE¼, 308.90 feet, more or less, to the centerline of the existing highway; thence Northwesterly along said centerline to a point on the North line of said S½NE¼SE¼, said point being 594.40 feet Easterly of the Northwest corner of said SW¼SW¼; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of L.P. Christensen, Victor D. Christensen, and Margery A. Christensen, all oil and gas rights as described in Warranty Deed dated August 11, 1953, and recorded August 13, 1953, in Book 17 of Deeds at Page No. 174, records of Buffalo County, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 7

A tract of land situated in the SW¼SW¼ of Section 29, Township 107 North, Range 71 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said SW¼SW¼; thence Southerly along the East line of said SW¼SW¼ to a point on the centerline of the existing highway, said point being 992.34 feet Northerly of the Southeast corner of said SW¼SW¼; thence Northwesterly along said centerline to a point on the North line of said S½NE¼SE¼; said point being 594.40 feet Easterly of the Northwest corner of said SW¼SW¼; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of L.P. Christensen, Victor D. Christensen, and Margery A. Christensen, all oil and gas rights as described in Warranty Deed dated August 11, 1953, and recorded August 13, 1953, in Book 17 of Deeds at Page No. 174, records of Buffalo County, South Dakota.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Parcel 8

A tract of land situated in the NW¼NE¼ of Section 32, Township 107 North, Range 71 West, Buffalo County, South Dakota, being more particularly described as follows:

Beginning at the Northeast corner of said NW¼NE¼; thence Southerly along the East line of said NW¼NE¼ 612.50 feet, more or less, to the centerline of the existing highway; thence Northwesterly along said centerline to a point on the North line of said NW¼NE¼, said point being 281.40 feet Easterly of the Northwest corner of said Northwest corner of said NW¼NE¼; thence Easterly along said North line to the point of beginning.

Subject to a reservation in favor of the Crow Creek Tribe of Sioux Indians, et al., all mineral rights as described in Judgment of Declaration of Taking, Civil Number 184 C.D., dated January 21, 1955, United States District Court, Sioux Falls, South Dakota.

Subject to a perpetual permit No. DA–25–066–CIVENG–61–818, granted by the United States of America, Secretary of the Army, to the Department of Interior, Bureau of Indian Affairs for the construction, use and maintenance of a road, as it now exists, over and across the above described property.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

Preservation Covenant

Transfer of Parcels 7 and 8 is subject to the conditions, restrictions, and limitations hereinafter set forth which shall be considered as covenants running with the property, and which the transferee, its heirs, and assigns covenant and agree, in the event that the property is sold or otherwise disposed of, will be inserted in the conveyance or other instrument disposing of the property.

1. No physical change to the archeological site or its surface or surface covering will be made without the written approval of the South Dakota State Historic Preservation Officer.

2. Scientific investigation of the archeological site involving removal of its contents or disturbance of any area within the site boundaries will be permitted only if the investigations are conducted in a professional manner under the direction of a person(s) meeting the professional standards for archeologists established by the U.S. Department of the Interior and after (a) written approval by the South Dakota State Historic Preservation Officer of a research design which will ensure adequate recovery of data that makes the site significant; and (b) the owner has granted consent to the implementing individuals for conducting such work on the property.

3. The South Dakota State Historic Preservation Officer will be contacted by the owner upon completion of any scientific investigation or after any disturbance of the site in order that the State Historic Preservation Officer can conduct, or cause to be conducted, an inspection of the site to determine the necessity for retaining the protection provided by these covenants.

4. The owner shall not allow removal or collecting of artifacts from the archeological site except under the provision for scientific investigation described above.

5. The above restriction shall be binding on the parties hereto, to their heirs, successors, and assigns, in perpetuity or until the site no longer retains the data that makes it significant.

6. The State Historic Preservation Officer may, for good cause, modify or cancel any or all of the foregoing restrictions upon application of the grantee, his heirs and assigns.

7. In the event of a violation of the above restrictions, GSA or the South Dakota State Historic Preservation Officer may institute a suit to enjoin such violation or for damages by reason of any breach thereof.

The acceptance of this transfer shall constitute conclusive evidence of the agreement of the transferee to be bound by the conditions, restrictions, and limitations and to perform the obligations herein set forth.

Parcel 9

the mineral leasing laws. This segregation will terminate upon the

Sec. 16: All;
Sec. 36: All.

The non-Federal lands described above are subject to prior Federal

Parcel 9

That portion of S½NW¼ of Section 13 and the S½S½NE¼NE¼, S½SE¼NW¼NE¼ of Section 14, Township 106 North, Range 71 West, Buffalo County, South Dakota, lying Northerly of the centerline of the existing highway.

Subject to a reservation in favor of the Crow Creek Tribe of Sioux Indians et al., all mineral rights as described in Judgment on Declaration of Taking, Civil Number 184 C.D., dated January 21, 1955, United States District Court, Sioux Falls, South Dakota.

Subject to a permit, No. DACW 45-4-71-6042, which expires April 9, 2021, granted by the United States of America, Secretary of the Army, to the Department of the Interior, Bureau of Indian Affairs for the construction, use and maintenance of a road, as it now exists, over and across the above described property.

Subject to existing easements and encumbrances for public roads and highways, public utilities, railroads and pipelines and other easements and encumbrances of record, if any.

These lands are to be treated and receive the same benefits and protection as other trust lands held for the benefit and use of the Crow Creek Sioux Tribe. Appropriate notation will be made to the land records of the Bureau of Indian Affairs.

Hazel E. Elbert,

Acting Deputy Assistant Secretary—Indian Affairs.

BILLING CODE 4310-02-M

Bureau of Land Management

Designation of the Red Hills Area of Critical Environmental Concern, Bakersfield District, CA

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice that Certain Public Lands in the Folsom Resource Area, Bakersfield District, California are Designated as an Area of Critical Environmental Concern (ACEC).

SUMARY: Notice is hereby given pursuant to authority in the Federal Land Policy and Management Act of 1976 (Sec. 202(c)(3)), 43 CFR Part 1610, and land use decisions developed in the Sierra Management Framework Plan (February 1983), that public lands within the Red Hills Management Area are designated as an Area of Critical Environmental Concern.

SUPPLEMENTARY INFORMATION: Notice of the intent to designate public lands within the Red Hills Management Area as an Area of Critical Environmental Concern and the availability of the Final Red Hills Management Plan and Environmental Assessment were published in the **Federal Register** on March 8, 1985. The Record of Decision and final management plan call for the management of the Red Hills as an ACEC.

The Red Hills ACEC is located in western Tuolumne County, southwest of Chinese Camp and east of Keystone. The ACEC was identified to protect five sensitive plant species found in the area. Major components of the plan are to restrict cumulative surface disturbance to less than five percent, and to close the ACEC to off-road vehicle activity.

The following described lands (approximately 4,500 acres) are hereby designated as the Red Hills Area of Critical Environmental Concern (ACEC):

Mount Diablo Meridian, California

BILLING CODE 4310-40-M

[A-20225]

Realty Action; Public Lands Exchange in Mohave County, AZ

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Realty Action—Exchange, Public Lands In Mohave County, Arizona.

SUMMARY: The following described lands and interests therein have been determined to be suitable for disposal by exchange under section 206 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1716:

Gila and Salt River Meridian, Arizona

T. 21 N., R. 18 W.,
Sec. 34, SW¼.
T. 20 N., R. 18 W.,
Sec. 13, S½S½;
Sec. 14, E½SE¼SE¼ and E½W½S E¼SE¼.

Comprising 350 acres, more or less.

In exchange for these lands, the United States will acquire the following described lands from the Western Progress Company of Kingman, Arizona.

Gila and Salt River Meridian

T. 19 N., R. 18 W.,
Sec. 29, all.

Comprising 640 acres, more or less.

The public lands to be transferred are subject to the following terms and conditions:

1. Reservations to the United States—(a) right-of-way for ditches and canals pursuant to the Act of August 30, 1890; (b) all the oil and gas and with it, the right to prospect for, mine and remove same; and (c) electric distribution right-of-way A–16998.

2. Subject to—(a) prior valid rights existing as of the date of this action; (b) electric distribution right-of-way PHX–034352; (c) telephone line right-of-way PHX–079765; (d) Topock-Oatman Road right-of-way A–21021; (e) such rights for road right-of-way purposes as the Mohave County Board of Supervisors may have under Revised Statute 2477; (f) any restrictions that may be imposed by the Mohave County Board of Supervisors in accordance with county floodplain regulations established under Resolution No. 84–10 of July 16, 1984; and (g) the right of the grazing lessee to continue the grazing use of those public lands in sections 13 and 14, T. 20 N., R. 18 W., through September 29, 1985.

Private lands to be acquired by the United States will be subject to the following reservations:

1. All minerals in the subject are reserved to the New Mexico and Arizona Land Company as set forth in Book 92 of Deeds, page 166, Mohave County, Arizona.

Publication of this Notice will segregate the subject lands from all appropriations under the public lands laws, including the mining laws, but not the mineral leasing laws. This segregation will terminate upon the issuance of a patent or two years from the date of this Notice, or upon publication of a Notice of Termination.

Detailed information concerning this exchange can be obtained from the Kingman Resource Area Office, 2475 Beverly Avenue, Kingman, Arizona 86401. For a period of forty-five (45) days from the date of this Notice, interested parties may submit comments to the District Manager, Phoenix District Office, 2015 West Deer Valley Road, Phoenix, Arizona 85027. Any adverse comments will be evaluated by the District Manager who may vacate or modify this Realty Action, and issue a final determination. In the absence of any action by the District Manager, this Realty Action will become the final determination of the Department of the Interior.

Dated: July 11, 1985.

Marlyn V. Jones,

District Manager.

[FR Doc. 85-17111 Filed 7-17-85; 8:45 am]

BILLING CODE 4310-32-M

Realty Action, Exchange of Public Lands in Boundary, Bonner, Kootenai Counties, ID

AGENCY: Bureau of land Management (BLM), Interior

ACTION: Notice

SUMMARY: The following described public lands have been determined to be suitable for disposal by exchange under section 206 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1716:

T. 53 N., R. 5 W., B.M.,
Sec. 28: NE¼SE¼.
T. 56 N., R. 5 W., B.M.,
Sec. 3: S½SE¼,
Sec. 10: E½SE¼.
T. 56 N., R. 3 W., B.M.,
Sec. 12: S½SE¼.
T. 56 N., R. 2 W., B.M.,
Sec. 8: S½SE¼;
Sec. 19: Lots 1, 2, 3, 4, SE¼, E½SW¼.
T. 57 N., R. 3 W., B.M.,
Sec. 17: S½NW¼NE¼NW¼.
T. 62 N., R. 3 E., B.M.,
Sec. 10: Lot 4, SE¼SW¼,SW¼SE¼
Sec. 15: Lots 1 & 2.
T. 64 N., R. 4 W., B.M.,
Sec. 35: SW¼SW¼.

Containing 942.43 acres.

In exchange for these lands, the Federal Government will acquire scattered sections of non-Federal lands in Blaine and Power Counties from the State of Idaho, described as follows:

T. 5 S., R. 27 E., B.M.,
Sec. 36: All.
T. 6 S., R. 27 E., B.M.,
Sec. 16: All;
Sec. 36: All.
T. 6 S., R. 28 E., B.M.,
Sec. 16: All;
Sec. 25: SE¼SW¼, W½NW¼SW¼SE¼, SW¼SW¼SE¼;
Sec. 36: W½NE¼NW¼NE¼, W½NW¼NE¼, W½SW¼NE¼, NW¼, N½NE¼SW¼, N½S½NE¼SW¼, S½SW¼NE¼SW¼, SW¼SE¼NE¼SW¼, W½SW¼, NE¼NW¼SE¼SW¼, W½S½SE¼SW¼, NW¼NW¼SE¼.
T. 7 SE., R. 27 R., B.M.,
Sec. 16: N½, E½SE¼SW¼, SE¼SW¼, SE¼, N½SW¼;
Sec. 36: All.
T. 7 S., R. 28 E., B.M.;
Sec. 16: All;
T. 8 S., R. 27 E., B.M.,
Sec. 16: All.
T. 8 S., R. 28 E., B.M.,
Sec. 16: All.

Containing 6,140 acres.

The purpose of the exchange is to dispose of scattered, difficult to manage public lands while acquiring State-owned lands which would compliment management of the Bureau's Wapi Lava Flow portion of the proposed Great Rift Wilderness Area. The exchange is consistent with the Bureau's planning and has been discussed with Federal, State and local governmental agencies, public land user groups and individuals through participation in the Bureau's Land Use Planning Process. The public interest will be well served by making the exchange. The exchange will include both surface and mineral estates.

The acreage of the lands to be exchanged will be adjusted so that the acreage exchanged will be equal in value. The State of Idaho's offered land has been appraised at $25 per acre.

The terms and conditions applicable to the exchange are:

1. The reservation to the United States of a right-of-way for ditches or canals constructed by the authority of the United States, Act of August 30, 1890 (43 U.S.C. 945).

2. Those rights for powerline purposes as granted to Northern Lights, Inc. under serial number I–017450.

3. Those rights for pipeline purposes as granted to Pacific Gas Transmission Company under serial numbers I–9099 and I–011838.

The publication of this notice in the **Federal Register** will segregate the public lands described above to the extent that they will not be subject to appropriation under the public land laws, including the mining laws. As provided by the regulations of 43 CFR 2201.1(b), any subsequently tendered application, allowance of which is discretionary, shall not be accepted, shall not be considered as filed, and shall be returned to the applicant.

The non-Federal lands described above are subject to prior Federal reserved minerals. The prior Federal interests are hereby segregated to the extent that such interests will not be subject to appropriation under the mining laws until a notice pursuant to 43 CFR 2200.3(a) is issued.

Detailed information concerning the exchange, including the environmental analysis and the record of public discussions, is available for review at the Idaho Falls District Office, 940 Lincoln Road, Idaho Falls, Idaho 83401.

For a period of 45 days, interested parties may submit comments to the Idaho Falls District Office, at the address listed above.

For Further Information Contact: O'dell A. Frandsen, Bureau of Land Management, 940 Lincoln Road, Idaho Falls, Idaho 83401; Telepone: (208) 529–1020.

July 9, 1984.

O'dell A. Frandsen,

District Manager.

Realty Action; Noncompetitive Sale of Public Land in Sweetwater County, WY

July 8, 1985.

AGENCY: Bureau of Land Management, Interior.

ACTION: Direct sale of public land in Sweetwater County, Wyoming.

SUMMARY: The following public lands have been examined and found suitable for direct sale under section 203 of the Federal Land Policy and Management Act of 1976 (90 Stat. 2750, 43 U.S.C. 1713) at not less than the appraised fair market value of $6,250.00. The lands will not be offered for sale until 60 days after the date of this notice.

Sixth Principal Meridian

T. 18 N., R. 105 W.,
Sec. 20: SW¼SE¼SW¼, SE¼NE¼SW¼SW¼, E½SE¼SW¼SW¼, S½NW¼SE¼SW¼, S½N½NW¼SE¼SW¼.

The above-described lands, containing 25 acres, are proposed to be offered for direct sale to the Sweetwater County Solid Waste Disposal District No. 1 which plans to construct a County industrial waste disposal facility adjacent to their existing sanitary landfill operation. The land proposed for sale is presently leased to the Solid Waste District for the landfill under authority of the Recreation and Public Purposes Act. The Recreation and Public

Purposes classification and lease on the affected lands would be terminated at

[W-059320, W-068665, W-094163, W-0150106, W-0321051, W-28577, W-34584]

T. 29 N., R. 75 W.,
Sec. 28, NW¼NW¼NE¼, NW¼SW¼

SUMMARY: Emergency coal lease application on public land in Carbon

Parcel	Legal description	Acres	Sale type

along with twenty percent (20%) of the full bid price, must accompany each bid

Purposes classification and lease on the affected lands would be terminated at the time of sale.

The sale is consistent with the Bureau's planning system. The lands are needed for any resource program and are not suitable for management by the Bureau or another Federal department or agency. After consulting with Sweetwater County officials and members of the public, it has been determined that the public interest would be served by offering the lands for sale.

All minerals except oil and gas and coal beneath the parcel will also be offered for conveyance. The mineral interest being offered have no known mineral value. A bid on the parcel will also constitute application for conveyance of those mineral interests offered under the authority of section 209(b) of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1719(b)). The bid must be accompanied by a fifty dollar ($50.00) non-returnable filing fee to process the mineral conveyance.

The BLM must receive fair market value for the land sold and a bid for less than fair market value will be rejected. The BLM may accept or reject the offer, or withdraw any land or interest on the land for sale if the sale would not be consistent with FLPMA or other applicable law. Requests for information about the sale should be sent to BLM, Salt Wells Resource Area, P.O. Box 1170, Rock Springs, Wyoming 82902–1170 (Phone 307–362–7350).

The patent issued as the result of the sale will be subject to all valid existing rights and reservations of record and will contain a reservation to the United States for ditches and canals.

For period of 45 days from the date of publication of this notice in the **Federal Register**, interested parties may submit comments to the District Manager, Bureau of Land Management, P.O. Box 1869, Rock Springs, Wyoming 82902–1869. Objections will be reviewed by the State Director who may sustain, vacate, or modify this realty action. In the absence of any objections, this realty action will become the final determination of the Department of the Interior.

Donald Sweep,

District Manager.

Wyoming; Notice of Proposed Continuation of Forest Service Withdrawals

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The U.S. Forest Service proposes a 537.40 acre withdrawal for an administrative site and recreational areas continue for an additional 20 years. The lands remain closed to the operation of the mining laws. They have been and will remain open to surface entry and mineral leasing.

DATE: Comments and requests for a public meeting should be received on or before October 16, 1985.

ADDRESS: Comments should be sent to: Chief, Branch of Land Resources, Bureau of Land Management, P.O. Box 1828, Cheyenne, Wyoming 82003.

FOR FURTHER INFORMATION CONTACT: Scott Gilmer, Wyoming State Office, 307–772–2089.

SUPPLEMENTARY INFORMATION: The U.S. Forest Service proposes that the existing withdrawals made by Public Land Order No. 2278, as modified by PLO 4788, and PLO No's 2796, 2978, 3250, 3777, 4265, 5140 and 5293, dated February 27, 1961, April 2, 1970, October 19, 1962, March 18 and October 10, 1963, August 10, 1965, August 30, 1967, October 18, 1971, October 11, 1972, and Executive Order 8519 of August 19, 1940, be continued for an additional 20 years pursuant to section 204 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2751, 43 U.S.C. 1714, insofar as they affect the following described lands:

Sixth Principal Meridian

Medicine Bow National Forest

T. 14 N., R. 71 W.,
Sec. 7, S½N½, S½ of lot 1, NW¼SW¼ SE¼;
Sec. 18, N½NW¼NE¼;
Sec. 20, W½SW¼SE¼, SE¼SW¼SE¼, SE¼SE¼SE¼;
Sec. 29, N½NE¼NE¼, NW¼NE¼, NE¼NE¼NW¼.
T. 28 N., R. 71 W.,
Sec. 1, SW¼NW¼SW¼;
Sec. 2, S½NE¼NE¼SE¼, SE¼NE¼SE¼;
Sec. 9, Block 1, lots 1–5; Block 2, lots 1–5, 16–20; Block 3, lots 1–5, 16–20.
T. 15 N., R. 72 W.,
Sec. 23, S½NE¼SW¼, NW¼SE¼SW¼, W½E½SE¼SW¼, E½SW¼SE¼SW¼;
Sec. 24, S½NE¼SW¼, NW¼SE¼, N½SW¼SE¼.
T. 28 N., R. 73 W.,
Sec. 8, S½SW¼SE¼.
T. 29 N., R. 75 W.,
Sec. 28, NW¼NW¼NE¼, NW¼SW¼ NE¼.
T. 13 N., R. 77 W.,

T. 14 N., R. 80 W.,
Sec. 31, SE¼SE¼SW¼, NE¼SW¼SE¼, W½SE¼SW¼SE¼, W½NE¼SE¼SE¼, NW¼SE¼SE¼.

The areas described aggregate 537.40 acres in Albany, Carbon and Converse Counties.

The purpose of the withdrawal is to protect the capital investments for the Esterbrook Administrative Site and the recreational areas. The withdrawal segregates the lands from the operation of the mining laws, but not from surface entry and mineral leasing.

For a period of 90 days from the date of publication of this notice, all persons who wish to submit comments in connection with the proposed withdrawals may present their views in writing to the Chief, Branch of Land Resources, in the Wyoming State Office.

The authorized officer of the Bureau of Land Management will undertake such investigations as are necessary to determine the existing potential demand for the land and its resources. A report will also be prepared for consideration by the Secretary of the Interior, the President, and Congress, who will determine whether or not the withdrawal will be continued, and if so, for how long. The final determination of the continuation of the withdrawal will be published in the **Federal Register**. The existing withdrawals will continue until such final determination is made.

Gerald L. Jessen,

Acting State Director.

BILLING CODE 4310-22-M

Public Meeting; Emergency Coal Lease Application on Public Land in Carbon and Emery Counties; Correction

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Public Meeting; Correction.

SUMMARY: Emergency coal lease application on public land in Carbon and Emery Counties.

For FR Doc. 85–15825 appearing on page 27364 in issue of Tuesday, July 2, 1985 note the following corrections:

1. The title should read: "NOTICE OF PUBLIC MEETING; EMERGENCY COAL LEASE APPLICATION ON PUBLIC LAND IN EMERY COUNTY".

2. The summary should read: "Emergency Coal Lease Application on Public Land in Emery County".

3. In 2nd column in 2nd paragraph beginning on the sixth line the information that appeared "the 278.16 acre tract (U–54762) is located on the Manti-La Sal National Forest in Carbon and Emery Counties approximately 5 miles west of Hiawatha, Utah" should have read, "the 256.46 acre tract (U–54762) is located on the Manti-La Sal National Forest in Emery County approximately 10 miles west of Hiawatha, Utah".

Dated: July 11, 1985.

Gary Hansen,

Acting District Manager.

BILLING CODE 4310-DQ-M

Sale of Public Lands; Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of Realty Action, Sale of Public lands in Lemhi County and Custer County, Idaho.

DATE AND ADDRESS: The sale offering will be held on Thursday, September 19, 1985, at 10:00 a.m. at the Salmon District Office, Box 430, Salmon, Idaho 83467. Unsold parcels will be offered every Thursday through December 19, 1985.

SUMMARY: Based on public supported land use plans the following described lands has been examined and identified as suitable for disposal by public sale under section 203 of the Federal Land Policy and Management Act (FLPMA) of 1976 (90 Stat. U.S.C. 1713), at no less than the appraised fair market value.

Sealed bids only will be accepted for each parcel offered for sale. The appraised values will be available after August 15, 1985 by contacting the Salmon District Office.

The below described lands are hereby segregated from all appropriations under the public land laws, including the mineral laws, as provided by 43 CFR 2711.1–2(d).

Parcel	Legal description	Acres	Sale type
I–22074, I–4(61).	T. 9 N., R. 22 E., B.M., Sec. 17: Lot 2.	17.91	Competitive.
I–22075, I–4(62).	T. 9 N., R. 22 E., B.M., Sec. 17: Lots 3, 6, 8.	62.45	Do.
I–22076, I–4(63).	T. 9 N., R. 22 E., B.M., Sec. 17: Lot 9.	25.53	Do.
I–21324, I–4(58).	T. 13 N., R. 23 E., B.M., Sec. 34: NE¼NE¼.	40.00	Modified competitive.
I–19635, I–4(27).	T. 8 N., R. 22 E., B.M., Sec. 6: Lot 9.	40.00	Competitive.
I–21325, I–4(45).	T. 16 N., R. 25 E., B.M., Sec. 35: NW¼NE¼.	40.00	Do.
I–21326, I–4(46).	T. 16 N., R. 25 E., B.M., Sec. 35: NW¼SE¼SW¼.	10.00	Do.
I–21327, I–4(47).	T. 16 N., R. 25 E., B.M., Sec. 35: N½NE¼ NW¼SE¼, SW¼NE¼ NW¼SE¼, NW¼NW¼SE¼, N½SW¼ NW¼SE¼, SW¼SE¼ NW¼SE¼.	25.00	Do.
I–21328, I–4(49).	T. 16 N., R. 25 E., B.M., Sec. 25: SW¼SW¼.	40.00	Do.
I–21330, I–4(50).	T. 16 N., R. 25 E., B.M., Sec. 11: SW¼SW¼.	40.00	Modified, competitive.

When patented the lands will be subject to the following reservations.

1. Ditches and Canals (43 U.S.C. 945).

2. Oil and gas leasing and development (43 U.S.C. 1719).

3. All valid and existing rights and reservations of record.

4. Sale of I–21327 will be subject to temporary continued use of existing grazing privileges. The successful bidder agrees that the real estate is taken, subject to the grazing use occurring within the State Section grazing allotment (No. 6220) by Charles Shiner. The privilege to graze domestic livestock on the real estate according to the terms and conditions of grazing permit No. 4708 dated January 8, 1983, shall cease on February 28, 1989. The level of use allowed on the real estate under the above grazing permit will not exceed 12 animal unit months annually. The successful bidder is entitled to receive annual grazing fees from Charles Shiner in an amount not to exceed that which would be authorized under the Federal grazing fee published annually in the **Federal Register**. If at any time prior to the expiration date listed above the permitted sells or leases to another person the condition of patent is null and void.

Sale Procedures

Bids for less than the appraised fair market value will not be accepted. A bid will constitute an application for conveyance of mineral interests of no known value. A $50.00 non-returnable filing fee for processing the mineral, along with twenty percent (20%) of the full bid price, must accompany each bid. Bids must be accompanied by a certified check, postal money order, or cashier's check made payable to the Bureau to Land Management. Bids will be rejected if accompanied by a personal check.

Sale parcels I–21324 and I–21330 are being offered at public auction subject to preference bidding designations to allow Dick Coleman, P.O. Box 5, Ellis, Idaho, 83235 to meet the highest bid on I–21324 and to allow Jack Powers, P.O. Box 203, Leadore, Idaho, 83464 to meet the highest bid on I–21330. Both of these preference right bidders must submit a bid on September 19, 1985, in order to exercise their preference. They will be allowed 30 days from the date of sale to match the highest bid. If no bid is received from a preference right bidder, the preference right will be waived and the parcel will be subject to competitive sale procedures as outlined above. This preference right is being allowed based on adjacent landownership, historical use and restricted access.

SUPPLEMENTARY INFORMATION: Detailed information concerning the sale terms and conditions, bidding instructions and procedures, appraisal and other details may be obtained by contacting the District Office at the above address or by calling (208) 756–2201. For a period of 45 days from the date of this notice, interested parties may submit comments to the Salmon District Manager at the above address.

Dated: July 9, 1985.

Kenneth G. Walker,

District Manager.

for how long. The final determination on

remaining portion of the preserve. The values of the public and private lands in the exchange were equalized by a cash payment in the amount of $6,625 from The Nature Conservancy. The public interest was well served through completion of this exchange. The land acquired in this exchange will be opened to the operation of the public land laws and to the full operation of the United States mining and mineral leasing laws.

EFFECTIVE DATE: March 14, 1985.

FOR FURTHER INFORMATION CONTACT: Viola Andrade, California State Office, (916) 484–4431.

The United States issued an exchange conveyance document to The Nature Conservancy on March 14, 1985, for the following described public land under the Federal Land Policy and Management Act of October 21, 1976, 90 Stat. 2758, 43 U.S.C. 1716:

San Bernardino Meridian, California

T. 8 S., R. 8 E.,
- Sec. 4, Fractional NW¼, SW¼, and W½SE¼;
- Sec. 10, E½SW¼;
- Sec. 14, SW¼SE¼;
- Sec. 22, E½, E½NW¼, E½NW¼NW¼, E½NE¼SW¼, SW¼NW¼SW¼, W½ SW¼SW¼, and NE¼SE¼SW¼;
- Sec. 28, E½NE¼, NW¼NE¼, E½SW¼ NE¼, NW¼SW¼NE¼, N½NW¼, NE¼ SW¼NW¼, N½SE¼NW¼, S½SW¼, SW¼SE¼, and S½SE¼SE¼.

Comprising 1,335.41 acres of public land.

In exchange for these lands, the United States acquired the following described land from The Nature Conservancy:

Parcel 1. Section 34, Township 3 South, Range 6 East, San Bernardino Base and Meridian, according to the Official Plat thereof;

Except all sodium, as reserved to the United States of America, together with the right to prospect for, mine and remove same, in Patent to William A. Whitlow and Minnie A. Whitlow, recorded April 7, 1965, as Instrument No. 39903 of Official Records of Riverside County, California.

Parcel 2. The Southwest Quarter, the Northwest Quarter of the Southeast Quarter, the Northwest Quarter of the Southwest Quarter of the Southeast Quarter of Section 35, Township 3 South, Range 6 East, San Bernardino Base and Meridian, according to the Official Plat thereof.

Subject To Agreement dated February 10, 1984, by and between Cathton Investments, Inc., C.I. Indio, Inc., and Nature Conservancy, copy of which is on file at District Office of Bureau of Land Management in Riverside, California.

The private land described above contains 850.00 acres.

At 10 a.m. on August 20, 1985, the lands described under Parcels 1 and 2 above shall be open to operation of the public land laws generally, subject to valid existing rights and the requirements of applicable law. All valid applications received at or prior to 10 a.m. on August 20, 1985, shall be considered as simultaneously filed at the time. Those received thereafter shall be considered in the order of filing.

At 10 a.m. on August 20, 1985, the lands described under Parcels 1 and 2 above shall be open to applications under the United States mining laws and mineral leasing laws.

Inquiries concerning the land should be addressed to the Bureau of Land Management, Room E–2841, 2800 Cottage Way, Sacramento, California 95825.

Sharon N. Janis,
Chief, Branch of Lands & Minerals Operations.

BILLING CODE 4301–84–M

[CA 7572 WR, CA 7573 WR, CA 7576 WR]

California; Proposed Continuation of Withdrawals

July 11, 1985.

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The Bureau of Reclamation, Mid-Pacific Region, proposes that three land withdrawals in the Los Padres National Forest aggregating approximately 20,641 acres continue for an additional 50 years for the Cachuma Project. The lands would remain closed to surface entry and mining. As provided by Secretarial Order No. 2714 dated January 27, 1953, until further notice, no oil and gas lease under the Mineral Leasing Act of February 25, 1920, as amended, shall be issued affecting about 19,133 acres of land within the subject withdrawals. This is a separate order issued by the Secretary on the recommendation of the Department of Agriculture.

DATE: Comments should be received by October 16, 1985.

ADDRESS: Comments should be sent to: Chief, Branch of Lands and Minerals Operations, Bureau of Land Management, California State Office, 2800 Cottage Way (Room E–2841), Sacramento, California 95825.

FOR FURTHER INFORMATION CONTACT: Anniteen Pack-Lovelace, California State Office, (916) 484–4431.

The Bureau of Reclamation proposes to continue three existing withdrawals of land for a period of 50 years pursuant to the provisions of Section 204 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2751; 43 U.S.C. 1714. The withdrawals are described as follows:

San Bernardino Meridian

CA 7572 WR

Secretarial Order dated July 3, 1943

T. 5 N., R. 29 W.,

T. 6 N., R. 29 W,
- Sec. 31, lots 2, 3, 4, and E½E½.

T. 5 N., R. 30 W.,
- Sec. 1, lots 1, 2, 3, 5, 6, and 7, SW¼NE¼, S½NW¼, SW¼ and W½SW¼;
- Sec. Sec. 12, lots 1 to 4, W½E½ and W½.

The areas described aggregate 17,042.82 acres in Santa Barbara County.

The purpose of the Reclamation withdrawals is to protect lands for the Cachuma Project. The withdrawals segregate the lands from operation of the public land laws generally, including the mining laws but not mineral leasing. No change is proposed in the purpose or segregative effect of the Reclamation withdrawals.

Secretarial Order No. 2714 provides that all pending applications for oil and gas leases and all applications for such leases shall be rejected. The overlapping order was issued to protect Forest Service watershed and wild-area values of the land.

For a period of 90 days from the date of publication of this notice, all persons who wish to submit comments in connection with the proposed withdrawal continuation may present their views in writing to the Chief, Branch of Lands and Minerals Operations, in the California State Office.

The authorized officer of the Bureau of Land Management will undertake such investigations as are necessary to determine the existing and potential demand for the land and is resources. A report will also be prepared for consideration by the Secretary of the Interior, the President, and Congress, who will determine whether or not the withdrawal will be continued and, if so, for how long. The final determination on the continuation of the withdrawal will be published in the **Federal Register.** The existing withdrawal will conintue until such final determination is made.

Sharon N. Janis,
Chief, Branch of Lands & Minerals Operations.

[FR Doc. 85–17047 Filed 7–17–85; 8:45 am]

BILLING CODE 4310–84–M

California; Sale of Public Land in Calaveras County

The following described land has been examined and through the development of land use planning decisions based on public input, resource considerations, regulations and Bureau policies, it has been determined that the proposed sale of these parcels is consistent with the Federal Land Policy and Management Act (FLPMA) of October 21, 1976, (90 Stat. 2750; 43 U.S.C. 1713). Sale parcels will be offered for sale September 20, 1985, at no less than the appraised fair market value using competitive and modified competitive sale procedures.

Serial No.	Legal description	Acres	Fair market value	Bidding procedure
CA 16847	T. 3 N., R. 13 E., MDM, Sec. 29, Lot 13	1.93	$5,000	Modified competitive
CA 17465	T. 5 N., R. 14 E., MDM, Sec. 5, Lot 2	37.20	35,350	Do.
CA 17466	T. 6 N., R. 14 E., MDM, Sec. 29, Lots 3, 4, and 5; Sec. 32, Lots 6 and 7	86.57	103,250	Do.

The BLM solicits and will accept bids on these lands; and may accept or reject any and all bids, or withdraw any land from sale at any time, if in the opinion of the Authorized Officer, consummation of the sale would not be in the best interest of the United States.

Sale terms and conditions are as follows

1. A right-of-way for ditches and canals will be reserved to the United States (43 U.S.C. 945).

2. All bidders must be United States citizens; corporations must be authorized to own real property in the State of California; political subdivisions of the State and State instrumentalities must be authorized to hold property. Proof of meeting these requirements shall accompany bids.

3. The parcels described as CA 17465 and CA 17466 will be offered by modified competitive sealed bid with Fort Mountain Ranch designated as having the right to meet any high bid. Fort Mountain Ranch completely surrounds both parcels.

SUPPLEMENTARY INFORMATION: Upon publication of this notice in the **Federal Register** as provided in 43 CFR 2711.1–2(d) (amended) the above lands will be segregated from appropriation under the mining laws but excepting the mineral leasing laws for a period not to exceed 270 days, or until the lands are sold, whichever occurs first. The segregation effect may otherwise be terminated by the Authorized Officer by publication of a termination notice in the **Federal Register** prior to the expiration of the 270-day period. The above described lands, will be separately offered for sale utilizing sealed bid procedures. The bids will be opened at 10:00 a.m. on September 20, 1985, at the Folsom Resource Area Office, Bureau of Land Management, 63 Natoma Street, Folsom, California 95630. Sealed bids shall be considered only if received at the above address prior to 10:00 a.m. on September 20, 1985. Each sealed bid shall be accompanied by certified check, postal money order, bank draft or cashier's check made payable to the Department of the Interior-BLM for 10 percent of the bid.

The sealed bid envelopes must be marked on the front lower left corner "Folsom Resource Area, September 1985, Land Sale, Case File Serial CA ———" After opening all sealed bids, if two or more envelopes containing valid high bids of the same amount are received, the determination of which is to be considered the highest bid shall be by supplemental oral bids. The oral bidding, if needed, will be conducted by the Authorized Officer immediately following the opening of the sealed bids. The person declared to have entered the highest qualifying oral bid shall submit payment of 10 percent as specified above, immediately following the close of the sale.

The successful bidder, whether such is a sealed or oral bid, shall submit the remainder of the full purchase price within 180 days of the sale date. Failure to submit the balance of the full bid within the above specified time limit shall result in cancellation of the sale and the deposit shall be forfeited. The next high bid will then be honored.

It has been determined that the lands are without known mineral values and a successful bid will constitute a

simultaneous request for conveyance of the reserved mineral estate. As such, the

Survey, Idaho State Office, 3380 Americana Terrace, Boise, Idaho 83706

simultaneous request for conveyance of the reserved mineral estate. As such, the successful high bidder will be required to deposit a $50.00 nonreturnable filing fee for conveyance of the mineral estate.

If any of the lands described do not receive qualifying bids on September 20, 1985, they will be available over the counter at the fair market value until April 30, 1986. Detailed information concerning the sale, including the land report and environmental assessment report are available for review at the Folsom Resource Area Office, 63 Natoma Street, Folsom, California 95630.

For a period of 45 days from the date of first publication of this notice, interested parties may submit comments to the District Manager, Bakersfield District, Bureau of Land Management, 800 Truxtun Avenue, Room 311, Bakersfield, California 93301; (805) 861–4191. Any adverse comments will be evaluated by the District Manager who may vacate or modify this realty action and issue a final determination. In the absence of any action by the District Manager, this realty action will become a final determination.

DATE: Sealed bids must be received by 10:00 a.m. September 20, 1985.

ADDRESS: Bureau of Land Management, Folsom Resource Area, 63 Natoma Street, Folsom, CA 95630.

[Serial No. I–20858]

Idaho; Proposed Reinstatement of Oil and Gas Lease

Notice is hereby given that a petition for reinstatement of oil and gas lease I–20858 for lands in Clark County, Idaho, was timely filed and was accompanied by all the required rentals and royalties accruing from April 1, 1985, the date of termination.

The lessee has agreed to new lease terms for rentals and royalties at rates of $5.00 and 16⅔ percent, respectively.

The lessee has paid the required $500 administrative fee for the lease and has reimbursed the Bureau of Land Management for the estimated cost of this Federal Register notice.

Having met all the requirements for reinstatement of the lease as set out in section 31 (d) and (e) of the Mineral Lands Leasing Act of 1920, as amended, (30 U.S.C. 188), the Bureau of Land Management is proposing to reinstate the lease, effective April 1, 1985, subject to the original terms and conditions of the leases and the increased rental and royalty rates cited above.

Questions concerning this notice may be directed to Bunny Wilson of the Idaho State Office at (208) 334–9088.

Dated: July 3, 1985.

Minerals Management Service

Development Operations Coordination Document, Amoco Production Co.

AGENCY: Minerals Management Service, Interior.

ACTION: Notice of the Receipt of a proposed development operations coordination document (DOCD).

SUMMARY: Notice is hereby given that Amoco Production Company has submitted a DOCD describing the activities it proposes to conduct on Lease OCS–G 6144, Block 67, High Island Area, Offshore Texas. Proposed plans for the above area provide for the development and production of hydrocarbons with support activities to be conducted from an onshore base located at Freeport, Texas.

DATE: The subject DOCD was deemed submitted on July 9, 1985.

ADDRESS: A copy of the subject DOCD is available for public review at the Office of the Regional Director, Gulf of Mexico OCS Region, Minerals Management Service, 3301 North Causeway Blvd., Room 147, Metairie, Louisiana (Office Hours: 9 a.m. to 3:30 p.m., Monday through Friday).

FOR FURTHER INFORMATION CONTACT: Michael J. Tolbert; Minerals Management Service; Gulf of Mexico OCS Region; Rules and Production; Plans, Platform and Pipeline Section; Exploration/Development Plans Unit; Phone (504) 838–0875.

SUPPLEMENTARY INFORMATION: The purpose of this Notice is to inform the public, pursuant to sec. 25 of the OCS Lands Act Amendments of 1978, that the Minerals Management Service is considering approval of the DOCD and that it is available for public review.

Revised rules governing practices and procedures under which the Minerals Management Service makes information contained in DOCDs available to affected states, executives of affected local governments, and other interested parties became effective December 13, 1979, (44 FR 53685). Those practices and procedures are set out in revised § 250.34 of Title 30 of the CFR.

Dated: July 10, 1985.

INTERNATIONAL DEVELOPMENT COOPERATION AGENCY

Agency for International Development

Joint Committee on Agricultural Research and Development of the Board for International Food and Agricultural Development; Meeting

Pursuant to the provisions of the Federal Advisory Committee Act, notice is hereby given of the fourteenth meeting of the Joint Committee on Agricultural Research and Development (JCARD) of the Board for International Food and Agricultural Development BIFAD) on August 8 and 9, 1985.

The purpose of the meeting is to discuss concepts of U.S. national agricultural extension programs as they relate to AID's activities in developing national extension systems in developing countries; review progress of AID-supported Collaborative Research Support Programs; react to recommendations for improvement of involvement of U.S. universities in AID's human capital development programs; and consider future action and agenda items for JCARD.

JCARD will meet from 1:00 p.m. to 5:00 p.m. on August 8 and from 9:00 a.m. to 1:00 p.m. on August 9. The meeting will be held in Room 1408 New State Building, 21st and Virginia Avenue NW, Washington, D.C. on August 8, and in Room 1105 New State Building on August 9. The meeting is open to the public. Any interested person may attend, may file written statements with the Committee before or after the meeting, or may present oral statements in accordance with procedures established by the Committee, and to the extent the time available for the meeting permits.

Dr. John Stovall, BIFAD Support Staff, is the designated AID Advisory Committee Representative at the meeting. It is suggested that those desiring further information write to him in care of the Agency for International Development, BIFAD Support Staff, Washington, D.C. 20523 or telephone him at (202) 632–9048.

Dated: July 12, 1985.

John Stovall,

AID Advisory Committee Representative, Joint Committee on Agricultural Research and Development Board for International Food and Agricultural Development.

BILLING CODE 6116–01–M

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Stepan Chemical Co.; Importation of Controlled Substances Application

Pursuant to section 1008 of the Controlled Substances Import and Export Act (21 U.S.C. 958(h)), the Attorney General shall, prior to issuing a registration under this section to a bulk manufacturer of a controlled substance in Schedule I or II and prior to issuing a regulation under section 1002(a) authorizing the importation of such a substance, provide manufacturers holding registrations for the bulk manufacture of the substance an opportunity for a hearing.

Therefore, in accordance with § 1311.42 of Title 21, Code of Federal Regulations (CFR), notice is hereby given that on January 25, 1985, Stepan Chemical Company, Natural Products Department, 100 West Hunter Avenue, Maywood, New Jersey 07607, made application to the Drug Enforcement Administration to be registered as an importer of coca leaves (9040), a basic class controlled substance in Schedule II.

As to the basic class of controlled substance listed above for which application for registration has been made, any other applicant therefore, and any existing bulk manufacturer registered therefore, may file written comments on or objections to the issuance of such registration and may, at the same time, file a written request for a hearing on such application in accordance with 21 CFR 1301.54 in such form as prescribed by 21 CFR 1316.47.

Any such comments, objections or requests for a hearing may be addressed to the Deputy Assistant Administrator, Drug Enforcement Administration, United States Department of Justice, 1405 I Street, NW., Washington, DC 20537, Attention: DEA Federal Register Representative (Room 1112), and must be filed no later than (30) days from publication.

This procedure is to be conducted simultaneously with and independent of the procedures described in 21 CFR 1311.42(b), (c), (d), (e), and (f). As noted in a previous notice of 40 FR 43745–43746 (September 23, 1975), all applicants for registration to import a basic class of any controlled substance in Schedule I or II are and will continue to be required to demonstrate to the Deputy Assistant Administrator of the Drug Enforcement Administration that the requirements for such registration pursuant to 21 U.S.C. 958(a), 21 U.S.C. 823(a), and 21 CFR 1311.42 (a), (b), (c), (e), and (f) are satisfied.

Dated: July 10, 1985.

Gene R. Haislip,

Deputy Assistant Administrator, Office of Diversion Control, Drug Enforcement Administration.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[V–85–5]

Permanent Variance; the Chlorine Institute, Inc.

AGENCY: Occupational Safety and Health Administration, Department of Labor.

ACTION: Modification of Notice of Application for Permanent Variance.

SUMMARY: This notice is to make a change in the Federal Register publication of the Chlorine Institute, Inc. application for a permanemt variance (50 FR 25343–46, June 18, 1985).

The Occupational Safety and Health Administration has been requested, and has agreed, to extend the time for comments to be accepted for an additional 30 days until August 14, 1985. The comment period and last date for requests for a hearing have been extended by modifying the following:

(1) The paragraph entitled **"DATES:"** in column one on page 25344, to read:

"The last date for interested persons to submit comments on the variance application is August 18, 1985. The last date for affected employers and employees and appropriate State authority having jurisdication over employment or places of employment covered in the application to request a hearing on the application is August 18, 1985."

(2) The paragraph in column three on page 25346, to read:

All interested persons, including employers and employees who believe they would be affected by the grant or denial of the application of variance are invited to submit written data, views, and arguments relating to the pertinent application no later than August 18, 1985. In addition, employers and employees who believe they would be affected by a grant or denial of the variance may request a hearing on the application no later than August 18, 1985, in conformance with the requirements of 29 CFR 1905.15. Submission of written comments and requests for a hearing should be in quadruplicate, and must be addressed to the Office of Variance Determination at the above address.

Signed at Washington, D.C., this 15th day of July, 1985.

Patrick R. Tyson,

Deputy Assistant Secretary of Labor.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[85–46]

NASA Advisory Council, Aeronautics Advisory Committee; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of Meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Pub. L. 92–463, as amended, the National Aeronautics and Space Administration announces a forthcoming meeting of the NASA Advisory Council, Aeronautics Advisory Committee, Ad Hoc Technology

August 12, 1985, at the Denver Airport Clarion, Denver, Colorado.

Title: Final Decriptive Report Form for State and Regional Arts Agencies

Chairman's Delegation of Authority dated January 15, 1979,

The remainder of the proposed

Permit Application Received Under the

VOL 50 ISS 138 JL 18 1985 UMI

announces a forthcoming meeting of the NASA Advisory Council, Aeronautics Advisory Committee, Ad Hoc Teams on Rotorcraft, Supersonic and Subsonic.

DATE AND TIME: July 23, 25 and 29, 1985, 8:30 a.m. to 5:00 p.m. each day.

ADDRESS: National Aeronautics and Space Administration, 600 Independence Avenue, SW., Room 625, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Cecil Rosen, National Aeronautics and Space Administration, Code RJ, Washington, DC 20548 (202/453-2792).

SUPPLEMENTARY INFORMATION: The Ad Hoc Teams on Rotorcraft, Supersonic and Subsonic were established to assist the National Aeronautics and Space Administration in the development of "Technology Trees" for the National Aeronautical Research and Development (R&D) Goals. The Ad Hoc Team of Rotorcraft, Chaired by Mr. Al Schoen, is comprised on seven members. The Ad Hoc Team on Supersonic, Chaired by A.D. Welliver, is comprised of five members. The Ad Hoc Team on Subsonic, Chaired by R. Hopps, is comprised of seven members. The meetings of the Ad Hoc Teams are an integral first step in expanding and refining the Technology Roadmaps for the recently established National Aeronautical R&D Goals. It is imperative that the meetings be held at this time in order to review and revise the draft Technology Roadmaps to reflect a truly national perspective prior to submission to the White House Office of Science and Technology Policy by the end of July as requested. The meeting will be open to the public up to the seating capacity of the room (approximately 40 persons including the Ad Hoc Team members and participants).

TYPE OF MEETING: Open.

Richard L. Daniels,

Deputy Director, Logistics Management and Information Programs Division, Office of Management.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Agency Information Collection Activities Under OMB Review

AGENCY: National Foundation on the Arts and the Humanities.

ACTION: Notice.

SUMMARY: The National Endowment for the Arts (NEA) has sent to the Office of Management and Budget (OMB) the following proposal for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

DATE: Comments on the information collection must be submitted by August 2, 1985.

ADDRESSES: Send comments to Mr. Joseph Lackey, Office of Management and Budget, New Executive Office Building, 728 Jackson Place, NW., Room 3208, Washington, D.C. 20503; (202-395-7316). In addition, copies of such comments may be sent to Ms. Marianna Dunn, National Endowment for the Arts, Administrative Services Division, Room 203, 1100 Pennsylvania Avenue, NW., Washington, D.C. 20506; (202-682-5464).

FOR FURTHER INFORMATION CONTACT: Ms. Marianna Dunn, National Endowment for the Arts, Administrative Services Division, Room 203, 1100 Pennsylvania Avenue, NW., Washington, D.C. 20506; (202-682-5464) from whom copies of the documents are available.

SUPPLEMENTARY INFORMATION: The National Endowment for the Arts requests OMB approval of a revision of a currently approved collecion. The entry contains the following information: (1) The title of the form; (2) the agency form number, if applicable; (3) how often the form must be filled out; (4) who will be required or asked to report; (5) what the form will be used for; (6) an estimate of the number of responses; (7) an estimate of the total number of hours needed to fill out the form. None of these entries are subject to 44 U.S.C. 3504 (h).

Title: Final Decriptive Report Form for State and Regional Arts Agencies
Form number: OMB No. 3135-0034
Frequency of Collection: Annually
Respondents: Non-profit institutions and State or local governments
Use: Information is used for monitoring of state and regional arts agency program activities; planning for coordination of Endowment programs and activities with those of state and regional arts agencies; and reporting to the Congress and the public on the use of funds awarded to the states and regions.
Estimated Number of Respondents; 63
Estimated Hours for Respondents to Provide Information: 252

BILLING CODE 7537-01-M

National Council on the Humanities Advisory Committee; Meeting

July 12, 1985.

Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92-463, as amended) notice is hereby given that a meeting of the National Council on the Humanities will be held in Washington, D.C. on August 7-9, 1985.

The purpose of the meeting is to advise the Chairman of the National Endowment for the Humanities with respect to policies, programs, and procedures for carrying out his functions, and to review applications for financial support and gifts offered to the Endowment and to make recommendations thereon to the Chairman.

The meeting will be held in the Old Post Office Building, 1100 Pennsylvania Avenue, NW., Washington, D.C. The afternoon session on August 7, 1985 and a portion of the morning and afternoon sessions on August 8-9, 1985 will not be open to the public pursuant to subsections (c) (4), (6) and (9)(B) of section 552b of Title 5, United States Code because the Council will consider information that may disclose: Trade secrets and commercial or financial information obtained from a person and privileged or confidential; information of a personal nature the disclosure of which will constitute a clearly unwarranted invasion of personal privacy; and information the disclosure of which would significantly frustrate implementation of proposed agency action. I have made this determination under the authority granted me by the Chairman's Delegation of Authority dated January 15, 1978.

The agenda for the session on August 7, 1985 will be as follows:

Committee Meeting

(Open to the Public)

4:00—4:20 p.m.: Challenge Grants—Room 430
4:20 p.m. until adjourned: (Closed to the Public)
Discussion of specific grant applications

The agenda for the sesslons on August 8, 1985 will be as follows:

Committee Meetings

(Open to the Public)

8:30—9:30 a.m.: Coffee for Council Members—Room 502
9:30—10:30 a.m.: Committee Meetings—Policy Discussion
General Programs—Room 415
Education Programs—Room M-14
Fellowship Programs—Room 315
Research Programs—Room 316-2
State Programs—Room M-07 East
10:30 a.m. until adjourned: Committee Meetings (Continued)
(Closed to the Public for the reasons stated above)—Consideration of specific applications

The morning session on August 9, 1985 will convene at 8:30 a.m. in the 1st Floor Council Room M-09 and will be open to the public. The agenda for the morning session will be as follows: (Coffee for Staff and Council members attending the meeting will be served from 8:30 a.m.—9:00 a.m.)

Minutes of the Previous Meeting Reports
A. Introductory Remarks
B. Introduction of New Staff
C. Contracts Awarded in the Previous Quarter
D. Dates of Future Council Meetings
E. Application Report and Gifts and Matching Report
F. Status of Fiscal Year 1985 Program Funds
G. FY 1986 Appropriation Request and Reauthorization Hearings
H. FY 1987 Budget Planning
I. Institutional Endowments and Application Review
J. Committee Reports on Policy and General Matters
1. General Programs
2. Education Programs
3. Fellowship Programs
4. Research Programs
5. State Programs
6. Challenge Grants
K. Emergency Grants and Actions Departing from Council Recommendation—Awards

The remainder of the proposed meeting will be given to the consideration of specific applications (closed to the public for the reasons stated above).

Further information about this meeting can be obtained from Mr. Stephen J. McCleary, Advisory Committee Management Officer, Washington, D.C. 20506, or call area code 202-786-0322.

Stephen J. McCleary,

Advisory Committee Management Officer.

NATIONAL SCIENCE FOUNDATION

Meeting of the Committee on Equal Opportunities in Science and Technology and of its Subcommittees; July 31 and August 1-2, 1985

In accordance with the Federal Advisory Committee Act, Pub. L. 92-463, the National Science Foundation announces the following meetings:

Names/Dates/Times/Places:
Subcommittee on Minorities, Wednesday, July 31, 9:00-5:00 p.m.
Full Committee, Thursday, August 1, 9:00-12:00 Noon
Subcommittee on Women, Thursday, August 1, 1:30-5:00 p.m.; Friday, August 2, 9:00-12:00 Noon
Subcommittee on Disabled Scientists, Friday, August 2, 1:30-5:00 p.m.
National Science Foundation, 1800 G Street NW., Room 540, Washington, D.C. 20550

Type of Meeting: Open.

Contact Person: Ms. Jane Stutsman, Executive Secretary, National Science Foundation, Rm. 425, 1800 G Street, NW., Washington, D.C. 20550, Telephone: 202/357-9418.

Purpose of Subcommittees: Responsible for all Committee matters relating to the participation in and opportunities for education, training, and research for minorities, women and handicapped persons in science and technology, and the impact of science and technology on them.

Summary Minutes: May be obtained from the contact person at the above stated address.

Agenda: The Subcommittees will consider mechanisms to increase participation of minorities, women and handicapped persons in Foundation programs, research projects, and on all NSF advisory committees. They will also advise the Director on how to modify NSF policies and procedures relating to minority, women and handicapped persons as well as the internal distribution of funds to implement this program.

M. Rebecca Winkler,

Committee Management Officer.

July 15, 1985.

BILLING CODE 7555-01-M

Permit Application Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of permit application received under Antarctic Conservation Act of 1978, Pub. L. 95-541.

SUMMARY: The National Science Foundation (NSF) is required to publish notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act of 1978 at Title 45 Part 670 of the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application by August 19, 1985. Permit applications may be inspected by interested parties at the Permit Office, address below.

ADDRESS: Comments should be addressed to Permit Office, Room 627, Division of Polar Programs, National Science Foundation, Washington, D.C. 20550.

FOR FURTHER INFORMATION CONTACT: Charles E. Myers at the above address or (202) 357-7934.

SUPPLEMENTARY INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95-541), has developed regulations that implement the "Agreed Measures for the Conservation of Antarctic Fauna and Flora" for all United States citizens. The Agreed Measures, developed in 1964 by the Antarctic Treaty Consultative Parties, recommended establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas as requiring special protection. The regulations establish such a permit system to designate Specially Protected Areas and Sites of Special Scientific Interest.

The application received is as follows:

1. *Applicant*—David F. Parmelee, 349 Bell Museum of Natural History, University of Minnesota, Minneapolis, Minnesota 55455.

Activity for Which Permit Requested

Taking; Import into U.S.A.; Enter Specially Protected Area

The applicant proposes to collect birds south of the Antarctic Convergence in heavy pack ice, light pack ice, ice edge, and open water habitats along the west coast of the Antarctic Peninsula. The main objective of these collections is to obtain

representative samples of species present in this area in the austral winter

4. How often the collection is required: As necessary in order for NRC

II

representative samples of species present in this area in the austral winter to determine diet, plumage and molt condition, winter weight and fat content.

If ice conditions permit, the applicant will census birds on Anvers Island and the surrounding smaller islands, including Litchfield (SPA–17).

The applicant proposes to take up to the following numbers of birds:

Species	Number
Southern Giant Fulmar	6
Blue-eyed Shag	6
Antarctic Prion	20
Wilson's Storm Petrel	20
Black-bellied Storm Petrel	20
American Sheathbill	20
Southern Black-backed Gull	20
South Polar Skua	20
Antarctic Tern	20
Chinstrap Penguin	20
Adelie Penguin	20
Blue Petrel	50
Southern Fulmar	50
Antarctic Petrel	50
Cape Pigeon	50
Snow Petrel	50

Location

West Coast of Antarctic Peninsula

Dates

August–September, 1985.

Authority to publish this notice has been delegated by the Director of the National Science Foundation.

A. N. Fowler,

Acting Division Director, Division of Polar Programs.

NUCLEAR REGULATORY COMMISSION

Documents Containing Reporting or Record Keeping Requirements; Office of Management and Budget Review

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice of the Office of Management and Budget (OMB) review of information collection.

SUMMARY: The Nuclear Regulatory Commission has recently submitted to the OMB for review the following proposal for the collection of information under the provisions of the Paperwork Reduction Act [44 U.S.C. Chapter 35].

1. Type of submission, new revision or extension: Revision.

2. The title of the information collection: 10 CFR Part 50.

3. The form number if applicable: N/A.

4. How often the collection is required: As necessary in order for NRC to meet its responsibilities to conduct a detailed review of applications for licenses, and amendments thereto, to construct and operate power plants, research and test facilities, reprocessing plants and other utilization and production facilities, licensed pursuant to the Atomic Energy Act of 1954, as amended (the Act).

5. Who will be required or asked to report: Licensees and applicants for nuclear power plants, and research and test reactors.

6. An estimate of the number of responses: 2,126 annually.

7. An estimate of the total number of hours needed to complete the requirement or request: 3.87 million.

8. An indication of whether section 3504(h), Pub. L. 9696–511 applies: Not applicable.

9. Abstract: 10 CFR Part 50 of the NRC's regulations, "Domestic Licensing of Production and Utilization Facilities," specifies technical information and data to be provided by applicants and licensees so that the NRC may make determinations necessary to promote the health and safety of the public, in accordance with the Act.

ADDRESSES: Copies of the submittal may be inspected or obtained for a fee from the NRC Public Document Room, 1717 H Street, NW., Washington, DC 20555.

FOR FURTHER INFORMATION CONTACT: Comments and questions should be directed to the OMB reviewer: Jefferson B. Hill, (202) 395–7340.

NRC Clearance Officer is R. Stephen Scott, (301) 492–8585.

Dated At Bethesda, Maryland, This 10th day of July 1985.

For the Nuclear Regulatory Commission.

Patricia G. Norry,

Director, Office of Administration.

[FR Doc. 85–17097 Filed 7–17–85; 8:45 am]

BILLING CODE 7590–01–M

[Docket No. 50–255]

Exemption; Consumers Power Co.

I

The Consumers Power Company (CPC the licensee) is the holder of Provisional Operating License No. DPR–20 which authorizes operation of the Palisades Plant. This license provides, among other things, that it is subject to all rules, regulations and Orders of the Commission now or hereafter in effect.

The facility comprises one pressurized water reactor at the licensee's site located in Van Buren County, Michigan.

II

On November 19, 1980, the Commission published a revised § 50.48 and a new Appendix R to 10 CFR Part 50 regarding fire protection features of nuclear power plants. The revised § 50.48 and Appendix R became effective on February 17, 1981. Section III of Appendix R contains fifteen subsections, lettered A through O, each of which specifies requirements for a particular aspect of the fire protection features at a nuclear power plant. One of these subsections, III.G., is the subject of the licensee's exemption request.

Subsection III.G.3 of Appendix R requires that for areas where alternative or dedicated shutdown is provided, fire detection and a fixed fire suppression system shall also be installed in the area, room, or zone under consideration.

III

By letters dated July 16, 1984, as supplemented by letters dated July 20, 1984, August 10, 1984, October 1, 1984, December 28, 1984, March 19, 1985 and June 19, 1985, the licensee requested exemptions from III.G.3 of Appendix R in the Engineered Safeguards Panel Room and the Corridor between the Charging Pump Room and the 1C Switchgear Room in the Reactor Building elevation 590'–0". The exemptions were requested from providing fixed fire suppression systems in the above areas as required by section III.G.3 of Appendix R.

The licensee has provided alternative shutdown capability in each area. Fire protection in each area consists of early warning fire detectors, manual hose stations and portable fire extinguishers. The fuel loading (cable insulation) in each area is moderate. The staff finds that there is reasonable assurance that a fire in these areas would be promptly detected and extinguished. The moderate combustible loading in each area ensures that safety-related equipment in adjacent areas will not be threatened before the fire brigade can extinguish the fire. NRR and Region III fire protection engineers recently visited the site to walk down the fire protection modifications made by the licensee to comply with Appendix R and to review the above two areas where exemptions from Appendix R had been requested. Based on the licensee's analysis and the review of the areas at the site the staff concludes that the installation of fixed fire suppression systems would not significantly increase the level of fire protection in the Engineered Safeguards Room or the Corridor between the Charging Pump Room and the 1C Switchgear Room in the Reactor Building elevation 590'–0". Therefore, the requested exemptions should be granted.

IV

Accordingly, the Commission has determined that, pursuant to 10 CFR 50.12(a), the requested exemptions are authorized by law and will not endanger life or property or the common defense and security and are otherwise in the public interest. Therefore, the Commission hereby grants the following exemptions from the requirements of section III.G.3 of Appendix R to 10 CFR Part 50:

1. Engineered Safeguards Room to the extent a fixed fire suppression system should be installed in the area.

2. Corridor between the Charging Pump Room and the 1C Switchgear Room in the Reactor Building elevation 590'–0" to the extent a fixed fire suppression system should be installed in the area.

Pursuant to 10 CFR 51.32, the Commission had determined that the granting of these exemptions will have no significant impact on the environment (July 5, 1985, 50 FR 27708).

A copy of the Safety Evaluation dated July 12, 1985, related to this action is available for public inspection at the Commission's Public Document Room, 1717 H Street, NW., Washington, D.C. and at the local public document room located at the Van Zoeren Library, Hope College, Holland, Michigan 49428. A copy may be obtained upon written request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Licensing.

This Exemption is effective upon issuance.

Dated at Bethesda, Maryland, this 12th day of July 1985.

For the Nuclear Regulatory Commission.

Hugh L. Thompson, Jr.,

Director, Division of Licensing, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–M

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Intent to Designate Major Wine Trading Countries; Public Comments

AGENCY: Office of the United States Trade Representative.

ACTION: Notice requesting written comments.

SUMMARY: The Office of the United States Trade Representative ("USTR") is soliciting written comments on the list of countries which the USTR intends to designate as major wine trading countries.

The Trade and Tariff Act of 1984 (the "Act") was signed into law on October 30, 1984. Title IX of that Act, the Wine Equity and Expansion Act of 1984, provides USTR with specific responsibility to respond to problems that Congress has found are facing the U.S. wine industry. Among these responsibilities are: (1) The designation of major wine trading countries and (2) the development and coordination of reports on wine trade.

Section 906 of the Act provides that USTR must consult with representatives of the wine and grape products industries in the United States prior to designating major wine trading countries. In response to a **Federal Register** notice dated November 23, 1984, comments were received on market potential for U.S. wines in various countries and on trade barriers or distortions to U.S. wine exports.

Based on this and other information, the U.S. Trade Representative intends to designate the following as major wine trading countries: Canada, Jamaica, Japan, Mexico, South Korea, and Taiwan. In addition, the U.S. Government will conduct trade consultations with a number of other foreign governments to discuss their trade barriers or distortions affecting U.S. wine exports. Depending on additional information, other countries may be designated at a later date.

DATE: Written comments should be received by July 26, 1985. Twenty copies of the submission should be provided.

ADDRESS: Written comments should be submitted to Carolyn Frank, Secretary, Trade Policy Staff Committee, Office of the United States Trade Representative, Room 500, 600 17th Street, NW., Washington, D.C. 20506, (202) 395–3487.

FOR FURTHER INFORMATION CONTACT: Ellen Terpstra, Advisor to the Assistant U.S. Trade Representative for Agricultural Affairs and Commodity Policy, Office of the United States Trade Representative, Room 423, 600 17th Street, NW., Washington, D.C. 20506, Phone: (202) 395–5006.

Alexander Platt, Associate General Counsel, Office of the United States Trade Representative, Room 223, 600 17th Street, NW., Washington, D.C. 20506, Phone: (202) 395–7305.

BILLING CODE 3190–01–M

Termination of the International Sugar Agreement 1977; Deadline for Refunds for Unused Stamps

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of termination for refunds of unused International Sugar Agreement 1977 stamps for contributions to the stock financing fund.

SUMMARY: Traders holding unused sugar stamps that are not required to meet obligations to pay outstanding contributions should seek refunds before July 31, 1985.

U.S. sugar importers were required to purchase certificate-exempt International Sugar Organization stamps for use on imported sugard under the terms of the 1977 International Sugar Agreement. This Agreement expired on December 31, 1984.

Unused stamps should be returned to the Manager, Stock Financing Fund, International Sugar Organization, 28 Haymarket, London SW1Y 4SP, England. requests for refunds on unused stamps will not be entertained after July 31, 1985, in accordance with the decision of the Council of the ISA 1977 taken on May 22, 1985.

FOR FURTHER INFORMATION CONTACT: Ellen Terpstra, Advisor to the assistant U.S. Trade Representative for Agricultural Affairs and Commodity Policy, Office of the United States Trade Representative, Room 423, 600 17th Street, NW., Washington, D.C. 20506, Phone: (202) 395–5006.

SECURITIES AND EXCHANGE COMMISSION

[Release No. IC–14626; File No. 811–3276]

Application and Opportunity for Hearing; KILICO Money Market Fund, Inc.

July 11, 1985.

Notice is hereby given that KILICO Money Market Fund, Inc. ("Applicant"), 120 S. LaSalle Street, Chicago, Illinois 60603, registered as a diversified open-end investment company under the Investment Company Act of 1940 (the "Act"), filed an application on Form N–8F on August 27, 1984, pursuant to section 8(f) of the Act, for an order declaring that Applicant has ceased to be an investment company. All

interested persons are referred to the application on file with the Commission

D.C. 20549. A copy of such request should be served personally or by mail

Consolidated will initially pay $100,000 and will sign a promissory note

Washington, D.C. 20549. Following this opportunity for hearing, the Commission

[Release No. IC–14626; (File No. 811–3846)]

For the Commission, by the Division of Investment Management, pursuant to

VOL
50
ISS
138

1985
UMI

interested persons are referred to the application on file with the Commission for a statement of the representations contained therein, which are summarized below.

Applicant, a Maryland corporation, registered under the Investment Company Act of 1940 on October 9, 1981, and submitted a registration on Form N–1 on that same date. The application and exhibits attached thereto indicate that the Applicant's Board of Directors resolved it advisable that Applicant be dissolved and that the proposed dissolution be submitted for consideration by shareholders at a special meeting. Shareholders approved the proposal to dissolve Applicant at a special meeting held on October 4, 1983, and Applicant states that it filed Articles of Dissolution of the corporation with the state of Maryland concurrently with the filing of this application.

The application states that as of July 31, 1983, it had 19,820,448 shares outstanding common stock, the net asset value of which was $1.00 per share. Applicant submits that it distributed all of its assets remaining after the payment of all of its debts and obligations to Kemper Investors Life Insurance Company in behalf of participating contractowners in Kemper Investors Life Insurance Company Variable Annuity Account C. Applicant further states that participating contractowners were given the following options: (1) To use the remaining value of their contracts to purchase a Kemper Advantage III contract, with assets allocated to KILICO Money Market Separate Account, (2) retain the current contract and have its contract value transferred to a Fixed Rate Option, or (3) terminate the existing contract. Applicant states that it has retained no assets, has no outstanding debts, and no securityholders. Applicant states that it is not a party to any litigation or administrative proceeding, and is not now engaged or proposed to be engaged in any business activities other than those necessary for winding up its affairs.

Notice is further given that any interested person wishing to request a hearing on the application may, not later than August 6, 1985, at 5:30 p.m., do so by submitting a written request setting forth the nature of his/her interest, the reasons for such request, and the specific issues, if any, of fact or law that are disputed. Such request should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request should be served personally or by mail upon Applicants at the address stated above. Proof of such service (by affidavit or, in the case of an attorney-at-law, by certificate) shall be filed with the request. After said date, an order disposing of the application will be issued unless the Commission orders a hearing upon request or upon its own motion.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

John Wheeler,

Secretary.

[Release No. 35–23763; 70–7126]

Consolidated Natural Gas Co.; Proposal to Acquire $250,000 Partnership Interest

July 11, 1985.

Consolidated Natural Gas Company ("Consolidated"), a registered holding company, has filed an application with this Commission pursuant to section 9(c)(3) of the Public Utility Holding Company Act of 1935 ("Act") and Rules 40 and 100 thereunder.

As a result of the difficult economic climate that has befallen Pittsburgh in recent years, The Pittsburgh Seed Fund ("Fund"), a limited partnership, has been formed for the purpose of encouraging and financing local high risk entrepreneurial ventures, including research and development of products. The limited partnership, organized under and by virtue of the laws of the Commonwealth of Pennsylvania, has appealed to companies operating in and around Pittsburgh, such as Consolidated, to assist financially in this endeavor.

Affiliated with the Fund will be The Enterprise Corporation of Pittsburgh, a nonprofit Pennsylvania corporation, which is also affiliated with the University of Pittsburgh and Carnegie-Mellon University. The function of The Enterprise Corporation will be to advise the Fund on the selection and financing of worth while ventures.

Consolidated proposes to subscribe for the acquisition of five of the Fund's units ("Units"), at a price of $50,000 per Unit, consisting of $20,000 cash and $30,000 in the form of a limited partner note. The subscription is irrevocable unless rejected by the general partner, Pittsburgh Venture Partners. Thus, Consolidated will initially pay $100,000 and will sign a promissory note obligating it to pay $75,000 in each of the years 1986 and 1987.

The application and any amendment thereto are available for public inspections through the Commission's Office of Public Reference. Interested persons wishing to comment or request a hearing should submit their views in writing by August 5, 1985, to the Secretary, Securities and Exchange Commission, Washington, D.C. 20549, and serve a copy on the declarant at the address specified above. Proof of service (by affidavit or, in the case of an attorney at law, by certificate) should be filed with the request. Any request for hearing shall identify specifically the issues of fact or law that are disputed. A person who so requests will be notified of any hearing, if ordered, and will receive a copy of any notice or order issued in this matter. After said date the application, as filed or as it may be amended, may be granted.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

John Wheeler,

Secretary.

Omega Venture Partners I Ltd.; Application for Order Declaring that Applicant Has Ceased To Be an Investment Company

July 12, 1985.

Notice is hereby given that Omega Venture Partners I Ltd. ("Applicant"), 5950 Canoga Avenue, Woodland Hills, California 91367, registered under the Investment Company Act of 1940 ("Act") as a closed-end, non-diversified management investment company, filed an application on June 13, 1985, for an order of the Commission, pursuant to section 8(f) of the Act, declaring that Applicant has ceased to be an investment company. All interested persons are referred to the application on file with the Commission for a statement of the representations contained therein, which are summarized below, and to the Act and the rule thereunder for the applicable provisions thereof.

Applicant represents that it filed a registration statement pursuant to section 8(b) of the Act on September 16, 1983, never made a public offering of its securities, has fewer than 100 securityholders for purposes of section 3(c)(1) of the Act and the rules thereunder, and does not propose to make another public offering or engage in business of any kind. Applicant represents further that it is not a party to any litigation or administrative proceeding, and that it does not intend to engage in any business activities other than those necessary for the winding up of its affairs. Finally, Applicant represents that it was dissolved under California state law.

Notice is further given that any interested person wishing to request a hearing on the application may, not later than August 5, 1985, at 5:30 p.m., do so by submitting a written request setting forth the nature of his interest, the reasons for his request, and the specific issues, if any, of fact or law that are disputed, to the Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of the request should be served personally or by mail upon Applicant at the address stated above. Proof of service (by affidavit or, in the case of an attorney-at-law, by certificate) shall be filed with the request. After said date, an order disposing of the application will be issued unless the Commission orders a hearing upon request or upon its own motion.

Secretary.

[FR Doc. 85–17131 Filed 7–17–85; 8:45 am]

BILLING CODE 8010–01–M

[Release No. 34–22236; File No. SR–OCC–85–9]

Self-Regulatory Organizations; Options Clearing Corporation; Proposed Rule Change

The Options Clearing Corporation ("OCC") on June 26, 1985, submitted a proposed rule change to the Commission under section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"). OCC's proposal would amend OCC By-Laws and Rules to enable OCC to issue, clear and settle European style options, which are options that may be exercised only on their expiration date. The Commission is publishing this notice to solicit public comment on the proposal.

Proposed issuance, clearance and settlement procedures for European style options would be identical to those now in effect for all options at OCC, except that European style options could not be exercised before their expiration date. As described below, OCC is proposing several changes in its By-Laws and Rules to accommodate European style options.

OCC By-Law Article I would be amended to provide definitions for "styles" of options. Options that can be exercised by holders at any time from issuance to expiration (which includes all options currently issued by OCC) would be termed "American" style options. Options that can be exercised only on their expiration date would be termed "European" style options. *See* proposed Article I, § 1 (rrr), (sss) and (ttt).

OCC By-Law Article VI, governing clearance of exchange transactions, would be amended in several ways. Section 7 of the By-Law would require all options exchanges submitting trade information to OCC to include the option style for each reported trade. Section 12 would be amended to limit the exercise of European style options to their expiration date. Amended Section 17 would clarify that exercise restrictions cannot be imposed for European style options.[1]

[1] Section 17 also would be amended to clarify that exercise restrictions on a series of American style options could not be imposed on that series' expiration date. Current Section 17 states that such restrictions cannot be imposed during the business

Section 2 of OCC By-Law Article XVII, which governs the general rights

comments with the Secretary of the Commission, 450 Fifth Street, N.W.,

most significant aspects of such statements.

the proposed rule change that are filed

administrative proceeding, and that it

customer margin system for "short"

Section 2 of OCC By-Law Article XVII, which governs the general rights and obligations of holders and writers of index options, would be amended to provide for the two styles of options. The amendment again would make it clear that European style options can only be exercised on their expiration date.[3]

OCC Rules would be amended to conform to the above changes in OCC By-Laws. Specifically, the proposal would amend OCC Rule 401, governing trade reports, and OCC Rule 801, governing option exercise procedures.[3]

OCC believes that the proposal is consistent with the Act in general, and section 17A of the Act in particular, because it facilitates the prompt and accurate clearance and settlement of European style options. OCC states that the proposal does so by applying to European style options substantially the same clearing system and rules currently in use by OCC. That system, in OCC's view, already has been proven efficient, effective, and safe.

OCC requested accelerated approval of its proposal to the extent necessary to allow OCC to issue, clear and settle European style options at the latest by the time the Commission approves any exchange proposal to trade European style options. OCC notes that trading in European style options has been proposed by the Chicago Board Options Exchange.[4] OCC believes that accelerated approval would be justified because the proposal would merely implement any Commission approved program for trading European style options.

Copies of all documents relating to the proposal, other than those which may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, may be inspected and copied at the Commission's Public Reference Room, 450 Fifth Street, NW., Washington, D.C. and at OCC's principal office.

To assist the Commission in determining whether to approve the proposal or to institute disapproval proceedings, the Commission invites public comment on the proposal. Comments should refer to file no. SR-OCC-85-9. Please file six copies of comments with the Secretary of the Commission, 450 Fifth Street, N.W., Washington, D.C. 20549, by August 8, 1985.

For the Commission, by the Division of Market Regulation pursuant to delegated authority.

Dated: July 12, 1985.

John Wheeler,

Secretary.

[FR Doc. 85-17132 Filed 7-17-85; 8:45 am]

BILLING CODE 8010-01-M

day (for index options) or the ten business days (for all other options) immediately prior to the expiration date of such series.

[3] Section 2 of OCC By-Law Article XVII replaces Section 9 of OCC By-Law Article VI, which governs the general rights and obligations of holders and writers of non-index options. Thus, the proposal clarifies the rights and obligations of holders and writers of all OCC options.

[3] OCC's proposal also would correct typographical errors in Section 1 of OCC By-Law XVII.

[4] *See* file no. SR-CBOE-84-31.

[Release No. 34-22237; File No. SR-NASD-85-17]

Self-Regulatory Organizations; Proposed Rule Change by the National Association of Securities Dealers; Relating to the ITS/CAES Rules Dealing With Locked or Crossed Markets

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on June 25, 1985, the National Association of Securities Dealers, Inc., filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed amendment establishes specific procedures in regard to locked and crossed markets that have evolved through the operational experience and mutual agreement of the Intermarket Trading System (ITS) Participants.

The amendment provides a complaint and rectification procedure for the party whose quotation is locked or crossed which obligates the locking or crossing party to promptly ship stock or unlock the market, as directed.

II. Self-Regulatory Organization's Statement Regarding the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections (A), (B) and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule

The rule change will allow the aggrieved member the flexibility of requesting either the shipment of stock or the unlocking of the market, and should enhance the operation of ITS by encouraging the prompt and equitable resolution of locked and crossed markets.

The proposed rule change is consistent with sections 15A(b)(6) of the Securities Exchange Act of 1934 and with the Commission's order dated May 6, 1982 issued pursuant to section 11A(a)(3)(B) of the Act which together requires the Association to adopt rules governing the participation of ITS/CAES market makers in the ITS/CAES linkage.

B. Self Regulatory Organization's Statement on Burden on Competition

The Association does not foresee any impact on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Changes Received From Members, Participants, or Others

Comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer periods to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

A. By order approve such proposed rule change, or

B. Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 5th Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC. Copies of such filing will also be available at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by August 8, 1985.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

John Wheeler,

Secretary.

July 12, 1985.

BILLING CODE 8010-01-M

Omega Government Fund, Inc.; Application For Order Declaring that Applicant Has Ceased To Be an Investment Company

[Release No. IC-14629; File No. 811-3845]

July 12, 1985.

Notice is hereby given that Omega Government Fund, Inc. ("Applicant"), 5950 Canoga Avenue, Woodland Hills, California 91367, registered under the Investment Company Act of 1940 ("Act") as an open-end, diversified management investment company, filed an application on June 13, 1985, for an order of the Commission, pursuant to section 8(f) of the Act, declaring that Applicant has ceased to be an investment company. All interested persons are referred to the application on file with the Commission for a statement of the representations contained therein, which are summarized below, and to the Act for the applicable provisions thereof.

Applicant states that it filed a registration statement pursuant to section 8(b) of the Act on September 16, 1983, never made a public offering of its securities, has fewer than 100 securityholders for purposes of 3(c)(1) of the Act and the rules thereunder, and does not propose to make another public offering or engage in business of any kind. Applicant further states that it has previously distributed all of its assets to its one securityholder, and, accordingly, will have no assets to distribute upon dissolution. Applicant represents that it is not a party to any litigation or administrative proceeding, and that it does not intend to engage in any business activities other than those necessary for the winding up of its affairs. Finally, Applicant represents it is in the process of being dissolved under Maryland state law.

Notice is further given that any interested person wishing to request a hearing on the application may, not later than August 5, 1985, at 5:30 p.m., do so by submitting a written request setting forth the nature of his interest, the reasons for this request, and the specific issues, if any, of fact or law that are disputed, to the Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of the request should be served personally or by mail upon Applicant at the address stated above. Proof of service [by affidavit or, in the case of any attorney-at-law, by certificate) shall be filed with the request. After said date, an order disposing of the application will be issued unless the Commission orders a hearing upon request or upon its own motion.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

John Wheeler,

Secretary.

BILLING CODE 8010-01-M

[Release No. 34-22235; File No. SR-NASD-85-15]

Self-Regulatory Organizations; Proposed Rule Change by National Association of Securities Dealers Relating to Proposed Amendments to Appendix A to Article III, Section 30 of the Association's Rules of Fair Practice

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on May 29, 1985, the National Association of Securities Dealers, Inc. filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change amends Appendix A to Article III, section 30 of the Association's Rules of Fair Practice to provide a uniform, premium-based customer margin system for "short" options positions.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B) and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The purpose of the proposed amendments to section 4 of Appendix A is to establish uniform minimum margin requirements for different types of options which are listed or traded on a registered national securities exchange, or in the future, may be displayed on the NASDAQ System.

Under current margin rules, there are different systems for calculating margin requirements for the different types of options products (equity, broad and narrow-based indices, foreign currencies and treasuries). The Association and the options exchanges have developed a uniform margin system based upon the option premium plus an additional amount, which more closely reflects the risks involved in such trading than that under the current system. The Board of Governors determined that it was appropriate to adopt this uniform system as the basis for the Association's minimum margin requirements. The proposed rules continue to protect broker/dealers in the event that customers fail to meet their financial obligations but simplify the margin requirements by establishing a single, standardized approach, which can be applied to all option products. Under proposed rules, the minimum margin requirement for all short options positions would be: 100% of the option premium plus a fixed percentage of the current market value of the underlying security (the percentage to vary for each option product), with an adjustment for out-of-the-money options not to be less than 100% of the option premium plus a stipulated lesser percentage of the current market value of the underlying security. Percentages contained in the

proposed rule change which are the same as those previously adopted by the

concerns which will contribute to a well-balanced national economy by

DEPARTMENT OF TRANSPORTATION

This notice is issued under authority of the Federal Advisory Committee Act, Pub. L. 92-

proposed rule change which are the same as those previously adopted by the number of the registered options exchanges were developed by relating option margin to the annualized price volatility of the underlying security. The resulting percentage has been adjusted to provide for initial margin that would cover the underlying product's historical volatility over a seven day period given a 95% confidence level. The proposed formula will decrease the incidence of excessive or inappropriate margining in customer accounts by correlating the margin to risk exposure. In addition, the broker/dealer community will benefit from reduced operational and computerization costs due to the uniformity of the rules among the various self-regulatory organizations and the standardization of the formula. The Association and the other self-regulatory organizations will also have a more rational basis for establishing margin levels for new option products as well as for monitoring an appropriate level of existing requirements on an ongoing basis. The statutory basis for the proposed rule change is found in section 15A(b)(6) of the Securities Exchange Act of 1934 which applies to registered securities associations and requires that rules of the Association be designed to promote just and equitable principals of trade and to protect the investing public. The Association believes that by revising the margin requirements to more closely reflect the risks involved in options trading and thus potentially increasing market liquidity, the proposed rules are consistent with these provisions. The proposed rule change is also consistent with the requirements of Section 7(a) of the Act and the rules and regulations prescribed by the Board of Governors of the Federal Reserve System pursuant to that Section in that they adjust margins to a level which provides a reasonable amount of financial protection to the securities industry and does not permit the excessive use of credit for the purchase or carrying of securities.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Association does not forsee any impact on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Comments were neither sollcited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 5th Street, NW., Washington, D.C. 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 5th Street, NW., Washington, D.C. Copies of such filing will also be avialable for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by August 8, 1985.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Dated: July 12, 1985.

John Wheeler,

Secretary.

BILLING CODE 8025-01-M

[License No. 02/02-5488]

SB Capital Corp.; Application for a License to Operate as a Small Business Investment Company

An application for a license to operate as a small business investment company (SBIC) under the provisions of section 301(d) of the Small Business Investment Act of 1958, as amended, (the Act), (15 U.S.C. 661 *et seq.*), has been filed by SB Capital Corporation, 36 West 47th Street, Suite 701, New York, New York 10036, with the Small Business Administration (SBA), pursuant to 13 CFR 107.102(1985).

The officers, directors and sole shareholder of the Applicant are as follows:

Name and address	Title or relationship	Percent of ownership
Benzion Bornfreund, 1624 46th Street, Brooklyn, New York 11204.	Chairman of the Board, President, Director.	100
Chaim Bornfreund, 1566 47th Street, Brooklyn, New York 11219.	Treasurer, Secretary, Director.	0
Marcel Gross, 1748 53rd Street, Brooklyn, New York 11219.	Manager, Director	0

The Applicant, a New York corporation, will begin operations with a capitalization of $1,000,000 and will conduct its operations principally in the State of New York.

As an SBIC licensed to operate under section 301(d) of the Act, the Applicant will provide financial and managerial assistance solely to small business concerns which will contribute to a well-balanced national economy by facilitating ownership in such concerns by persons whose participation in the free enterprise system is hampered because of social or economic disadvantages.

Matters involved in SBA's consideration of the Application include the general business reputation and character of the proposed owners and management, and the probability of successful operation of the Applicant under their management, including adequate profitability and financial soundness, in accordance with the Act and the SBA Rules and Regulations.

Notice is hereby given that any person may, not later than 30 days from the date of publication of this notice, submit written comments on the proposed SBIC to the Deputy Associate Administrator for Investment, Small Business Administration, 1441 L Street, NW., Washington, DC 20416

A copy of this notice shall be published in a newspaper of general circulation in New York, New York.

BILLING CODE 4910-14-M

Federal Highway Administration

Environmental Impact Statement; Cook and Dupage Counties, IL

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an Environmental Impact Statement will be prepared for multi-lane (four or six) highway from U.S. Route 12/20/45 (Mannhiem Road), near O'Hare International Airport in Cook County, extending westerly approximately 21 miles to U.S. Route 20 (Lake Street) near the southeast corporate limits of the City of Elgin in Cook County, Illinois. The proposed project, which generally follows the previously recorded centerline for the Elgin-O'Hare Corridor Highway Improvement, will be designated Federal-aid Primary Route 426 (FAP 426).

FOR FURTHER INFORMATION CONTACT: James C. Partlow, District Engineer, Federal Highway Administration, 320 West Washington Street, 7th Floor, Springfield, Illinois 62701, Telephone (217) 492-4622. Cesar Nepomuceno, Chief, Bureau of Programming, Illinois Department of Transportation, 1000 Plaza Drive, Schaumburg, Illinois 61096-1096, telephone (312) 884-3493.

SUPPLEMENTARY INFORMATION: The proposed Elgin-O'Hare Corridor Highway Improvement was conceived in the early 1960's and early 1970's. The studies were discontinued in 1972. As a result of these studies, an approximately 3 mile portion of the facility was constructed as the relocation of Illinois Route 19 (Irving Park Road) near O'Hare International Airport. The Illinois Route 53 (FAI 290) interchange at Thorndale Avenue was also constructed at that time, taking into account the proposed Elgin-O'Hare Supplemental Freeway.

Major alternatives under consideration are (1) no action, (2) upgrading and/or rehabilitation of existing arterial facilities and (3) construction of a limited access controlled, combined expressway/high-

type arterial facility. Incorporated into and studied with the build alternatives

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research

Title: Application—Permit—Special License—Unlading—Lading—

Sunshine Act Meetings

type arterial facility. Incorporated into and studied with the build alternatives will be design variations of grade, alignment, grade seperations, possible interchange locations and access to adjacent existing and planned facilities by means of access road or frontage roads.

Coordination meetings and public hearings were conducted as part of the earlier corridor studies. Coordination at that time was undertaken with Federal, State, regional, metropolitan and local agencies, community organizations, public utilities and private industry. Contacts, comments and imputs have been made through correspondence, telephone communications and meetings. As a result of these studies and coordination, corridor approval for the Elgin-O'Hare Corridor Highway Improvement was given by the FHWA January 5, 1970. Additional information will continue to be gathered throughout project development. Due to the ongoing nature of the coordination process a formal scoping meeting is not anticipated. If new information indicates a need to define issues attendant to the proposed action, scoping activities will be conducted with specific agencies.

To ensure that the range of issues related to the proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to FHWA or IDOT at the addresses provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Research Planning and Construction. The provisions of Executive Order 12372 regarding State and local clearinghouse review of Federal and federally-assisted programs and projects apply to this program)

FEDERAL DEPOSIT INSURANCE CORPORATION

Notice of Changes in Subject Matter of Agency Meeting

Pursuant to the provisions of subsection (e)(2) of the "Government in the Sunshine Act" (5 U.S.C. 552b (e)(2)), notice is hereby given that at its open meeting held at 2:00 p.m. on Monday, July 15, 1985, the Corporation's Board of Directors determined, on motion of Chairman William M. Isaac, seconded by Director Irvine H. Sprague (Appointive), concurred in by Mr. Michael A. Mancusi, acting in the place and stead of Director H. Joe Selby (Acting Comptroller of the Currency), that Corporation business required the withdrawal from the agenda for consideration at the meeting, on less than seven days' notice to the public, of the following matter:

Memorandum and resolution regarding liquidation rights of repurchase agreement participants in bank insolvencies.

The Board further determined, on motion of Chairman William M. Isaac, seconded by Director Irvine H. Sprague (Appointive), concurred in by Mr. Michael A. Mancusi, acting in the place and stead of Director H. Joe Selby (Acting Comptroller of Currency), that Corporation business required the addition to the agenda for consideration at this meeting, on less than seven days' notice to the public, of the following matters:

Application of Council Bluffs Savings Bank, Council Bluffs, Iowa, an insured State nonmember bank, for consent to purchase certain assets of and assume the liability to pay deposits made in Mineola State Bank, Mineola, Iowa, and for consent to establish the sole office of Mineola State Bank as a branch of Council Bluffs Savings Bank.

Recommendation regarding the liquidation of a bank's assets acquired by the Corporation in its capacity as receiver, liquidator, or liquidating agent of those assets:

Case No. 46,277-L (Amendment)
The First National Bank of Midland, Midland, Texas

By the same majority vote, the Board further determined that no earlier notice of these changes in the subject matter of the meeting was practicable.

Dated: July 16, 1985.

Federal Deposit Insurance Corporation.

Hoyle L. Robinson,

Excutive Secretary.

Federal Deposit Insurance Corporation's Board of Directors will meet in closed	4

Portions Closed to the Public

1. Petition of Hong Kong Shippers' Council

Federal Deposit Insurance Corporation's Board of Directors will meet in closed session, by vote of the Board of Directors, pursuant to sections 552b(c)(2), (c)(6), (c)(8), and (c)(9)(A)(ii) of Title 5, United States Code, to consider the following matters:

Summary Agenda: No substantive discussion of the following items is anticipated. These matters will be resolved with a single vote unless a member of the Board of Directors requests that an item be moved to the discussion agenda.

Recommendations with respect to the initiation, termination, or conduct of administrative enforcement proceedings (cease-and-desist proceedings, termination-of-insurance proceedings, suspension or removal proceedings, or assessment of civil money penalties) against certain insured banks or officers, directors, employees, agents or other persons participating in the conduct of the affairs thereof:

Names of persons and names and locations of banks authorized to be exempt from disclosure pursuant to the provisions of subsections (c)(6), (c)(8), and (c)(9)(A)(ii) of the "Government in the Sunshine Act" (5 U.S.C. 552b(c)(6), (c)(8), and (c)(9)(A)(ii)).

Note.—Some matters falling within this category may be placed on the discussion agenda without further public notice if it becomes likely that substantive discussion of those matters will occur at the meeting.

Discussion Agenda:

Personnel actions regarding appointments, promotions, administrative pay increases, reassignments, retirements, separations, removals, etc.:

Names of employees authorized to be exempt from disclosure pursuant to the provisions of subsections (c)(2) and (c)(6) of the "Government in the Sunshine Act" (5 U.S.C. 552b(c)(2) and (c)(6)).

The meeting will be held in the Board Room on the sixth floor of the FDIC Building located at 550—17th Street, NW., Washington, D.C.

Requests for further information concerning the meeting may be directed to Mr. Hoyle L. Robinson, Executive Secretary of the Corporation, at (202) 389–4425.

Dated: July 15, 1985.

Federal Deposit Insurance Corporation.

Hoyle L. Robinson,

Executive Secretary.

[Docket No. 23634; Amdt. Nos. 121-186 and 135-19]

Flight Time Limitations and Rest Requirements

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This final rule amends flight time limitations and rest requirements for flight crewmembers engaged in air transportation. The rule is based on recommendations of a Regulatory Negotiation Advisory Committee composed of persons who represent the interests affected by the flight time rules. The rule clarifies certain requirements that have had voluminous interpretations and updates certain requirements in relation to current operating conditions.

DATES: Effective date: October 1, 1985. Certificate holders may comply on the effective date or on the first day of any calendar month after the effective date or on the final compliance date of this rule.

Final compliance date: October 1, 1986.

FOR FURTHER INFORMATION CONTACT: Larry P. Bedore, Project Development Branch, (AFO)-240), Air Transportation Division, Office of Flight Operations, Federal Aviation Administration, Washington, D.C. 20591; telephone: (202) 426-8096.

SUPPLEMENTARY INFORMATION:

Background

Air crewmember fatigue is a fundamental factor of flight safety. The flight time limitation rules regulate the number of flight hours a flight crewmember may be scheduled for in a year, month, week, and day and the frequency and length of rest periods that a flight crewmember must be given, in the interest of both individual and public safety. The flight time limitation rules that apply to major scheduled airlines—those most familiar to the traveling public—and to other airlines operating large transport category airplanes are contained in Part 121 of the Federal Aviation Regulations (FAR) (14 CFR Part 121). The flight time limitation rules that apply to the scheduled air carriers that operate airplanes of 30 or fewer seats and to air taxi operations are contained in Part 135 of the FAR (14 CFR Part 135).

The flight time limitation rules in both Parts 121 and 135 have remained virtually unchanged for the past 30 years despite significant changes in the aviation transportation industry. The most significant reasons for amending the rules are that—(1) rest requirements under Part 121 have been extremely complicated and have required thousands of pages of interpretation over the past 30 years; (2) rest requirements have been inflexible, preventing air carriers from adjusting schedules and resulting in a number of exemption requests; and (3) recent increases in short-duration, passenger-carrying operations (commonly called regional operations) have prompted recommendations (reflected in the Airline Deregulation Act of 1978) that Part 135 rules provide a level of safety that is, to the maximum feasible extent, equivalent to the level of safety provided by Part 121 rules.

The FAA has recognized for several years that the flight time rules need to be clarified and updated and on several occasions has proposed rules to correct problems. Because of the complexity of the rules and the variety of interested persons, none of the proposals adequately resolved the problems to the satisfaction of the affected parties. The FAA, therefore, initiated an innovative approach called Regulation by Negotiation. The FAA created an Advisory Committee under the Federal Advisory Committee Act. The committee included persons representing flight crewmembers, air carriers, air taxis, helicopter operators, the FAA, and a consumer interest group. Initially, the committee met on seven occasions for a total of 16 days. It gave serious consideration to various proposals and justifications submitted by its members and succeeded in narrowing the differences among interested parties and in reaching substantial agreement on some issues.

As a result of the committee's deliberations, the FAA drafted a Notice of Proposed Rulemaking (Notice 84-3), which reflected the committee's discussion of and agreements on certain issues, in addition to identifying five issues which were not resolved by the committee at the time of publication (49 FR 12136, March 28, 1984). The FAA and the Advisory Committee reviewed comments received on the NPRM, and on September 11, 1984, the Advisory Committee convened to discuss issues which needed to be addressed in the final rule. The final rule is the result of FAA consideration of all comments on the NPRM and of the final deliberations of the Advisory Committee.

The Advisory Committee met under the direction of Nicholas Fidandis who acted as convener/mediator. The regulatory negotiation process was supported by the Office of the Secretary of Transportation, the Vice President's Office, The Office of Management and Budget, and the Administrative Conference of the United States. The support of those offices was appreciated. In the obviously complex and controversial area of flight and duty time limitations, the regulatory negotiation process was essential in achieving the highly successful result which is apparent in these amendments. It allowed a thorough discussion of all issues with representatives of all interests. At a minimum, the process acted to substantially narrow the number of differences between the parties and, even where differences remained, acted to lessen the contentiousness of the parties regarding those differences. The process also highlighted for the FAA those areas in which a compromise position was possible that the parties could accept even if they could not concur with it publicly. The end result, in the FAA's view, is a final rule that accomplishes the objectives of the rulemaking and addresses the concerns expressed by all parties. An additional benefit is that the parties were made more sensitive to the competing interests of the other parties. As a result of this process, a better compliance attitude should result. The FAA wishes to express its appreciation for the cooperation and untiring efforts of all those who participated in the process either as committee members or commenters.

Intent of the Rule

The Notice of Intent for the formation of the Advisory Committee (48 FR 21339, May 12, 1983) contained a lengthy list of issues that could be addressed by the committee. However, as the committee began its deliberations, it became apparent that not all the issues could be resolved in a reasonable time. Therefore, the committee began to focus on the following major objectives:

- To address the series-of-flights problem in Part 121, thereby resolving many interpretation problems;
- To correct an inadequacy in current Part 121, domestic air carriers rules, for flight crewmembers scheduled to fly 8 hours or less in 24 consecutive hours (current rest requirements apply only if more than 8 hours is scheduled) and to allow greater scheduling flexibility;
- To upgrade the requirements for all operations in Part 135, particularly scheduled operations; and

- To incorporate into the rule certain exemptions that have wide applicability.

Both the proposed rule and the final rule have kept within the limits of the FAA's intention and the deliberations of the committee.

The rule accomplishes the intended objectives in the following way:

- It establishes flexible daily rest requirements in Part 121 for domestic operations and in § 135.265 for scheduled operations, in accordance with the number of scheduled flight hours.
- It establishes cumulative weekly (every 7 days), monthly, and annual flight time limits for Part 135 to assure a level of safety, to the maximum feasible extent, equivalent to that under Part 121;
- It codifies in Part 135 several exemptions: the reduction of a 10-hour rest under certain conditions, the extension of flight time with augmented crews, and the special limitations needed for helicopter medical emergency services.

Comments on the Proposed Rule

During the 45-day comment period, the FAA received over 140 comments in response to Notice 84-3. The comments represented the views of individuals, airline organizations, labor organizations, research institutions, public interest groups, and other government agencies. Most comments expressed agreement with the need for improving the regulations and commended the FAA for the rulemaking effort. Airline organizations generally favored the proposal while some labor organizations, research institutions, public interest groups, individual pilots, and the National Transportation Safety Board expressed reservations about certain proposed changes. In general, the tone and the length of the comments received indicated that the proposed rule was far more acceptable than the last several FAA proposals.

A number of commenters stated that the 45-day comment period was not long enough for them to respond as fully as they would have liked. According to certain of these comments, one group particularly affected by the 45-day comment time was flight crewmembers who are not represented by unions and, therefore, were not formally represented at the Advisory Committee sessions. According to these comments, because of the busy work schedule of these flight crewmembers and their lack of an organizational unit to represent their interests, 45 days in which to comment was not sufficient. In addition, comments pointed out that the proposed rule was highly complex and that a comment period of 90 days should have been given after the negotiation meetings to allow for a full consideration of the complex proposal. In response to these comments, the FAA points out that three factors determined the length of the comment period. First, all of the Advisory Committee meetings were open to the public. Interested parties, in addition to the representatives who served on the committee, were given an opportunity to express their concerns to the committee. A number of pilots, not represented by organizations on the committee, made oral presentations to the committee at the September 11, 1984 meeting, which occurred after the close of the comment period. The FAA considered these presentations, as well as the written comments submitted by non-unionized pilots, in the drafting of the final rule. Second, the majority of the parties most affected by the rulemaking were represented on the committee. Their views were heard during the negotiating sessions, and their written comments were, to a large extent, statements of their negotiating positions. Third, the scope of the rulemaking had been narrowed from the Notice of Intent in order to correct as quickly as possible those problems most in need of resolution. Thus, the issues for comment were relatively few. Given all of the above factors a 45-day comment period was considered sufficient. Comments which were received after the comment period closed were considered under 14 CFR 11.47 which provides that late filed comments are considered, in so far as possible, without incurring expense or delay.

Most of the comments received fall into one of three categories: (1) those which focus on particular provisions of the rule, such as the length of minimum rest and flight time limits between rests; (2) those which indicate a misunderstanding about certain provisions of the rule, such as the look-back provisions for required rest based on the amount of scheduled flight time during a preceding 24-hour period; and (3) those which focus on issues that are beyond the scope of this rulemaking. Comments that focus on particular provisions or that indicate a misunderstanding about certain provisions are discussed under the appropriate headings. Comments which raise issues beyond the scope of this rulemaking are discussed below.

A number of comments objected to the rule on the grounds that it does not amend flag and supplemental air carrier rules which have problems similar to those of domestic operations rules. In answer, the objective of revising the flag and supplemental rules was considered by the Advisory Committee, and some committee proposals included flag or supplemental revisions. However, because of the overriding importance of clarifying the domestic rules, revisions to flag and supplemental rules are not addressed at this time.

A number of comments objected to the proposed rule because it does not take into account recent bio-medical research or factors affecting pilot fatigue. Some of these comments include copies of bio-medical studies. A representative of the Air Line Pilots Association also made a presentation to the committee on the status of the relevant scientific research. Again, because of the overriding importance of clarifying and simplifying the current rules, broader revisions which could alter the overall structure of the FAR on flight time limits and rest requirements could not be considered at this time. The FAA intends to continue its consideration of fatigue studies and is awaiting completion of the National Aeronautics and Space Administration's study on the operational significance of pilot fatigue and circadian desynchronosis. The study report is expected to be available for review in the latter part of 1986. If the report establishes a quantifiable relationship between fatigue and job performance and identifies specific criteria which support an amendment of the flight time limitations and rest requirements, the FAA would then consider additional rulemaking. Presently, the rules adopted by these amendments protect against acute (short-term) fatigue by requiring specific rest periods in the 24 hours preceding the completion of scheduled flight time and protect against chronic or long-term fatigue by setting cumulative flight time limits.

A number of commenters pointed out that the proposed rule does not cover flight attendants and that regulations should be enacted that would cover flight attendants. The issue of including flight attendants is beyond the scope of this rulemaking. The Association of Flight Attendants presented a Petition for Rulemaking to the FAA on this issue, a summary of which was published in the Federal Register (50 FR 6185, February 14, 1985). Flight and duty time for flight attendants will be considered by the FAA as a separate issue.

One concern raised by a number of commenters is that the current rule and the proposed rule regulate only flight time and rest periods but do not regulate duty time. According to commenters, the proposed rule should specifically limit the duty period to protect flight crewmembers from fatigue. Again, the

FAA wishes to emphasize that these changes to Part 121 focused on

scheduled operations in § 135.265 if they obtain an amendment to their

Labor Board on May 10, 1934, which stated that 85 hours a month would be

have a significant cost impact because of the additional bookkeeping

scheduled operations, and that the benefits of the amendment outweigh the

consecutive hours in each quarter. If a

FAA wishes to emphasize that these changes to Part 121 focused on clarification and simplification with the one exception of requiring a rest for less than 8 hours of flight time. To institute a limit on duty, beyond the inherent limits necessitated by the required rest, would be outside the scope of this rulemaking. However, adequate and timely rest periods effectively limit the length of duty periods.

The Rule—Parts 121 and 135

General Issues

Certain important issues, some of which were identified as unresolved issues in the proposed rule and some of which arise from the comments to the proposed rule, involve changes in both Parts 121 and 135. These issues and comments will be discussed in the following paragraphs. The general issues include: (1) applicability, (2) cumulative flight time limits, (3) daily flight time limits, (4) daily rest requirements, (5) actual flight time vs. scheduled flight time, (6) flight-crewmember responsibility, and (7) dual operations.

Specific changes to the sections involved and comments about these changes are discussed in the *Section by Section* division of this preamble.

Applicability

The dividing line between Part 121 and Part 135 is provided by Special Federal Aviation Regulation (SFAR) 38–2 (50 FR 23941; June 7, 1985). Operations of aircraft with more than 30 passenger seats or a payload capacity of more than 7,500 pounds must be conducted under Part 121. Operations of aircraft with a lesser seating configuration or payload capacity must be conducted under Part 135. This rule continues the 30 passenger/7,500 pound payload distinction as the major dividing line between Part 121 and Part 135, and it makes some additional distinctions within Part 135.

Part 135 contains two sets of cumulative flight time limits and daily rest requirements, one for scheduled operations and another for unscheduled operations. Scheduled operations that must be conducted under § 135.265 are defined in § 135.261(b) as passenger-carrying operations that are conducted in accordance with a published schedule of at least five round trips per week on at least one route between two or more points. The schedule must include dates or times (or both) and must be openly advertised or otherwise made available to the public. All other Part 135 certificate holders are given the option of complying with the rules applicable to scheduled operations in § 135.265 if they obtain an amendment to their operations specifications.

Unscheduled operations, except for helicopter hospital emergency medical evacuation service (HEMES) operations, are conducted under §§ 135.267 and 135.269. These operations include unscheduled air taxi operations and commercial operations. The rule also permits Part 135 scheduled passenger and cargo-carrying operations in Alaska to be conducted under these sections. Helicopter hospital emergency medical evacuation services (HEMES) are conducted under § 135.271.

While this rulemaking clarifies Part 121 rest requirements, it also upgrades the requirements for all Part 135 operations, particularly scheduled operations. By separating Part 135 into scheduled and unscheduled operations, the FAA is able to establish acceptable cumulative flight time limits for operations that under current rules have only daily flight time limits.

Cumulative Flight Time Limits

Cumulative flight time limits, that is weekly, monthly, and annual limits for Part 121 domestic air carrier operations and Part 135 scheduled operations, and quarterly, biquarterly and annual limits for Part 135 unscheduled operations, are meant to protect the flight crewmember against chronic or long-term fatigue. Weekly limits in the context of this preamble refer to limits over any 7 consecutive days, not a calendar week. A quarter refers to the four periods of 3 months each, beginning in January, April, July, and October.

The annual, monthly, and weekly flight time limits for Part 121 domestic operations will remain the same as in the current rule: 1,000 hours in any calendar year, 100 hours in any calendar month, and 30 hours in any seven consecutive days (§ 121.471(a)). Newly imposed annual, monthly, and weekly flight time limits for Part 135 scheduled operations will be slightly less restrictive: 1,200 hours in any calendar year, 120 hours in any calendar month, and 34 hours in any seven consecutive days (§ 135.265(a)). The new quarterly, biquarterly, and annual limits for Part 135 unscheduled operations will be the least restrictive: 1,400 hours in any calendar year, 800 hours in any two consecutive calendar quarters, and 500 hours in any calendar quarter (§§ 135.267, 135.269, and 135.271).

One commenter objected to the Part 121 monthly flight time limit of 100 hours in any calendar month on the basis that Decision 83, which was incorporated into law, is still in force. Decision 83 was an announcement of the National Labor Board on May 10, 1934, which stated that 85 hours a month would be the flight time limitation for pilots of five airline companies involved in a dispute. Decision 83 was incorporated into Federal law in the Civil Aeronautics Act of 1938, and reenacted in both the Federal Aviation Act of 1958 and the Airline Deregulation Act of 1978. Decision 83 is incorporated into Title IV of the Federal Aviation Act, which governs economic regulation, not into Title VI, which affects safety regulations. The economic decisions in Decision 83 have never carried over to safety rules such as the monthly flight time limit.

A number of commenters objected to the less restrictive limits for Part 135 operators on the basis that the FAA should require the same flight time limits as Part 121 domestic operations for all Part 135 operations. These commenters reasoned that what is considered safe for one type of operation should be considered safe for all. Certain factors, however, were considered in establishing the new Part 135 flight time limits. Part 121 limits for large aircraft have been established for more than 30 years. The large air carriers are accustomed to operating within these restrictions and have maintained a high level of safety. Part 135 scheduled and unscheduled operators have had no cumulative weekly, monthly, or annual flight time limits, only daily limits of 10 hours for a two-pilot crew and 8 hours for a one-pilot crew. Theoretically, the current rule allows a two-pilot crew to fly 70 hours of flight per week and 3,640 hours in 52 weeks. The new limits for both scheduled and unscheduled operations substantialy reduce flight time in order to reduce fatigue and provide a level of safety equivalent to, to the maximum feasible extent, the level of safety in Part 121.

The Airline Deregulation Act of 1978 requires the Administrator to "impose requirements upon . . . commuter air carriers to assure that the level of safety provided to persons traveling on such commuter air carriers is, to the maximum feasible extent, equivalent to the level of safety provided to persons traveling" on Part 121 air carriers: The FAA's action in establishing, for the first time, weekly, monthly, and annual flight time limits for Part 135 scheduled operations is consistent with the "maximum feasible extent" requirement.

Thirty-seven commenters, primarily operators, a few pilots, and a state government, objected to the proposed limit of 32 hours of flight time in any 7 consecutive days in § 135.265(a). They claimed that the weekly limit would

have a significant cost impact because of the additional bookkeeping requirements and the need to hire additional flight crewmembers. Examples from schedules submitted by operators as part of their comments showed that these operators were scheduling 1 or 2 hours of flight in excess of the proposed 32-hour weekly limit. Commenters also pointed out that during peak periods, seasonal operators would be forced to hire additional flight crewmembers. This would not only be costly to the operators but also to flight crewmembers who need the extra hours of flight time during peak seasons to compensate for wages lost during slack seasons. The commenters believed that from a safety standpoint a weekly limit is unnecessary; monthly and annual limits or only monthly limits are a sufficient safeguard against fatigue.

Based on these comments and considering that the new weekly flight time limit is considerably more restrictive than the old Part 135 limits, the FAA has decided to increase the weekly limit from the proposed 32 hours to 34 hours, which is within the range of weekly flight hour limitations discussed during the regulatory negotiation process. The increase should accommodate those air carriers who submitted schedules showing flight times in excess of 32 hours and should also increase flexibility for seasonal operators and crewmembers. However, the FAA is unwilling to eliminate the weekly flight time limitation.

The FAA points out that weekly, monthly, and annual limits work in conjunction with each other and with daily required rests and flight hour limitations between rests. For example, for Part 135 scheduled operators, an annual limit of 1200 hours if divided by 12 months allows 100 flight hours a month. However, a Part 135 pilot could accumulate a maximum of 120 flight hours in a month if necessary. In the same way, the monthly limit of 120 hours if divided by 4 weeks allows for 30 flight hours each week. However, a Part 135 pilot could accumulate a maximum of 34 flight hours per week for the first 3 weeks, but could not exceed 18 flight hours during the remainder of the calendar month. Thus the weekly, monthly, and annual flight hour limits will provide more protection from acute and chronic fatigue by significantly reducing the number of weekly, monthly, and annual flight hours permitted by the old rule. Therefore, the FAA believes that the weekly limit is a necessary component of the overall regulatory scheme for the prevention of fatigue of flight crewmembers engaged in scheduled operations, and that the benefits of the amendment outweigh the costs. The costs and benefits are discussed below under "Economic Evaluation."

A number of commenters pointed out that two earlier FAA proposals, Notice 78–3B and 82–4 (45 FR 55316, August 11, 1980 and 47 FR 10748, March 11, 1982) did not contain annual limits and that one of these proposals also did not contain weekly limits. In both cases, however, the concepts for the proposed rules differed from this proposal. In Notice 78–3B annual limits were dropped but monthly and weekly limits included both flight and duty hours. In Notice 82–4 the flight time rules were simplified across the board with a single monthly limit, and an 8-hour rest for under 8 hours of flight time and a 10-hour required rest for over 8 hours of flight time. In light of comments on Notice 82–4 and the negotiations of the Advisory Committee, the FAA has determined that the final rule better serves the needs of the public, flight crewmembers, and operators. Those operators who will have additional costs connected with the weekly limit are reminded that they have an adequate time period to adjust their scheduling practices to the new weekly requirements.

A number of commenters favored the quarterly, biquarterly, and annual limits for Part 135 unscheduled operators. Two commenters objected to the limits for Part 135 unscheduled operations on the grounds that they appear potentially unsafe. One commenter pointed out that under the proposed limits, a flight crewmember could be scheduled to work a 14-hour duty day with 8 hours of flight time each day for 2 consecutive calendar months without an extended rest. Under these circumstances the flight crewmember would be within the limit of 500 hours within one calendar quarter and 800 hours within two consecutive calendar quarters. (§ 135.267(a) (1) and (2)).

The FAA recognizes that such a schedule would be allowed under the new rule. However, the quarterly limit has been set at 500 flight hours to allow for seasonal, unscheduled operations which provide an important transportation service to the public. In addition, certain safeguards are inherent in the rule. If a flight crewmember does fly 500 hours in one quarter, he or she cannot fly more than 300 hours in the quarter before nor in the quarter after. And a flight crewmember cannot fly more than 1400 hours in the year. Also a Decrease in flight crewmember must be given 13 rest periods of at least 24 consecutive hours in each quarter. If a pilot does fly 8 hours in a 14-hour duty period each day for 60 consecutive days, in the last 30 days of the quarter he or she can fly only 20 hours and must be given 13 rest periods of at least 24 consecutive hours. Although such a schedule is theoretically possible under the rule, it seems highly impractical. Finally, the rule also requires that each 14-hour duty period in this example be preceded and followed by 10 hour rest periods and that the daily flight limit of 8 hours for a single pilot and 10 hours for two-pilot crew cannot be exceeded without incurring a penalty of up to 16 hours of rest. Given the entire context of § 135.267, the flight crewmember will be adequately rested. This is in contrast to the current rule which allows a pilot to fly 8 to 10 hours a day for 7 days a week for 52 weeks.

The proposed rule distinguished a special category of Part 121 operators in § 121.471(h). Paragraph (h) established less restrictive weekly, monthly, and annual limits for operators of propeller-driven multiengine airplanes with a passenger seating configuration of 31 to 60 seats and a payload capacity range of 7,501 pounds to 18,000 pounds. The provision was based upon a proposal from the Regional Airlines Association (RAA) submitted to the Advisory Committee involved in the regulatory negotiations of the flight time limitation rules. The RAA originally proposed establishing in Part 135 special flight time limits to apply to operations of multiengine propeller-driven airplanes with a maximum passenger seating configuration of 60 seats and a maximum payload capacity of 18,000 pounds. The present benchmark for Part 135 operations, as established in Special Federal Aviation Regulation 38 (now SFAR 38–2), is a maximum seating configuration of 30 seats and a maximum payload capacity of 7,500 pounds. The basic premise of the RAA's request was that the 30-seat benchmark is inappropriate for flight time rules. According to the RAA, short-duration, passenger-carrying operations using smaller aircraft (commonly known as regional operations), whether conducted under Part 135 or Part 121, are like each other and unlike the longer haul jet operations of the major airlines. Therefore, the RAA requested that those operations in aircraft up to 60 passenger seats follow the flight time rule appropriate to their type of operation.

The FAA's proposed rule (Notice 84–3) retained the 30-passenger, 7,500 pound payload distinction as the dividing line between Part 121 and Part 135 flight time rules. However, the FAA

accommodated the RAA request by (1) proposing the same daily rest requirements and flight time limits

especially in light of the flexibility and other benefits the rule offers Part 121 and Part 135 scheduled operators. If it is

FAA is impressed that the most persuasive comments oppose allowing less restrictive cumulative limits for

practices of carriers that carriers do not know and cannot hypothesize how often

it could not accommodate many distant city pairs. Furthermore, the 9-hour cap

FAA has decided that the final rule will limit scheduled flight time between

accommodated the RAA request by (1) proposing the same daily rest requirements and flight time limits between rests for Part 121 domestic air carrier operations and for Part 135 scheduled operations; and (2) proposing flight time limits, during any 7 days, calendar month or year, for Part 135 scheduled operations, which are less restrictive than those for Part 121 domestic air carrier operations (§ 121.471(a)). These less restrictive limits were incorporated in proposed § 121.471(h) as follows:

(h) For operations of propeller driven multiengine airplanes having a passenger seating configuration of 31–60 seats and a payload capacity of 18,000 pounds or less, no air carrier may schedule any flight crewmember for flight time in scheduled air transportation or in other commercial flying if that crewmember's total flight time in all commercial flying will exceed—

(1) 1,200 hours in any calendar year.
(2) 120 hours in any calendar month.
(3) 32 hours in any 7 consecutive days.
(4) 9 hours between rest periods. [Changed to "8 hours between rest periods" in this final rule.]

Thus, in effect, proposed paragraph (h) created a special aircraft size category in the Part 121 flight time limitations without changing the benchmark for Part 135 established in SFAR 38.

Proposed paragraph (h) was a controversial issue in the Advisory Committee negotiations and the Committee did not reach consensus on the issue. While the FAA chose to include paragraph (h) in the NPRM, it stated the following reservation:

Although the FAA has incorporated the RAA requests into this proposed rule, in view of objections to proposed paragraph (h) expressed at the February 14, 1984 Advisory Committee meeting, the FAA invites comments and statistics on this issue.

During the comment period, the FAA received a number of comments on paragraph (h). Of the 54 comments received on the subject, 27 favored including paragraph (h), while 27 opposed it. Most of the comments in favor of including paragraph (h) were from air carrier associations and individual air carriers who fly Part 121 operations or dual Part 121/135 operations. These comments supported the RAA's earlier position that regional operations are like each other and unlike other Part 121 or Part 135 operations. Some dual Part 121/135 operators pointed out that without paragraph (h) dual operators would have the expense of maintaining two sets of records on flight time limitations and rest requirements for operations that are essentially the same. However, recordkeeping is not that costly, especially in light of the flexibility and other benefits the rule offers Part 121 and Part 135 scheduled operators. If it is of significant cost to keep dual records, it is not a new cost, and presumably is an anticipated cost when a Part 135 operator considers purchasing large aircraft. It is a cost that operators should take into account as part of that decision and is in no way a cost imposed by this rulemaking.

Most of the comments in opposition to paragraph (h) were from regional airline pilots who conduct operations under Part 121 and from organizations representing pilots. These comments stated that regional operations are actually more strenuous and more fatiguing than other Part 121 operations.

At the last Advisory Committee meeting on September 11, 1984, the issue of including paragraph (h) was not separately discussed as an issue by the committee members. However, several regional air carrier pilots made oral presentations to the committee in which they objected to less restrictive limits for short-duration, passenger-carrying operations. The chairman of the National Transportation Safety Board (NTSB) also made an oral presentation in which he objected to paragraph (h) as follows:

The FAA has not presented any basis for the higher flight time limitations proposed for flight crewmembers of the category of aircraft addressed in proposed 121.471(h) over the limitations set forth in 121.471(a). The operation of propeller-driven smaller airplanes and those used for commuter operations are, by the very nature of their normal use, more demanding; they fly shorter leg segments, make more approaches into smaller airports having less sophisticated navigations aids, spend proportionately more time in high density terminal environments, and encounter more often the adverse weather conditions typical of lower altitudes. Moreover, flight crewmembers of these aircraft often have a higher duty time to flight time ratio which is not accounted for in the proposed regulations. In the Board's view, there is a compelling rationale for imposing more restrictive flight time limitations on these flight crews. To allow less restrictive limitations, as proposed, will possibly jeopardize safety.

As emphasized in the NPRM, decisions in this final rule are the sole responsibility of the Administrator. Although the consensus recommendations of the Advisory Committee made a significant impact on the final rule, on this issue the Committee did not reach a consensus. Therefore, the FAA has made its own determination after considering NPRM 84–3 comments, final presentations, and the earlier deliberations. While the comments were numerically split, the FAA is impressed that the most persuasive comments oppose allowing less restrictive cumulative limits for certain Part 121 operations. The less restrictive weekly, monthly, and annual limits being adopted for Part 135 scheduled operations can be justified primarily on the grounds that present Part 135 operations are subject only to daily limits. However, Part 121 operations—including operations conducted by operators who began as Part 135 operators—have for over 30 years been subject to the 30 hour weekly, 100 hour monthly, and 1,000 hour annual limits. The FAA concludes that it cannot ensure that the present level of safety would be maintained if it were to relax these limits for some Part 121 operations. Therefore, proposed § 121.471(h) has not been included in this final rule.

Daily Flight Time Limits—Part 121 and Part 135 Scheduled Operations

The daily flight time limits and rest requirements for Part 121 domestic operations and Part 135 scheduled operations are alike except that Part 135 scheduled operations have an additional daily flight time limit of 8 hours for a one-pilot crew. Under both parts, an air carrier may not schedule a flight crewmember for more than 8 hours of flight time between required rest periods. An 8-hour flight time limit between rests is similar to the current § 121.471(b) which limits flight time to 8 hours between rests by requiring that an intervening rest of twice the number of hours of flight time but not less than 8 hours be given at or before the completion of 8 hours of flight time in any given 24-hour period.

The proposed rule limited flight time to 9 hours between rest periods. A number of commenters objected to the 9-hour limit on the basis that 9 hours had not been discussed by the Advisory Committee before drafting NPRM. The FAA proposed 9 hours as the limit between rest periods because several members stood firm on an 8-hour flight time limit in any 24 consecutive hours with a 10-hour required rest and other members stood firm on an 8-hour flight time limit with an 8-hour required intervening rest.

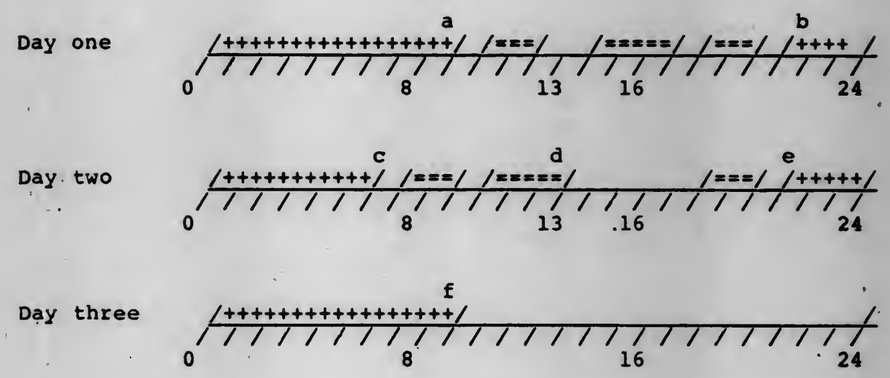
In order to gather additional information, in Notice 83–4 the FAA requested comments on how often the 9-hour cap would be reached, including the types of schedules contemplated. Only one commenter submitted specific, substantive comments on the 9-hour cap. This comment stated that current Part 121 requirements have so influenced marketing strategies and scheduling

practices of carriers that carriers do not know and cannot hypothesize how often the 9-hour cap would be reached. However, flexibility to exceed 8 hours would likely offer benefits as certain markets, which involve turn-arounds on long stage lengths, could be efficiently served within a 9-hour cap. The FAA considered this information in conjunction with a number of comments submitted by pilots, pilot associations, and others who objected to the 9-hour cap because it would extend the duty day. The FAA concluded that the proposed 9-hour cap was of dubious benefit to long-haul operations because it could not accommodate many distant city pairs. Furthermore, the 9-hour cap might extend what is already a long duty period for flight crewmembers in short-haul operations. For short-haul, passenger carrying operations, 8 hours of flight time usually involves 12 to 14 hours of duty because of the number of flights and the time needed on the ground between flights. Extending the flight time limitation between rests beyond the 8 hours currently allowed by the domestic rules in Part 121 cannot be justified at this time, and would create inconsistencies with certain other Part 121 flight time limitations. Therefore, the FAA has decided that the final rule will limit scheduled flight time between required rest periods to a maximum of 8 hours.

A number of commenters apparently view the 8-hour cap as an 8-hour limit within any 24-hour period. It should be noted that the 8-hour cap of this rule and the 8-hour cap of the current rule are not flight time limits in a rolling 24-hour period. Rather, the 8-hour cap is a flight time limit between required rest periods. It is possible under both rules to fly in excess of 8 hours within a 24-hour period. (See Figure 1 for an example of operation under the new rule.)

Figure 1

LEGALLY SCHEDULED FLIGHT TIME IN EXCESS OF 8 HOURS DURING 24 CONSECUTIVE HOURS



[+] Scheduled rest
[=] Scheduled flight time

(a) At 0900 hours the flight crewmember is scheduled for duty after 24 hours rest.

(b) At 2100 hours the flight crewmember is scheduled to be released from duty after being scheduled for 7 hours of flight time.

(c) At 0600 hours (Day two), the flight crewmember reports for duty after a 9 hour reduced rest.

(d) At 1300 hours (Day two) the flight crewmember can look back on 10 hours of scheduled flight time in 24 consecutive hours.

(e) At 2100 hours (Day two), the flight crewmember is released from duty after 7 hours of scheduled flight to receive compensatory rest of at least 12 hours.

(f) At 0900 hours (Day three), the flight crewmember completes the compensatory rest.

Daily Rest Requirements—Part 121 and Part 135 Scheduled Operations

The new rest requirements under Part 121 and Part 135 scheduled rules resolve the series-of-flights problem in current Part 121 by replacing the intervening rest concept and the 16-hour rest with a daily rest requirement based on the number of flight hours scheduled in any 24-hour period. The new daily rest requirements apply when any amount of flight time is scheduled, thereby correcting the lack of rest requirements in current Part 121 for flight crewmembers who are scheduled for

less than 8 hours of flight time in any 24-hour period. For both Part 121 and Part 135 scheduled operations for a 24-

little in that context, particularly since it does not include getting to or from the airport hotel or checking in and out.

less than 8 hours of rest. Therefore, the final compliance date of this final rule is

less than 8 hours of flight time in any 24-hour period. For both Part 121 and Part 135 scheduled operations for a 24 consecutive hour period, 9 consecutive hours of rest must be scheduled for less than 8 hours of flight time, 10 consecutive hours of rest for 8 or more but less than 9 hours of flight time, and 11 consecutive hours of rest for 9 or more hours of flight time.

To allow more flexibility than the current rule in scheduling or in adjusting scheduled rests in the event of late arrivals, the new rule provides for reducing a required rest as follows: a 9-hour rest can be reduced to 8 hours if 10 hours of rest is given at the flight crewmember's next scheduled rest; a 10-hour rest can be reduced to 8 hours of rest if 11 hours is given at the next scheduled rest; and an 11-hour rest can be reduced to 9 hours if 12 hours is given at the next scheduled rest. These reduced and compensatory rest periods are absolute and may not be further reduced under any circumstances.

It should be emphasized that the provisions for rest period reductions adopted herein provide substantially more flexibility for air carriers than is available under the current domestic rules. The change from the proposed 7½ hour reduced rest to an 8 hour reduced rest simplifies the regulation because the air carriers are accustomed to using an 8 hour rest period.

Scheduled flight time hours during any 24-hour period	Minimum hours of rest		
	Normal	Reduced	Compensatory
<8	9	8	10
>8<9	10	8	11
>9	11	9	12

NOTE.—< means less than. > means equal to or greater than.

The proposed rule allowed the 9-hour rest required for less than 8 hours of scheduled flight time to be reduced to 7½ hours provided a minimum of 10 hours rest is given at the next scheduled rest period. A large majority of the commenters who addressed this provision strongly opposed allowing a minimum rest period to be reduced to 7½ hours. The following excerpt from the comment of the Aviation Consumer Action Project (which was represented on the Committee) was typical of the anti-7½-hour minimum rest comments:

> It would seem more appropriate to limit the shrinkage, if at all, from nine hours to eight hours. An eight hour floor would seem more appropriate, particularly in the not unusual situation where the pilot lands late at night after a 'light' day of flying, but has a heavier schedule starting the next morning. Seven and one-half hours rest would seem to be too little in that context, particularly since it does not include getting to or from the airport hotel or checking in and out.

A significant number of pilots in regional air carrier operations made a joint submission in commenting on various aspects of the proposal including that for a reduced rest period of 7½ hours. This submission indicated that on one carrier alone, there are five "quick turnaround" schedules involving overnight rest periods. According to these commenters, although the rest periods are scheduled for 8 to 9 hours, frequently the flights arrive late at the overnight point thus creating a situation for reduction of the scheduled rest to 7½ hours. According to these pilots, if transportation to and from the hotel and normal functions prior to retiring and after arising are considered, the maximum time available for sleep is 5 hours and 45 minutes. These pilots contend that this amount of time is inadequate, particularly if the next day involves a heavy flight schedule.

Although the proposed 7½ hour reduced rest period was focused on during the regulatory negotiation process, the above described comments and others which opposed that provision raise a significant issue concerning whether to adopt the 7½-hour provision as proposed or modify it. This question is exacerbated by the fact that the air transportation industry is experiencing significant changes including innovative operating practices and the entry of many new air carriers. Competition has increased substantially. Thus, there is a recognizable risk that the present relatively few rest periods in the range of 7½ hours could increase substantially.

All parties agreed to a minimum rest period regardless of the amount of flight time. In determining the specific amount of such a rest period, the FAA has decided to follow a course of action which minimizes the possibility of pilot fatigue. Accordingly, the proposal, as adopted herein, is modified to change the 7½ hour reduced rest period to 8 hours. In this respect, as discussed earlier in this preamble, at the present time the National Aeronautics and Space Administration is conducting a study of pilot fatigue factors. When the results of that study are available to the FAA, the agency will review the flight time limitations and rest requirements to determine what, if any, changes are indicated.

The FAA recognizes that some of the approximately 30,000 scheduled daily flights currently operating within the United States may depend on providing less than 8 hours of rest. Therefore, the final compliance date of this final rule is delayed long enough to provide those operators affected by the minimum rest requirement ample time to adjust those flight schedules which provide for less than 8 hours of rest.

Requests that the minimum rest be an 8-hour rest at a rest facility are not being incorporated in the final rule because travel time to and from a rest facility varies according to distance, time of day, surface traffic conditions, and other variables. The FAA believes that the 8-hour minimum rest, taken together with weekly flight time limitations and compensatory requirements for rest reductions, will assure a rested flight crewmember. Since a reduced rest must be compensated for at the next scheduled rest, a flight crewmember will receive at a minimum 18 hours of rest over approximately 48 hours. Discussion at the last Advisory Committee meeting questioned whether the compensatory rest must be completed within a 48-hour period. One commenter specifically requested "definitive language" to that effect in the preamble or the proposed rule. The proposed rule only required that a compensatory rest be given at the next required rest period. The preamble by way of explanation stated that the rest would be given within "approximately a 48-hour period". The FAA did not intend to require that the compensatory rest be completed within exactly a 48-hour period. However, it was the intent of the proposal, as discussed at the last committee meeting, that the flight crewmember receive enough rest from the combined reduced and compensatory rests to overcome fatigue. In order to assure that a flight crewmember receives both the reduced and compensatory rests within a reasonable period, the final rule requires, in all appropriate sections, that the compensatory rest begin no later than 24 hours after the commencement of the reduced rest period. The longer compensatory rest is necessary within a reasonable time period to overcome any acute fatigue incurred during the flight times scheduled before and after the reduced rest period.

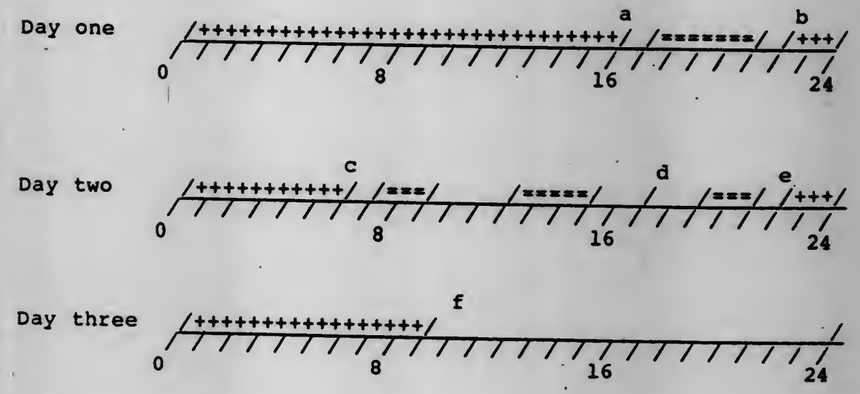
A number of commenters expressed concern that the rest reduction provisions of the rule would result in the scheduling of short flights late in the duty period of the first day, minimum rest overnight, and a strenuous flight and duty period on the second day. This concern, plus hypothetical schedules submitted in comments, suggest that these provisions have not been entirely understood. For example, one commenter stated that a flight

crewmember could be scheduled for 4 consecutive 15-hour days with 7.5 (now 8) to 9 hours of scheduled rest between the duty periods if the flight crewmember is acheduled for less than 8 hours of flight time each day. The statement is incorrect because in 4 consecutive days with less than 8 hours of scheduled flight time during any 24 hour period, a reduced rest of 8 hours for the first scheduled rest must be compensated for at the second scheduled rest by at least 10 consecutive hours of rest.

It should be noted that the rest requirement is based on the number of flight hours looking back 24 hours from the completion of each flight segment. If a pilot is scheduled for 4 hours of flight time late on the first day and receives a reduced rest of 8 hours, he or she can only be scheduled for up to 5 hours of flight time the following morning, since the flight crewmember cannot be scheduled for 9 or more flight time hours in 24 consecutive hours, based on an 8 hour reduced rest period. (See Figure 2)

Figure 2

REDUCED REST TIED TO NUMBER OF FLIGHT HOURS IN 24 CONSECUTIVE HOURS



(a) At 1600 hours the flight crewmember reports for duty after 24 hours rest.

(b) At 2200 hours the flight crewmember is scheduled to be released from duty having been scheduled to fly 4 hours.

(c) At 0600 hours (Day Two), the flight crewmember is scheduled to report for duty after an 8 hour reduced rest.

(d) By 1700 hours (Day Two), the flight crewmember may not be scheduled for more than 4 hours and 59 minutes of flight, or he or she will equal or exceed 9 hours of flight time in 24 consecutive hours which would not be legal unless he or she is scheduled for at least 9 hours of reduced rest in the preceding 24 hours.

(e) At 2200 hours (Day Two), 24 hours after the commencement of the reduced rest, the flight crewmember is released from duty to receive 11 hours of compensatory rest for 8 or more but less than 9 hours of scheduled flight time.

(f) At 0900 hours (Day Three), the flight crewmember completes the compensatory rest.

The purpose of the rest reduction is to allow scheduling flexibility for the benefit of air carriers, pilots, and the flying public. Although this rule allows for scheduling a reduced rest, it does not allow for any reduction of the minimum reduced rest or of the minimum compensatory rest under any circumstances. Therefore, in order to benefit fully from this flexibility, an air carrier should schedule realistically to avoid any possible flight schedule disruptions. The FAA expects that most air carriers will schedule at least 9- to 11-hour required rest periods. But, in those instances when air carriers need to schedule a shorter rest or when rest must be reduced because actual flight time has exceeded scheduled flight time, the rule allows for some scheduling flexibility.

A number of commenters requested that the word "rest" be defined or that rest be measured as the period between "release to report" and that release and report times be specified in the rules to allow 1 hour outside the rest period for report and 30 minutes outside the rest period for release. Actual report and release (briefing and debriefing) procedures vary among air carriers

depending on certain factors, such as agreements made with employees. In addition, actual time spent for report and release duties may vary according to the nature and time of the flight. The FAA will continue to leave briefing and debriefing time allotments to the discretion of the air carrier as long as the air carriers permit adequate time to perform required preflight and post flight duties and do not infringe on the required rest periods.

A number of commenters stated that the new sliding scale for required rest plus the system of reduced rests and compensatory rests is more complicated than the current rule. Actually, the proposed rule is very simple if reduced scheduling is not used, and no air carrier is required to schedule a reduced rest period. However, to provide guidance for scheduling in compliance with the new rule, the FAA has added examples and a chart to this preamble to the rule that can help to determine if a schedule is in compliance.

Actual Flight Time vs. Scheduled Flight Time

While §§ 121.471 and 135.265 deal primarily with daily scheduled flight hours, *actual flight hours* determine compliance with weekly, monthly, and annual limits. Sections 121.471(g) and 135.263(d) state that a flight crewmember is not considered to be scheduled for duty in excess of flight time, limitations if the scheduled flights *normally* terminate within the limitation. In scheduling flights, each air carrier must provide adequate time for the flight crewmember to perform required pre- and post-flight duties, and at least the minimum rest periods required by the rules.

A number of commenters objected to the lack of a provision for a make-up rest in Part 121 domestic operations and Part 135 scheduled operations, such as exists in the Part 135 unscheduled operations rules for instances when actual flight time exceeds scheduled flight time. In answer, compliance with the flight scheduling rules requires each air carrier to schedule realistically. In addition, each flight crewmember, if provided the opportunity, should bid a realistic schedule. If actual flight time is consistently higher than the scheduled flight time allowed, the schedule should be adjusted. It should also be noted that the required rest period in § 121.471(b) and § 135.265(b) is actual rest time which may not be reduced except in accordance with § 121.471(c) and § 135.265(c). If a flight crewmember does not receive the required number of hours of rest, the operator and the flight crewmember are in violation of the regulation. The FAA intends to enforce the regulation vigorously. Realistic scheduling and bidding should provide a reasonable balance between scheduled flight hours and rest periods on a daily, weekly, monthly, and annual basis. Public safety demands realistic scheduling and properly rested flight crewmembers.

Two commenters raised a question about the application of the rule when during a 24 consecutive hour period, actual flight time exceeds scheduled flight time. For example, if a flight crewmember is scheduled for 7:45 hours of flight and 9 hours of rest in the 24 hours preceding the scheduled completion of the flight, and because of enroute delays, the crewmember actually flies 8:05 hours, does the subsequent rest have to be 10 hours? *No,* because the flight crewmember was not scheduled for more than eight flight hours. Nor is the air carrier required to provide a longer compensatory rest at the next scheduled rest period because the actual flight time exceeded scheduled flight time. No penalty exists in either § 121.471 or § 135.265 for circumstances under which actual flight time exceeds scheduled flight time. However, if actual flight hours infringe on a required minimum reduced rest or makeup rest, the full, required minimum rest must be given at the completion of the late flight even if doing so results in late departures for subsequent flights. As a further example, if a flight crewmember is scheduled for 5 hours of flight followed immediately by 9 hours of rest and because of reasons beyond the control of the operator or flight crewmember the flight infringes on the scheduled rest, one of two events could occur: (1) If the total scheduled flight time in the 24 consecutive hours is less than 8, the required rest could be reduced to 8 hours with a compensatory rest of 10 hours given at the next scheduled rest; (2) If the rest is already a minimum rest, the flight crewmember must be given that rest, which may mean that subsequent scheduled flights will have to be delayed.

Flight Crewmember Responsibility

At the September 11, 1984 meeting, several committee members requested that the proposed language in § 121.471(a) ". . . no domestic air carrier may schedule any flight crewmember and no flight crewmember may accept . . ." be changed by deleting the words "no flight crewmembers may accept." According to the committee, the phrase places responsibility for accepting an assignment on the crewmember which can create labor-management problems for the air carriers. Committee members think that the air carriers should have full responsibility for scheduling flight time. Members representing labor organizations expressed the concern that in the event of an accident, a flight crewmember could be blamed if he or she had accepted an assignment for flight time beyond his or her limit. A number of commenters also stated that requiring flight crewmembers to be responsible for the flight time limits could create confusion if a difference of opinion arises between a flight crewmember and an operator as to whether a flight will extend beyond the flight time limits.

"Flight crewmember responsibility" is a requirement in current Part 135, § 135.261. The FAA has retained the language throughout the final rule because the provision is essential for enforcement of the flight time limits. For example, in instances where a flight crewmember has logged commercial flying other than the flight time logged for the air carrier, the air carrier might not have knowledge of the additional commercial flying. Thus, the flight crewmember must also be responsible for complying with the flight time limits and rest requirements.

The FAA wants to stress that the goal of these revisions is to prevent fatigue. Acute or short-term fatigue will be prevented by the introduction of a minimum daily rest requirement in Part 121, regardless of the amount of flight time scheduled. Cumulative or long-term fatigue will be prevented by instituting either weekly, monthly, and annual flight time limitations for Part 135 scheduled operations or quarterly, biquarterly, and annual flight time limitations for Part 135 unscheduled operations. It is the responsibility of both the operator and the flight crewmember to prevent fatigue, not only by following the regulations, but also by acting intelligently and conscientiously while serving the traveling public. This means taking into consideration weather conditions, air traffic, health of each flight crewmember, or any other circumstances (personal problems, etc.) that might affect the flight crewmember's alertness or judgment on a particular flight. The FAA also emphasizes that accurate flight time records must be made. The agency will consider it a very serious matter if recording of flight time is not accomplished in an honest manner.

Dual Operations

In Notice 84-3, the FAA stated that "Part 135 operators who operate scheduled passenger-carrying operations under Part 121 are subject to the domestic air carrier flight time limitations of Subpart Q." The FAA requested comments on whether additional language was needed in the rule to clarify this requirement. The purpose of the statement was to clarify for air carriers that operate under both Part 121 and Part 135, that they must comply with Part 121 Subpart Q flight time limits and rest requirements for their Part 121 domestic air carrier operations. The statement was specifically referring to Part 135 operators who had been operating scheduled passenger-carrying operations under Part 121 Subpart S and who recently have been required to comply with the domestic air carrier requirements of Subpart Q and other rules applicable to domestic air carrier operations. No specific comments were received on this issue.

A number of comments indicated and the deliberations of the Advisory Committee confirmed the existence of a broader problem concerning dual operations. Several comments were received from air carriers who fly both scheduled and unscheduled operations. These comments expressed confusion about how to comply with the rules. Should a dual operator make all its operations comply with whatever the most restrictive flight time limits and rest requirements are? For example, should a Part 135 scheduled operator who has some Part 121 operations comply in all operations with the more restrictive Part 121 rules? Or should that operator maintain separate crews, one for Part 121 operations and one for Part 135 operations? The same questions arise for operators who have both Part 135 scheduled and Part 135 unscheduled operations, and for operators who fly different types of Part 121 operations, such as domestic and supplemental.

The long-standing policy of the FAA has been to permit dual operators to use the same flight crewmembers interchangeably for different types of operations. However, an operator may maintain separate crews for different types of operations if that is more convenient. To be in compliance with the rules, a pilot who files dual operations must, in all respects, comply with the flight time limits and rest requirements for the particular operation being conducted. Thus, under the new rule, a pilot flying Part 121 domestic flights and Part 135 scheduled flights could legally fly both types of flights interchangeably up to 1,000 hours in a calendar year. The pilot could then continue to fly Part 135 scheduled flights for an additional 200 hours, but could no longer fly Part 121 domestic flights. The same principle would apply for the monthly and weekly limits. In the case of dual operators who operate Part 121 domestic and supplemental flights, a pilot could fly up to 30 hours of domestic flight operations and supplemental operations in less than 7 days. During a 7-day period, the pilot could then continue to fly supplemental operations, which have no weekly limit, but could not fly more hours of domestic operations. However, the 30 hours in 7 days limit may prohibit the pilot from conducting a domestic flight on the eighth day.

Dual operators who assign pilots interchangeably on a daily basis must also see that the pilot has satisfied all of the flight time limits and rest requirements. Thus, for any assigned flight hours, a pilot must have had the required amount of rest and must fly within the daily flight time limitations for the particular type of operation. For example, a pilot who flies both Part 135 scheduled operations and Part 135 unscheduled operations on a daily basis must be in compliance with both sets of rest and flight requirements. If a pilot is flying scheduled operations morning and afternoon, the pilot must have had at least the required rest under § 135.265 and may not fly more than 8 hours between rests. If in addition to scheduled flights, the pilot is flying unscheduled operations in the middle of the day, the pilot must have had at least 10 hours of rest in the 24 hours preceding the completion of any flight.

On a daily basis, in instances where the requirements are not parallel (most cases) the more restrictive limits will necessarily apply. A certificate holder who plans less than 8 hours of flight time for combined scheduled and unscheduled flights must schedule at least 10 hours of rest preceding the flight hours. Certificate holders who plan more than 9 hours of scheduled and unscheduled flights must give 11 hours of rest in the preceding 24 hours. If the certificate holder reduces the 11-hour rest as allowed under § 135.265(c)(3), he may only reduce it to 10 hours or he will not be in compliance with § 135.267(c)(2). In the same way, a certificate holder who conducts scheduled and unscheduled operations on a daily basis must adhere to both daily flight time limits of § 135.265(a) (4) and (5), and § 135.267(c) (1) and (2) as applicable. This certificate holder cannot schedule a pilot for more than 8 hours of flight time between required rest periods nor schedule a pilot for more than 10 hours of flight time in any 24 consecutive hours.

Clearly, dual operations do present scheduling complications and always have. However, the FAA believes that it is beneficial to the majority of operators to have flight time limits and rest requirements specifically suited to different types of operations. One rule for all operations would eliminate the complications of dual operations, but might unreasonably restrict certain types of operations. Under the new rule, dual operators will continue to be required to comply with all applicable rules. However, in Part 121 and Part 135 rules certain mechanisms exist which allow some dual operators to simplify their operations. Section 121.5 allows flag and domestic air carriers to obtain authority from the Administrator to conduct charter flights or other special services, over certain routes, under the rules applicable to flag and domestic air carriers. The requirements in § 135.261 have been changed from the proposed rule to allow any Part 135 operator the option of conducting all Part 135 operations under the rules for scheduled operations after obtaining an appropriate operations specification amendment. This should reduce the administrative and operational management burdens for Part 135 dual operators.

Section by Section Discussion

Part 121, Subpart Q—Flight Time Limitations and Rest Requirements: Domestic Air Carriers

Subpart Q of Part 121 consists of §§ 121.470 and 121.471. Throughout Subpart Q, the words "rest requirements" have been added, in the subpart heading, in the body of § 121.470, and in the heading of § 121.471. In addition, certain nonsubstantive editorial changes have been made for clarity or correctness.

The following sections describe the technical changes to the proposed rule incorporated in the final rule. All of the major issues involving Part 121 and related changes have been discussed earlier in this preamble.

Section 121.471—Flight time limitations and rest requirements: All flight crewmembers.

Paragraph (a)(4) is changed from the proposed rule by adding the word "required" to clarify that the rest period must be a scheduled rest period as described in paragraph (b) or (c). The proposed 9 flight hours between rests in paragraph (a)(4) is changed to 8 flight hours, and the proposed minimum of 7½ hours of rest in paragraph (c) (1) is changed to 8 hours.

Paragraphs (c) (1), (2), and (3) are changed from the proposed rule to

Advisory Committee and those who commented in writing on the rule

Section 135.263—Flight time limitations and rest requirements: All certificate

Section 135.267—Flight time limitations and rest requirements: Unscheduled

Paragraphs (c) (1), (2), and (3) are changed from the proposed rule to clarify in the rule that the compensatory rest must begin within 24 hours of the commencement of the reduced rest. (See the "Daily Rest Requirements Part 121 and Part 135 Scheduled Operations" section of the preamble.) The undesignated paragraph at the end of paragraph (c) is redesignated as paragraph (c)(4) in order to make its relationship to the paragraph clear.

The word "duty" in the second line of paragraph (g), which describe flight time in excess of limitations, is changed in the final rule to "flight time", for consistency.

Paragraph (h) is removed, as discussed in the section on "Cumulative Flight Time Limits—Certain Part 121 Operations."

Part 135, Subpart, F—Flight Crewmember Flight Time Limitations and Rest Requirements

The flight time limitations and rest requirements for Part 135 operations are organized into the following categories to accommodate the needs of the varied operations conducted under Part 135: (1) general requirements for all Part 135 operations; (2) scheduled operations; (3) unscheduled operations (one- and two-pilot crews and augmented crews); and (4) helicopter hospital emergency medical evacuation services (HEMES).

Some technical changes have been made throughout Part 135, Subpart F. First, the words "rest requirements" are added to the subpart and section headings throughout the subpart in order to make it clear that the subpart contains rest requirements as well as flight time limitations.

Second, whenever the word "duty" meant "flight time" the wording has been changed to read "flight time" in order to make the language in the subpart consistent with the FAA interpretation of the word "duty".

In addition, certain nonsubstantive editorial changes have been made.

The following sections detail the technical changes from the proposed rule in the final rule. They also describe those changes and comments related to controversial issues in specific sections of Part 135, Subpart F. General issues related to both Parts 121 and 135 have been considered in earlier sections of this preamble.

Section 135.261—Applicability.

Proposed § 135.216(b) limited by definition "scheduled operations" to "scheduled passenger carrying operations" with a published schedule of at least five round trips per week. Cargo operators represented on the Advisory Committee and those who commented in writing on the rule requested that cargo operations also be allowed to operate under Section 135.265, scheduled operations rules. The FAA has changed the proposed rule to permit any Part 135 operator to comply with the flight time limitations and rest requirements of § 135.265 thereby reducing any compliance burden caused by keeping two sets of records. In addition, paragraph (b) has been restructured for the sake of clarity.

Paragraph (c) specifies that operations not included in the definition of "scheduled passengers-carrying operations" and operations conducted only within the state of Alaska (except for the helicopter hospital emergency medical evacuation operations) are conducted under the rest requirements and flight time limits of §§ 135.267 and 135.269. Comments were invited by the FAA on the inclusion of scheduled Alaskan operations under Part 135 unscheduled operations. One commenter opposed including Alaskan operations under unscheduled operations because the commenter believed that all operators providing regularly scheduled air service should be subject to the same rules. On this issue, the FAA remains in agreement with certain members of the Advisory Committee who maintain that because of the size of the state and the weather conditions, Alaska has a unique flying environment which justifies the flight time limits and rest requirements applicable to unscheduled operations. One commenter who opposed the rule apparently assumed that scheduled operators in Alaska would have to comply with scheduled rules. This is a misunderstanding of the proposal. Scheduled and unscheduled operations conducted solely within the state of Alaska must comply with § 135.267 and § 135.269, i.e., rules for unscheduled operations. However, Alaskan operators may elect to comply with § 135.265, flight time limitations and rest requirements for scheduled operations, and obtain an appropriate operations specification amendment.

Some commenters requested that large helicopters, those with a passenger seating capacity of more than 30 people, be allowed to fly under the Part 135 flight time limitations and rest requirements. They argued that the new, large helicopters are operated in the same way and under the same conditions as smaller helicopters. This concern is outside the scope of this rulemaking. The operation of large helicopters has been accommodated in a recent revision of SFAR 36.

Section 135.263—Flight time limitations and rest requirements: All certificate holders.

Section 135.263 contains requirements that apply either to all operations under Part 135 or to more than one type of operation. Most of the paragraphs in § 135.263 originated in current § 135.261. Paragraph (d) states that under certain conditions a flight crewmember is not considered to have flown in excess of the flight time limitations. It has been changed from proposed § 135.263 (d) to clarify that it applies to unscheduled as well as scheduled operations.

The requirements for compensatory rest for flight crewmembers who have exceeded the daily flight time limitations, which appeared in proposed § 135.263(e), have been moved to §§ 135.267(e), 135.269(c),and 135.271(c) for clarity and in order to tailor them appropriately to the different unscheduled operations.

The deviation authority that appeared in proposed § 135.263(f) is moved to § 135.267(g) because it concerns only that section.

Section 135.265—Flight time limitations and rest requirements: Scheduled operations.

The words "air carrier" in this section have been changed to "certificate holder" in order to clarify that § 135.265 applies to any operator conducting scheduled operations under Part 135, not just air carriers.

The flight time limit in § 135.265(a)(3) has been changed from "32 hours in any 7 consecutive days" to "34 hours in any 7 consecutive days." (See the discussion of "Cumulative Flight Time Limits.")

Section 135.265(a)(5) has been amended to clarify that the rest periods referred to are the required rest periods in paragraphs (b) and (c). The proposed 9 hours between rest in paragraph (a)(5) is changed to 8 hours, and the proposed minimum of 7½ in paragraph (c)(1) is changed to 8 hours. Paragraph (a)(5) is also changed from the proposed rule by adding the phrase "qualified under this part for the operation being conducted." This phrase was inadvertently omitted from the proposal. This is consistent with other provisions imposing certain qualifications for certain types of operations.

Paragraphs (c) (1), (2), and (3) are changed from the proposed rule to clarify in the rule that the make-up rest must commence within 24 hours of the beginning of the reduced rest. (See the "Daily Rest Requirements Part 121 and Part 135 Scheduled Operations" section of this preamble.)

Section 135.267—Flight time limitations and rest requirements: Unscheduled one- and two-pilot crews.

For the first time, quarterly, biquarterly, and yearly flight time limits are imposed. Quarterly limits, as opposed to monthly limits, allow flexible scheduling for seasonal and on-demand operations and provide adequate rest for flight crewmembers engaged in such operations. The rule requires 13 rest periods of at least 24 hours in each calendar quarter, as proposed, instead of 24 hours off in 7 days. This provides for the same number of days off as are required for Part 121 and scheduled Part 135 operators, and at the same time recognizes that unscheduled pilots, particularly in remote operating locations, may not find it convenient or necessary to take one day off every 7 days.

Daily flight time limits for one- and two-pilot crews remain 8 and 10 hours, respectively, in every 24 consecutive hours. However, § 135.267(c), which is adopted as proposed, allows an operator and flight crewmember to use a schedule of regular daily duty hours rather than a rolling 24-hour clock.

In paragraph (a), editorial changes have been made: (1) to clarify that the section applies to unscheduled one- and two-pilot crews, and (2) to remove the words "duty during."

Paragraph (b)(2) is changed by adding the phrase "for the operation being conducted." This is consistent with other provisions imposing certain qualifications for certain types of operations.

Paragraph (c)(1) is changed to incorporate elements of proposed paragraph (e), and (e) is deleted in order to avoid redundancy. Also, the paragraph is changed to clarify that the regularly scheduled rest period may be more than 10 hours.

A new paragraph (e) is added which contains the make-up rest provisions for overflights formerly in § 135.263(e) of the proposed rule. The provisions were moved unchanged to this section for convenience and to enable the similar provisions that apply to augmented crews in § 135.269 and to helicopter emergency medical evacuation services (HEMES) in § 135.271 to be tailored to those sections.

Comments on the make-up rest provision stated that, since a 16-hour rest was considered excessive under current Part 121 and Part 135, the maximum make-up rest should be no more than 13 hours of rest. The FAA does not agree. Although 16 hours may be excessive as a routinely required rest, it is not excessive as a make-up rest. The purpose of the make-up rest is to ensure that each flight crewmember is properly rested prior to the next assignment. The provision has always acted as an incentive to operators to plan for actual flight times, and leave an adequate margin of safety.

A number of commenters wrote that the make-up rest clause is inequitable because it applies to Part 135 operations and not Part 121 operations. Actually the provision applies to the unscheduled operations in Part 135, where daily flight time limits are actual limits. In scheduled operations under Part 135 (§ 135.265) and Part 121 operations, there is a limit to the number of scheduled flight time hours (8 hours) between required rest periods, but no specified limit to actual daily flight time (except for one-pilot crews in § 135.265). The wording and position of the make-up rest clause in proposed § 135.263(e) is changed to make it clear that it applies to the unscheduled flights in §§ 135.267 through 135.271, and not to the scheduled flights in § 135.265. The undesignated paragraph that followed proposed § 135.263(e) is deleted. The paragraph is unnecessary now that the application of the make-up rest provision has been clarified.

The deviation authority originally proposed in § 135.263(f) is transferred to § 135.267(g), the specific section to which it applies. If granted, a deviation will allow an operator who conforms with the current rules to continue under those rules for a period of time not to exceed 2 years. This will give operators who may experience difficulties because of the more restrictive cumulative flight time limits in new Part 135, Subpart F, additional time to adjust their operations. The reference to § 135.269 has been removed from the deviation authority since the current rules do not address augmented crews, and the deviation authority is not intended to apply to those operating under exemptions to the current rule. Each of these exemptions contains a provision that states that the exemption terminates with the adoption of any amendments to the Part 135 flight time limitations and rest requirements that provide for augmented crews.

The proposed rule stated that, within 2 years after the issuance of this rule, the Director of Flight Operations could issue operations specifications authorizing a deviation from any specific requirement of §§ 135.267 and 135.269 if he or she finds that the deviation provides a substantially equivalent standard of safety. Commenters pointed out that the proposal did not limit either the duration of the deviation or the time within which the FAA must respond to a request for a deviation. To correct the proposed language, the final rule makes the deviation effective for up to 2 years after the effective date of this rule, and allows an operator who has requested a deviation to operate under the current rule until the FAA has reviewed the request and made a final determination.

One commenter also suggested that deviations be discouraged and that requests for deviations be reviewed by personnel specifically trained in flight crew stress and fatigue management. The FAA intends that the deviation authority will provide a smooth transition to compliance with the new rule. The FAA will base its approval for allowing a deviation on the certificate holder's need for additional time and its ability to maintain a comparable level of safety.

Section 135.269—Flight time limitations and rest requirements: Unscheduled three- and four-pilot crews.

Section 135.269 provides flight time limitations and rest requirements for augmented crews which in the past have always been handled by exemption. This section limits not only hours of flight deck duty, but also hours of duty and hours aloft.

Paragraph (b) is redesignated as paragraph (d) and moved to the end of the section. Proposed paragraph (c) becomes paragraph (b) and the cross references are changed accordingly. This is done to make the organization of this section consistent with the rest of the subpart.

The term "flight time" in paragraphs (b)(2) and (c) is changed to "flight deck duty" in order to make the language consistent with similar provisions in Part 121 (§§ 121.507 and 121.509). The word "approved" in proposed paragraph (b)(5) has been replaced by the word "adequate" to be consistent with the requirements applicable to augmented crews in Part 121.

A new paragraph (c) is added which contains the compensatory rest provisions, formerly in proposed § 135.263(e), which apply particularly to augmented crews.

No substantive comments on § 135.269 were received.

Section 135.271—Helicopter hospital emergency medical evacuation service (HEMES).

This rule provides specific flight time limits and rest requirements for helicopter hospital emergency medical evacuation services. The rule was based on FAA experience with numerous certificate holders operating under

exemption. The internal cross reference in proposed § 135.271(a) has been deleted, and the referenced material has

exemption. The internal cross reference in proposed § 135.271(a) has been deleted, and the referenced material has been included in the final rule in full for the convenience of the user.

New compensatory rest provisions have been added to this section in paragraph (c). The FAA has decided that the provisions that were contained in proposed § 135.263(e) are not appropriate to HEMES operations, nor do they reflect the requirements of the exemptions on which this rule is based. As stated in the preamble to the NPRM, this rule is based on the terms of typical exemptions for emergency evacuations because of their undoubted public benefit. Typically, the exemption required the development of procedures for the termination of a HEMES assignment "When it becomes apparent that . . . a flight crewmember might be required, for an emergency situation, to exceed 8 hours duty during flight time." While the FAA does not find it necessary for the rule to be that stringent, a HEMES pilot who exceeds 8 flight hours during any 24-hour period will not be given a graduated rest. Instead, he or she must be relieved of the HEMES assignment and immediately given a minimum rest period of:

1. 12 consecutive hours for an assignment of less than 48 hours.

2. 16 consecutive hours for an assignment of more than 48 hours.

A flight crewmember who has exceeded 8 flight hours in any 24-hour period of a HEMES assignment, because of circumstances beyond the control of the certificate holder or flight crewmember, is assumed to be tired and may be unsafe to conduct additional flight operations under demanding conditions. It is highly improbable that any HEMES flight crewmember will exceed 8 flight hours during any 24-hour period of a HEMES assignment, because the assignment is for emergency medical evacuation purposes only. The HEMES assignment is not to be used for the routine transport of patients to, from, or between hospitals. Rather, it is intended to be used in bona fide emergency situations.

Proposed paragraph (d) is changed by adding a sentence which explains that the flight crewmember must be relieved if he or she has not or cannot receive 8 hours of rest during any 24 consecutive hour period of a HEMES assignment. It is amended to be consistent with the conditions of the exemptions. The word "approved" in proposed paragraph (f) has been replaced by the word "adequate" to be consistent with the language in other parts of the FAR.

Paragraph (h)(1) is changed from the proposed rule by removing the words "at least 24 hours but," in order to make paragraph (h) compatible with the new compensatory rest provisions in paragraph (c).

One commenter objected to the exclusion of fixed-wing aircraft from the HEMES rule. The FAA has excluded fixed-wing aircraft because they are not truly hospital based, and the flight crewmember of an airplane does not work in the same closely controlled environment experienced by a helicopter flight crewmember based at a hospital heliport.

Economic Evaluation

FAA analysis indicates that there should be no significant adverse impact associated with the amendments, and that they will not have a significant economic impact on a substantial number of small entities. The amendment includes a number of changes which should benefit the industry. However, it is not possible for the FAA to quantify the benefits associated with the rule, as these benefits can only be achieved by the air carriers after any operational flexibilities are translated into actual use.

Part 135 Benefits

The benefits which result specifically from weekly and other flight time limits derive from improved safety, since the maximums established will prevent a flight crewmember from accruing unsafe amounts of flight time. These benefits are not specifically quantifiable, due to a lack of detailed accident records. Specifically, accident records rarely address cumulative fatigue, which is the primary problem addressed by these amended standards.

There are additional benefits associated with the amendments, resulting from increased flexibility in crew scheduling options, and reduced penalties for exceeding flight time limits. Aircraft and crew utilization can improve, providing benefits. Scheduled operators, for example, can provide 9 hours of rest after less than 8 hours of flight time, down from a minimum 10 hours of rest under current rules. The minimum rest periods can be reduced, whereas previous minimums could not be reduced. Additionally, while the regulation for unscheduled operators before amendment required 16 hours of make-up rest if daily flight time limits were exceeded, the amendment allows for less compensating rest, unless the daily limit is exceeded by more than 1 hour. After amendment, there is no requirement for scheduled operators to provide compensating rest when flight time limits are exceeded. The benefits associated with crew utilization flexibility and the change in make-up rest cannot be quantified with the data available. The changes can be evaluated economically by management only after experience with the flexibilities of the final rule.

Part 135 Costs

Part 135 operators incur costs as a result of these amendments in two ways. First, operators' scheduling costs will increase; second, decreased crew utilization will involve a cost for some operators. These costs will be higher for scheduled operators than for unscheduled operators.

Increased scheduling costs will affect both scheduled and unscheduled operators. Scheduled operators will be more heavily impacted than unscheduled operators, because the most complicated and restrictive new flight time limit is the one limiting scheduled operators to 34 hours of flight time in 7 consecutive days. This restriction will involve a more complex crew scheduling process for larger operators, since the crew scheduling task will be more complicated than at present.

The economic analysis assumes that the scheduling cost for the largest 50 commuter airlines will be approximately $25,000 per year, approximately equivalent to one full-time clerk and additional office expenses. The next largest 50 commuters are assumed to incur one half the cost of the largest commuters, and the smallest 40 scheduled operators are assumed to incur a cost of $2,500 yearly. The total scheduling cost impact for scheduled operators is thus approximately $2,000,000 for the industry.

Nonscheduled air taxi operators may incur minor scheduling cost increases since they must now be concerned with quarterly, biquarterly, and annual total flight hours in addition to daily flight hours. This analysis assumes that one half of the approximately 4,000 unscheduled operators will incur no notable cost, due to their very small size. The other half of unscheduled operators is assumed to incur costs averaging $500 per operator.

The weekly and other flight time limits also involve costs associated with crew utilization. Some scheduled firms will have to add to crew count in order to handle peaks of activity. Data submitted in comments was not substantive, however, and we expect that only about 20 scheduled operators will be affected, incurring a cost of

$25,000 to $50,000 per firm. The range of industry impacts is therefore between $500,000 and $1,000,000. The impact of crew utilization changes for unscheduled operators is expected to be negligible, based on review of the comments.

One final element of the amendment provides benefits to certain operators, particularly operators of unscheduled helicopter services. Section 135.267(c) refers to operations having regularly assigned duty periods, and it is discussed in the preamble to the final rule. This section involves a minor benefit which is not quantifiable, due to lack of information.

There are no other rule elements which involve notable increased costs for the Part 135 operator.

Part 121 Costs and Benefits

There is only one major change for Part 121, namely the new rule for daily rest requirements. The amendment is somewhat simpler than the rule prior to amendment and provides more flexibility in crew utilization. One potentially costly provision is that, under the present rules, there is no minimum rest requirement when crewmembers are scheduled for less than 8 hours of flight time in 24 consecutive hours. Under the amendment, there is a minimum 9-hour rest period required, which is reducible to 8 hours, as explained elsewhere. However, this cost is minimal and is balanced by benefits. The impact is minimal because the actual number of routings which would be affected by the amendment are very few.

Benefits of the Part 121 amendments result from better crew utilization, a possible reduction in the amount of time crews must be away from home, and, probably, a reduction in the number of days per month the typical crew member must work. The benefits of this amendment can only be quantified by air carriers, after experience is gained under the amendment.

For both classes of air operator, the FAA believes that the benefits of the amendments exceed any costs involved with showing compliance.

Conclusion

The FAA has determined that this amendment involves a regulation which is not major under Executive Order 12291 but is significant under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). This final rule is expected to generate no net cost, while maintaining or increasing the level of safety. Although there are a number of changes in the regulation, any potentially costly changes would be balanced by benefits. Under the terms of the Regulatory Flexibility Act of 1980, Federal Agencies must review rules with particular concern about the impact rules might have on small entities. It is certified that this rule will not have significant economic impact on a substantial number of small entities because the only costs implied are minimal and balanced by the benefits of the rule. A summary of the economic evaluation is printed in the preamble to this final rule, and a copy of the full economic evaluation is filed in the docket and may also be obtained by contacting the person listed under "**FOR FURTHER INFORMATION CONTACT.**"

Compliance Date

This rule will become effective October 1, 1985, at which time any certificate holder who wishes to may begin complying with the new flight time and rest requirements. However, the final compliance date of this rule is delayed until October 1, 1986, in order to allow certificate holders ample time to reschedule and bring their operations into full compliance with this rule. The delayed compliance date is particularly intended to give those few operators who have flight schedules that depend on less than 8 hours of rest time to reschedule those flights.

List of Subjects

Aviation safety, Air carriers, Aircraft, Airmen, Charter flights, Reporting and recordkeeping requirements.

14 CFR Part 135

Aviation safety, Air taxis, Airmen, Aircraft, Reporting and recordkeeping requirements.

Rule

In consideration of the foregoing, the Federal Aviation Administration amends Parts 121 and 135 of the Federal Aviation Regulations (14 CFR Parts 121 and 135) as follows:

PART 121—CERTIFICATION AND OPERATIONS: DOMESTIC, FLAG AND SUPPLEMENTAL AIR CARRIERS AND COMMERCIAL OPERATORS OF LARGE AIRCRAFT

1. The authority citation for Part 121 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1355, 1356, 1357, 1401, 1421–1430, 1472, 1485, and 1502; 49 U.S.C. 106(g) (Revised, Pub. L. 97–449, January 12, 1983).

2. By revising the table of contents of Subpart Q of Part 121 to read as follows:

Subpart Q—Flight Time Limitations and Rest Requirements: Domestic Air Carriers

Sec.
121.470 Applicability.
121.471 Flight time limitations and rest requirements: All flight crewmembers.

3. By revising Subpart Q of Part 121 to read as follows:

Subpart Q—Flight Time Limitations and Rest Requirements: Domestic Air Carriers

§ 121.470 Applicability.

This subpart prescribes flight time limitations and rest requirements for domestic air carriers.

§ 121.471 Flight time limitations and rest requirements: All flight crewmembers.

(a) No domestic air carrier may schedule any flight crewmember and no flight crewmember may accept an assignment for flight time in scheduled air transportation or in other commercial flying if that crewmember's total flight time in all commercial flying will exceed—

(1) 1,000 hours in any calendar year;
(2) 100 hours in any calendar month;
(3) 30 hours in any 7 consecutive days;
(4) 8 hours between required rest periods.

(b) Except as provided in paragraph (c) of this section, no domestic air carrier may schedule a flight crewmember and no flight crewmember may accept an assignment for flight time during the 24 consecutive hours preceding the scheduled completion of any flight segment without a scheduled rest period during that 24 hours of at least the following:

(1) 9 consecutive hours of rest for less than 8 hours of scheduled flight time.
(2) 10 consecutive hours of rest for 8 or more but less than 9 hours of scheduled flight time.
(3) 11 consecutive hours of rest for 9 or more hours of scheduled flight time.

(c) An air carrier may schedule a flight crewmember for less than the rest required in paragraph (b) of this section or may reduce a scheduled rest under the following conditions:

(1) A rest required under paragraph (b)(1) of this section may be scheduled for or reduced to a minimum of 8 hours if the flight crewmember is given a rest period of at least 10 hours that must begin no later than 24 hours after the commencement of the reduced rest period.

(2) A rest required under paragraph (b)(2) of this section may be scheduled for or reduced to a minimum of 8 hours if the flight crewmember is given a rest period of at least 11 hours that must

begin no later than 24 hours after the commencement of the reduced rest

Sec.
135.267 Flight time limitations and rest

holder requires of a flight crewmember and provides to transport the

commencement of the reduced rest period.

(3) If the combined duty and rest

(1) At least 10 consecutive hours of

VOL 50 ISS 138 JL 18 1985 UMI

begin no later than 24 hours after the commencement of the reduced rest period.

(3) A rest required under paragraph (b)(3) of this section may be scheduled for or reduced to a minimum of 9 hours if the flight crewmember is given a rest period of at least 12 hours that must begin no later than 24 hours after the commencement of the reduced rest period.

(4) No air carrier may assign, nor may any flight crewmember perform any flight time with the air carrier unless the flight crewmember has had at least the minimum rest required under this paragraph.

(d) Each domestic air carrier shall relieve each flight crewmember engaged in scheduled air transportation from all further duty for at least 24 consecutive hours during any 7 consecutive days.

(e) No domestic air carrier may assign any flight crewmember and no flight crewmember may accept assignment to any duty with the air carrier during any required rest period.

(f) Time spent in transportation, not local in character, that an air carrier requires of a flight crewmember and provides to transport the crewmember to an airport at which he is to serve on a flight as a crewmember, or from an airport at which he was relieved from duty to return to his home station, is not considered part of a rest period.

(g) A flight crewmember is not considered to be scheduled for flight time in excess of flight time limitations if the flights to which he is assigned are scheduled and normally terminate within the limitations, but due to circumstances beyond the control of the air carrier (such as adverse weather conditions), are not at the time of departure expected to reach their destination within the scheduled time.

PART 135—AIR TAXI OPERATORS AND COMMERCIAL OPERATORS

4. The authority citation for Part 135 continues to read as follows:

Authority: 49 U.S.C. 1354(a), 1355(a), 1421 through 1431, and 1502; 49 U.S.C. 106(g) (Revised Pub. L. 97-449, January 12, 1983).

5. By revising the table of contents of Subpart F of Part 135 to read as follows:

Subpart F—Flight Crewmember Flight Time Limitations and Rest Requirements

Sec.
135.261 Applicability.
135.263 Flight time limitations and rest requirements: All certificate holders.
135.265 Flight time limitations and rest requirements: Scheduled operations.
135.267 Flight time limitations and rest requirements: Unscheduled one- and two-pilot crews.
135.269 Flight time limitation and rest requirements: Unscheduled three- and four-pilot crews.
135.271 Helicopter hospital emergency medical evacuation service (HEMES).

6. By revising Subpart F of Part 135 to read as follows:

Subpart F—Flight Crewmember Flight Time Limitations and Rest Requirements

§ 135.261 Applicability.

Sections 135.263 through 135.271 prescribe flight time limitations and rest requirements for operations conducted under this part as follows:

(a) Section 135.263 applies to all operations under this subpart.

(b) Section 135.265 applies to:

(1) Scheduled passenger-carrying operations except those conducted solely within the state of Alaska. "Scheduled passenger-carrying operations" means passenger-carrying operations that are conducted in accordance with a published schedule which covers at least five round trips per week on at least one route between two or more points, includes dates or times (or both), and is openly advertised or otherwise made readily available to the general public, and

(2) Any other operation under this part, if the operator elects to comply with § 135.265 and obtains an appropriate operations specification amendment.

(c) Sections 135.267 and 135.269 apply to any operation that is not a scheduled passenger-carrying operation and to any operation conducted solely within the State of Alaska, unless the operator elects to comply with § 135.265 as authorized under paragraph (b)(2) of this section.

(d) Section 135.271 contains special daily flight time limits for operations conducted under the helicopter emergency medical evacuation service (HEMES).

§ 135.263 Flight time limitations and rest requirements: All certificate holders.

(a) A certificate holder may assign a flight crewmember and a flight crewmember may accept an assignment for flight time only when the applicable requirements of §§ 135.263 through 135.271 are met.

(b) No certificate holder may assign any flight crewmember to any duty with the certificate holder during any required rest period.

(c) Time spent in transportation, not local in character, that a certificate holder requires of a flight crewmember and provides to transport the crewmember to an airport at which he is to serve on a flight as a crewmember, or from an airport at which he was relieved from duty to return to his home station, is not considered part of a rest period.

(d) A flight crewmember is not considered to be assigned flight time in excess of flight time limitations if the flights to which he is assigned normally terminate within the limitations, but due to circumstances beyond the control of the certificate holder or flight crewmember (such as adverse weather conditions), are not at the time of departure expected to reach their destination within the planned flight time.

§ 135.265 Flight time limitations and rest requirements: Scheduled operations.

(a) No certificate holder may schedule any flight crewmember, and no flight crewmember may accept an assignment, for flight time in scheduled operations or in other commercial flying if that crewmember's total flight time in all commercial flying will exceed—

(1) 1,200 hours in any calendar year.

(2) 120 hours in any calendar month.

(3) 34 hours in any 7 consecutive days.

(4) 8 hours during any 24 consecutive hours for a flight crew consisting of one pilot.

(5) 8 hours between required rest periods for a flight crew consisting of two pilots qualified under this part for the operation being conducted.

(b) Except as provided in paragraph (c) of this section, no certificate holder may schedule a flight crewmember, and no flight crewmember may accept an assignment, for flight time during the 24 consecutive hours preceding the scheduled completion of any flight segment without a scheduled rest period during that 24 hours of at least the following:

(1) 9 consecutive hours of rest for less than 8 hours of scheduled flight time.

(2) 10 consecutive hours of rest for 8 or more but less than 9 hours of scheduled flight time.

(3) 11 consecutive hours of rest for 9 or more hours of scheduled flight time.

(c) A certificate holder may schedule a flight crewmember for less than the rest required in paragraph (b) of this section or may reduce a scheduled rest under the following conditions:

(1) A rest required under paragraph (b)(1) of this section may be scheduled for or reduced to a minimum of 8 hours if the flight crewmember is given a rest period of at least 10 hours that must begin no later than 24 hours after the commencement of the reduced rest period.

(2) A rest required under paragraph (b)(2) of this section may be scheduled for or reduced to a minimum of 8 hours if the flight crewmember is given a rest period of at least 11 hours that must begin no later than 24 hours after the commencement of the reduced rest period.

(3) A rest required under paragraph (b)(3) of this section may be scheduled for or reduced to a minimum of 9 hours if the flight crewmember is given a rest period of at least 12 hours that must begin no later than 24 hours after the commencement of the reduced rest period.

(d) Each certificate holder shall relieve each flight crewmember engaged in scheduled air transportation from all further duty for at least 24 consecutive hours during any 7 consecutive days.

§ 135.267 Flight time limitations and rest requirements: Unscheduled one- and two-pilot crews.

(a) No certificate holder may assign any flight crewmember, and no flight crewmember may accept an assignment, for flight time as a member of a one- or two-pilot crew if that crewmember's total flight time in all commercial flying will exceed—

(1) 500 hours in any calendar quarter.

(2) 800 hours in any two consecutive calendar quarters.

(3) 1,400 hours in any calendar year.

(b) Except as provided in paragraph (c) of this section, during any 24 consecutive hours the total flight time of the assigned flight when added to any other commercial flying by that flight crewmember may not exceed—

(1) 8 hours for a flight crew consisting of one pilot; or

(2) 10 hours for a flight crew consisting of two pilots qualified under this Part for the operation being conducted.

(c) A flight crewmember's flight time may exceed the flight time limits of paragraph (b) of this section if the assigned flight time occurs during a regularly assigned duty period of no more than 14 hours and—

(1) If this duty period is immediately preceded by and followed by a required rest period of at least 10 consecutive hours of rest;

(2) If flight time is assigned during this period, that total flight time when added to any other commercial flying by the flight crewmember may not exceed—

(i) 8 hours for a flight crew consisting of one pilot; or

(ii) 10 hours for a flight crew consisting of two pilots; and

(3) If the combined duty and rest periods equal 24 hours.

(d) Each assignment under paragraph (b) of this section must provide for at least 10 consecutive hours of rest during the 24-hour period that precedes the planned completion time of the assignment.

(e) When a flight crewmember has exceeded the daily flight time limitations in this section, because of circumstances beyond the control of the certificate holder or flight crewmember (such as adverse weather conditions), that flight crewmember must have a rest period before being assigned or accepting an assignment for flight time of at least—

(1) 11 consecutive hours of rest if the flight time limitation is exceeded by not more than 30 minutes;

(2) 12 consecutive hours of rest if the flight time limitation is exceeded by more than 30 minutes, but not more than 60 minutes; and

(3) 16 consecutive hours of rest if the flight time limitation is exceeded by more than 60 minutes.

(f) The certificate holder must provide each flight crewmember at least 13 rest periods of at least 24 consecutive hours each in each calendar quarter.

(g) The Director of Flight Operations may issue operations specifications authorizing a deviation from any specific requirement of this section if he finds that the deviation is justified to allow a certificate holder additional time, but in no case beyond October 1, 1987, to bring its operations into full compliance with the requirements of this section. Each application for a deviation must be submitted to the Director of Flight Operations before October 1, 1986. Each applicant for a deviation may continue to operate under the requirements of Subpart F of this part as in effect on September 30, 1985 until the Director of Flight Operations has responded to the deviation request.

§ 135.269 Flight time limitations and rest requirements: Unscheduled three- and four-pilot crews.

(a) No certificate holder may assign any flight crewmember, and no flight crewmember may accept an assignment, for flight time as a member of a three- or four-pilot crew if that crewmember's total flight time in all commercial flying will exceed—

(1) 500 hours in any calendar quarter.

(2) 800 hours in any two consecutive calendar quarters.

(3) 1,400 hours in any calendar year.

(b) No certificate holder may assign any pilot to a crew of three or four pilots, unless that assignment provides—

(1) At least 10 consecutive hours of rest immediately preceding the assignment;

(2) No more than 8 hours of flight deck duty in any 24 consecutive hours;

(3) No more than 18 duty hours for a three-pilot crew or 20 duty hours for a four-pilot crew in any 24 consecutive hours;

(4) No more than 12 hours aloft for a three-pilot crew or 16 hours aloft for a four-pilot crew during the maximum duty hours specified in paragraph (b)(3) of this section;

(5) Adequate sleeping facilities on the aircraft for the relief pilot;

(6) Upon completion of the assignment, a rest period of at least 12 hours;

(7) For a three-pilot crew, a crew which consists of at least the following:

(i) A pilot in command (PIC) who meets the applicable flight crewmember requirements of Subpart E of Part 135;

(ii) A PIC who meets the applicable flight crewmember requirements of Subpart E of Part 135, except those prescribed in §§ 135.244 and 135.247; and

(iii) A second in command (SIC) who meets the SIC qualifications of § 135.245.

(8) For a four-pilot crew, at least three pilots who meet the conditions of paragraph (b)(7) of this section, plus a fourth pilot who meets the SIC qualifications of § 135.245.

(c) When a flight crewmember has exceeded the daily flight deck duty limitation in this section by more than 60 minutes, because of circumstances beyond the control of the certificate holder or flight crewmember, that flight crewmember must have a rest period before the next duty period of at least 16 consecutive hours.

(d) A certificate holder must provide each flight crewmember at least 13 rest periods of at least 24 consecutive hours each in each calendar quarter.

§ 135.271 Helicopter hospital emergency medical evacuation service (HEMES).

(a) No certificate holder may assign any flight crewmember, and no flight crewmember may accept an assignment for flight time if that crewmember's total flight time in all commercial flight will exceed—

(1) 500 hours in any calendar quarter.

(2) 800 hours in any two consecutive calendar quarters.

(3) 1,400 hours in any calendar year.

(b) No certificate holder may assign a helicopter flight crewmember, and no flight crewmember may accept an assignment, for hospital emergency medical evacuation service helicopter operations unless that assignment

provides for at least 10 consecutive hours of rest immediately preceding

(d) Each flight crewmember must receive at least 8 consecutive hours of

(h) Each pilot must be given a rest period upon completion of the HEMES

provides for at least 10 consecutive hours of rest immediately preceding reporting to the hospital for availability for flight time.

(c) No flight crewmember may accrue more than 8 hours of flight time during any 24-consecutive hour period of a HEMES assignment, unless an emergency medical evacuation operation is prolonged. Each flight crewmember who exceeds the daily 8 hour flight time limitation in this paragraph must be relieved of the HEMES assignment immediately upon the completion of that emergency medical evacuation operation and must be given a rest period in compliance with paragraph (h) of this section.

(d) Each flight crewmember must receive at least 8 consecutive hours of rest during any 24 consecutive hour period of a HEMES assignment. A flight crewmember must be relieved of the HEMES assignment if he or she has not or cannot receive at least 8 consecutive hours of rest during any 24 consecutive hour period of a HEMES assignment.

(e) A HEMES assignment may not exceed 72 consecutive hours at the hospital.

(f) An adequate place of rest must be provided at, or in close proximity to, the hospital at which the HEMES assignment is being performed.

(g) No certificate holder may assign any other duties to a flight crewmember during a HEMES assignment.

(h) Each pilot must be given a rest period upon completion of the HEMES assignment and prior to being assigned any further duty with the certificate holder of—

(1) At least 12 consecutive hours for an assignment of less than 48 hours.

(2) At least 16 consecutive hours for an assignment of more than 48 hours.

(i) The certificate holder must provide each flight crewmember at least 13 rest periods of at least 24 consecutive hours each in each calendar quarter.

Issued in Washington, D.C., on June 3, 1985.

Donald D. Engen,

Administrator.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Parts 5400 and 5440

Sales of Forest Products; General and Conduct of Sales, Procedures for Debarment of Contractors

AGENCY: Bureau of Land Management, Interior.

ACTION: Proposed rulemaking.

SUMMARY: This proposed rulemaking would amend provisions of the existing regulations in 43 CFR Part 5400, Sales of Forest Products; General, and Part 5440, Conduct of Sales. The Department of the Interior has determined that it is necessary to amend the existing regulations concerning debarment and suspension of timber sale contractors to provide notice and opportunity for a hearing to contractors who are subject to debarment, and to focus on the contractor's present and future responsibility, considering the circumstances provoking the proposed debarment. The provisions of the proposed rulemaking are similar to provisions in the revised Federal Procurement Regulations on debarment and suspension, and have been determined to be suitable for timber sale contracts and to meet the requirements of the law.

DATE: Comment period expires September 16, 1985. Comments received or postmarked after this date may not be considered in the decisionmaking process on a final rulemaking.

ADDRESS: Comments should be sent to: Director (140), Department of the Interior, Bureau of Land Management 1800 'C' Street, NW., Washington, D.C. 20240.

FOR FURTHER INFORMATION CONTACT: Charles R. Frost, (202) 653–8864.

SUPPLEMENTARY INFORMATION: The Department of the Interior has determined that there are two shortcomings in the existing regulations on debarment of timber contractors at 43 CFR 5441.1(c). First, the regulations fail to focus on the purchaser's present responsibility as a contractor with the Bureau of Land Management. The proposed rulemaking would eliminate this problem by requiring a careful review of the financial integrity of the contractor, which is in doubt upon its failure to make payment by the expiration date of the contract. Debarment will be pursued only if, as a result of the review, the debarring official determines that the contractor's financial situation demonstrates its lack of present responsibility i.e., the contractor is presently a bad risk for the government to do business with. Second, the regulations lack procedural safeguards, such as provisions for notice and opportunity to present evidence, in the process leading to debarment.

The existing regulation at 43 CFR 5441.1(c) provides for automatic debarment of defaulting contractors from all future Bureau of Land Management timber contracts until the default is cured. This proposed rulemaking would establish procedures for the Bureau to recognize mitigating and other circumstances relating to the contractor's present responsibility, and to assure the contractor due process of law.

This proposed rulemaking parallels the debarment procedures in Subpart 9.4 of the Federal Acquisition Regulation (48 FR 42102). These regulations meet the requirements of law and are well suited, as adapted herein, to the timber management program of the Bureau. The debarment provisions of the existing Federal Procurement Regulations have on occasion been used as the authority for debarring a timber purchase contractor, so the suitability of that segment of the Federal Procurement Regulations to timber sale contracts has been established.

The prinicipal author of this proposed rulemaking is Ernest Black, Division of Forestry, assisted by the staff of the Office of Legislation and Regulatory Management.

It is hereby determined that this proposed rulemaking does not constitute a major Federal action significantly affecting the quality of the human environment, and that no detailed statement pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969 (42 U.S.C. 4332(2)(C)) is required.

The Department of the Interior has determined that this document is not a major rule under Executive Order 12291 and will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.)

Under this proposed rulemaking, individuals or firms who receive notice from the Bureau of Land Management of proposed debarment would be permitted to present facts and information pertaining to an allegation of failure to perform under a timber sale contract and/or to mitigation of damages. The rulemaking would not require any specific information or any format for the information to be provided. Therefore, the rulemaking would not impose an information collection requirement as that term is defined in Office of Management and Budget regulations at 5 CFR 1320.7.

List of Subjects in 43 CFR Part 5440

Forest and forest products, Government contracts, Public lands.

Under the authority of section 5 of the Act of August 28, 1937 (43 U.S.C. 1181e), and the Act of July 31, 1947, as amended (30 U.S.C. 601 *et seq.*), Subchapter E, Chapter II of Title 43 of the Code of Federal Regulations is proposed to be amended as set forth below:

PART 5400—[AMENDED]

1. The authority citation for Part 5400 is revised to read as follows:

Authority: 61 Stat. 681, as amended, 69 Stat. 367, 48 Stat. 1269, sec. 11, 30 Stat. 414, as amended, sec. 5, 50 Stat. 875; 30 U.S.C. 601 *et seq.*, 43 U.S.C. 315, 423, 1181a *et seq.* unless otherwise noted.

2. Section 5400.0–5 is amended by adding new paragraphs (p), (q), and (r) at the end thereof to read:

§ 5400.0–5 Definitions.

* * * * *

(p) 'Debarment' means action taken by a debarring official under § 5441.1(c) of this title to exclude a purchaser from entering into contracts with the Bureau of Land Management for sale of timber.

(q) 'Debarring Official' is a Bureau of Land Management official who has been delegated authority to make debarment decisions under this part.

(r) 'Purchaser' means any individual or other legal entity that: (1) Submits bids or proposals for or is awarded, or reasonably may be expected to submit bids or proposals for or be awarded, a Bureau of Land Management timber sale contract, or (2) conducts business with the Government as an agent or representative of another purchaser.

PART 5440—[AMENDED]

3. Section 5441.1 is amended by revising paragraph (c) to read:

§ 5441.1 Qualification of bidders.

* * * * *

(c)(1) In accordance with the provisions of this section the debarring official may debar a bidder who has defaulted on a timber purchase contract because of failure to make payment by the expiration date of the contract from bidding on any subsequent timber purchase contracts until the bidder has made satisfactory arrangements with the authorized officer for payment of damages to the United States.

(2) Debarment shall be pursued only if the defaulting purchaser's financial situation demonstrates a lack of present responsibility to do business as a government contractor.

(3) The authorized officer shall report to the State Director and the debarring official any information relating to the basis for dabarment of a timber purchaser, including a complete statement of the facts, appropriate exhibits and a recommendation for action.

(4) When the debarring official gives preliminary approval, debarments shall be initiated by informing purchasers and any specifically named affiliates by certified mail, return receipt requested, as follows:

(i) That debarment is being considered.

(ii) The reasons for the proposed debarment in terms sufficient to put the purchaser on notice of the transaction(s) upon which it is based; and

(iii) The potential effect of the proposed debarment.

(5) The purchaser, within 30 days after receipt of the notice, may submit, in person, in writing, or through a representative, information in opposition to the proposed debarment, including any additional specific information that raises a genuine dispute over the material facts.

(6) If purchaser requests, the authorized officer shall hold a meeting with the purchaser within 20 calendar days. Any statements, records, or exhibits submitted by the purchaser at this meeting shall become part of the debarment decision record.

(7) The debarring official shall make a decision on the basis of all the information in the record, including any submission made by the purchaser. The decision shall be made within 30 working days after receipt of any information and arguments submitted by the purchaser, unless the debarring official determines that there is good cause to extend this period.

(8)(i) If the debarring official decides to impose debarment, the purchaser and any affiliates involved shall be given prompt notice by certified mail, return receipt requested, as follows:

(A) The notice of proposed debarment shall be referred to;

(B) The reasons for debarment shall be specified; and

(C) The period of debarment including effective date shall be stated.

(ii) If a debarment is not imposed the debarring official shall promptly notify the purchaser and any affiliates involved of the decision by certified mail return receipt requested.

(d)(1) The debarring official shall compile and maintain a current list of debarred timber purchasers. This list shall be distributed to all State Directors, the General Services Administration, the General Accounting Office, and other Federal agencies requesting it.

(2) The list of debarred purchasers shall contain the following information:

(i) The names and addresses of all debarred or suspended purchasers.

(ii) The cause of the action.

(iii) Any limitation to or deviations from the normal effect of debarment.

(iv) The effective date of the action.

(v) The name and telephone number of the person in the Bureau of Land Management with information about the debarment.

(3) Purchasers debarred in accordance with this section shall be excluded from receiving Bureau of Land Management timber sale contracts and the Bureau shall not solicit offers from, award contracts to, or consent to subcontracts with these purchasers unless the Director or authorized representative determines in writing that there is a compelling reason for such action.

(4) During the period of debarment, a debarred contractor, upon a showing of good cause, may apply for reinstatement to contract with the Bureau of Land Management.

J. Steven Griles,

Deputy Assistant Secretary of the Interior.

May 7, 1985.

DEPARTMENT OF EDUCATION

34 CFR Part 304

Removal of Architectural Barriers to the Handicapped

AGENCY: Department of Education.

ACTION: Final rule.

SUMMARY: The Secretary issues regulations under section 607 of the Education of the Handicapped Act to govern a State formula grant program for the elimination of architectural Barriers to handicapped children and individuals. The Removal of Architectural barriers to the Handicapped program provides grants to State educational agencies (SEAs) to assist them in making subgrants to local educational agencies (LEAs) and intermediate educational units (IEUs) to alter existing buildings and equipment. These final regulations include application requirements, an allocation formula, and funding activities that are allowable under this program.

EFFECTIVE DATE: These regulations will take effect either 45 days after publication in the **Federal Register** or later if Congress takes certain adjournments. If you want to know the effective date of the regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Mr. William D. Tyrrell, Special Education Programs, Department of Education, 400 Maryland Avenue, SW., Switzer Building, Room 3611, Washington, D.C. 20202; Telephone (202) 732–1025.

SUPPLEMENTARY INFORMATION:

A. Overview of the Program

The Removal of Architectural Barriers to the Handicapped program is authorized by Section 607 of the Education of the Handicapped Act (EHA), 20 U.S.C. 1406, as amended by section 5 of the Education of the Handicapped Act Amendments of 1983, Pub. L. 98–199, December 2, 1983. As amended, section 607 provides that:

(a) The Secretary is authorized to make grants and to enter into cooperative agreements with State educational agencies to assist such agencies in making grants to local educational agencies or intermediate educational units to pay part or all of the cost of altering existing buildings and equipment in accordance with standards promulgated under the Act approved August 12, 1968 (Pub. L. 90–480), relating to architectural barriers.

(b) For the purpose of carrying out the provisions of this section, there are authorized to be appropriated such sums as may be necessary.

Pub. L. 98–8, commonly referred to as the Emergency Jobs Bill, enacted on March 24, 1983, provides $40 million to carry out the provisions of section 607. The funds will remain available until expended.

The Architectural Barriers Act of 1968 (ABA), Pub. L. 90–480, 42 U.S.C. 4151–4157, requires various Federal agencies—not including the Department of Education—to prescribe such standards for the design, construction, and alteration of certain buildings as may be necessary to ensure that handicapped children and individuals will have ready access to and use of those buildings. These agencies include the General Services Administration (GSA), the Department of Defense, the Department of Housing and Urban Development, and the United States Postal Service.

Section 607 of the EHA authorizes the alteration of existing buildings and equipment in accordance with standards promulgated under the ABA. The alteration of existing buildings and equipment under this part must be consistent with the standards adopted by the GSA on August 7, 1984 (49 FR 31528) and incorporated by reference at 41 CFR 101–19.603 (49 FR 31625; August 7, 1984). The GSA standards may be modified as appropriate to take into account the age groups of individuals who will benefit under this program.

The final regulations establish a State formula grant program. This is consistent with the revisions to Section 607 of the EHA made by the Education of the Handicapped Act Amendments of 1983. As amended, section 607 authorizes the Secretary to give grants to SEAs for the removal of architectural barriers. SEAs then give subgrants to LEAs and IEUs.

In order to establish administrative procedures for this program that are consistent with procedures used for the Department's other State formula grant programs, 34 CFR 76.102(y) is redesignated as § 76.102(z), and a new provision is added at 34 CFR 76.102(y).

This new provision adds the application submitted by a State under the Removal of Architectural Barriers to the Handicapped program to the EDGAR definition of "State plan." As a result of this amendment, all the administrative procedures set out in the EDGAR which govern State plans apply to the Removal of Architectural Barriers to the Handicapped program.

The authorizing statute for this program does not include a formula for distributing funds. The Secretary, however, amends the definitions of "direct grant program" and "State formula grant program" at 34 CFR 75.1(b) and 76.1(b), respectively, to include programs which contain a regulatory formula for distributing funds. In addition, conforming amendments are made to 34 CFR 76.260.

B. Overview of Regulatory Provisions

1. Subpart A—General

Subpart A describes the basic purpose of the Removal of Architectural Barriers to the Handicapped program. This subpart identifies the parties that are eligible to receive grants. Other Federal regulations which apply to this program are also listed. In addition, Subpart A contains definitions of several terms that apply to this program, and commonly used acronyms. The definition for "alteration" in this subpart is the definition used in the "Uniform Federal Accessibility Standards" (49 FR 31528, August 7, 1984) adopted by GSA. The definition of "equipment" under section 602 of the EHA is used for this program.

2. Subpart B—How Does an SEA Apply for a Grant?

Subpart B sets forth the requirements that an SEA must meet in order to receive a grant under this program, including program assurances and application requirements. Assurances included in this subpart incorporate requirements under section 607 of the EHA and Pub. L. 98–8. The use of assurances in the program application relieves the paperwork burden on SEAs since they will not need to submit detailed information to demonstrate how applicable statutory and regulatory requirements will be met.

In its application for program funds, each SEA must assure that the quality of the environment will be assessed according to provisions in the National Environmental Policy Act of 1969 and Executive Order 11514. *See* 34 CFR 75.601, as incorporated by 34 CFR 76.600(a). In addition, the SEA must provide the Secretary with the information required under 34 CFR 75.602(a) (*Preservation of historic sites*). The Secretary will notify SEAs of the date on which they must submit a summary of this information to the Department.

The SEA must also assure that special consideration will be given to projects in areas experiencing high rates of unemployment. The legislative history of Pub. L. 98–8 includes this provision for making section 607 awards under that appropriation. *See* Senate Report No. 98–17 (1983), pp. 33–34. Section 101(c) of Pub. L. 98–8 requires that, to the extent practicable, funds authorized by the Act be used in a manner which maximizes immediate creation of new employment opportunities to individuals who were unemployed at least fifteen of the twenty-six weeks immediately preceding the March 24, 1983, date of its enactment.

In its application, an SEA must describe the general areas to be funded under this program. The SEA need not describe specific projects, nor does it submit blueprints to the Secretary for approval.

3. Subpart C—How Does the Secretary Make a Grant to an SEA?

Section 607 of the EHA does not provide a funding formula for allocating funds among eligible SEAs. A funding formula has been developed from the comments of individuals and organizations who responded to the Secretary's request for comments in the notice of proposed rulemaking. The formula used to allocate funds to the fifty States, the District of Columbia, and Puerto Rico is based on the number of handicapped children served in each participating State, as determined under Part B of the EHA and the State agency program for handicapped children under section 146 of Title I of the Elementary and Secondary Education Act of 1965 (as incorporated in Chapter 1 of the Education Consolidation and Improvement Act of 1981). The Insular Areas, which include American Samoa, Guam, the Virgin Islands, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands, are eligible for grants that, together, do not exceed one-half of one percent of the aggregate amounts available to States under this program, and which will be allocated proportionately among the Insular Areas on the basis of the number of children aged three through twenty-one in each Insular Area. However, no Insular Area will receive less than $15,000, and allocations within these jurisdictions will be ratably reduced, if necessary, to ensure that each Insular Area receives that amount.

Section 304.21 describes how excess funds are reallocated.

4. Subpart D—How Does an Applicant Apply to an SEA for a Subgrant?

Subpart D specifies the information which LEAs and IEUs must include in applications for subgrants. Readers should note that the EDGAR definition of "local educational agency" (34 CFR 77.1(c)) is substantively the same as the definition of that term under section 602(a)(8) of the EHA, and includes any public institution having administrative control and direction of a public elementary or secondary school. Consequently, State agencies and other public institutions which are legally responsible for the education of handicapped children are eligible for subgrants under this program.

5. Subpart E—How Does an ESA Make a Subgrant?

Subpart E describes the methods an SEA will use to approve or disapprove applications for subgrants from LEAS and IEUs. The regulations permit a State to establish criteria for awarding subgrants. This subpart includes the criteria for determining the amount of subgrants and procedures for reallocating funds.

6. Subpart F—What Conditions Must Be Met by an SEA, LEA, or IEU?

Subpart F describes the provisions with which recipients must comply as a condition of receiving funds under the Removal of Architectural Barriers to the Handicapped program. In the notice of proposed rulemaking, the Secretary encouraged States to use their funds for activities that would—

(1) Make available to handicapped children the variety of educational programs and services available to non-handicapped children in the area served by the LEA or IEU;

(2) Provide non-academic and extracurricular services and activities in a manner that affords handicapped children opportunity for participation in those services and activities; and

(3) Provide accessibility to handicapped individuals involved in the education of handicapped children or eligible to participate in programs administered by LEAs and IEUs.

These activities have been incorporated into § 304.51 as examples of project priorities which an SEA may adopt for approving projects.

7. Subpart G—What Are the Administrative Responsibilities of an SEA?

Subpart G describes the amount of grant funds that the SEA can use for administrative costs, including, among other things, technical assistance to, and monitoring of, participating LEAs and IEUs. Program planning is added to the examples of allowable administrative costs.

Public Participation

Proposed regulations for this program were published on September 19, 1984 (49 FR 36808). A summary of the comments received in response to that notice and the Secretary's responses to those comments are contained in the appendix to these regulations.

Executive Order 12291

These regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the Order.

Paperwork Reduction Act of 1980

The information collection requirements contained in these regulations (§ 304.11) have been approved by the Office of Management and Budget under the provisions of the Paperwork Reduction Act of 1980 (Pub. L. 96–511) and have been assigned an OMB control number. The control number appears as a citation at the end of this section.

Intergovernmental Review

This program is subject to the requirements of Executive Order 12372 and the regulations in 34 CFR Part 79 (48 FR 29158; June 24, 1983). The objective of this Executive Order is to foster an intergovernmental partnership and a strengthened federalism by relying on State and local processes for State and local government coordination and review of proposed Federal financial assistance.

In accordance with the Order, this document is intended to provide early notification of the Department's specific plans and actions for this program.

Assessment of Educational Impact

In the notice of proposed rulemaking, the Secretary requested comments on whether the proposed regulations would require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

Based upon the comments on the proposed rules and the Department's own review, it has been determined that the regulations in this document do not require information that is being gathered by or is available from any other agency or authority of the United States.

List of Subjects in 34 CFR Part 304

Education, Education of handicapped, Grants program—education, Local educational agency, Reporting and recordkeeping requirements, School, School construction, State educational agencies.

Citation of Legal Authority

A citation of statutory or other legal authority is placed in parentheses on the

line following each substantive provision of these final regulations.

line following each substantive provision of these final regulations.

(Catalog of Federal Domestic Assistance No. 84.155; Removal of Architectural Barriers to the Handicapped)

Dated: July 11, 1985.

William J. Bennett,

Secretary of Education.

PART 75—[AMENDED]

The Secretary amends Parts 75 and 76 and adds a new Part 304 to Title 34 of the Code of Federal Regulations as follows:

1. Section 75.1 is amended by revising paragraph (b) to read as follows:

§ 75.1 Programs to which Part 75 applies.

* * * * *

(b) If a direct grant program does not have implementing regulations, the Secretary implements the program under the authorizing statute and, to the extent consistent with the authorizing statute, under the General Education Provisions Act and the regulations in this part. For the purposes of this part, the term "direct grant program" includes any grant program of the Department other than a program whose authorizing statute or implementing regulations provide a formula for allocating program funds among eligible States.

* * * * *

2. The table following § 75.1 is amended by removing the following language from the list in Section IV.C.

C. Education of the Handicapped Programs:

"Removal of Architectural Barriers to the Handicapped"; "Section 607 of the Education of the Handicapped Act (20 U.S.C. 1406)"; "None"; "None".

PART 76—[AMENDED]

3. Section 76.1 is amended by revising paragraph (b) to read as follows:

§ 76.1 Programs to which Part 76 applies.

* * * * *

(b) If a State formula grant program does not have implementing regulations, the Secretary implements the program under the authorizing statute and, to the extent consistent with the authorizing statute, under the General Education Provisions Act and the regulations in this part. For the purposes of this part, the term "State formula grant program" means a program whose authorizing statute or implementing regulations provide a formula for allocating program funds among eligible States.

* * * * *

4. The table following § 76.1 is amended by adding the following language to the list in Section B.

Education of the Handicapped Programs:

"Removal of Architectural Barriers to the Handicapped"; "Section 607 of the Education of the Handicapped Act (20 U.S.C. 1406)"; "Part 304"; "84.155".

* * * * *

5. Section 76.102 is amended by redesignating paragraph (y) as paragraph (z) and adding a new paragraph (y) to read as follows:

§ 76.102 Definition of "State plan" for Part 76.

* * * * *

(y) *Removal of Architectural Barriers to the Handicapped.* The application under Section 607 of the Education of the Handicapped Act.

* * * * *

6. The table following § 76.125 is amended by adding the following language to the list under "Education for the Handicapped Programs":

EDUCATION FOR THE HANDICAPPED PROGRAMS

CFDA No. and name of program	Authorizing legislation	Implementing regulations Title 34 CFR (Part)
* * * * *		
84.155 Removal of architectural barriers to the handicapped.	Section 607, Education of the Handicapped Act (20 U.S.C. 1406).	304

7. Section 76.260 is revised to read as follows:

§ 76.260 Allotments are made under program statute or regulations.

(a) The Secretary allots program funds to a State in accordance with the authorizing statute or implementing regulations for the program.

(b) Any reallotment to other States will be made by the Secretary in accordance with the authorizing statute or implementing regulations for that program. (20 U.S.C. 3474(a)).

8. A new Part 304 is added to Title 34 of the Code of Federal Regulations, as follows:

PART 304—REMOVAL OF ARCHITECTURAL BARRIERS TO THE HANDICAPPED PROGRAM

Subpart A—General

Sec.

304.1 The Removal of Architectural Barriers to the Handicapped program.
304.2 Applicability of regulations in this part.
304.3 Regulations that apply to the Removal of Architectural Barriers to the Handicapped program.
304.4 Definitions.
304.5 Acronyms that are used.
304.6–304.9 [Reserved]

Subpart B—How Does an SEA Apply for A Grant?

304.10 Submission of an SEA application.
304.11 Content of SEA application.
304.12–304.19 [Reserved]

Subpart C—How Does the Secretary Make a Grant to an SEA?

304.20 Amount of an SEA's grant.
304.21 Reallocation of excess funds.
304.22–304.29 [Reserved]

Subpart D—How Does an LEA or IEU Apply to an SEA for a Subgrant?

304.30 Submission of an application to the SEA.
304.31 LEA and IEU applications.
304.32–304.39 [Reserved]

Subpart E—How Does an SEA Make a Subgrant?

304.40 Amount of a subgrant to an LEA or IEU.
304.41 Reallocation of excess funds.
304.42–304.49 [Reserved]

Subpart F—What Conditions Must be Met by an SEA, LEA, or IEU?

304.50 Standards for the removal of architectural barriers.
304.51 Project priorities.
304.52 Project requirements.
304.53–304.59 [Reserved]

Subpart G—What Are the Administrative Responsibilities of an SEA?

304.60 Amount available for SEA administration.
304.61 Administrative responsibilities and allowable costs.
304.62–304.69 [Reserved]

Authority: Sec. 607, Education of the Handicapped Act (20 U.S.C. 1406), Pub. L. 94–142, as amended by Pub. L. 98–199; Sec. 5, 97 Stat. 1358 (Dec. 2, 1983); sec. 101(c), Pub. L. 98–8, 97 Stat. 31–32 (1983), unless otherwise noted.

Subpart A—General

§ 304.1 The Removal of Architectural Barriers to the Handicapped program.

The purpose of this part is to provide financial assistance to State educational agencies and, through them, to local educational agencies and intermediate educational units to remove architectural barriers to the handicapped children and other handicapped individuals.

(20 U.S.C. 1406)

§ 304.2 Applicability of regulations in this part.

This part applies to assistance under section 607 of the Education of the Handicapped Act.

(20 U.S.C. 1406)

§ 304.3 Regulations that apply to the Removal of Architectural Barriers to the Handicapped program.

The following regulations apply to assistance under the Removal of Architectural Barriers to the Handicapped program:

(a) The regulations in this Part 304.

(b) The Education Department General Administrative Regulations (EDGAR) set out in the following parts of Title 34 of the Code of Federal Regulations—

(1) Part 74 (Administration of Grants);

(2) Part 76 (State-administered Programs);

(3) Part 77 (Definitions that Apply to Department Regulations);

(4) Part 78 (Education Appeal Board); and

(5) Part 79 (Intergovernmental Review of Department of Education Programs and Activities).

(20 U.S.C. 1406; 20 U.S.C. 3474(a))

§ 304.4 Definitions.

(a) *Definitions in EDGAR.* The following terms used in this part are defined in 34 CFR 77.1:

Application
EDGAR
Fiscal year
Grant
Local educational agency
Project
Public
Secretary
State
State educational agency
Subgrant

(20 U.S.C. 3474(a))

(b) *Definitions in 34 CFR Part 300.* The following terms used in this part are defined in 34 CFR 300.5(a), 300.7, 300.13, and 300.14:

Handicapped children
Intermediate educational unit
Related services
Special education

(20 U.S.C. 1401(a)(1), (16), (17), (22))

(c) *Other definitions that apply to this part.* In addition to the definitions referred to in paragraphs (a) and (b), the following definitions apply to this part:

(1) "Alteration," as applied to a building or structure, means a change or rearrangement in the structural parts or elements, or in the means of egress, or in moving from one location or position to another. It does not include normal maintenance and repair, reroofing, interior decoration, or changes to mechanical and electrical systems.

(20 U.S.C. 1406, 41 CFR 101–19.603)

(2) "Equipment" includes machinery, utilities, and built-in equipment and any necessary enclosures or structures to house them, and includes all other items necessary for the functioning of a particular facility as a facility for the provision of educational services, including items such as instructional equipment and necessary furniture, printed, published, and audio-visual instructional materials, telecommunications, sensory, and other technological aids and devices, and books, periodicals, documents, and other related materials.

(20 U.S.C. 1401(a)(5), 1406)

§ 304.5 Acronyms that are used.

The following acronyms are used in this part:

"IEU" stands for intermediate educational unit.

"LEA" stands for local educational agency.

"SEA" stands for State educational agency.

(20 U.S.C. 1406)

§§ 304.6–304.9 [Reserved]

SUBPART B—HOW DOES AN SEA APPLY FOR A GRANT?

§ 304.10 Submission of an SEA application.

In order to receive funds under this part, an SEA must submit an application to the Secretary for review and approval.

(20 U.S.C. 1406)

§ 304.11 Content of SEA application.

(a) Each SEA shall include in its application assurances that—

(1) Funds received under this part will be used to pay the costs of altering existing buildings and equipment in accordance with the standards in § 304.50;

(2) In using funds appropriated under Pub. L. 98–8, special consideration will be given to projects in areas experiencing high rates of unemployment; and

(Pub. L. 98–8, "Education for the Handicapped", 97 Stat. 27 (1983); S. Rep. No. 17, 98th Cong., 1st Sess. 33–34 (1983))

(3) Funds provided under this part that are appropriated under Pub. L. 98–8 will, to the extent practicable, be utilized in manner which maximizes immediate creation of new employment opportunities to individuals who were unemployed at least 15 of the 28 weeks immediately preceding March 24, 1983 (the date of enactment of Pub. L. 98–8).

(Pub. L. 98–8, section 101(c); 97 Stat. 31–32 (1983))

(b) Each SEA application must also include the following information:

(1) A description of the goals and objectives to be supported by the grant in sufficient detail for the Secretary to determine what will be achieved with the grant.

(2) The estimated number of LEAs and IEUs that will receive subgrants, and a description of the procedures and criteria the SEA will use to award subgrants to LEAs and IEUs, including any priorities established by the SEA under § 304.51(b) (*see* § 304.40 and Subpart F, "What Conditions Must Be Met by an SEA, LEA, or IEU?").

(20 U.S.C. 1406)

§§ 304.12–304.19 [Reserved]

Subpart C—How Does the Secretary Make a Grant to an SEA?

§ 304.20 Amount of an SEA's grant.

(a) For the purpose of this section—

(1) The term "Insular Area" means American Samoa, Guam, the Virgin Islands, the Northern Mariana Islands, or the Trust Territory of the Pacific Islands; and

(2) The term "handicapped children" means the number of handicapped children determined by the Secretary—

(i) Under section 611 of the Act, to be receiving special education and related services; or

(ii) In average daily attendance at schools for handicapped children or supported by a State agency within the meaning of section 146 of Title I of the Elementary and Secondary Education Act of 1965.

(b) The amount of an SEA's grant under this part for a State other than an Insular Area is determined by—

(1) Dividing the number of handicapped children in that State by the total number of handicapped children in all States submitting approvable applications under this part; and

(2) Multiplying that fraction by the amount of funds available for grants under this part.

(c) The Secretary reserves up to one-half of one percent of the aggregate of the amounts available under this part for grants to Insular Areas. Funds reserved by the Secretary for the Insular Areas are allocated proportionately among them on the basis of the number of children ages three through twenty-one in each Insular Area. However, no Insular Area may receive less than $15,000, and allocations within these jurisdictions are ratably reduced, if necessary, to ensure that each Insular Area receives at least that amount. Allocations within these jurisdictions are further ratably reduced if the amount reserved is insufficient to provide $15,000 to each Insular Area.

(20 U.S.C. 1406)

§ 304.21 Reallocation of excess funds.

The Secretary may reallocate funds

§§ 304.42–304.49 [Reserved]

§§ 304.53–304.59 [Reserved]

change is considered necessary. Specific comments are arranged in order of the

health problems may need other kinds of adaptations to their educational environment

devices are included under the terms

§ 304.21 Reallocation of excess funds.

The Secretary may reallocate funds—or portions of those funds—made available to an SEA under this part if the Secretary determines that the SEA cannot use the funds in a manner consistent with the requirements of applicable statutes or this part. Any reallocation is made on the same basis as grants are determined under § 304.20.

(20 U.S.C. 1406)

§§ 304.22–304.29 [Reserved]

Subpart D—How Does an LEA or IEU Apply to an SEA for a Subgrant?

§ 304.30 Submission of an application to the SEA.

In order to receive funds under this part for any fiscal year, an LEA or IEU shall submit an application for a subgrant to the appropriate SEA.

(20 U.S.C. 1406, 3474(a))

§ 304.31 LEA and IEU applications.

An LEA or IEU shall include in its application any information that is required by the SEA in order to fulfill its responsibilities under this part.

(20 U.S.C. 1406, 3474(a))

§§ 304.32–304.39 [Reserved]

Subpart E—How Does an SEA Make a Subgrant?

§ 304.40 Amount of a subgrant to an LEA or IEU.

(a) The SEA shall determine the amount of a subgrant to an LEA or IEU based on—

(1) The size, scope, and quality of the proposed project; and

(2) Any other relevant criteria developed by the SEA and included in the SEA application approved by the Secretary.

(b) The SEA may establish minimum and maximum amounts for subgrants.

(20 U.S.C.1406)

§ 304.41 Reallocation of excess funds.

(a) The SEA may reallocate funds provided for subgrants under this part if an LEA or IEU cannot use the funds in a manner consistent with the requirements of section 607 of the Education of the Handicapped Act and the requirements in this part.

(b) The SEA shall reallocate funds in accordance with the criteria and priorities for approving subgrants in its approved application.

(20 U.S.C. 1406)

§§ 304.42–304.49 [Reserved]

Subpart F—What Conditions Must Be Met by an SEA, LEA, or IEU?

§ 304.50 Standards for the removal of architectural barriers.

The alteration of existing buildings and equipment under this part must be done consistently with standards adopted by the General Services Administration (GSA) under Pub. L. 90–480, the Architectural Barriers Act of 1968. However, the dimensions set out in those standards may be modified as appropriate considering the age groups of the individuals who will use the buildings or equipment.

Note.—On August 7, 1984, the GSA adopted new standards under the Architectural Barriers Act (49 FR 31528) and incorporated them by reference at 41 CFR 101–19.603 (49 FR 31625).

(20 U.S.C. 1406)

§ 304.51 Project priorities.

(a) An SEA may establish priorities for the use of funds made available under this part. The SEA may, for example, give special consideration to projects that will meet the special needs of urban or rural locations, or that will facilitate the transition of handicapped children and individuals from school to work.

(b) The Secretary encourages States to use their funds for activities that will—

(1) Make available to handicapped children the variety of educational programs and services available to non-handicapped children in the area served by the LEA or IEU;

(2) Provide non-academic and extracurricular services and activities in a manner that affords handicapped children opportunity for participation in those services and activities; and

(3) Provide accessibility to handicapped individuals involved in the education of handicapped children or eligible to participate in programs administered by LEAs and IEUs.

(20 U.S.C. 1406)

§ 304.52 Project requirements.

To the extent practicable, funds made available under this part that are appropriated under Pub. L. 98–8 must be utilized to create new employment opportunities for the unemployed, as required by Pub. L. 98–8, section 101(c).

(Pub. L. 98–8, sec. 101(c); 97 Stat. 31–32 (1983))

§§ 304.53–304.59 [Reserved]

Subpart G—What Are the Administrative Responsibilities of an SEA?

§ 304.60 Amount available for SEA administration.

An SEA may use up to five percent of its grant for the cost of administering funds provided under this part.

(20 U.S.C. 1406)

§ 304.61 Administrative responsibilities and allowable costs.

Administrative costs under this part include—

(a) Planning of programs and projects assisted by funds under this part;

(b) Approval, supervision, monitoring, and evaluation by an SEA of the effectiveness of projects assisted by funds made available under this part; and

(c) Technical assistance that an SEA provides to LEAs and IEUs with respect to the requirements of this part.

(20 U.S.C. 1406)

§ 304.62–304.69 [Reserved]

Subpart G—What Are the Administrative Responsibilities of an SEA?

§ 304.60 Amount available for SEA administration.

An SEA may use up to five percent of its grant for the cost of administering funds provided under this part.

(20 U.S.C. 1406)

§ 304.61 Administrative responsibilities and allowable costs.

Administrative costs under this part include—

(a) Planning of program and projects assisted by funds under this part;

(b) Approval, supervision, monitoring, and evaluation by an SEA of the effectiveness of projects assisted by funds made available under this part; and

(c) Technical assistance that an SEA provides to LEAs and IEUs with respect to the requirements of this part.

(20 U.S.C. 1406)

§ 304.62–304.69 [Reserved]

Appendix—Summary of Comments and Responses (Note: This Appendix Will Not Be Codified in the Code of Federal Regulations)

The following is a summary of the comments received on the notice of proposed rulemaking for the Removal of Architectural Barriers to the Handicapped program published on September 19, 1984. Each comment is followed by a response that indicates a change has been made or why no change is considered necessary. Specific comments are arranged in order of the sections of the final regulations to which they pertain.

Subpart A

Comment. One commenter recommended adding the term "handicapped children" to § 304.1 in place of the term "the handicapped."

Response. A change has been made. The term "handicapped" is modified by adding "children and other handicapped individuals" to § 304.1 to make it consistent with the language in § 304.51.

Comment. Several commenters asked about the availability of funds under this program for removing architectural barriers in postsecondary schools.

Response. No change has been made. Postsecondary schools are not eligible applicants under this program. Section 607 of the Education of the Handicapped Act (EHA) states that grants are made to State educational agencies (SEAs), and SEAs then make subgrants to local educational agencies (LEAs) and intermediate educational units (IEUs).

Comment. One commenter asked the Secretary to add a definition of the word "barriers" to help clarify how funds distributed under this program may be expended.

Response. No change has been made. The terms "alteration" and "equipment" are defined in § 304.4(c). These definitions and the "Uniform Federal Accessibility Standards" adopted by the GSA on August 7, 1984 describe the types of modifications that can be made for accessibility of handicapped persons to facilities and programs. This approach gives States the necessary flexibility to modify facilities to meet the variety of needs of handicapped persons for accessibility in LEAs and IEUs.

Comment. One commenter felt that State program funds should only be used for the removal of "actual architectural barriers," such as the construction of ramps, curb cuts, restroom renovations, the widening of doorways and sidewalks, and the purchase of properly approved equipment such as water fountains.

Response. No change has been made. The adoption of this recommendation would limit potential projects by responding primarily to some needs of handicapped individuals who are non-ambulatory. This program is not limited to providing accessibility only to individuals with those disabilities. The definitions of "alteration" and "equipment" applicable to this program reflect the needs created by the wide range of physical disabilities in handicapped children and other handicapped individuals which schools must accommodate. For example, some of the target population expected to benefit from this program have visual impairments which may require modification in signs and tactile warnings for detecting hazardous obstructions. Hearing impaired individuals may need visual emergency warning systems and may require amplification systems in classrooms and common areas. Children with other health impairments which result in limited strength due to chronic or acute health problems may need other kinds of adaptations to their educational environment.

Comment. A number of commenters approved of the proposed definition of "alteration" under § 304.4(c)(1). Other commenters requested changes. Several commenters recommended that the word "alteration" be modified to include the extension of mechanical systems needed to make renovated areas operative, and to include roofing when it is needed to complete a renovated area. Others suggested expanding the term "alteration" to include buildings and grounds in order to allow school systems to make changes to playgrounds, walkways, sidewalks, and curbs on school grounds, or to add bus ramps.

Response. A change has been made. The proposed definition of "alteration" has been replaced by the definition of the term which is used in the revised "Uniform Federal Accessibility Standards" (49 FR 31528, August 7, 1984) as adopted by GSA. The Secretary believes that the amended definition addresses the concerns of the commenters since the definition is flexible enough to permit the use of funds under this program for the various projects suggested by the commenters.

Comment. One commenter recommended that the definition of "alteration" in § 304.4(c)(1) be flexible enough to include State and local options for the use of non-standard temporary ramps so that cities can make more of their schools accessible.

Response. No change has been made. This type of ramp does not meet the guidelines in the GSA standards. The recipients of funds under this program must comply with the "Uniform Federal Accessibility Sandards."

Comment. Several commenters stated that the definition of "equipment" under § 304.4(c)(2) should not include "printed, published materials, or books, periodicals, documents, and other related materials" since these are generally considered supplies. One commenter wanted to delete all these examples from the definition. Another commenter felt that priorities should be assigned to the examples of equipment.

Response. No change has been made. By statute, the definition of "equipment" under section 602(a) of the EHA, which is repeated in these final regulations, applies to the program under Section 607. The Secretary notes, however, that under this program, priorities for the use of funds may be set at the discretion of SEAs. Under this program, SEAs have the responsibility to approve projects proposed by LEAs and IEUs. At a minimum, SEAs should ensure that proposed equipment purchases are directly related to the needs of handicapped individuals for an accessible school environment.

Comment. Several commenters requested that the definition of "equipment" under § 304.4(c)(2) be modified by adding the terms "communication aids," "computer access devices," and "augmentative communication" to provide program accessibility for mobility impaired, hearing impaired, and nonspeaking students, and those with other physical and sensory impairments.

Response. No change has been made. Communication aids, computer access devices, and augmentative communication devices are included under the terms "telecommunications, sensory, and other technological aids and devices" in the definition of equipment.

Subpart B

Comment. Several commenters agreed with the provisions in § 304.11(a) (2) and (3) which require SEAs to assure that special consideration will be given to projects in areas experiencing high rates of unemployment. However, one commenter felt that current unemployment data, rather than data from the 1980 census, should be used to determine which areas are experiencing high rates of unemployment. Others felt that the special consideration of high rates of unemployment and the creation of new employment opportunities are unnecessary requirements and have no bearing on the removal of architectural barriers to the handicapped. Another commenter felt that funds should be used to maximize immediate creation of new employment opportunities for unemployed individuals.

Response. No change has been made. The Senate report on the bill that became Pub. L. 98–199 states that special consideration should be given to areas experiencing high rates of unemployment. S. Rep. No. 17, 98th Cong., 1st Sess. 33–34 (1983). In addition, Section 101(c) of Pub. L. 98–8 requires that funds made available under the Act shall, *to the extent practicable*, be utilized in a manner which maximizes immediate creation of new employment opportunities to individuals who were unemployed at least fifteen of the twenty-six weeks preceding the date of enactment of the Act. These requirements are incorporated in the regulations at § 304.11(a)(2), and at § 302.11(a)(3) and § 304.52, respectively. The Secretary believes that States are afforded sufficient flexibility to comply with these requirements while selecting projects that most effectively meet the program's purpose. The Secretary also notes that nothing in the EHA, Pub. L. 98–8, or in these regulations requires the use of 1980 census data under this program.

Comment. A number of commenters recommended that the unique requirements in the Emergency Jobs Bill regarding the use of funds to ease unemployment should be deleted from § 304.11(a). Others felt that since regulations for this program will outlive the Emergency Jobs Bill, the regulations should not include specific references to the unemployment situation. Another commenter recommended adding an additional requirement to § 304.11(a) stating that funds should be distributed so that the largest possible number of handicapped children benefit.

Response. No change has been made. The assurances required by § 304.11(a) reflect the requirements of the Emergency Jobs Bill and Section 607 of the EHA. Each SEA has the discretion to establish further requirements for distributing funds within the State. *See* § 304.51 concerning project priorities.

Comment. Several commenters wanted to ensure that funds appropriated under this program are used in addition to, not instead of, funds already being spent or budgeted by

States for the removal of architectural barriers. One commenter recommended that LEAs match or contribute to program funds to all school-aged children in each participating State.

one percent of the appropriated funds will apply to the funds reserved for the Insular

modifications will eliminate previously identified program accessibility barriers.

Response. No change has been made.

Response. No change has been made. Section 607 of the EHA requires that

handicapped children and other handicapped individuals.

VOL 50 ISS 138 JL 18 1985 UMI

States for the removal of architectural barriers. One commenter recommended that LEAs match or contribute to program funds to increase the impact of the program.

Response. No change has been made. SEAs have the flexibility to develop criteria for approving LEA and IEU applications. There is no statutory requirement for cost-sharing under this program and no prohibition on supplanting of State and local funds.

Comment. Several commenters indicated approval of the requirements for an SEA application at § 304.11(b). One commenter was concerned that the requirement at § 304.11(b)(1) may be impossible for an SEA to fulfill. The commenter believed that since LEAs will apply for funds for specific projects, the SEA may only be able to provide enough detail for the Secretary to gain substantial understanding of whether the purposes of Section 607 of the EHA will be fulfilled.

Response. No change has been made. It is expected that each SEA will be able to provide the Secretary with a general overview of the State's goals and objectives for this program. The SEA will then approve LEA and IEU applications that support these goals and objectives. SEAs will meet the requirement of § 304.11(b)(1) by providing descriptions of priorities and criteria for funding and by indicating examples of the types of projects that can be considered rather than descriptions of specific projects.

Comment. Several commenters felt that consumer groups should be involved in the development of an SEA's criteria for approving LEA and IEU applications. Some of these commenters noted that, under § 304.11(b)(2), these criteria must be described in the State plan submitted to the Secretary for program funds.

Response. No change has been made. In the general State application required under EDGAR, which each State has submitted to the Secretary, SEAs provided an assurance that the State will provide for the participation of relevant committees, interest groups, and experienced professionals in the development of State plans (*see* 34 CFR 76.101(e)(7)(i)). Since that section in EDGAR applies to this program (*see* the amendments to 34 CFR 76.1), consumer groups will have the opportunity for participation in the development of the State's application. The public must also have 30 days to comment on the State's application for program funds before it is submitted to the Secretary. (*See* 34 CFR 76.101(e)(7)(ii).)

Subpart C

Comment. More than two-thirds of the commenters responding to the Secretary's invitation to comment on the proposed alternative funding formulas under § 304.20 recommended the adoption of the first option as the most appropriate distribution scheme for the appropriation under this program. The first formula is based on the number of handicapped children served in each participating State, as determined under Part B of the EHA and the State agency program for handicapped children under section 146 of Title I of the Elementary and Secondary Education Act of 1965 (ESEA). The second option is a formula based on the number of all school-aged children in each participating State.

Commenters who preferred the second formula felt that this approach would recognize the needs of children with impaired mobility who are not "handicapped" within the meaning of Section 602 of the Act, focus on increasing accessibility to general education facilities, deter some States from inflating their child counts in order to increase their allocations under this program, or provide specific States and LEAs with a greater amount of funds than would a formula based only on the relative numbers of handicapped children.

One commenter indicated that neither of the proposed formulas was adequate to address the needs of the Insular Areas. The commenter suggested that the funds be allocated according to a formula that provides a minimum of $100,000 to each of the Insular Areas.

A few commenters recommended the inclusion of a formula (based on either the first or second alternative) for making subgrants to LEAs.

Response. A change has been made. The Secretary has determined that allocations to the fifty States, the District of Columbia, and Pureto Rico will be based on the number of handicapped children served in those States and jurisdictions, as reported in their child counts under Part B of the EHA and the State agency programs for handicapped children under Section 146 of Title I of the ESEA.

A funding formula that is similiar to the funding formula under the EHA–B (*see* 34 CFR 300.710) has been adopted for the Insular Areas (American Samoa, Guam, the Virgin Islands, the Northern Mariana Islands, and the Trust Territory of the Pacific). Under this formula (*see* § 304.20(c)), the Secretary will reserve an amount not to exceed one-half of one percent of the aggregate of the amount available to States under this part. Funds reserved for the Insular Areas will be allocated proportionately among them on the basis of the number of all children aged three through twenty-one in each Insular Area. No Insular Area will receive less than $15,000, which is the minimum amount that the Secretary believes appropriate to support projects of adequate size, scope, and quality to meet the needs of the small population of handicapped children in those jurisdictions. In order to ensure that each Insular Area receives at least that amount, allocations within these jurisdictions will be ratably reduced if necessary. A formula based on the count of handicapped children in each Insular Area would not be consistent with the EHA–B funding formula for those areas and would impose additional data collection, record-keeping, and reporting requirements since those jurisdictions are not required to submit counts of handicapped children under either the EHA–B or the State agency program under section 146 of Title I.

Under Section 611(e)(2) of the EHA–B, the Insular Areas may receive grants that do not exceed a total amount equal to one percent of the amounts available to all States under that part for any fiscal year. For the purpose of the Removal of Architectural Barriers to the Handicapped program, the Secretary has determined that a maximum of one-half of one percent of the appropriated funds will apply to the funds reserved for the Insular Areas in order to provide a fair share of the program funds to each eligible State and jurisdiction.

The Secretary agrees with the majority of the commenters that the adoption of the funding formula applicable to the fifty States, Puerto Rico, and the District of Columbia is appropriate for the following reasons. First, this approach is consistent with the funding formula under Part B of the EHA and the purpose of that program, which is to make available (that is, to provide access to) special education and related services for handicapped children. Second, this formula directs funds to jurisdictions in proportion to their established programs for serving handicapped children. Third, the desirable goal of increasing accessibility to general education facilities, including vocational education and other program options, can be addressed as well under this formula as under the alternative approach. Finally, since there is no guarantee of further appropriations under this program, there is no real incentive for States to inflate their child counts in expectation of increased allocations under this program.

The Secretary also has determined that an allocation formula for LEAs and IEUs is not necessary for the purpose of this program. Each SEA can establish goals, objectives, criteria, and priorities for projects that reflect the number and location of physically handicapped children within its jurisdiction who can best benefit from the program funds.

Comment. One commenter indicated that the formula used for allocating funds should be used on a three-year trial basis before a final formula is selected for this program.

Response. No change has been made. The Secretary expects to distribute funds appropriated under this program before the end of fiscal year 1985. No additional funds were appropriated for this program.

Subpart D

Comment. One commenter asked if State-operated or State-supported programs for the education of handicapped children can receive subgrants under this program.

Response. No change has been made. The EDGAR definition of "local educational agency" is used for this program. This definition includes public institutions or agencies having administrative control and direction of a public elementary or secondary school. (*See* 34 CFR 77.1.) Under this definition, State-operated programs or State-supported programs are eligible subgrantees if they are under the administrative control and direction or a public institution or agency, and if they meet the EDGAR requirements for construction grants under 34 CFR 75.603 and 75.615, and other applicable rules and requirements under these regulations.

Subpart F

Comment. One commenter recommended incorporating into the regulations a requirement that LEAs and IEUs submit, as part of their application to the SEA, a copy of their most recent self-evaluation report and a description of how the proposed modifications will eliminate previously identified program accessibility barriers.

Response. No change has been made. According to the Department's regulations under Section 504 of the Rehabilitation Act of 1973 at 34 CFR 104.22(e), the recipients of Federal funds, including LEAs and IEUs, were required to develop and implement a transition plan describing how they would achieve program accessibility for handicapped individuals. Funds available under this program may be used to achieve full program accessibility, as specified in the schedule outlined in an LEA's or IEU's transition plan. The SEA has flexibility under this program to determine the types of information LEAs and IEUs must submit with an application for a subgrant.

Comment. A number of commenters felt that § 304.50 should be amended to allow States to use State standards which are equivalent to standards adopted by the GSA for making alterations to existing buildings and equipment. One commenter supported the use of GSA standards with age appropriate dimension modifications.

Response. No change has been made. The "Uniform Federal Accessibility Standards" adopted by GSA on August 7, 1984, are now in effect. As was noted in the preamble to the proposed regulations, the GSA standards may be modified as appropriate for the age groups of individuals to be served under this program.

Comment. Several commenters recommended that the Department send each SEA a copy of the "Uniform Federal Accessibility Standards" adopted by GSA on August 7, 1984.

Response. No change has been made. However, a copy of the GSA standards published in the **Federal Register** on August 7, 1984 will be included as part of the State application package for this program. Each State eligible for a grant will receive an application package.

Comment. One commenter recommended that the "Uniform Federal Accessibility Standards" adopted by GSA on August 7, 1984, be codified into the regulations for this program. The commenter believed that requirements relating to the preservation of historic sites might not be observed if users of 34 CFR Part 304 were not informed of the criteria in the GSA standards.

Response. No change has been made. The GSA standards are referenced in a note under § 304.50 of these regulations. In addition, the regulations under 34 CFR Part 76, which apply to this program, specify that States and subgrantees using funds for construction must comply with requirements relating to preservation of historic sites (*see* 34 CFR 76.600).

Comment. Several commenters felt that § 304.50 should be amended to permit the use of the American National Standards Institute (ANSI) accessibility standards.

Response. No change has been made. Section 607 of the EHA requires that alterations of existing buildings and equipment must be made in accordance with standards authorized by the Act approved August 12, 1968 (Pub. L. 90–480), relating to architectural barriers. The "Uniform Federal Accessibility Standards" (49 FR 31523, August 7, 1984) are the standards adopted to implement Pub. L. 90–480. Readers may be interested to note that these new standards clearly identify which provisions differ from the ANSI standards.

Comment. Numerous commenters responded to the Secretary's invitation to comment on the use of program funds for the three types of activities described in the portion of the preamble summarizing the contents of Subpart F in the proposed regulations. The comments fell into several distinct categories—

(1) Recommendations that no changes be made to the provisions relating to project priorities under § 304.51;

(2) Recommendations to incorporate the three proposed activities into the regulations and to make them mandatory;

(3) Recommendations for adding or substituting different activities as priorities instead of the three proposed activities (e.g., giving priority to educational facilities used as polling places); and

(4) Recommendations to target funding to projects enhancing the integration of handicapped and nonhandicapped children.

Response. A change has been made. The activities listed in the portion of the preamble summarizing Subpart F in the proposed regulations have been added to § 304.51 as examples of project priorities. This gives each SEA the discretion to determine which activities and priorities are needed to meet the needs within the State. States are not precluded from adopting different activities and priorities as criteria for approving projects under this program, and the requirements regarding the conditions which SEAs, LEAs, and IEUs must meet in order to receive program funds are kept flexible. States have the discretion to target funds to programs which integrate handicapped and nonhandicapped children. However, the Secretary believes that some funding needs to be available for children who are placed in separate facilities since this is the least restrictive environment for those children. Also, in previous responses in this Appendix, the Secretary has indicated that the definations of "alteration" and "equipment" are broadly construed to accommodate the wide variety of physical disabilities exhibited by handicapped children and other handicapped individuals.

Comment. One commenter stated that under this program LEAs should be encouraged to develop joint projects with recreation and other public community agencies and local organizations which serve handicapped children and other handicapped individuals.

Response. No change has been made. These types of cooperative arrangements are not precluded under this program, provided that grantees and subgrantees meet the construction requirements in EDGAR relating to the grantee's title to the construction site, and the responsibility for operation and maintenance of facilities built with program funds (*see* 34 CFR 75.603 and 75.615, as incorporated by 34 CFR 76.600).

Comment. Some commenters recommended that certain types of projects receive priority consideration (e.g., giving preference to projects for ramps or other alterations to assist nonambulatory individuals).

Response. No change has been made. Each State has the flexibility to develop the criteria for approving LEA and IEU applications based on State-established goals, objectives, criteria, and priorities. States have the discretion to assign relative weights to the types of projects that are consistent with their established requirements.

Subpart G

Comment. Several commenters felt that five percent of its grant allowed for SEA administration of the program under § 304.60 is an appropriate amount. One commenter felt that the Department should recognize that expenditures will be made by SEAs for planning and recommended that program planning be included as an allowable administrative cost.

Response. A change has been made. Program planning has been added to the activities listed under allowable administrative costs at § 304.61. The Secretary believes that pre-application planning by SEAs will ensure effective use of the program funds and that States may need to use some portion of these funds to involve appropriate staff or consultants.

Comment. One commenter asked if the SEA can contract for administrative services.

Response. No change has been made. Under EDGAR, 34 CFR Part 74, Appendix C, Part II, C. 7, the cost of professional services rendered by an individual or organization not part of a grantee's department may be paid with Federal funds if the State is given prior approval by the Department (*see* 34 CFR 74.102).

Comment. One commenter asked for clarification of the administrative responsibilities that SEAs will assume for this program (*see* § 304.61).

Response. No change has been made. The administrative responsibilities for State-administered grant programs, including this program, are described in EDGAR at 34 CFR Part 76, Subpart G.

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Determination of Threatened Status for Ribes Echinellum (Miccosukee Gooseberry)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Service determines a plant, *Ribes Echinellum* (Coville) Rehder (Miccosukee gooseberry) to be a threatened species under the authority contained in the Endangered Species Act (Act) of 1973, as amended. *Ribes Echinellum* is found at only two locations, one in South Carolina and another, with two population segments, in Florida. *Ribes Echinellum* is threatened by potential recreational activities at both sites, and in Florida from development pressures and logging of its lakeshore habitat. This action will implement the protection provided by the Act for *Ribes Echinellum* (Miccosukee gooseberry).

DATE: The effective date of this rule is August 19, 1985.

ADDRESSES: The complete file for this rule is available for inspection, by appointment, during normal business hours at the Asheville Endangered Species Field Station, U.S. Fish and Wildlife Service, 100 Otis Street, Room 224, Asheville, NC 28801.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Currie at the above address (704/259–0321 or FTS 672–0321).

SUPPLEMENTARY INFORMATION:

Background

Ribes echinellum was first discovered by two Florida Botanists in the early spring of 1924, along the shore of Lake Miccosukee, in Jefferson County, Florida (Coville, 1924). *Ribes echinellum* remained known only from this one population along the shores of Lake Miccosukee for over 30 years, until a second population was located about 308 kilometers (200 miles) northeast in McCormick County, South Carolina, in 1957 (Radford, 1959). The South Carolina location is considered to represent one of the most unusual floristic assemblages in the two Carolinas (Radford and Martin, 1975). In 1984, an additional segment of the Florida population was discovered approximately 0.6 kilometers (1 mile) from the previously known plants. These locations remain the only known sites for *Ribes echinellum*.

This unique plant is a shrub that reaches 1 meter (3.3 feet) in height and forms patches that often measure several meters in diameter. The plant has spiny stems and three-lobed leaves that measure 1–2 centimeters (0.5–1 inch) in length. The flowers are greenish white and small. The fruits are spiny and measure up to 22 millimeters (1 inch) in diameter.

Past Federal Government actions involving *Ribes echinellum* began with section 12 of the Endangered Species Act of 1973, which directed the Secretary of the Smithsonian Institution to prepare a report on those plants considered to be endangered, threatened, or extinct. The Secretary of the Smithsonian presented this report (House Document No. 94–51) to Congress on January 9, 1975. On July 1, 1975, the Service published a notice of review in the **Federal Register** (40 FR 27823) of its acceptance of the report of the Smithsonian Institution as a petition within the context of section 4(c)(2), now section 4(b)(3)(a), of the Act, and of its intention thereby to review the status of the covered plants. On June 16, 1976, the Service published a proposed rule in the **Federal Register** (41 FR 24523) to determine approximately 1,700 vascular plant species to be endangered species pursuant to Section 4 of the Act. *Ribes echinellum* was included in the Smithsonian petition and the 1976 proposal. General comments received in relation to the 1976 proposal were summarized in an April 26, 1978, **Federal Register** publication (43 FR 17909).

The Endangered Species Act Amendments of 1978 required that all proposals over 2 years old be withdrawn. A 1-year grace period was given to proposals already over 2 years old. In the December 10, 1979, **Federal Register** (44 FR 70796), the Service published a notice of withdrawal of that portion of the June 16, 1976, proposal that had not been made final, along with four other proposals that had expired. *Ribes echinellum* was included as a category-1 species in a revised list of plants under review for threatened or endangered classification published in the December 15, 1980, **Federal Register** (45 FR 82480). Category 1 comprises taxa for which the Service presently has sufficient biological information to support their being proposed to be listed as endangered or threatened species.

The Endangered Species Act Amendments of 1982 required that all petitions pending on October 13, 1982, be treated as having been newly submitted on that date. The species listed in the December 15, 1980, notice of review were considered to be petitioned, and the deadline for a finding on those species, including *Ribes echinellum*, was October 13, 1983. On October 13, 1983, the Service found that the petitioned listing of *Ribes echinellum* was warranted, but precluded by other pending listing actions, in accordance with section 4(b)(3)(B)(iii) of the Act. This finding was published in the **Federal Register** on January 20, 1984 (49 FR 2485). On August 31, 1984, the Service published a proposal to list *Ribes echinellum* as a threatened species (49 FR 34535). That proposal constituted the next one-year finding as required by the 1982 Amendments to the Endangered Species Act. The proposal provided information on the species' biology, status, and threats, and the potential implications of listing. The proposal also solicited comments on the status, distribution, and threats to the species.

Summary of Comments and Recommendations

In the August 31, 1984, proposed rule (49 FR 34535) and associated notifications, all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. Appropriate State agencies, county governments, Federal agencies, scientific organizations, and other interested parties were contacted and requested to comment. Newspaper notices were published in the *McCormick Messenger*, McCormick, South Carolina, on September 13, 1984, and in the *Monticello News*, Monticello, Florida, on September 12, 1984, which invited public comment. On September 18, 1984, the Fish and Wildlife Service received a request for a public hearing. A notice announcing the public hearing was published on October 22, 1984, in the **Federal Register** (49 FR 41266). Notice of the public hearing was also published in the *Monticello News* on October 24, 1984. Eleven substantive comments were received in response to the **Federal Register** and newspaper notifications. A public hearing was held on November 8, 1984, in the Jefferson County Courthouse, Monticello, Florida. The comments and public hearing are summarized below.

The proposal was supported by the Governor of South Carolina, South Carolina Wildlife and Marine Resources Department, South Carolina Nature Conservancy, Florida Department of Agriculture, Florida Department of Environmental Regulation, Florida Native Plant Society, Apalachee Regional Planning Council, and Florida Natural Areas Inventory. The last named group also reported that a previously unknown group of plants had been discovered in Florida in January 1984. The Orvis Company stated that it would cooperate with efforts to protect *Ribes echinellum* on its lands.

Woodlanders (a native plant dealer) provided information on its experience in propagating *Ribes echinellum*. It stated that the plant seemed to qualify for protection as a threatened species under the Endangered Species Act; however, it expressed doubts about the severity of threats to both the Florida and South Carolina populations of *Ribes echinellum*. The Service agrees that the threats facing the South Carolina population are not severe; however, the Florida population is not currently protected. The low number of populations and low total number of plants would have warranted endangered status if the threats had been more immediate.

Woodlanders further expressed concern that listing of the plant as a threatened species might restrict or prohibit its sale of cultivated *Ribes echinellum*. The merits of maintaining a commercial source of artificially propagated endangered and threatened plant species such as *Ribes echinellum* were also stated in the letter. The trade prohibitions, which are found in the Act and at 50 CFR 17.71 and 17.72, will prohibit interstate commerce in *Ribes echinellum*, except for the sale of seeds obtained from cultivated plants and shipped in containers clearly marked "cultivated origin." However, the Act and 50 CFR 17.72 also provide for issuance of permits to engage in interstate commerce of federally listed threatened plant species. The Service generally supports the commercial availability of federally listed endangered or threatened plant species, provided the original plant material is obtained in a manner that does not adversely affect wild populations of the species and the material in interstate commerce is of propagated origin.

An attorney representing an interested party in Florida requested a public hearing and asked for information about the specific location of the Florida population. Following a brief summary of the proposal, which included a review of current knowledge of the status of *Ribes echinellum*, the public hearing was opened to public comment. The above mentioned attorney stated that the best protection for *Ribes echinellum* would be provided if the Federal Government owned the land on which it occurred. He further indicated that the lands on which the Florida population occurs may in fact be owned by the State or Federal Government. This attorney also requested an explanation of why the species was being proposed as a threatened species in 1984 when it was discovered in 1924 and had been under review by the Service for some time. A representative of the Apalachee Regional Planning Council read from the Council's letter indicating their support for threatened status. An attorney representing a landowner for part of the Florida population of *Ribes echinellum* requested information about restrictions that would be placed on his client if *Ribes echinellum* were listed as a threatened species. More detailed information about listing restrictions and the geographical location of the Florida population of *Ribes echinellum* has been provided to the interested party and his attorney.

Notwithstanding comments to the contrary, the information currently available to the Service indicates that all segments of the Florida population of *Ribes echinellum* are located on privately owned land. Further examination of land ownership of this population may be an appropriate part of future recovery efforts for this species. Information about the discovery of the Miccosukee gooseberry is included in the "Background" section of this rule. The reasons for the extended period of time that has elapsed since *Ribes echinellum* was first recognized as a potential candidate for protection under the Act and the August 31, 1984, proposal to list it as a threatened species are also reviewed in the "Background" section of this rule. The potential restrictions on the actions of private landowners are reviewed in the "Available Conservation Measures" section of this rule.

Summary of Factors Affecting the Species

After a thorough review and consideration of all information available, the Service has determined that *Ribes echinellum* (Miccosukee gooseberry) should be classified as a threatened species. Procedures found at section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations promulgated to implement the listing provisions of the Act (50 CFR Part 424) were followed. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1). These factors and their application to *Ribes echinellum* (Coville) Rehder (Miccosukee gooseberry) (Syn: *Grossularia echinella* Coville), are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range.* Because of its localization to only two populations, *Ribes echinellum* is particularly vulnerable to any natural or human-influenced disturbance. The South Carolina population occurs on lands managed as a nature preserve by the South Carolina Wildlife and Marine Resources Department. Increased visitation by the public to this area could increase the risk of accidental destruction and trampling. Additional protection and management planning is needed at the South Carolina site. Also, research is needed to determine the management needs for *Ribes echinellum*.

The species' continued existence is more tenuous in Florida. The Florida population is on privately owned lands and the sites have potential for lakeside development. The present owners have no plans to sell or develop the sites, but subsequent owners may well choose to develop the sites for homesites or recreational developments if protection planning does not occur. Logging of the associated hardwoods and severe fire could pose additional threats to the Florida population (Milstead, 1978). Logging has occurred near part of the Florida site, with observed detrimental effects (Kral, 1977).

Both populations of *Ribes echinellum* occur at sites (riverbank and lakeshore) that have potential for recreational use. If this recreational use is not controlled with the protection of *Ribes echinellum* as a primary consideration, negative impacts to the populations could result.

B. *Overutilization for commercial, recreational, scientific, or educational purposes.* Gooseberries and currants are cultivated for their edible fruits and for their ornamental habit and bloom. The Miccosukee gooseberry is not in demand for these purposes at present, but, with publicity, such a demand could occur.

C. *Disease or predation.* None known.

D. *The inadequacy of existing regulatory mechanisms. Ribes echinellum* is afforded limited protection under Florida State law, Chapter 65–426, which includes prohibitions concerning taking, transport, and the sale of plants listed under the Florida law. South Carolina does not have a State law to protect endangered plants, but *Ribes echinellum* is indirectly protected under the Natural Area prohibitions against unauthorized plant taking. The Endangered Species Act will offer additional protection for the species.

E. *Other natural or manmade factors affecting its continued existence.* The small size and number of the populations cause this species to be in

jeopardy due to natural perturbations such as lightning fires or to natural fluctuations in the numbers of extant

jeopardy due to natural perturbations such as lightning fires or to natural fluctuations in the numbers of extant individuals. The South Carolina population is threatened by competition from the introduced vine, Japanese honeysuckle (*Lonicera japonica*).

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by this species in determining to make this rule final. Based on this evaluation, the preferred action is to list *Ribes echinellum* as threatened. With only two populations of this species known to exist, it warrants protection under the Act; threatened status seems appropriate since one of the sites is in State ownership and managed as a natural area. For the reasons given below, critical habitat is not being designated.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that to the maximum extent prudent and determinable, the Secretary designate critical habitat at the time a species is determined to be endangered or threatened. The Service finds that designation of critical habitat is not prudent for *Ribes echinellum* at this time. Taking is not prohibited by the Endangered Species Act with respect to plants, except for a prohibition against removal and reduction to possession of endangered plants from lands under Federal jurisdiction. Gooseberries and currants are cultivated for their edible fruits and for their ornamental habit and bloom. Publication of critical habitat descriptions would make this species even more vulnerable to taking and increase enforcement problems. Although South Carolina State law prohibits unauthorized plant taking from natural areas, drawing attention to the site could increase enforcement problems. Increased visitation at both populations, stimulated by critical habitat designation, could also result in trampling problems. Both the appropriate South Carolina land-management agency and the Florida landowners have been informed of the locations of this species and the importance of protecting *Ribes echinellum*, so no additional benefits from the notification function of a critical habitat designation are expected. Therefore, it would not be prudent to determine critical habitat for *Ribes echinellum* at this time.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service following listing. The protection required of Federal agencies and the prohibitions against taking are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR Part 402 and are now under revision (see proposal at 48 FR 29990; June 29, 1983). Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into formal consultation with the Service. No Federal involvement is expected or known for *Ribes echinellum*.

The Act and its implementing regulations found at 50 CFR 17.71 and 17.72 set forth a series of general trade prohibitions and exceptions that apply to all threatened plant species. With respect to *Ribes echinellum*, all trade prohibitions of section 9(a)(2) of the Act, implemented by 50 CFR 17.71 apply. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to import or export, transport in interstate or foreign commerce in the course of a commercial activity, or sell or offer for sale this species in interstate or foreign commerce. Seeds from cultivated specimens of threatened species are exempt from these prohibitions provided that a statement of "cultivated origin" appears on their containers. Certain exceptions can apply to agents of the Service and State conservation agencies. The Act and 50 CFR 17.72 also provide for the issuance of permits to carry out otherwise prohibited activities involving threatened species under certain circumstances. It is anticipated that few trade permits would ever be sought or issued since *Ribes echinellum* is not common in cultivation or in the wild.

Section 9(a)(2)(B) of the Act, as amended in 1982, prohibits the removal and reduction to possession of endangered plant species from areas under Federal jurisdiction. Section 4(d) allows for the provision of such protection to threatened species through regulations. This protection will apply to *Rives echinellum* once revised regulations are promulgated. Permits for exceptions to this prohibition are available through section 10(a) and 4(d) of the Act, until revised regulations are promulgated to incorporate the 1982 Amendments. Proposed regulations implementing this prohibition were published on July 8, 1983 (48 FR 31417), and it is anticipated that final regulations will be issued following public comment. As this species is not known to occur on Federal lands, no collecting permit requests are anticipated. Requests for copies of the regulations on plants and inquiries regarding them may be addressed to the Federal Wildlife Permit Office, U.S. Fish and Wildlife Service, Washington, D.C. 20240 (703/235–1903).

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined by the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

BILLING CODE 4310–55–M

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Determination of Endangered Status for Pityopsis Ruthii (Ruth's Golden Aster)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Service determines *Pityopsis ruthii* (Small) Small (Ruth's golden aster), a plant endemic to Polk County, Tennessee, to be an endangered species under the Endangered Species Act of 1973 (Act), as amended. *Pityopsis ruthii* is endangered by water quality degradation, toxic chemical spills, and water level and flow regime alterations, and potentially from trampling associated with recreational use of its habitat. This action will implement the protection provided by the Act for *Pityopsis ruthii*.

DATE: The effective date of this rule is August 19, 1985.

ADDRESS: The complete file for this rule is available for inspection, by appointment, during normal business hours at the Asheville Endangered Species Field Station, U.S. Fish and Wildlife Service, 100 Otis Street, Room 224, Asheville, North Carolina 28801.

FOR FURTHER INFORMATION CONTACT: Mr. Robert R. Currie, at the above address (704/259–0321 or FTS 672–0321).

SUPPLEMENTARY INFORMATION:

Background

Pityopsis ruthii, a member of the Asteraceae (Aster family), was first collected by Albert Ruth, A Knoxville botanist, near the Hiwassee River in Polk County, Tennessee. Ruth often visited this area between 1894 and 1902 and collected this unusual plant on several occasions (Bowers, 1972a). J.K. Small (1897) named the species in honor of Ruth, including it in the genus *Chrysopsis* in his original description. In 1933, Small transferred the pecies to the genus *Pityopsis*. Several alternative taxonomic treatments have been proposed for this and associated species (Harms, 1969; Bowers, 1972b; Cronquist, 1980; Semple *et al.*, 1980). Regardless of which genus (*Pityopsis*, *Heterotheca*, or *Chrysopsis*) the species is included in, all authors have recognized the specific distinctness of this unique plant. The inclusion of this species in the genus *Pityopsis*, as advocated by Semple *et al.* (1980), is widely supported and is followed here.

Following Ruth's original collections, *Pityopsis ruthii* was not collected again for almost 50 years. Harms (1969) speculated that the species might be extinct. Bowers (1972a) reported that *Pityopsis ruthii* had been rediscovered on the Hiwassee River by himself and two other Knoxville botanists and stated that W.J. Dress had also collected the species in 1953. The Dress collection had not been reported in the literature, and his collections were housed in herbaria outside the region. This resulted in a 19-year lapse in knowledge of Dress' discovery. In 1976, A. White discovered a small population of *Pityopsis ruthii* on the Ocoee River, Polk County, Tennessee (White, 1978). Despite searches of apparently suitable habitat on the adjacent Tellico and Conasauga River systems by White (1977) and Wofford and Smith (1980), *Pityopsis ruthii* is only known to occur on short reaches of the Ocoee and Hiwassee Rivers.

Pityopsis ruthii is a fibrous-rooted perennial which grows only in the soil-filled cracks of phyllite boulders in and adjacent to the Ocoee and Hiwassee Rivers. The stems are from one to three decimeters tall and bear long narrow leaves covered with silvery hairs. The yellow flower heads appear in a paniculate inflorescence in late August and September. The fruits (achenes) develop a few weeks after the flowers fade (Wofford and Smith, 1980).

Federal actions involving *Pityopsis ruthii* began with Section 12 of the Endangered Species Act of 1973, which directed the Secretary of the Smithsonian Institution to prepare a report on those plants considered to be endangered, threatened, or extinct. This report, designated as House Document No. 94–51, was presented to Congress on January 9, 1975. On July 1, 1975, the Service published a notice in the **Federal Register** (40 FR 27823) of its acceptance of the report of the Smithsonian Institution as a petition within the context of former section 4(c)(2) (now section 4(b)(3)(A), as amended) of the Act and of its intention thereby to review the status of those plants. On June 16, 1976, the Service published a proposed rule in the **Federal Register** (41 FR 24523) to determine approximately 1,700 vascular plant species to be endangered species pursuant to Section 4 of the Act. *Pityopsis ruthii* was included in the Smithsonian petition and the 1976 proposal. General comments received in relation to the 1976 proposal were summarized in an April 26, 1978,

Federal Register publication (43 FR 17909).

Federal Register publication (43 FR 17909).

The Endangered Species Act Amendments of 1978 required that all proposals over two years old be withdrawn. A one-year grace period was given to proposals already over two years old. In the December 10, 1979, Federal Register (44 FR 70796), the Service published a notice of withdrawal of that portion of the June 16, 1976, proposal that had not been made final, along with four other proposals that had expired. *Pityopsis ruthii* was included as a category 1 species in a revised list of plants under review for threatened or endangered classification published in the December 15, 1980, Federal Register (45 FR 82480). Category 1 comprises taxa for which the Service presently has sufficient biological information to support their being proposed to be listed as endangered or threatened species.

The Endangered Species Act Amendments of 1982 required that all petitions pending on October 13, 1982, be treated as having been newly submitted on that date. The species listed in the December 15, 1980, notice of review were considered to be petitioned, and the deadline for a finding on those species, including *Pityopsis ruthii*, was October 13, 1983. On October 13, 1983, and October 13, 1984, the Service found that the petitioned listing of *Pityopsis ruthii* was warranted, but precluded by other pending listing actions, in accordance with section 4(b)(3)(B)(iii) of the Act. Notice of the 1983 finding was published in the Federal Register on January 20, 1984 (49 FR 2485). On November 20, 1984, the Service published, in the Federal Register (40 FR 45766), a proposal to list *Pityopsis ruthii* as an endangered species. That proposal constituted the next one-year finding as required by the 1982 Amendments to the Endangered Species Act. The proposal provided information on the species' biology, status, and threats, and the potential implications of listing. The proposal also solicited comments on the status, distribution, and threats to the species.

Summary of Comments and Recommendations

In the November 20, 1984, proposed rule (49 FR 45766) and associated notifications, all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. Appropriate State agencies, county governments, Federal agencies, scientific organizations, and other interested parties were contacted and requested to comment. A newspaper notice was published in the *Cleveland Banner* on December 12, 1984, which invited public comment. Five supporting comments were received in response to the Federal Register and newspaper notifications. The comments are summarized below.

The U.S. Department of Agriculture, Forest Service Regional Office in Atlanta stated that *Pityopsis ruthii* merits listing as an endangered species. The forest superviser for the Cheokee National Forest stated that publicity (associated with designation of critical habitat) is likely to attract attention to the plant and make protection efforts more difficult. It was further stated that this species, which occurs on the Cherokee National Forest, has been treated by the Forest Service as a sensitive species since 1981.

The Tennessee Department of Conservation, Ecological Services Division, supported listing *Pityopsis ruthii* as an endangered species, provided additional information about the threats to this species, and provided recent information on the status of the Ocoee River population.

Two comments, one from a private organization and the other from a private individual, supported listing *Pityopsis ruthii* as an endangered species.

The Tennessee Valley Authority (TVA) was provided a copy of the November 20, 1984, proposed rule on November 27, 1984. Although that agency made no official comments during the formal comment period, it did provide, in a letter dated February 6, 1984, information concerning the existing environmental conditions in the reaches of the Ocoee and Hiwassee Rivers occupied by *Pityopsis ruthii*. The information provided has been incorporated into the appropriate sections of this rule.

Summary of Factors Affecting the Species

After a thorough review and consideration of all information available, the Service has determined that *Pityopsis ruthii* should be classified as an endangered species. Procedures found at section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations (50 CFR Part 424) promulgated to implement the listing provisions of the Act were followed. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1). These factors and their application to *Pityopsis ruthii* (Small) Small (Ruth's golden aster) [SYN: *Chrysopsis ruthii* Small and *Heterotheca ruthii* (Small) Harms] are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range.* The two known populations of *Pityopsis ruthii* occur on short reaches of rivers in which water regimes are controlled by upstream dams. The dams are operated by the Tennessee Valley Authority. Natural water flows in the Hiwassee River, through the area where the species occurs, have been essentially eliminated since construction of the Appalachia Dam in 1943 (White, 1977). Water usually bypasses this area through a large pipeline between the dam and the powerhouse that is located several miles downstream of the dam. Apart from temporary releases to flush toxic chemical spills from the river or to release excess water after heavy upstream rainfall, the prime source of water for this river reach is inflow from small tributaries and surface runoff from the adjacent slopes (Wofford and Smith, 1980; Parrish, 1981). Rivers (1985) stated that releases due to high water above Appalachia Dam have occurred an average of 19 times per year since the dam was built in 1943. This alteration of natural flow cycles with a significant reduction of the annual scouring of boulders on which *Pityopsis ruthii* grows has permitted more competitive species to invade the boulders and encroach and overshadow the riverbanks (White, 1977). Somers (1985) reported that the Hiwassee River population has been reduced by approximately 50 percent in the past eight years. *Pityopsis ruthii* has little shade tolerance and is replaced by other species when sunlight is reduced (Wofford and Smith, 1980; White, 1977). If present trends continue it would appear that *Pityopsis ruthii* will eventually be displaced from the Hiwassee River by more shade-tolerant species. *Pityopsis ruthii* has adapted to and is not displaced by the normal high water flows that periodically scour the rocks and riverbanks and remove the more competitive vegetation.

The Ocoee River population of fewer than 500 plants (Wofford and Smith, 1980) appears to be subject to detrimental impacts of abnormally high flows during the growing season. Present water management on the Ocoee River results in regular releases during the growing season that approximate the historical average annual flow on this reach of the river (Rivers, 1985). However, periodic low (summer) and high (spring) flows have been eliminated. Although periodic high flows appear to be essential for maintenance of *Pityopsis ruthii* habitat, the higher than normal flows on the

Ocoee River during the growing season may be exceeding the species' capability to withstand this normally beneficial action. A closer correlation between water management and the needs of *Pityopsis ruthii* is needed, if the species is to survive on the Ocoee River.

Current recreational use of the Hiwassee River is limited to hiking and fishing on the banks adjacent to the *Pityopsis ruthii* population. Current levels of activity do not appear to be adversely affecting the species. Should levels of these activities increase in the future, they could threaten the species if they are not managed in a way that minimizes direct impacts such as trampling. Recreational use of the Ocoee River primarily consists of white-water sports like rafting. Since this activity takes place in the river, it would not appear to be impacting *Pityopsis ruthii* at this time. Observers and photographers of these white-water activities have trampled this species in the past (Collins, 1984).

B. *Overutilization for commercial, recreational, scientific, or educational purposes. Pityopsis ruthii* is not currently in commercial trade as an ornamental plant. However, Farmer (1977) indicates that the species has excellent potential for horticultural use and public awareness of the species could generate a demand.

C. *Disease or predation.* Not applicable to this species at this time.

D. *The inadequacy of existing regulatory mechanisms.* The State of Tennessee recently passed the Tennessee Rare Plant Protection Act of 1985; implementing rules and regulations will soon be developed and it is anticipated that at that time *Pityopsis ruthii* will be offered some protection by this new legislation. The Tennessee Department of Conservation recognizes Ruth's golden aster as endangered in its current (1984) revision of the Official Rare Plant List of Tennessee issued pursuant to the Governor's Executive Order on March 7, 1980, and compiled with the assistance of a scientific advisory committee and with other public input. Removal of plants without a permit from the Cherokee National Forest is prohibited by regulation. However, this regulation is difficult to enforce. The Endangerd Species Act will provide additional protection for the species.

E. *Other natural and manmade foctors affecting its continued existence.* Water quality in the Ocoee River is drastically reduced on a regular basis because of mining activities in the Copperhill area, upstream of the *Pityopsis ruthii* population. Sediment levels are generally high, and acidity levels as low as pH 1.2 have been recorded in the Ocoee River (White, 1977). These water quality problems have adversely impacted the aquatic fauna of this reach of the Ocoee River and are probably adversely affecting the *Pityopsis ruthii* population. Several spills of toxic chemicals (sulfuric acid) have occurred on the Hiwassee River. In order to flush these chemicals from the river, releases from Appalachia Dam have been made. These releases have resulted, on at least one occasion (1976), in a loss of seed production for the year (White, 1977).

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by this species in determining to make this rule final. Based on this evaluation, the preferred actien is to list *Pityopsis ruthii* as endangered. With only two populations of this species known to exist, it definitely warrants protection under the Act; endangered status seems appropriate because of the threats facing both populations. Critical habitat is not being designated for reasons discussed in the next section.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that to the maximum extent prudent and determinable, the Secretary designate critical habitat at the time a species is determined to be endangered or threatened. The Service finds that designation of critical habitat is not prudent for *Pityopsis ruthii* at this time. The species has high potential for horticultural use (Farmer, 1977). Increased publicity and the provision of specific location information associated with critical habitat designation could result in taking pressures on Ruth's golden aster. Although removal and reduction to possession of endangered plants from lands under Federal jurisdiction is prohibited by the Endangered Species Act, such provisions are difficult to enforce effectively. Publication of critical habitat descriptions would make *Pityopsis ruthii* more vulnerable and would increase enforcement problems for the U.S. Forest Service. Increased visits to both populations stimulated by critical habitat designation could also result in trampling problems. Both of the Federal agencies involved in managing the habitat of Ruth's golden aster have been informed of the locations of this species and of the importance of protecting it, so no additional benefits from the notification function of critical habitat designation would result. Therefore, it would not be prudent to determine critical habitat for *Pityopsis ruthii* at this time.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service following listing. The protection required of Federal agencies and the prohibitions against removal and reduction to possession are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR Part 402 and are now under revision (see proposal at 48 FR 29990; June 29, 1983). Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into formal consultation with the Service.

The U.S. Forest Service (Cherokee National Forest) and the Tennessee Valley Authority (TVA) have jurisdiction over this species' habitat or essential components of its habitat. Federal activities that could impact *Pityopsis ruthii* and its habitat in the future include, but are not limited to, the following: Management of flow regimes and water levels on the Ocoee and Hiwassee Rivers, timber harvesting, recreational development, channel alterations, road and bridge construction, permits for mineral exploration, and implementation of forest management plans. It has been the experience of the Service that the large majority of section 7 consultations are resolved so that the species is protected and the project can continue.

The Act and its implementing regulations found at 50 CFR 17.61, 17.62, and 17.63 set forth a series of general trade prohibitions and exceptions that

apply to all endangered plant species. With respect to *Pityopsis ruthii*, all

1973, as amended. A notice outlining the Service's reasons for this determination

treatment of the segregate genus *Chamaesyce*, the species affected by

known from only two sites near

VOL 50 ISS 138 JL 18 1985 UMI

apply to all endangered plant species. With respect to *Pityopsis ruthii*, all trade prohibitions of section 9(a)(2) of the Act, implemented by 50 CFR 17.61, apply. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to import or export, transport in interstate or foreign commerce in the course of a commerical activity, or sell or offer for sale this species in interstate or foreign commerce. Certain exceptions can apply to agents of the Service and State conservation agencies. The Act and 50 CFR 17.62 and 17.63 also provide for the issuance of permits to carry out otherwise prohibited activities involving endangered species under certain circumstances. It is anticipated that few trade permits will be sought or issued since Ruth's golden aster is not common in cultivation or in the wild.

Section 9(a)(2)(B) of the Act, as amended in 1982, prohibits the removal and reduction to possession of endangered plant species from areas under Federal jurisdiction. This prohibition now applies to *Pityopsis ruthii*. Permits for exceptions to this prohibition are available through section 10(a) of the Act (revised regulations are being developed for the issuance of removal or reduction to possession permits) *Pityopsis ruthii* is only known to occur on lands administered by the Forest Service and TVA, but it is anticipated that few collecting permits will be requested for this species. Requests for copies of the current regulations on plants and inquiries regarding them may be addressed to the Federal Wildlife Permit Office, U.S. Fish and Wildlife Service, Washington, D.C. 20240 (703/235–1903).

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined by the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

Regulation Promulgation

PART 17—[AMENDED]

Accordingly, Part 17, Subchapter B of Chapter I, Title 50 of the Code of Federal Regulations, is amended as set forth below:

1. The authority citation for Part 17 continues to read as follows:

Authority: Pub. L. 93–205, 87 Stat. 884; Pub. L. 94–359, 90 Stat. 911; Pub. L. 95–632, 92 Stat. 3751; Pub. L. 96–159, 93 Stat. 1225; Pub. L. 97–304, 96 Stat. 1411 (16 U.S.C. 1531 *et seq.*).

2. Amend § 17.12(h) by adding the following, in alphabetical order under the family Asteraceae, to the List of Endangered and Threatened Plants:

§ 17.12 Endangered and threatened plants.

BILLING CODE 4310–55–M

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Endangered and Threatened Status for Five Florida Pine Rockland Plants

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Service finds four plants to be endangered: *Euphorbia deltoidea* ssp. *deltoidea* (spurge), *Galactia smallii* (Small's milkpea), *Polygala smallii* (tiny polygala), and *Amorpha crenulata* (crenulate lead-plant). The Service finds one plant, *Euphorbia garberi* (Garber's spurge), to be a threatened species. The four endangered species are restricted to pine rockland habitats in Dade County, Florida. They are endangered by the continuing destruction of pine rocklands for residential and commercial purposes. *Euphorbia garberi* formerly occurred widely in Dade and Monroe Counties, Florida, at the edges of pinelands and hammocks, and in coastal areas. Its range has been reduced by commercial and residential development to four sites in Everglades National Park and one site in the Florida Keys. Critical habitat has not been designated for any of these species. This action provides the protection of the Endangered Species Act to the five plant species.

DATE: The effective date of this rule is August 19, 1985.

ADDRESS: The complete file for this rule is available for inspection, by appointment, during normal business hours at the Endangered Species Field Station, U.S. Fish and Wildlife Service, 2747 Art Museum Drive, Jacksonville, Florida 32207.

FOR FURTHER INFORMATION CONTACT: Mr. David J. Wesley, Endangered Species Field Supervisor, at the above address (904/791–2580 or FTS 946–2580).

SUPPLEMENTARY INFORMATION:

Background

Euphorbia deltoidea was originally described by Engelmann, and published in Chapman (1883). Small (1903) transferred the species to the genus *Chamaesyce*. For the sake of consistency with the Service's previous treatment of the segregate genus *Chamaesyce*, the species affected by this rule are referred to the genus Euphorbia. This agrees with the nomenclature used in the Service's December 15, 1980, plant notice of review (45 FR 82480). Small (1903, 1927) later described *Chamaesyce serpyllum* and *Chamaesyce adhaerens* as species distinct from *Chamaesyce deltoidea*. Burch (1966) considered *Euphorbia deltoidea* to have two subspecies, *deltoidea* and *serpyllum*, the former including the varieties *deltoidea* and *adhaerens*. Herndon, however, believes that *deltoidea, adhaerens*, and *serpyllum* should be considered distinct species (Herndon, Florida International University, pers. comm., 1984). This final rule applies to the taxa *deltoidea* and *adhaerens*, which are restricted to Dade County, Florida. *Euphorbia deltoidea* subspecies *serpyllum* is restricted to Big Pine Key, Monroe County, Florida, and is a candidate for Federal listing. There is no known overlap in range among these three taxa. *Euphorbia deltoidea* s p. *deltoidea* variety *deltoidea* occurs in the Coral Gables-South Miami-Perrine area, while variety *adhaerens* occurs in the Homestead-Goulds area. These two varieties are both covered by the listing of the subspecies *Euphorbia deltoidea* ssp. *deltoidea*.

Euphorbia deltoidea is a herbaceous, prostrate to barely ascending plant forming small mats to a few decimeters in diameter. The thin, wiry stems extend from a central woody taproot. Leaves are deltoid to ovate in shape, opposite, and up to 5 millimeters (0.2 inch) long. The flowers are unisexual; male and female flowers are arranged in a cuplike structure (cyathium). The 3-seeded fruits are 1–2 millimeters (0.04–0.08 inch) wide; seeds measure about 1 millimeter (0.04 inch) wide. The density and distribution of hairs on the stems, leaves, and capsules distinguish varieties *deltoidea* and *adhaerens*. Variety *deltoidea* is essentially hairless; *adhaerens* is fairly hairy.

Galactia smallii was described as *Galactia prostrata* by Small (1933). Herndon (1981) published H.J. Roger's finding that this specific name was preoccupied by another species of *Galactia*. He also published Hollis' suggestion of the new specific name *smallii*, and clarified the characters separating this species from the related *Galactia pinetorum*. *Galactia smallii* is a small vine with compound leaves, usually with 3 elliptic leaflets 1.5–3 centimeters (0.6–1.2 inches) long. The pinkish flowers have a calyx 8–9 millimeters (0.34 inch) long and a standard petal 15–17 millimeters (0.59–0.67 inch) long. This species is currently known from only two sites near Homestead.

Polygala smallii was originally described by Small (1905) as *Polygala arenicola*. Smith and Ward (1976), realizing that the specific name *arenicola* was preoccupied in the genus *Polygala*, proposed a new name, *Polygala smallii*. The plant was originally known from pine rocklands in Broward and Dade Counties, Florida, but attempts to locate this species in 1979 (Austin *et al.*, 1980b) found all historic populations extirpated. The species is now known only from two sites in Dade County. *Polygala smallii* is an erect biennial herb with short, branched or unbranched stems. Leaves are 12–50 millimeters (0.47–1.97 inches) long, crowded, and oblanceolate to linear-lanceolate, and often form a basal rosette. The small yellow-green flowers are clustered at the ends of stems. The oblong seeds are 1.9–2.3 millimeters (0.08–0.09 inch) long.

Amorpha crenulata was described by Rydberg (1919) based on material from near Coconut Grove, Dade County, Florida. Wilbur (1975) confirmed the taxonomic validity of this species. The plant is presently restricted to a few sites in the South Miami area (Herndon, 1984a). *Amorpha crenulata* is a shrub to 1.5 meters (4.92 feet) in height. The compound leaves bear 25–33 leaflets. The flowers bear a single petal (the standard) 6 millimeters (0.24 inch) long and are arranged in loosely clustered racemes 9–20 centimeters (3.5–7.9 inches) long. The seed pod is 6–7 millimeters (0.24–0.27 inch) long and is conspicuously glandular.

Pine rockland plants formerly were more widely distributed along the south Florida limestone ridge, an area about 105 kilometers (65 miles) long, extending more or less continuously from southeastern Broward County to Long Pine Key in Everglades National Park. The ridge reaches 3–5 meters (10–16 feet) in elevation and provides a markedly different habitat for plants and animals than the marshes and wet prairies that dominate the surrounding areas. The substrate consists of porous limestone known as Miami oolite. Soils are poorly developed, consisting mainly of a thin layer of sand. Erosion of the limestone results in frequent solution holes and jagged surface features. Many plants are rooted in crevices in the limestone. The predominant canopy vegetation on the ridge is southern slash pine (*Pinus elliottii* var. *densa*). An understory of saw palmetto (*Serenoa repens*), silver palm (*Coccothrinax argentata*), poisonwood (*Metopium toxiferum*), rough velvetseed (*Guettarda*

scobra), and wax myrtle (*Myrica cerifera*) is typical. Large numbers of Monroe County, Florida. *Euphorbia garberi* occurs in transitional areas

proposed to be listed as endangered or threatened species.

scabra), and wax myrtle (*Myrica cerifera*) is typical. Large numbers of endemic pine rockland plants are present in the understory. Lack of fire results in succession to tropical hardwood hammock vegetation, characterized by oaks (*Quercus virginiana*), gumbo-limbo (*Bursera simaruba*), strangler fig (*Ficus aurea*), poisonwood (*Metopium toxiferum*), wild tamarind (*Lysiloma latisiliqua*), and other species. Burning at 3 to 10-year intervals may be necessary to maintain the pine rockland community; without fire the community may develop into rockland hammock in about 25 years (Duever, 1984).

The pine rocklands have been extensively developed for residential, commercial and agricultural purposes. Shaw (1975) estimated that the historic area of pinelands and hammocks in Dade County, exclusive of Everglades National Park, was about 152,000 acres. In 1975, these forests were estimated to have been reduced to 8,149 acres; 7,370 acres were pinelands. Only 5,268 acres of pinelands were of sufficient size to be considered viable. In 1978, these 5,268 acres of viable pineland had decreased to 4,558 acres (Anonymous, 1978). Only 1,710 acres of pineland remained in good condition; the remainder suffered from lack of burning and/or invasion of exotic plants. The Dade County Department of Resources Management is currently updating the forest survey, since the pinelands have continued to decline rapidly since 1978. Summaries of the unique botanical features of the Miami rock ridge pineland and the threats facing the remnants of this habitat type were recently provided by Herndon (1984b) and Duever (1984). *Linum carteri* var. *carteri* (Carter's flax), an endemic to Dade County pinelands, is a candidate species for Federal listing but could not be located in a 1980 search and may now be extinct (Austin *et al.*, 1980a).

Euphorbia garberi was originally described by Engelmann in 1883. Small (1903) transferred the species to the genus *Chamaesyce*. *Euphorbia garberi* is a prostrate herb with hairy stems, ovate leaves 4–9 millimeters (0.16–0.35 inch) long, and conspicuous flowers. The species formerly occurred in Dade and Monroe Counties, Florida, from the Miami area to the lower Florida Keys. Researchers conducted a status survey and were unable to locate this species over much of the historic range (Austin *et al.*, 1980a). The only known remaining populations occur at four sites in Everglades National Park, one in Dade County and three in Monroe County, Florida, and one site on Big Pine Key, Monroe County, Florida. *Euphorbia garberi* occurs in transitional areas between hammocks and pine rocklands, and on beach ridges in saline coastal areas. This species occurs in open areas on dry, sandy soil. *Euphorbia garberi* has been extirpated from the Miami area and from most of the Florida Keys in Monroe County where it was formerly found.

Federal Government actions on these species began with section 12 of the Endangered Species Act of 1973, which directed the Secretary of the Smithsonian Institution to prepare a report on plants considered to be endangered, threatened, or extinct. This report, designated as House Document No. 94–51, was presented to Congress on January 9, 1975. In this report *Euphorbia deltoidea* ssp. *deltoidea* was listed as threatened, and *Euphorbia garberi* was listed as endangered. On July 1, 1975 (40 FR 27823), the Service published a notice in the **Federal Register** of its acceptance of the report of the Smithsonian Institution as a petition within the context of section 4(c)(2) [now section 4(b)(3)] of the Act, and its intention thereby to review the status of the plant taxa named within. The above two taxa were included in the notice. On June 16, 1976, the Service published a proposed rule in the **Federal Register** (41 FR 24523) to determine approximately 1,700 vascular plant species to be endangered species pursuant to section 4 of the Act. The list of 1,700 plant taxa was assembled on the basis of comments and data received by the Smithsonian Institution and the Service in response to House Document No. 94–51 and the July 1, 1975, **Federal Register** publication. *Euphorbia garberi* was included in the proposed rule. General comments received in relation to the 1976 proposal were summarized in an April 26, 1976, **Federal Register** publication, which also determined 13 plant species to be endangered or threatened (43 FR 17909). On December 10, 1979, the Service published a notice of withdrawal of that portion of the June 16, 1976, proposal that had not been made final, along with four other proposals that had expired due to a procedural requirement of the 1978 Amendments. On December 15, 1980, the Service published a revised notice of review for native plants in the **Federal Register** (45 FR 82480); *Euphorbia deltoidea*, *Polygala smallii*, and *Euphorbia garberi* were included as category-1 species. Category 1 comprises taxa for which the Service presently has sufficient biological information to support their being proposed to be listed as endangered or threatened species.

The Endangered Species Act Amendments of 1982 required that all petitions pending as of October 13, 1982, be treated as having been newly submitted on that date. The species covered by the December 15, 1980, notice of review were considered to be petitioned and the deadline for a finding on those species, including *Polygala smallii*, *Euphorbia deltoidea* ssp. *deltoidea* and *Euphorbia garberi*, was October 13, 1983. On October 13, 1983, and October 12, 1984, the Service found that the petitioned listing of these three taxa was warranted, and that although other pending proposals had precluded their proposal, expeditious progress was being made to list the species.

On March 22, 1984, the Service received a petition from Mr. Alan Herndon of the Department of Biology, Florida International University, Miami, Florida, to list *Amorpha crenulata* and *Galactia smallii* pursuant to the Endangered Species Act. On June 4, 1984, an administrative decision was made that the petition presented substantial information indicating that the petitioned action might be warranted. Notice to this effect was published in the **Federal Register** on July 13, 1984 (49 FR 28583).

On November 7, 1984 (49 FR 44507), the Service proposed to list *Euphorbia deltoidea* ssp. *deltoidea*, *Galactia smallii*, *Polygala smallii*, and *Amorpha crenulata* as endangered species, and to list *Euphorbia garberi* as a threatened species. That proposal incorporated findings, pursuant to section 4(b)(3)(B) of the Act and due by March 22 and October 13, 1985, that the actions requested by the two petitions referred to above were warranted.

Summary of Comments and Recommendations

In the November 7, 1984, proposed rule (49 FR 44507) and associated notifications, all interested parties were requested to submit factual reports or information that might contribute to the development of a final rule. Appropriate State agencies, county governments, Federal agencies, scientific organizations, and other interested parties were contacted and requested to comment. Newspaper notices were published in the *Miami Herald* and the *Key West Citizen* on November 26, 1984, which invited general public comment. No public hearing was requested or held.

Six comments were received. The proposed listings were supported by the Florida Game and Fresh Water Fish Commission, the Florida Department of Natural Resources (Division of Recreation and Parks), the Florida Natural Areas Inventory (FNAI), and the State organization and a local chapter of the Florida Native Plant Society. The FNAI indicated that another site for *Amorpha crenulata* might exist; six plants were found on the site (a small cultivated lot) in 1982. A botanist supported the listing of *Euphorbia garberi*, noting that the single known remaining site for this species in the Florida Keys was vulnerable to storms.

Summary of Factors Affecting the Species

After a thorough review and consideration of all information available, the Service has determined that *Euphorbia deltoidea* ssp. *deltoidea*, *Galactia smallii*, *Pollygala smallii*, and *Amorpha crenulata* should be classified as endangered species, and that *Euphorbia garberi* should be classified as a threatened species. Procedures found at section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations promulgated to implement the listing provisions of the Act (50 CFR Part 424) were followed. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1). These factors and their application to *Euphorbia deltoidea* Engelm. *ex* Chapman ssp. *deltoidea* (spurge), *Galactia smallii* H.J. Rogers *ex* Herndon (synonym: *G. prostrata* Small) (Small's milkpea), *Polygala smallii* Smith and Ward (synonym: *P. arenicola* Small) (tiny polygala), *Amorpha crenulata* Rydberg (crenulate lead-plant), and *Euphorbia garberi* Engelm. *ex* Chapm. (Garber's spurge) are as follows:

A. *The present or threatened destruction, modification, or curtailment of their habitat or range.* *Euphorbia deltoidea* ssp. *deltoidea*, *Galactia smallii*, *Polygala smallii*, and *Amorpha crenulata* are restricted to pinelands of the Miami rock ridge in Dade County, Florida. Conversion of pine rocklands for commercial and residential purposes began early in the twentieth century and accelerated after 1930. It has been estimated that 90 percent of Dade County's pine rocklands (exclusive of the pine rocklands within Everglades National Park, where these species do not occur) present in 1940 had been destroyed by 1972 (Robertson and Kushlan, 1974). The pinelands outside of Everglades National Park have been even further reduced since that time, and are now restricted to small isolated stands. Herndon (1984b) estimated that 96 percent of the Dade County pinelands outside of Everglades National Park had been destroyed by 1984. The largest of these remnants are in county ownership; a few significant parcels are in private or Federal ownership. Originally, these plant species were probably distributed fairly widely throughout the pinelands, but apparently did not occur west of the Homestead area. The species occurring in Dade County parks (*Euphorbia deltoidea* ssp. *deltoidea* and *Amorpha crenulata*) are vulnerable to ongoing and potential future development for recreational purposes and the establishment of service roads, parking, and picnic areas.

Euphorbia deltoidea ssp. *deltoidea* var. *deltoidea* formerly occurred throughout the pinelands from Miami southwest to Cutler Ridge. It is now restricted to eight known sites in the vicinity of Cutler Ridge and Perrine. *Euphorbia deltoidea* ssp. *deltoidea* var. *adhaerens* formerly occurred at several sites in the Homestead-Goulds area; this species is now restricted to two sites near Homestead (Austin *et al.*, 1980a).

The former range of *Galactia smallii* is poorly known, but this species is presently restricted to two known sites near Homestead (Herndon, 1984a).

Polygala smallii formerly existed from southeastern Broward County (near Fort Lauderdale) to the Cutler area in Dade County. This species is now restricted to two sites in the Cutler area (Austin *et al.*, 1980b).

Amorpha crenulata formerly occurred throughout pinelands in the Miami-Coral Gables area; it is now known only from a few highly restricted sites within the Miami City limits (Herndon, 1984a).

Habitat destruction or modification threatening *Euphorbia garberi* includes residential and commercial development, lack of fire resulting in increased competition and shading out by other plant species, and natural risk from destruction by storms or hurricanes. *Euphorbia garberi* was formerly found from the Miami area southwest to Everglades National Park (ENP) and the Lower Florida Keys. Currently, the species is known from only four sites in ENP, one in Dade County and three in Monroe County, and one site on Big Pine Key, Monroe County. The species has apparently been extirpated from eight of the Florida Keys where it formerly occurred (Austin *et al.*, 1980a). It has not been found in the Miami area since 1949. Three of the ENP populations are located in coastal areas where storm overwash could eliminate them. *Euphorbia garberi* was considered a "species of highest concern" in a rare plant report prepared by the Everglades National Park South Florida Research Center (Loope and Avery, 1979). Another population is in a pineland area where periodic burning may be required to prevent overshading by shrubs. The Big Pine Key site is vulnerable to overshading and storm damage.

B. *Overutilization for commercial, recreational, scientific, or educational purposes.* *Euphorbia deltoidea* ssp. *deltoidea*, *Galactia smallii*, *Polygala smallii*, and *Amorpha crenulata* are so limited in distribution and population size that indiscriminate scientific or other collecting could adversely affect these species. Collecting is not known to occur at this time, but caution will be necessary to ensure that increased publicity does not spark such collecting.

C. *Disease or predation.* Not applicable to these species.

D. *The inadequacy of existing regulatory mechanisms.* *Polygala smallii* is considered endangered by the Florida Committee on Rare and Endangered Plants and Animals (Ward, 1979), but this recognition provides no protection to the plant or its habitat. *Euphorbia deltoidea* ssp. *deltoidea* and *Amorpha crenulata* occur in Dade County parks, but are not accorded any specific protection in park planning or development. *Euphorbia garberi* is provided some protection by its presence in ENP, but is unprotected outside the Park. National Park Service regulations prohibit the removal of plants from parks; these regulations will be further strengthened by prohibitions of the Act that restrict the removal and reduction to possession of endangered plants from lands under Federal jurisdiction (proposed to be implemented for threatened plants at 48 FR 31417, July, 1983).

Dade County sponsors an Environmentally Endangered Lands (EEL) program which provides property tax benefits to landowners who agree to maintain healthly forestlands. The program includes prescribed burning for pineland. Over 20 tracts of land supporting pinelands are now included in the EEL program, but these lands do not include any of the currently known sites for the species in this regulation.

E. *Other natural or manmade factors affecting its continued existence.* Pine rockland habitat in Dade County succeeds to hardwood hammock in the absence of periodic burning. Pine rockland plants are gradually shaded out as succession takes place. As Dade County becomes increasingly developed and the pinelands smaller and more fragmented, fire suppression is more apt to occur. Invasion of exotic plants is also affecting the pinelands. Two

species currently invading this habitat are *Schinus terebinthifolius* (Brazilian pepper) and a lesser pest (*Neo*

designation of critical habitat for these plants.

The Act and its implementing regulations found at 50 CFR 17.61, 17.62,

public comment. It is likely that few collecting permits for these species will

combinations and a key to the Caribbean members of the genus. Annals of the

Ward, D.B. 1979. Rare and endangered biota of Florida. Vol. 5: Plants. University Presses

VOL 50 ISS 138 JL 18 1985 UMI

species currently invading this habitat are *Schinus terebinthifolius* (Brazilian pepper) and a large reed (*Neyraudia reynaudiana*). Other exotic plants, which are extremely widespread in south Florida, may also invade pine rocklands in the future. The orchid tree (*Bauhinia variegata*) is currently present in some pinelands. Most of the remaining pinelands are surrounded with suburban landscaping dominated by exotic plants. Fire suppression and exotic plant competition affect *Euphorbia deltiodea* ssp. *deltiodea, Galactia smallii, Polygala smallii,* and *Amorpha crenulata.*

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by these species in determining to make this rule final. Based on this evaluation, the preferred action is to list *Euphorbia deltoidea* ssp. *deltoidea, Galactia smallii, Polygala smallii,* and *Amorpha crenulata* as endangered species and to list *Euphorbia garberi* as a threatened species. The former four species have already been extirpated over most of their historic range and could become extinct in the near future. *Euphorbia garberi* has been largely extirpated over its former range and is threatened at one or more of the remaining sites. The reasons for not proposing critical habitat for these species are discussed below in the "Critical Habitat" section.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that to the maximum extent prudent and determinable, the Secretary designate critical habitat at the time a species is determined to be endangered or threatened. The Service finds that designation of critical habitat is not prudent for these species at this time. *Euphorbia deltoidea* ssp. *deltoidea, Galactia smallii,* Polygala smallii, and *Amorpha crenulata* are sufficiently restricted that scientific collecting or vandalism could seriously damage the remaining populations of these species. Publication of critical habitat descriptions and maps in the **Federal Register** would increase the likelihood of such activities. Similarly, it would not be prudent to publish descriptions and maps of the few known sites of *Euphorbia garberi.* While collecting is generally prohibited in Monroe County Parks and in Everglades National Park, these prohibitions are difficult to enforce. The Service believes that Federal involvement in the areas where these plants occur can be identified without the designation of critical habitat. Therefore, there is no benefit in designation of critical habitat for these plants.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service following listing. The protection required of Federal agencies and the prohibitions against taking are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR Part 402 and are now under revision (see proposal at 48 FR 29990; June 29, 1983). Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into formal consultation with the Service.

Euphorbia deltoidea ssp. *deltoidea* occurs on land under the jurisdiction of the U.S. Army. The Army is currently conferring with the Service regarding the development of Reserve facilities on the pineland site. This process is anticipated to become a consultation, with determination of *Euphorbia deltoidea* ssp. *deltoidea* to be an endangered species.

Euphorbia garberi occurs in Everglades National Park. Park management includes prescribed burning of pinelands in areas where *Euphorbia garberi* is located. The present burning schedules, aimed at maintaining pinelands, should benefit this species. This activity will be subject to consultation under section 7 of the Endangered Species Act. No monitoring of this plant species is currently being done in the Park; the listing could focus increased attention on its status.

The Act and its implementing regulations found at 50 CFR 17.61, 17.62, and 17.63 for endangered plants and 17.71 and 17.72 for threatened plants set forth a series of general trade prohibitions that apply to all endangered and threatened plant species. With respect to *Euphorbia deltoidea* ssp. *deltoidea, Galactia smallii, Polygala smallii, Amorpha crenulata,* and *Euphorbia garberi,* all trade prohibitions of section 9(a)(2) of the Act, implemented by 50 CFR 17.61 and 17.71, would apply. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to import or export, transport in interstate or foreign commerce in the course of a commercial activity, or sell or offer for sale these species in interstate or foreign commerce. Seeds from cultivated specimens of threatened plant species are exempt from these prohibitions provided that a statement of "cultivated origin" appears on their containers. Certain exceptions can apply to agents of the Service and State conservation agencies. The Act and 50 CFR 17.62, 17.63, and 17.72 also provide for the issuance of permits to carry out otherwise prohibited activities involving endangered and threatened species under certain circumstances. It is anticipated that few trade permits would ever be sought or issued since the species are virtually unknown in cultivation and are uncommon in the wild.

Section 9(a)(2)(B) of the Act, as amended in 1982, prohibits the removal and reduction to possession of endangered plant species from areas under Federal jurisdiction. This prohibition now applies to *Euphorbia deltoidea* ssp. *deltoidea* of Federal lands. Section 4(d) allows for the provision of such protection to threatened species through regulations. This protection will apply to *Euphorbia garberi* in ENP once revised regulations are promulgated. Everglades National Park regulations already prohibit collecting, except under permit, so the existing situation will be unchanged. The remaining plants considered in the rulemaking would be given similar protection to the extent they are located on land subject to Federal jurisdiction. Permits for exceptions to this prohibition are available through sections 10(a) and 4(d) of the Act, until revised regulations are promulgated to incorporate the 1982 Amendments. Proposed regulations implementing this prohibition were published on July 8, 1983 (48 FR 31417), and it is anticipated that these will be made final following public comment. It is likely that few collecting permits for these species will ever be requested. Requests for copies of the regulations on plants and inquiries regarding them may be addressed to the Federal Wildlife Permit Office, U.S. Fish and Wildlife Service, Washington, D.C. 20240 (703/235–1903).

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined under authority of the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

DEPARTMENT OF EDUCATION

34 CFR Parts 425, 426, 431, and 432

State-Administered Adult Education Program and National Adult Education Discretionary Program

AGENCY: Department of Education.

ACTION: Final Regulations.

SUMMARY: The Secretary of Education issues final regulations to implement the Adult Education Act, which was amended and extended by the Education Amendments of 1984, Pub. L. 98-511. These regulations govern the State-administered program of adult basic and adult secondary education and the national adult education discretionary program for research, development, demonstration, dissemination, and evaluation. An additional purpose of these regulations is to reduce the administrative burden on grantees, to allow more flexibility in program administration to State educational agencies, to eliminate certain existing regulations that are unnecessary, and to clarify certain provisions of the existing regulations to make them more understandable to the public.

EFFECTIVE DATE: These regulations take effect either 45 days after publication in the **Federal Register** or later if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person.

FOR FURTHER INFORMATION CONTACT: Paul V. Delker, Director, Division of Adult Education, U.S. Department of Education, (ROB-3, Room 5610), 400 Maryland Avenue, SW., Washington, D.C. 20202-3585, Telephone: (202) 245-9793; or Thomas L. Johns, Chairperson, Adult Education Regulations Task Force, U.S. Department of Education, (ROB-3, Room 5126), 400 Maryland Avenue, SW., Washington, D.C. 20202-3579, Telephone: (202) 245-8176.

SUPPLEMENTARY INFORMATION:

Background

Title I of the Education Amendments of 1984 (Pub. L. 98-511) amends and extends the Adult Education Act (the Act), enacted in Pub. L. 91-230 (20 U.S.C. 1201 *et seq.*), as amended. The primary purpose of the Act has been, and continues to be under the recent amendments, to offer educationally disadvantaged adults an opportunity to acquire basic literacy skills necessary to function in society, to continue their education to at least the level of completion of secondary school, and to become able to secure training that will make them more employable, productive, and responsible citizens.

There are two major parts to the adult education program established by the Act: The State-administered adult education program and the national adult education discretionary program.

The State-administered adult education program establishes a cooperative effort between the Federal Government and the States. Federal funds are allocated to the States on a formula basis, and the States, in turn, fund local programs of adult education based on need and resources available. The regulations governing the State-administered program are found in 34 CFR Parts 425 and 426.

The Act also authorizes a national adult education discretionary program. At an appropriation level of $112 million, or higher, the Secretary may set aside up to five percent of that amount for projects under section 309 of the Act. At the current appropriation level of $100 million for program operations, this authority is not available to the Secretary. The regulations governing the national discretionary program are found in 34 CFR Part 431.

As noted in § 425.2(a) of these regulations, the Education Department General Administrative Regulations (EDGAR) apply to the adult education programs. Specific regulatory requirements for EDGAR are not repeated in these regulations. However, particular attention should be directed to the following EDGAR requirements:

(A) The SEA must have on file with the Secretary a single State application that covers adult education programs (34 CFR 76.101).

(B) By submitting a single State application under 34 CFR 76.101, an SEA meets the requirements of section 306(b)(6) of the Act, covering fiscal control and fund accounting procedures.

(C) By submitting a single State application under 34 CFR 76.101, an SEA gives assurance that it will evaluate—not less often then once every three years—the effectiveness of section 306 and section 310 programs in meeting statutory objectives.

(D) A State plan for adult education must include the certifications required by 34 CFR 76.104.

(E) Computation of the non-Federal share of expenditures for matching or cost-sharing is discussed in 34 CFR 74.52. The non-Federal share of expenditures under the State plan may be computed on a statewide basis and may come from any source other than Federal assistance so long as these expenditures are made to further the purposes of the State plan for adult education.

(F) An SEA must administer special experimental demonstration projects and teacher training projects under section 310 of the Act in accordance with the requirements contained in Subparts D and E of 34 CFR Part 76.

Summary of Major Areas of Public Comment

The State-administered Adult Education Program and National Adult Education Discretionary Program regulations were published as a Notice of Proposed Rulemaking (NPRM) in the **Federal Register** on February 28, 1985 (50 FR 6304). The Secretary invited comments on the proposed rules. In response to these comments changes were made in these final regulations. Summarized below are the major areas of comment and the Secretary's response. Appendix A contains a summary of all comments and responses received on the Notice of Proposed Rulemaking.

(a) *Limited English proficiency.* Two commenters urged that the definition of "limited English proficiency" be taken verbatim from title VII of the Elementary and Secondary Education Act of 1965, as amended. The definition is added in § 425.3. The Secretary agrees with the commenters that this definition relates to a particular subset of that population with limited English language skills and is required by section 306(b)(11) of the Act. The definition in the proposed regulations of "limited English language skills" is retained because this term is used both in the Act and the regulations and defines a broader population than those included under the definition of "limited English proficiency."

(b) *Data collection.* Commenters suggested that the regulatory language on data collection should reflect the requirements of section 306(b)(14) of the Act. The program assurance in § 426.11(b)(8) has been changed to reflect more explicitly these requirements.

(c) *Clarification of terms.* Commenters called attention to a variance in terms relating to employment and training between those used in the adult education program and those used in current legislation authorizing vocational education and job training programs.

The Secretary agrees that the terms should be consistent and has made the appropriate changes:

(1) In § 426.12(a)(10), the term "State manpower and training agencies" has been changed to *State employment and training agencies.*

(2) In § 426.12(a)(11), the term "Local manpower and training agencies" has been changed to *Local employment and training agencies.*

(3) In § 426.12(i)(1), the term "State manpower service councils" has been changed to *State job training coordinating councils.*

(d) *Outreach activities.* Two commenters questioned the advisability of including the stipulation in § 426.12(h)(2) that a concerted effort be made to obtain such services as transportation and child care through other than adult education program resources. The Secretary agrees that this language may be misinterpreted by a State to preclude the expenditure of any funds under the Act for these services. The stipulation has been deleted in these final regulations.

(e) *Evaluation.* One commenter suggested that more frequent evaluations be required. Another commenter recommended that the requirement in § 426.12(o) be clarified.

Section 426.12(o) of the proposed regulations has been deleted from the final regulations. By submitting a single State application under 34 CFR 76.101, an SEA gives assurance that it will evaluate—not less often than once every three years—the effectiveness of section 306 and section 310 programs in meeting statutory objectives.

(f) *Administration.* One commenter pointed out that the provision in § 426.21 that stipulates that "allowable administrative costs must be necessary and reasonable for proper and efficient administration of the program" is also set forth in Appendix C to 34 CFR Part 74. The Language has been deleted from the final regulations. It is Department policy not to repeat requirements set forth in the Education Department General Administrative Regulations in other regulations.

(g) *Dissemination plan.* A change has been made in the final regulations. One commenter, addressing the criterion on the dissemination plan, as set forth in § 431.31 of the proposed regulations, recommended that products of these national projects be disseminated to all parties concerned about illiteracy and other adult education problems. The Secretary agrees and has deleted the restrictive reference to "educators" in § 431.31(g)(2)(iii).

(h) *Application approval.* One commenter objected to the requirement in § 426.32(b)(2) that an applicant other than a local educational agency must provide the applicable local educational agency the opportunity to comment on the application prior to submitting it to the State. The commenters pointed out that while section 304(a)(1) of the Act does require that the opportunity to comment must take place prior to approval of an application by the State educational agency, the Act does not require that the opportunity to comment must take place prior to submission of the application to the State.

The Secretary agrees with the commenter, and the phrase "prior to submitting it to the State" has been deleted from § 426.32(b)(2).

Executive Order 12291

These regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the Order.

Intergovernmental Review

The State-administered adult education program is subject to the requirements of Executive Order 12372 and the regulations in 34 CFR Part 79. The objective of the Executive Order is to foster an intergovernmental partnership and a strengthened federalism by relying on processes developed by State and local governments for coordination and review of proposed Federal financial assistance.

In accordance with the Order, this document is intended to provide early notification of the Department's specific plans and actions for this program.

Assessment of Educational Impact

In the notice of proposed rulemaking, the Secretary requested comments on whether the proposed regulations would require transmission of information that is being gathered by or is available from any other agency or authority of the United States.

Based on the response to the proposed rules and on its own review, the Department has determined that the regulations in this document do not require information that is being gathered by or is available from any other agency or authority of the United States.

Citation of Legal Authority

A citation of statutory or other legal authority is placed in parentheses on the line following each substantive provision of these final regulations.

(Catalog of Federal Domestic Assistance Numbers: 84.002 Adult Education—State-administered Program; National Adult Education Discretionary Program (Number not assigned))

Dated: July 15, 1985.

William J. Bennett,

Secretary of Education.

The Secretary amends Parts 425, 426, and 431 and removes Part 432 of Title 34 of the Code of Federal Regulations as follows:

1. Part 425 is revised to read as follows:

PART 425—ADULT EDUCATION—GENERAL PROVISIONS

Subpart A—General

Sec.

425.1 What are the Adult Education Programs?
425.2 What regulations apply to the Adult Education Programs?
425.3 What definitions apply to the Adult Education Programs?
425.4–425.9 [Reserved]

Subpart B—What Kinds of Activities Does the Secretary Assist Under the Adult Education Program?

425.10 What kinds of activities does the Secretary assist?

Authority: Secs. 301–315 of the Adult Education Act, as amended by Pub. L. 98–511; 20 U.S.C. 1201 *et seq.*, unless otherwise noted.

Subpart A—General

§ 425.1 What are the Adult Education Programs?

(a) Under the Adult Education Programs the Secretary provides Federal financial assistance to encourage and expand educational opportunities for adults.

(b) The regulations in this Part 425 govern the following programs:

(1) 34 CFR Part 426—State-Administered Adult Education Program.

(2) 34 CFR Part 431—National Adult Education Discretionary Program.

(20 U.S.C. 1201 *et seq.*)

§ 425.2 What regulations apply to the Adult Education Programs?

Grant

§ 425.2 What regulations apply to the Adult Education Programs?

The following regulations apply to the Adult Education Programs:

(a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR Part 74 (Administration of Grants), Part 75 (Direct Grant Programs), (applicable only to Part 431), Part 76 (State-administered Programs) (applicable only to Part 426), Part 77 (Definitions that Apply to Department Regulations), Part 78 (Education Appeal Board), and Part 79 (Intergovernmental Review of Department of Education Programs and Activities).

(b) The regulations in this part.

(c) The regulations in 34 CFR Parts 426 and 431.

(20 U.S.C. 1201 *et seq.*)

§ 425.3 What definitions apply to the Adult Education Programs?

(a) *Program definitions.* The following definitions apply to 34 CFR Parts 426 and 431:

"Act" means the Adult Education Act as amended (20 U.S.C. 1201 *et seq.*)

"Adult" means an individual who has attained 16 years of age or who is beyond the age of compulsory school attendance under State law, except that for the purpose of section 305(a) of the Act, the term "adult" means an individual 16 years of age or older.

"Adult basic education" means adult education for adults whose inability to speak, read, or write the English language constitutes a substantial impairment of their ability to get or retain employment commensurate with their real ability, which is designed to help eliminate such inability and raise the level of education of those individuals with a view to making them less likely to become dependent on others, to improving their ability to benefit from occupational training and otherwise increasing their opportunities for more productive and profitable employment, and to making them better able to meet their adult responsibilities.

"Adult education" means instruction or services below the college level for adults who do not have—

(1) The basic skills to enable them to function effectively in society; or

(2) A certificate of graduation from a school providing secondary education (and who have not achieved an equivalent level of education).

"Basic literacy skills," as used in § 425.10(b)(1), means the skills taught in adult basic education.

"Community school program" means a program in which a public building, including but not limited to public elementary or secondary school or a community or junior college, is used as a community center operated in conjunction with other groups in the community, community organizations, and local governmental agencies, to provide educational, recreational, cultural, and other related community services for the community that center serves in accordance with the needs, interests, and concerns of that community.

"Immigrant" means any refugee admitted or paroled into this country or any alien except one who is exempt under the provisions of the Immigration and Nationality Act, as amended.

(8 U.S.C. 1101(a)(15))

"Institution of higher education" means any such institution as defined by section 481 of the Higher Education Act of 1965.

"Institutionalized person" means an adult, as defined in the Act, who is an inmate, patient, or resident of a correctional, medical, or special institution.

"Limited English language skills" refers to difficulty of adults in speaking, reading, writing, or understanding the English language so that those adults are denied the opportunity to learn successfully in a learning environment where the language of instruction is English.

"Limited English proficiency" and "Limited English proficient" where used with reference to individuals means—

(1) Individuals who were not born in the United States or whose native language is a language other than English;

(2) Individuals who come from environments where a language other than English is dominant; and

(3) Individuals who are American Indian and Alaskan Natives and who come from environments where a language other than English has had a significant impact on their level of English language proficiency, and who, by reason thereof, have sufficient difficulty speaking, reading, writing, or understanding the English language to deny those individuals the opportunity to learn successfully in classrooms where the language of instruction is English or to participate fully in our society.

(20 U.S.C. 3223(a)(1))

"Local educational agency" means a public board of education or other public authority legally constituted within a State for either administrative control or direction of public elementary or secondary schools in a city, county, township, school district, or other political subdivision of a State, or such combination of school districts or counties as are recognized in a State as an administrative agency for its public elementary or secondary schools, except that, if there is a separate board or other legally constituted local authority having administrative control and direction of adult education in public schools therein, the term means that other board or authority.

"Outreach" means activities designed to—

(1) Inform adult populations who are least educated and most in need of assistance of the availability and benefits of the adult education program; and

(2) Assist these adult populations to participate in the program by providing reasonable and convenient access.

"State" includes, in addition to the several States, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

"State administrative costs" means costs for those management and supervisory activities necessary for the direction and control by the State educational agency responsible for developing the State plan and overseeing the implementation of the adult education program under the Act. The term includes those costs incurred for State Advisory Councils under section 311 of the Act, but does not include those costs incurred for ancillary services such as evaluation, teacher training dissemination, and curriculum development.

"State educational agency" means the State board of education or other agency or officer primarily responsible for the State supervision of public elementary and secondary schools; or if there is a separate State agency or officer primarily responsible for supervision of adult education in public schools, then that agency or officer may be designated for the purpose of the Act by the Governor or by State law. If no agency or officer qualifies under the preceding sentence, the term means an appropriate agency of officer designated for the purpose of the Act by the Governor.

(b) *Definitions in EDGAR.* The following terms used in this part and Parts 426 and 431 are defined in 34 CFR Part 77:

Applicant
Application
Award
Budget
Budget period
ED
EDGAR
Grant
Grantee
Nonprofit
Private
Project
Project period
Public
Secretary
Subgrant
Subgrantee

(Sec. 303; 20 U.S.C. 1201 *et seq.*)

§§ 425.4–425.9 [Reserved]

Subpart B—What Kinds of Activities Does the Secretary Assist Under the Adult Education Programs?

§ 425.10 What kinds of activities does the Secretary assist?

The Secretary provides financial assistance to expand educational opportunities for adults and to encourage the establishment of programs of adult education that will—

(a) Enable all adults to acquire basic literacy skills necessary to function in society;

(b) Enable adults who so desire to continue their education to at least the level of completion of secondary school; and

(c) Make available to adults the means to secure training and education that will enable them to become more employable, productive, and responsible citizens.

(Sec. 302; 20 U.S.C. 1201)

2. Part 426 is revised to read as follows:

PART 426—STATE-ADMINISTERED ADULT EDUCATION PROGRAM

Subpart A—General

Sec.
426.1 How is the State-administered adult education program governed?

Subpart B—How Does a State Apply for a Grant?

426.10 Who is eligible?
426.11 What documents must a State submit to receive its grant?
426.12 What must the State plan contain?
426.13—426.19 [Reserved]

Subpart C—How is a Grant Made to a State?

426.20 How is the amount of each State's grant determined?
426.21 How does a State provide for the administrative of the program?
426.22–426.29 [Reserved]

Subpart D—How Does a State Distribute Funds?

426.30 Who is eligible for a subgrant or contract?
426.31 How does a State distribute funds?
426.32 How does a State approve applications?
426.33 What are special experimental demonstration projects and teacher training projects?
426.34–426.39 [Reserved]

Subpart E—What Conditions Must Be Met by a State?

426.40 What are the matching requirements of the program?
426.41 What are the maintenance of effort requirements of the program?
426.42 How is a maintenance of effort waiver granted?
426.43 What are exceptional or uncontrollable circumstances?
426.44 How is maintenance of effort computed in the event of a waiver?
426.45 What are a State's responsibilities regarding State advisory councils and what the functions of these councils?
426.46–426.49 [Reserved]

Authority: Secs. 301–315 of the Adult Education Act, as amended by Pub. L. 98–511, 20 U.S.C. *et seq.*, unless otherwise noted.

Subpart A—General

§ 426.1 How is the State-administered adult education program governed?

(a) *Federal-State relationship.* The State-administered adult education program is a cooperative effort between the Federal Government and the States to provide adult education. Federal funds are granted to the States on a formula basis. The States fund local programs of adult education based on need and resources available.

(b) *Other applicable provisions.* The provision of 34 CFR Part 425 apply to the State-administered adult education program under this part

(20 U.S.C. 1201 *et seq.*).

Subpart B—How Does a State Apply for a Grant?

§ 426.10 Who is eligible?

Any State may apply for a grant under this part.

(Sec. 304(a); 20 U.S.C. 1203(a))

§ 426.11 What documents must a State submit to receive its grant?

A State educational agency (SEA) shall submit to the Secretary the following:

(a) A State plan, developed once every three years, that meets the requirements of the Act and the regulations in this part.

(b) Program assurances, signed by an authorized official of the SEA, to provide that—

(1) Special emphasis will be given to adult basic education programs except where these needs have been met in the State;

(2) Adult enrolled in adult basic education programs will not be charged tuition, fees, or any other charges, or be required to purchase any books or any other materials that are needed for participation in the program;

(3) The SEA will make available not to exceed 20 percent of the funds granted to the State under the Act for programs of equivalency for a certificate of graduation from a secondary school;

(4) Not more than 20 percent of the funds granted to the State under the Act for any fiscal year will be used for the education of institutionalized adults;

(5) The SEA will use not less than 10 percent of the funds granted to the State under the Act for special experimental demonstration projects and teacher training projects under section 310 of the Act.

(6) Special assistance will be given to the needs of persons with limited English proficiency by providing bilingual adult education programs of instruction in English and, to the extent necessary to allow these persons to progress effectively through the adult education program, in the native language of these persons; and these programs will be carried out in coordination with programs of bilingual education assisted under title VII of the Elementary and Secondary Education Act of 1965 and bilingual vocational education programs under the Carl D. Perkins Vocational Education Act;

(7) (i) For each year covered by the plan, the fiscal effort per student or the aggregate amount available for expenditure by the State for adult education from non-Federal sources for the preceding fiscal year was not less than the fiscal effort per student or the amount available for expenditure for such purposes from those sources during the second preceding fiscal year;

(ii) In the event of exceptional and uncontrollable circumstances, the State may, under § 426.42, request a one-time waiver of the requirement in paragraph (b)(7)(i) of this section;

(8) The SEA will report information about the State's adult education students, programs, expenditures, and goals, as may be required by the Secretary, together with information with respect to the age, sex, and race of students in the programs assisted under the Act and whether the students complete those programs; and

(9) The SEA will send to the Secretary one copy of each final report of special experimental demonstration projects and teacher training projects supported under section 310 of the Act.

(Approved under OMB Control No. 1830–0027)

Secs. 304(b), 306, 307(b) and 310; 20 U.S.C. 1203(b), 1205, 1206(b), 1208.)

§ 426.12 What must the State plan contain?

§ 426.21 including any planned expenditures for a State advisory

antipoverty programs, and community organizations; and

institutions, an SEA shall give sufficient public notice throughout all regions of

school programs, carried out in cooperation with other Federal

exceptional or uncontrollable

VOL 50 ISS 138 JL 18 1985 UMI

§ 426.12 What must the State plan contain?

An SEA shall include all of the following in its State plan:

(a) The SEA shall describe the means by which one or more representatives of each of the following agencies and groups were involved in the development of the State plan and how they will continue to be involved in carrying out the plan:

(1) The business community.
(2) Industry.
(3) Labor unions.
(4) Public educational agencies and institutions.
(5) Private educational agencies and institutions.
(6) Churches.
(7) Fraternal/sororal organizations.
(8) Voluntary organizations.
(9) Community organizations.
(10) State employment and training agencies.
(11) Local employment and training agencies.
(12) Adult residents of rural areas.
(13) Adult residents of urban areas with high rates of unemployment.
(14) Adults with limited English language skills.
(15) Institutionalized adults.
(16) Other entities concerned with adult education, such as basic skills programs, volunteer literacy programs, libraries, and organizations offering education programs for older persons and military personnel and their adult dependents.

(b) The SEA shall describe—

(1) Its accomplishments in meeting the goals included in the previous three-year plan; and

(2) How the assessment of accomplishments and the evaluation required by paragraph (o) of this section were considered in establishing the State's goals for adult education in the plan being submitted.

(c) The SEA shall describe, for the three-year period covered by the plan, the adult education needs of all segments of the adult population in the State.

(d) The SEA shall—

(1) Demonstrate that the special educational needs of adult immigrants in the State have been examined; and

(2) Provide for the implementation of adult education and adult basic education programs for immigrants to meet existing needs.

(e) The SEA shall identify the other Federal and non-Federal resources available to meet the needs described in paragraph (c) of this section.

(f) The SEA shall describe its planned use of Federal funds for the administration of the program under § 426.21 including any planned expenditures for a State advisory council under § 426.45.

(g) The SEA shall—

(1) Identify the goals it intends to achieve in meeting the needs described in paragraph (c) of this section for the period covered by the plan. These goals must be designed to develop a statewide program in which the adult populations in the State that are least educated and most in need of assistance are served in a manner whereby they learn most effectively; and

(2) Describe proposed activities for reaching each goal and give estimated percentages of funds under the State plan to be allocated to each goal.

(h) The SEA shall describe—

(1) The outreach activities that the State intends to carry out during the period covered by the plan; and

(2) In conjunction with these outreach activities, for the period covered by the State plan, the efforts it will undertake to assist adult participation in adult education programs through flexible course schedules, covenient locations, adequate transportation, and child care services.

(i) The SEA shall describe the procedures the State will use to ensure that in carrying out the program there will be—

(1) Adequate consultation, cooperation, and coordination among the SEA State job training coordinating councils, State occupational information systems, and other agencies, organizations, and institutions in the State which operate employment and training programs or other educational or training programs for adults; and

(2) Coordination of programs carried out under this part with other programs carried out by State and local agencies, including reading improvement programs, designed to provide reading instruction for adults.

(j) The SEA shall describe the local application process and the criteria for evaluating local applications submitted by all eligible applicants for subgrants or contracts.

(k) The SEA shall describe the method of determining the amount of funds to be distributed to applicants approved for funding.

(l) The SEA shall describe the means by which the delivery of adult education services will be significantly expanded by—

(1) Efforts to increase the number of participating agencies, institutions, and organizations other than the public school systems, such as business, labor unions, libraries, institutions of higher education, public health authorities, antipoverty programs, and community organizations; and

(2) Efforts to increase the number of participants in adult basic education.

(m) An SEA that is prohibited by State law from awarding Federal funds by grant or contract to public or private agencies, organizations, or institutions, other than local educational agencies, shall describe in its State plan—

(1) The legal basis of this prohibition; and

(2) How public or private agencies, organizations, or institutions will be used for expanding the delivery of services.

(n) The SEA shall describe—

(1) Its policies, procedures, and activities for carrying out special experimental demonstration projects and teacher training projects in accordance with § 426.33; and

(2) Its criteria and priorities for awarding special projects and teacher training projects.

(Approved Under OMB Control No. 1830–0026)

(Secs. 306 and 310; 20 U.S.C. 1205, 1208)

§§ 426.13–426.19 [Reserved]

Subpart C—How Is a Grant Made to a State?

§ 426.20 How is the amount of each State's grant determined?

The Secretary determines the amount of each State's grant according to the formula in section 305(a) of the Act.

(Sec. 305; 20 U.S.C. 1204)

§ 426.21 How does a State provide for the administration of the program?

A State may use funds received under section 304 of the Act to provide for State and local administration of the program. A State shall determine allowable local administrative costs.

(Sec. 306(b)(2); 20 U.S.C. 1205(b)(2))

§§ 426.22–426.29 [Reserved]

Subpart D—How Does a State Distribute Funds?

§ 426.30 Who is eligible for a subgrant or contract?

(a) Local educational agencies and public or private agencies, organizations, and institutions are eligible to apply for funds.

(b) An SEA shall give public notification of the availability of Federal and State funds to eligible applicants—

(1) For the purpose of notifying local educational agencies, an SEA shall provide the notice directly; and

(2) For the purpose of notifying public or private agencies, organizations, and institutions, an SEA shall give sufficient public notice throughout all regions of the State.

(Sec. 304; 20 U.S.C. 1203)

§ 426.31 How does a State distribute funds?

(a) An SEA shall distribute funds on the basis of applications submitted by eligible applicants.

(b) If funds are awarded to a for-profit agency, organization, or institution, the award must be in the form of a contract.

(Sec. 304; 20 U.S.C. 1203

§ 426.32 How does a State approve applications?

(a) An SEA may not approve an application from a for-profit agency, organization, or institution unless the State has first determined that the applicant—

(1) Can make a significant contribution to attaining the objectives of the Act; and

(2) Can provide substantially equivalent education at a lesser cost or can provide services and equipment not available in public institutions.

(b) An SEA may not approve an application from a public or private agency, organization, or institution other then a local educational agency unless the applicant—

(1) Provides assurance to the State that advice on the development of its application has been sought from the applicable local educational agency, located in the same city, county, township, school district, or other political subdivision of the State to be served by the applicant; and

(2) Provides the applicable local educational agency the opportunity to comment on the application.

(Sec. 304; 20 U.S.C. 1203)

§ 426.33 What are special experimental demonstration projects and teacher training projects?

In accordance with section 310 of the Act, the SEA shall provide assistance for—

(a) Special projects which will be carried out in furtherance of the purposes of the Act, and which—

(1) Involve the use of innovative methods, including methods for educating persons of limited English-speaking ability, systems, materials, or programs which may have national significance or may be of special value in promoting effective programs under the Act; or

(2) Involve programs of adult education, including education for persons of limited English-speaking ability, which are part of community school programs, carried out in cooperation with other Federal, federally assisted, State, or local programs which have unusual promise in promoting a comprehensive or coordinated approach to the problems of persons with educational deficiencies; and

(b) Training persons engaged, or preparing to engage, as personnel in programs designed to carry out the purposes of the Act.

(Sec. 310; 20 U.S.C. 1208)

§§ 426.34–426.39 [Reserved]

Subpart E—What Conditions Must be Met by a State?

§ 426.40 What are the matching requirements of the program?

(a) The Federal share of expenditures made under a State plan may not exceed 90 percent of the cost of carrying out a State's program.

(b) The Federal share for American Samoa, Guam, the Northern Mariana Islands, the Trust Territory of the Pacific Islands, and the Virgin Islands is 100 percent.

(Sec. 307; 20 U.S.C. 1206)

§ 426.41 What are the maintenance of effort requirements of the program?

(a) To be eligible for Federal funds a State shall expend for adult education from non-Federal sources an amount equal to the fiscal effort of the State in the preceding fiscal year.

(b) A State may determine its fiscal effort on a per student expenditure basis or on a total expenditure basis.

(Sec. 307; 20 U.S.C. 1206)

§ 426.42 How is a maintenance of effort waiver granted?

(a) The Secretary may waive for one fiscal year only the maintenance of effort requirement in section 307(b) of the Act if the Secretary determines it would be equitable to do so in view of exceptional or uncontrollable circumstances affecting a State.

(b)(1) If an SEA wishes to receive a waiver from the maintenance of effort requirement in paragraph (a) of this section, the SEA shall submit a request for a waiver.

(2) An SEA shall include in the request for a waiver the reason for the request and any additional information the Secretary may require.

(Sec. 307; 20 U.S.C. 1206)

§ 426.43 What are exceptional or uncontrollable circumstances?

(a) The Secretary considers exceptional or uncontrollable circumstances under § 426.42 to include situations in which a State had no control of the events resulting in decreased expenditures but has made a reasonable effort in a timely fashion to comply with the maintenance of effort requirement of the Act.

(b) Exceptional or uncontrollable circumstances include, but are not limited to, the following situations:

(1) A sudden, substantial reduction in available revenue due to—

(i) A natural disaster;

(ii) The unforeseen removal of property from the tax roll by government action; or

(iii) The unforeseen departure of an industrial or commercial facility.

(2) An uncontrollable diversion of available revenue to other purposes outside the control of the State due to emergency circumstances such as those resulting from a disaster of human or natural causes.

(Sec. 307; 20 U.S.C. 1206)

§ 426.44 How is maintenance of effort computed in the event of a waiver?

A State shall determine fiscal effort for the year following the year for which a waiver is granted based on the level of effort that existed prior to the waiver. For example, if in fiscal year (FY) 1986 a State receives a waiver for its failure in FY 1985 to maintain fiscal effort at the level established in FY 1984, the State shall compute its fiscal effort for FY 1986 on the basis of the fiscal effort for FY 1984.

(Sec. 307; 20 U.S.C. 1206)

§ 426.45 What are a State's responsibilities regarding State advisory councils and what are the functions of these councils?

(a) A State may use funds received under section 304 of the Act to support a State advisory council.

(b) The State shall determine the membership, method of appointment, manner of operation, and necessary support services of a State advisory council.

(c) The functions of a State advisory council are to assist the SEA to plan, implement, or evaluate programs or activities assisted under the Act.

(Sec. 311; 20 U.S.C. 1206b)

§§ 426.46–426.49 [Reserved]

3. Part 431 is revised to read as follows:

PART 431—NATIONAL ADULT EDUCATION DISCRETIONARY PROGRAMS

§431.0 What regulations apply to this program?

§§ 431.1–431.11 [Reserved]

§ 431.12 What are the purposes of the program?

§§ 431.12—431.19 [Reserved]

(1) The Secretary reviews each application for information that shows

(ii) The equipment and supplies that the applicant plans to use are adequate.

PART 432—ADULT EDUCATION PROGRAMS FOR IMMIGRANTS AND

PART 431—NATIONAL ADULT EDUCATION DISCRETIONARY PROGRAM

Subpart A—General

Sec.

431.1 What is the National Adult Education Discretionary Program?
431.2 Who is eligible to apply for an award under the National Adult Education Discretionary Program?

Subpart C—[Reserved]

431.20–431.29 [Reserved]

Subpart D—How Does the Secretary Make an Award?

431.30 How does the Secretary evaluate an application?
431.31 What selection criteria does the Secretary use?
431.32 How does the Secretary select an application for funding?
431.33–431.39 [Reserved]

Subpart E—What Condition Must Be Met by a Recipient?

431.40 What condition must be met under this program?
431.41–431.49 [Reserved]

Authority: Sec. 309 of the Adult Education Act, as amended by Pub. L. 98–511; 20 U.S.C.1207a, unless otherwise noted.

Subpart A—General

§ 431.1 What is the National Adult Education Discretionary Program?

The National Adult Education Discretionary Program supports projects that contribute to the improvement and expansion of adult education.

(Sec. 309(a)(1); 20 U.S.C. 1207a(a)(1))

§ 431.2 Who is eligible to apply for an award under the National Adult Education Discretionary Program?

The following are eligible to apply for grants, contracts, or cooperative agreements under this program:

(a) Public and private institutions, agencies, and organizations.

(b) Individuals.

(c) Business concerns.

(Sec. 309(a)(2); 20 U.S.C. 1207a(a)(2))

§ 431.3 What regulations apply to this program?

The following regulations apply to the National Adult Education Discretionary Program:

(a) The regulations in 34 CFR Part 425.

(b) The regulations in this part.

(20 U.S.C. 1201 *et seq.*)

§ 431.4 What definitions apply to this program?

The definitions in 34 CFR 425.3 apply to this program.

(20 U.S.C. 1201 *et. seq.*)

§§ 431.5–431.9 [Reserved]

Subpart B—What Kinds of Activities Does the Secretary Assist Under This Program?

§ 431.10 What types of projects may be funded?

(a) The Secretary directly or through grants, contracts, or cooperative agreements supports projects for the improvement and expansion of adult education. Funds may be used for—

(1) Applied research;

(2) Development;

(3) Demonstration;

(4) Dissemination;

(5) Evaluation; and

(6) Related activities.

(b) Projects may include, but are not limited to—

(1) Improving adult education opportunities for elderly individuals and adult immigrants;

(2) Evaluating educational technology and computer software suitable for providing instruction to adults; and

(3) Supporting exemplary cooperative adult education programs that combine the resources of businesses, schools, and community organizations.

(Sec. 309(a)(1); 20 U.S.C. 1207a(a)(1))

§ 431.11 How does the Secretary establish priorities for this program?

(a) The Secretary announces, through one or more notices published in the **Federal Register**, the priorities for this program, if any, from the topics described in § 431.10, and the manner in which those priorities will be implemented.

(b) The Secretary may establish a separate competition for one or more of the priorities selected. If a separate competition is established for one or more priorities, the Secretary may reserve all applications that relate to those priorities for review as part of the separate competition.

(20 U.S.C. 1201 *et seq.*)

§§ 431.12–431.19 [Reserved]

Subpart C—[Reserved]

§§ 431.20–431.29 [Reserved]

Subpart D—How Does the Secretary Make an Award?

§ 431.30 How does the Secretary evaluate an application?

(a) The Secretary evaluates an application for a grant or cooperative agreement on the basis of the criteria in § 431.31.

(b) The Secretary may award up to 100 points, including a reserved 15 points to be distributed in accordance with paragraph (d) of this section, based on the criteria in § 431.31.

(c) Subject to paragraph (d) of this section, the maximum possible points for each criterion are indicated in parentheses after the heading for each criterion.

(d) For each competition, as announced through a notice published in the **Federal Register**, the Secretary may assign the reserved points among the criteria in § 431.31.

(20 U.S.C. 1201 *et seq.*)

§ 431.31 What selection criteria does the Secretary use?

The Secretary uses the following criteria in evaluating each application:

(a) *Plan of operation.* (20 points)

(1) The Secretary reviews each application for information that shows the quality of the plan of operation for the project.

(2) The Secretary looks for information that shows—

(i) High quality in the design of the project;

(ii) An effective plan of management that ensures proper and efficient administration of the project;

(iii) A clear description of how the objectives of the project relate to the purpose of the program;

(iv) The way the application plans to use its resources and personnel to achieve each objective;

(v) A clear description of how the applicant will provide equal access and treatment for eligible project participants who are members of groups that have been traditionally underrepresented, such as—

(A) Members of racial or ethnic minority groups;

(B) Women;

(C) Handicapped persons; and

(D) The elderly.

(b) *Quality of key personnel.* (15 points)

(1) The Secretary reviews each application for information that shows the qualifications of the key personnel the applicant plans to use on the project.

(2) The Secretary looks for information that shows—

(i) The qualifications of the project director (if one is to be used);

(ii) The qualifications of each of the other key personnel to be used in the project;

(iii) The time each person referred to in paragraphs (b)(2) (i) and (ii) of this section will commit to the project; and

(iv) The extent to which the applicant, as part of its nondiscriminatory employment practices, encourages applications for employment from persons who are members of groups that have been traditionally underrepresented, such as—

(A) Member of racial or ethnic minority groups;

(B) Women;

(C) Handicapped persons; and

(D) The elderly.

(3) To determine personnel qualifications, the Secretary considers experience and training, in fields related to the objectives of the subject, as well as other information that the applicant provides.

(c) *Budget and cost effectiveness.* (10 points)

(1) The Secretary reviews each application for information that shows that the project has an adequate budget and is cost effective.

(2) The Secretary looks for information that shows—

(i) The budget for the project is adequate to support the project activities; and

(ii) Costs are reasonable in relation to the objectives of the project.

(d) *Evaluation plan.* (5 points)

(1) The Secretary reviews each application for information that shows the quality of the evaluation plan for the project.

Cross Reference. See 34 CFR 75.590 (Evaluation by grantee).

(2) The Secretary looks for information that shows methods of evaluation that are appropriate for the project and, to the extent possible, are objective and produce data that are quantifiable.

(e) *Adequacy of resources.* (5 points)

(1) The Secretary reviews each application for information that shows that the applicant plans to devote adequate resources to the project.

(2) The Secretary looks for information that shows—

(i) The facilities that the applicant plans to use are adequate; and

(ii) The equipment and supplies that the applicant plans to use are adequate.

(f) *National need.* (20 points)

(1) The Secretary reviews each application to determine how it addresses a national need in adult education.

(2) The Secretary looks for information that describes—

(i) The need in terms of the problem rather than the symptom of the problem;

(ii) Who or what will be helped by the project;

(iii) How the project will improve and expand adult education; and

(iv) The extent to which the project involves creative or innovative techniques and concepts.

(g) *Dissemination plan.* (10 points)

(1) The Secretary reviews each application for information that shows the quality of the dissemination plan for the project.

(2) The Secretary looks for information that shows—

(i) The extent to which the project is designed to yield outcomes that can be readily disseminated;

(ii) A clear description of the project outcomes; and

(iii) A detailed description of how information and materials will be disseminated.

(Sec. 309; 20 U.S.C. 1207a)

§ 431.32 How does the Secretary select an application for funding?

(a) After evaluating the applications according to the criteria contained in § 431.31, the Secretary may determine whether the most highly rated applications are broadly and equitably distributed throughout the Nation.

(b) The Secretary may select other applications for funding on the basis of geographic distribution if doing so would contribute to achieving the purposes of this discretionary program.

(c) The Secretary may decline to fund any project that is eligible for funding under a different competition of Department of Education program.

(Sec. 309; 20 U.S.C. 1207a)

§§ 431.33–431.39 [Reserved]

Subpart E—What Condition Must Be Met by a Recipient?

§ 431.40 What condition must be met under this program?

A recipient shall not charge participants for their participation in the projects assisted under this program.

(Sec. 309(a)(2); (20 U.S.C. 1207a(a)(2))

§§ 431.41–431.49 [Reserved]

4. Part 432 is removed.

PART 432—ADULT EDUCATION PROGRAMS FOR IMMIGRANTS AND INDOCHINA REFUGEES—[REMOVED]

Appendix—Summary of Comments and Responses

Note.—This Appendix will not be codified in the Code of Federal Regulations.

The following is a summary of the comments, suggestions, and recommendations received on the notice of proposed rulemaking for the Adult Education General Provisions, the State-administered Adult Education Program, and the National Adult Education Discretionary Program published on February 28, 1985. Each comment is followed by a response that indicates a change has been made or why no change is considered necessary. Specific comments are arranged in order of the sections of the final regulations to which they pertain.

§ 425.3 Program definition—Limited English proficiency.

Comment. Two commenters urged that the definition of "limited English proficiency" be taken verbatim from title VII of the Elementary and Secondary Education Act of 1965 (ESEA), as required by section 306(b)(11) of the Act.

Response. A change has been made. The definition of "limited English proficiency" from title VII of ESEA, as amended, is added in § 425.3. The Secretary agrees that this definition relates to a particular subset of that population with limited English language skills and is required for inclusion by section 306(b)(11) of the Act. However, since "limited English language skills" is also referenced in the Act and the regulations and defines a broader population than those included under the definition of "limited English proficiency," a definition of this term is retained in the final regulations.

§ 425.3 Program definition—Community school programs.

Comment. Two commenters suggested that the term "community school programs" be defined in the regulations.

Response. A change has been made. The term "community school program," as defined in section 303(e) of the Act, is included in § 425.3.

§ 425.10 Program activities.

Comment. One commenter took exception to the authorized program activities. With reference to acquiring basic literacy skills, the commenter questioned whether this activity takes into account cost-effectiveness of funding programs that are needed

because of the ineffectiveness of earlier compulsory education programs. The

will not discourage participation in the adult secondary education program.

including adult immigrants. The Secretary believes that a State

those key agencies and groups that are unique to a particular State.

highlighted in the preamble of these regulations. Another commenter called

evaluating local applications submitted

because of the ineffectiveness of earlier compulsory education programs. The commenter viewed the activities relating to enabling adults to become more employable, productive, and responsible citizens as too broad in scope and lacking in definition.

Response. No substantive change has been made. Section 302 of the Act states the purpose of and the activities to be supported by the adult education program. The format of § 425.10 now explicitly reflects the language of section 302 of the Act.

§ 426.11(b)(2) Tuition and fees.

Comment. A number of commenters addressed the prohibition on charging tuition, fees, or other charges for adults enrolled in adult basic education. Over three-fourths of these commenters concurred in retaining this prohibition. Another commenter suggested the allowance of a modest contribution by the adult basic education participant with assistance from other agencies or individual scholarships for the more economically disadvantaged. A few commenters viewed eliminating the prohibition as a guarantee of adequate interest and a means of building a better self image for adult participants. One commenter suggested sliding scales for adult basic education participants and allowing charges for materials. It was asserted this would give participants ownership of their books and also help relieve the fiscal constraint on some programs. A few commenters advocated eliminating the entire regulatory provision and leaving the decision on all charges to the discretion of individual State educational agencies.

While the proposed regulations did not address charges for adult secondary education, three commenters suggested that individual State educational agencies be allowed flexibility in creating procedures for charges to participants at this instructional level.

Response. No change has been made. The prohibition on charging tuition and fees for adult basic education participants has been in effect since late in the 1960's. The adult education program emphasis has been and continues to be on serving educationally disadvantaged adults. These adult participants are the ones least likely to have financial resources available for these charges.

The prohibition does not apply to adult secondary education participants. A State educational agency is permitted discretion in making charges for adult secondary education participants.

The Secretary believes that modest tuition or fee charges for this population will not discourage participation in the adult secondary education program.

§ 426.11(b)(9) Final reports of 310 projects.

Comment. One commenter requested retention of the requirement in the 1980 regulations that the results of State-administered special experimental demonstration projects and teacher training projects be sent to the adult education information clearinghouse.

Response. No change has been made. The Education Amendments of 1984 eliminated the requirement for an adult education information clearinghouse; consequently, no such dissemination requirement can be retained in the regulations.

§ 426.11(b) (5) and (9) and § 426.33 Funds for section 310 projects.

Comment. One commenter called for the repeal of the legislative authority for special experimental demonstration projects and teacher training projects. Another commenter recommended that a percentage range of expenditures, from 5 to 10 percent, be established to allow more flexibility to the State educational agency.

Response. No change has been made. Section 310 of the Act requires that each State expend not less than 10 percent of its allotment for each fiscal year for special experimental demonstration projects and teacher training projects. The statutory authority is specific and may not be changed by regulation. A State educational agency is allowed flexibility to determine any maximum limit.

§ 426.11(b)(6) Assistance to persons with limited English proficiency.

Comment. A commenter questioned the absence of any limitation on expenditures for special assistance to meet the needs of persons with limited English proficiency. That commenter believed assistance for this special population should carry an expenditure limitation as do programs in adult secondary education, programs for institutionalized adults, and section 310 projects.

Response. No change has been made. The program assurance relating to assistance to persons with limited English proficiency is required by section 306(b)(11) of the Act which contains no expenditure limitation. The Secretary, through the regulatory process, has no authority to establish an expenditure limitation on this activity.

Additionally, a State educational agency, in its three-year State plan, must show the needs, goals, and activities for persons with limited English proficiency, including adult immigrants. The Secretary believes that a State educational agency should have the flexibility to determine the appropriate services to meet the educational needs of this population.

§ 426.11(b)(8) Data collection.

Comment. One commenter recommended that the data collection requirement include an assurance to the Secretary that private entities are participating in the program.

Response. No change has been made. Public and private entity participation is assured to the Secretary through requirements in § 426.12 (a), (i), and (1).

Comment. Regarding the program assurance on data collection, two commenters stated that the specific language of the statute should be followed in the regulations.

Response. A change has been made. The program assurance in § 426.11(b)(8) has been changed to reflect the requirements of section 306(b)(14) of the Act.

§ 426.12 (a) and (i) Clarification of terms.

Comment. Two commenters suggested that terms relating to employment and training be made more consistent with the language contained in the Job Training Partnership Act and the Carl D. Perkins Vocational Education Act.

Response. Changes have been made. The Secretary agrees that the terms should be consistent among related legislative authorities. Accordingly, in listing the entities to be involved in developing and carrying out the State plan in § 426.12(a)(10), the term "State manpower and training agencies" has been changed to *State employment and training agencies.* Likewise, in § 426.12(a)(11), the term "Local manpower and training agencies" has been changed to *Local employment and training agencies.*

An additional change for consistency appears in § 426.12(i)(1). The term "State manpower service councils" has been changed to *State job training coordinating councils.*

§ 426.12(a) Representation in developing and carrying out the State plan.

Comment. One commenter expressed concern about the prescriptiveness of the regulations in the listing of agencies and groups required to be involved in developing and carrying out the State plan. The commenter suggested that a representative sampling of these agencies and groups would suffice, thus allowing flexibility to a State to involve those key agencies and groups that are unique to a particular State.

Another commenter supported this mechanism for ensuring involvement of nonpublic entities interested in adult education as a means of broadening the scope of the program.

Response. No change has been made. Section 306(b)(8) of the Act specifies fifteen agencies and groups to be involved in developing and carrying out the State plan. The Act also provides a general category of "other entities in the State concerned with adult education." The regulations contain this category, along with some examples of these "other entities," as the sixteenth agency and group. A State educational agency, of course, has the discretion to include additional entities as appropriate in its participatory planning process.

§ 426.12(h) Outreach activities.

Commenter. Two commenters questioned the advisability of stipulating that a State shall make a concerted effort to provide transportation and child care services through other programs, agencies, and organizations.

Response. A change has been made. A State is required, by § 426.12(h), to include in its three-year plan a description of its outreach activities, including efforts to assist adult participation in adult education programs. The regulations allow a State the option of using program funds for activities in conjunction with support services, such as child care. The permissible use of other programs or entities for support services is intended to allow maximum funding for programs to serve the needs of educationally disadvantaged adults. The stipulation that a concerted effort be made to obtain these services through other than adult education resources was included in the 1980 regulations. The Secretary agrees with the commenters that the statement may be misinterpreted by a State so as to discourage or preclude the expenditure of any funds under the Act for such support services as transportation and child care. Consequently, the statement stipulating that States make a concerted effort to obtain these services through other programs, agencies, and organizations has been deleted from the regulations.

§ 426.12(c) and (g) Addressing the educational needs of all segments of the adult population in a State.

Comment. One commenter, while agreeing with Department policy not to exceed statutory language in regulations, suggested that program participation of disabled persons be highlighted in the preamble of these regulations. Another commenter called for specificity in addressing migrant farmworkers as a segment of the adult population in need of educational services.

Response. No change has been made. Section 306(b) (1) and (4) of the Act requires a State to identify the needs and to set forth a program with respect to the needs of *all* segments of the adult population in the State, including residents of rural areas, residents of urban areas with high rates of unemployment, adults with limited English language skills, and institutionalized adults. In addition, section 306(b)(12) of the Act requires that the special needs of adult immigrants be addressed and section 306(b)(9) of the Act requires outreach activities to assist participation, including adequate transportation. These provisions should assure the participation of disabled persons and migrant farm workers as part of the adult population of a State.

§ 426.12(i)(1) Public and private entities.

Comment. One commenter suggested that in § 426.12(i)(1) the phrase "other agencies, organizations, and institutions in the State which operate employment . . ." be changed to read *other public and private agencies, organizations, and institutions in the State which operate employment . . .*

Response. No change has been made. The current phrase reflects the statutory language and includes both public and private entities which are made eligible under section 304(a)(1)(A) of the Act.

§ 426.12(j) Local application process.

Comment. A number of commenters recommended retention of the competitive local application process as required by the 1980 regulations. A lesser number of commenters recommended the elimination of the competitive local application process.

Response. No change has been made. Section 304(a) of the Act establishes local educational agencies and public or private agencies, organizations, and institutions as categories of eligible applicants to a State educational agency for financial assistance to conduct adult education programs. A State educational agency may not give preferential status to or exclude any category of eligible applicant, unless it is prohibited by State law from awarding Federal funds to a category of eligible applicants. The regulations in § 426.12(j) require that a State educational agency in its three-year State plan describe "the local application process and the criteria for evaluating local applications submitted by all eligible applicants for subgrants or contracts." This will ensure an open competition and equal opportuntity for all eligible applicants.

§ 426.12(j) State-established criteria for evaluating local applications.

Comment. A number of commenters recommended retaining the factors for evaluating applications, as enumerated in the 1980 regulations for the adult education program. One commenter recommended that the factors be made more selective. Another commenter recommended suggesting certain criteria in the regulations, rather than requiring specific criteria.

A lesser number of commenters recommended deletion of the factors for evaluating applications to allow more flexibility to a State educational agency. One commenter saw no clear need to delete the factors nor any inherent problem in deleting them.

Response. No change from the NPRM has been made. The 1980 regulations for the adult education program contained factors that a State educational agency was required to consider in developing objective criteria for evaluating local applications. In developing these new regulations, the Secretary deleted those provisions because it is the policy of the Secretary not to promulgate regulations or to delimit State discretion when not required to do so by the law. However, the Secretary encourages State educational agencies to develop objective criteria for evaluating local applications to ensure quality instructional services, fiscal accountability, and access for educationally disadvantaged adults.

§ 426.12(l) Expansion of the delivery system.

Comment. The provision that generated the most public comment was the definition of expansion of the delivery of adult education services. All commenters recommended modifications of the 1980 provisions. A number of commenters expressed concern that expansion should not be measured purely by quantitative means particularly in view of the fact that funding limitations sometimes act to preclude program expansion in terms of enrollment increases. Quality factors as well as quantity factors were suggested for inclusion in the concept of expansion. Suggested modifications included making the definition less burdensome administratively; providing optional ways of measuring expansion; measuring involvement with additional public and private providers in planning,

delivery, and evaluation; and measuring an increased use of volunteers and

§ 426.12(n) Criteria for awarding special projects and teacher training projects

limitations: the limitation under the 1980 regulations of five percent; a five to ten

and reasonable" cost principles, the Secretary has no authority to prescribe

equitable and appropriate public notice to public and private agencies,

of the Act and (2) either can provide substantially equivalent education at a

delivery, and evaluation; and measuring an increased use of volunteers and literacy volunteer programs. One commenter suggested that measures of expansion be enlarged to include adoption of improved instructional techniques, use of new technologies, or new agency coordination. One commenter suggested that an expansion of geographic areas in which adult education services are provided should be a measure.

Response. No change has been made. The final regulations retain the language of the proposed regulations in requiring a description of the *efforts* to increase the number of participating agencies, institutions, and organizations other than the public school systems and the number of participants in adult basic education. This language is intended to allow a State educational agency to document its efforts to expand rather than reporting the end results of its efforts. It is clear that the legislation does charge a State with the responsibility to make an effort to expand the delivery system and to document those efforts in the State plan. However, the Secretary recognizes that the best efforts may not always result in quantifiable increases in agencies and participants because of uncontrollable factors.

§ 426.12(m) Prohibition by Stote law.

Comment. One commenter suggested that a State having a legal prohibition against awarding Federal funds by grant or contract to private agencies receive a decrease in its Federal allotment for the adult education program.

Response. No change has been made. The Secretary has no authority to withhold Federal funds from a State if by State law that State is prohibited from awarding Federal funds to public or private agencies, organizations, or institutions, other than local educational agencies. The regulations, do, however, in § 426.12(m), require a State educational agency to describe in its State plan (1) the legal basis of this prohibition and (2) how public or private agencies, organizations, or institutions will be used for expanding the delivery of services.

Comment. One commenter suggested that the phrase "public or private agencies" in § 426.12(m)(2) be changed to read *public and private agencies.*

Response. No change has been made. The phrase "public or private agencies" reflects the requirements of section 304(a)(1) of the Act.

§ 426.12(n) Criteria for awarding special projects and teacher training projects under section 310 of the Act.

Comment. A number of commenters gave views on whether the Secretary should publish national priorities for a State educational agency to consider in establishing criteria for the approval of section 310 projects. Commenters were evenly divided on this issue. Commenters who favored the published national priorities saw them as providing good, broad-based guidance. The opposing viewpoint was that Section 310 efforts should be directed more toward needs that are unique to regions within State boundaries.

Response. No change has been made. The Secretary chooses not to regulate in this instance, thus affording a State more flexibility to address its own special interests, needs, and concerns in section 310 projects.

§ 426.12(o) Evaluation of activities under sections 306 and 310 of the Act.

Comment. One commenter advocated more frequent evaluations to ensure managerial and programmatic effectiveness in the adult education program. Another commenter called for clarification of the evaluation requirement.

Response. A change has been made. Section 426.12(o) of the proposed regulations has been deleted from these final regulations because the applicable State evaluation requirements for the Act are set forth in 34 CFR 76.101(e)(4).

The single State application required by section 435(b) of the General Education Provisions Act contains an assurance that a State will evaluate the effectiveness of covered programs in meeting its statutory objectives, at such intervals (at least once every three years), and in accordance with such procedures as the Secretary may prescribe by regulation. While more frequent evaluations may not be required, a State, of course, has the option of performing evaluations annually if it so desires.

By submitting a single State application, an SEA gives assurance that it will evaluate the effectiveness of section 306 and section 310 programs under the Act.

§ 426.21 State administrative costs.

Comment. A majority of the commenters agreed that the regulations should not establish a limitation on administrative costs at the State level. Those commenters believe that a State should be given authority to determine appropriate administrative costs. Other commenters suggested percentage limitations: the limitation under the 1980 regulations of five percent; a five to ten percent limitation; five percent of the State's total allocation or $65,000 limitation, whichever is greater; and negotiated costs based on administrative goals and objectives submitted in the three-year State plan.

Response. No change has been made. The 1980 regulations for the adult education program limited State administrative costs to five percent. The amended legislation retains the requirement, in section 306(b)(2), that a State plan provide for the administration of the program by the State educational agency. However, the amended legislation is silent on a separate authorization for, or a maximum limitation on, administrative costs. Accordingly, the Secretary has no legal authority for stipulating or suggesting a limitation. However, the Secretary believes that administrative costs should be held to a minimum so as to allow maximum funding for programs to serve the needs of educationally disadvantaged adults. Also, the cost principles in Appendix C of 34 CFR Part 74 impose a "necessary and reasonable" standard.

State educational agencies should note that § 426.12(f) of the regulations requires that the State set forth in its three-year State plan a description of the planned use of Federal funds for the administration of the program, including any planned expenditures for a State advisory council.

Comment. One commenter pointed out that the provision in § 426.21 that stipulates that "allowable administrative costs must be necessary and reasonable for proper and efficient administration of the program" is also set forth in Appendix C to 34 CFR Part 74.

Response. A change has been made. The language has been deleted from the final regulations. It is Department policy not to repeat requirements set forth in the Education Department General Administrative Regulations in other regulations.

§ 426.21 Local administrative costs.

Comment. While a majority of the commenters did not support a regulatory limitation on State administrative costs, the commenters were unanimous in their desire to allow a State flexibility in determining or limiting local administrative costs. The commenters recommended that no regulatory guidance on determining or limiting local administrative costs be provided.

Response. No change has been made. Except with respect to the "necessary and reasonable" cost principles, the Secretary has no authority to prescribe or limit local administrative costs. The regulations give a State the flexibility to determine allowable local administrative costs.

§ 426.30 Eligible applicants.

Comment. A number of commenters expressed concurrence with the elimination from the regulations of the authority to fund individuals under section 310 of the Act. A lesser number of commenters called for retention of the authority to fund individuals.

Response. No change has been made. Section 304(a)(1) of the Act provides that local educational agencies and public or private agencies, organizations, and institutions are eligible applicants for funds. Since the statute does not separately address eligible applicants for section 310 projects, these same categories of applicants are eligible for all components of the State-administered adult education program.

Previous program regulations permitted individuals to apply unless precluded by State law. Individuals are now excluded as eligible applicants for section 310 projects. A State educational agency, of course, has the authority to act directly and in doing so may issue personal service contracts to obtain products or services. Likewise, other recipients under section 310 may issue personal service contracts to obtain products or services.

Comment. One commenter suggested that the phrase "public or private agencies" in §426.30(a) be changed to read *public and private agencies.*

Response. No change has been made. The current phrase reflects statutory requirements.

§ 426.30 Public notice of ovoilability of funds.

Comment. One commenter recommended that the regulations prescribe the means of notifying public and private agencies, organizations, and institutions of the availability of funds. The commenter suggested a requirement that notices be posted in all public libraries and advertised in major daily newspapers in the State.

Response. No change has been made. A State educational agency is required by § 426.30(b)(2) to give sufficient public notice of the availability of Federal and State funds to public and private agencies, organizations, and institutions. The Secretary does not believe that a more prescriptive notification process is warranted. A State educational agency may choose to use public libraries, newspapers, or other means that ensure equitable and appropriate public notice to public and private agencies, organizations, and institutions. To notify local educational agencies, a State educational agency is required by § 426.30(b)(1) to provide the notice directly.

§ 426.31 State distribution of funds.

Comment. One commenter recommended that a minimum of one-third of the funds distributed by a State be awarded to private agencies, organizations, or institutions.

Response. No change has been made. The Secretary has no authority to establish any minimum or maximum allotment level for any category of eligible recipient. Open competition and equal opportunity must be afforded to all eligible applicants.

§ 426.31 Multi-year grants or contracts.

Comment. A number of commenters suggested that a State educational agency be authorized to award multi-year grants or contracts. A few commenters opposed this discretion. One commenter suggested a three-year period for instructional programs, two years for section 310 projects. Another commenter suggested that safeguards be included in the multi-year process to ensure that changing demographics in the population and emerging priorities are served.

Response. No change has been made. Unlike the 1980 regulations, these regulations do not require an annual review of applications from eligible applicants and single-year awards. A State educational agency may continue to employ an annual application review and funding process, or it may employ a multi-year review and funding process.

§ 426.32 For-profit providers of services.

Comment. A majority of the commenters found the statutory and regulatory language adequate with respect to for-profit providers and services. One commenter was critical of the provision making for-profit providers of services eligible for funding. The commenter expressed concern that for-profit providers may seriously weaken efforts to ensure quality control and professionalization in the adult education field.

Response. No change has been made. Under section 304(a)(2) of the Act, for-profit agencies, organizations, and institutions are eligible applicants. The law provides that for-profit entities must meet two tests not explicitly required of other applicants. These are (1) that the applicant can make a significant contribution to attaining the objectives of the Act and (2) either can provide substantially equivalent education at a lesser cost or can provide services and equipment not available in public institutions. The Secretary agrees with the commenters that a State educational agency should have the flexibility to develop its own procedures for determining these qualitative judgments and cost comparisons.

§ 426.32(b) Consultation by applicable local educational agency.

Comment. One commenter opposed the involvement by the applicable local educational agency in the review of applications by public or private agencies, organizations, and institutions. The commenter expressed doubt as to whether a local educational agency has an understanding of the problem or solutions superior to that of other eligible applicants.

Response. No change has been made. Section 304(a)(1) of the Act clearly requires consultation between the applicable local educational agency and other public or private eligible applicants prior to funding by a State. In addition to consultation, the Act further provides the applicable local educational agency the opportunity to comment on applications from these other categories of eligible applicants. This statutory requirement may not be changed by regulation.

The purpose of consultation is to reduce duplication of effort and provide for the best possible delivery of services to educationally disadvantaged adults. Consultation will enable different points of view and understanding to be considered in an organized way. The initiative for seeking consultation is the responsibility of the public or private agency. The local educational agency does not have the authority to certify, approve, or veto an application from an applicant. Nor can the local educational agency jeopardize the agency's application through inaction of the request for consultation. If a local educational agency delays in commenting on an agency's application, a State may still consider the application for funding if there is written evidence that consultation was requested in a timely manner.

Comment. One commenter objected to the requirement in § 426.32(b)(2) that an applicant other than a local educational agency must provide the applicable local educational agency the opportunity to comment on the application prior to submitting it to the State. The commenter pointed out that while section 304(a)(1) of the Act does require that the opportunity to comment must

take place prior to approval of an application by the State educational agency, the Act does not require that the

in financial resources, one commenter believed that the one-year waiver

educators" has been deleted in § 431.31(g)(2)(iii).

Comment. One commenter, while generally supporting the regulations,

appropriate. However, the statute contains no authority to regulate teacher

Response. No change has been made. Instructional content and methodology

take place prior to approval of an application by the State educational agency, the Act does not require that the opportunity to comment must take place prior to submission of the application to the State.

Response. A change has been made. The Secretary agrees with the commenter and the phrase "prior to submitting it to the State" has been deleted from § 426.32(b)(2).

§ 426.32 Local applications.

Comment. One commenter suggested that regulatory language be added in § 426.32 to require local applicants to describe the cooperative arrangements that have been made to deliver services to participants of the adult education program.

Response. No change has been made. Section 426.32 refers specifically to requirements for non-local educational agency applicants. The Secretary believes that assurance of consultation, cooperation, and coordination by both the State educational agency and by local providers of adult education services is adequately covered in § 426.12 (i) and (m).

§§ 426.41–426.44 Maintenance of effort.

Comment. One commenter strongly opposed the maintenance of effort requirement of the program on the basis that it would have the effect of punishing success. The commenter pointed out that as adult education programs achieve success State expenditures would be reduced in proportion to the decreased need for programs. In turn, the Federal contribution to the State would decrease.

Response. No change has been made. The statutory authority requiring maintenance of effort is specific and may not be changed by regulation.

Comment. One commenter suggested other situations that might result in less revenue to State governments and thereby constitute exceptional or uncontrollable circumstances warranting a waiver of the maintenance of effort requirement.

Response. No change has been made. Section 307(b)(2) of the the Act cites examples of exceptional or uncontrollable circumstances "such as a natural disaster or a precipitous and unforeseen decline in the financial resources of the State educational agency." The language in § 426.43(b) is offered for guidance and is not intended to be an all-inclusive list of situations denoting exceptional or uncontrollable circumstances.

Comment. Due to the long-range effect on State governments of certain declines in financial resources, one commenter believed that the one-year waiver provision is too restrictive.

Response. No change has been made. The regulatory language conforms to that in the Act and provides for a one-year waiver from the maintenance of effort requirement.

§ 431.2 Eligible applicants.

Comment. One commenter suggested that private nonprofit entities be eligible to apply under the National Adult Education Discretionary Program.

Response. No change has been made. both the statute and the regulations cite public and private institutions, agencies, and organization among the eligible applicants under the National Adult Education Discretionary Program. That category of eligible applicants includes both *nonprofit* and *for-profit* entities.

§ 431.10 Program activities under the National Discretionary Program.

Comment. One commenter objected to a basic goal of the National Discretionary Program. That objectionable goal is to support projects that contribute to the expansion of adult education. Rather, the commenter suggested that the goal should be to reduce the need for adult education by having successful educational programs for all age levels. The commenter also took exception to the examples of projects that may be funded. In particular, the commenter believed that elderly individuals should not be singled out as a group more worthy of this program than any other group. The commenter suggested that activities relating to educational technology and computer software should not be open-ended but should be directly related to meeting the needs of educationally disadvantaged adults.

Response. No change has been made. The regulations reflect the statutory requirements as set forth in section 309(a)(1) of the Act. It should be noted that the project examples relating to elderly individuals and adult immigrants, educational technology and computer software, and cooperative adult education programs are intended to be illustrative only and are not required by statute or regulations.

§ 431.31(g) Dissemination plan.

Comment. One commenter recommended that information and materials developed under national projects be disseminated to any parties concerned about illiteracy and other adult education problems, not solely to educators.

Response. A change has been made. The Secretary agrees, and the phrase "to educators" has been deleted in § 431.31(g)(2)(iii).

§ 431.40 Charges to participants.

Comment. One commenter suggested an amendment to the Act to allow charges to those participants who can afford to pay. The commenter further suggested that collected funds be reverted to the State program or placed in reserve for future funding needs.

Response. No change has been made. Section 309(a)(2)(B) of the Act is specific in the prohibition of charges to participants in projects conducted by any private for-profit institution, agency, organization, individual, or business concern. Further, the Secretary, based on legislative history, believes the Congress intended that no such charges shall be made to participants regardless of the entity conducting the program.

General Comments

Comment. Some commenters recommended that the greatest amount of latitude possible for program operations should be allowed to States. Commenters suggested that the diversity of conditions and populations throughout the country preclude establishing a set of prescriptive rules that will have equitable and beneficial application to all. Other commenters supported the efforts made to reduce administrative burden on grantees, to eliminate certain unnecessary regulations, and to clarify existing regulations.

Response. No change has been made. The Secretary believes that these regulations are not intrusive and provide maximum flexibility to State educational agencies, while adhering to requirements and intent of the authorizing legislation.

Comment. One commenter urged that the regulations be modified in a number of instances to involve public broadcasting stations and state public telecommunication agencies in State plan development and in the delivery of services under the Act. The commenter also suggested changes in the regulations that would encourage the use of telecommunications technology in the instructional program.

Response. No change has been made. The Secretary encourages States to utilize the public broadcasting system and its associated technology in carrying out responsibilities under the Act when such involvement and use is appropriate. However, there is no statutory authority for including in the regulations any requirements for such involvement.

Comment. One commenter, while generally supporting the regulations, emphasized the need to include teacher involvement in policy-making matters relative to the implementation of the adult education program.

Response. No change has been made. The Secretary agrees that teachers are the center of the learning environment and contribute immeasurably to programmatic achievements. The Secretary further agrees that States should use the expertise and experience of teachers in any way that is appropriate. However, the statute contains no authority to regulate teacher involvement.

Comment. A commenter recommended that the regulations should emphasize the importance of life skills toward enabling adults to function in society. The commenter also pointed out that life skill achievements should be among the evaluation criteria as well as the data collection elements. The commenter also spoke on behalf of competency-based adult education.

Response. No change has been made. Instructional content and methodology are determined at the State and local levels. While agreeing that life skills instruction and competency-based instruction may be effective methods in adult education, the Secretary leaves decisions of this nature to the discretion of the individual States. There is no requirement in the legislation to govern either the content or methodology of instruction.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $300.00 per year, or $150.00 for 6 months, payable in advance. The charge for individual copies is $1.50 for each issue, or $1.50 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

There are no restrictions on the republication of material appearing in the **Federal Register**.

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

How To Cite This Publication: Use the volume number and the page number. Example: 50 FR 12345.

Vol. 50, No. 139
Friday, July 19, 1985

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Office of the Secretary

7 CFR Part 2

[Docket No. 85-401]

Delegation of Authority Pertaining to Biotechnology

AGENCY: Office of the Secretary, USDA.

ACTION: Final rule.

SUMMARY: This document amends the delegations of authority of the Department of Agriculture to assign responsibility for the regulation of biotechnology and for agricultural research in biotechnology.

EFFECTIVE DATE: July 19, 1985.

FOR FURTHER INFORMATION CONTACT: Dr. James W. Glosser, Assistant Administrator, Animal and Plant Health Inspection Service, USDA, Room 313-E, Administration Building, 12th and Independence Avenue, SW., Washington, D.C. 20250. Telephone (202) 447-3580; or Dr. John Patrick Jordan, Administrator, Cooperative State Research Service, USDA, Room 305-A, Administration Building, 12th and Independence Avenue, SW., Washington, D.C. 20250. Telephone (202) 447-4423.

SUPPLEMENTARY INFORMATION: This document amends the delegations of authority of the Department of Agriculture in 7 CFR Part 2 by delegating from the Secretary of Agriculture to the Assistant Secretary for Marketing and Inspection Services the responsibility to coordinate the development and carrying out by Department agencies of all matters and functions pertaining to the Department's regulation of biotechnology, and to act as liaison on all matters and functions pertaining to the regulation of biotechnology between agencies within the Department and between the Department and other governmental and private organizations. This document also amends the delegations of authority in 7 CFR Part 2 by further delegating the responsibilities referred to above from the Assistant Secretary for Marketing and Inspection Services to the Administrator of the Animal and Plant Health Inspection Service.

This document also amends the delegations of authority in 7 CFR Part 2 by delegating from the Secretary of Agriculture to the Assistant Secretary for Science and Education the responsibility to coordinate the development and carrying out by Department agencies of all matters and functions pertaining to agricultural research involving biotechnology conducted or funded by the Department including the development and implementation of guidelines for oversight of research activities, and to act as liaison on all matters and functions pertaining to agricultural research in biotechnology between agencies within the Department and between the Department and other governmental, educational and private organizations.

This rule relates to internal agency management. Therefore, pursuant to 5 U.S.C. 553, it is found upon good cause that notice and other public procedures with respect thereto are impractical and contrary to the public interest, and good cause is found for making this rule effective less than 30 days after publication in the Federal Register. Further, since this rule relates to internal agency management it is exempt from the provisions of E.O. 12291. Also, this action is not a rule as defined by Pub. L. 96-354, the Regulatory Flexibility Act, and thus is exempt from the provisions of that Act.

List of Subjects in 7 CFR Part 2

Authority delegations (Government agencies).

PART 2—DELEGATIONS OF AUTHORITY BY THE SECRETARY OF AGRICULTURE AND GENERAL OFFICERS OF THE DEPARTMENT

Accordingly, 7 CFR Part 2 is amended as follows:

1. The authority citation for Part 2 is revised to read as follows:

Authority: 5 U.S.C. 301 and Reorganization Plan No. 2 of 1953, except as otherwise stated.

Subpart C—Delegations of Authority to the Deputy Secretary, the Under Secretary for International Affairs and Commodity Programs, the Under Secretary for Small Community and Rural Development, and Assistant Secretaries

2. Section 2.17 is amended by adding a new paragraph (j) to read as follows:

§ 2.17 Delegations of authority to the Assistant Secretary for Marketing and Inspection Services.

BILLING CODE 3410-34-M

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 200

[Release No. 34-22229]

Delegation of Authority to Director of the Division of Market Regulation

AGENCY: Securities and Exchange Commission.

ACTION: Final rule amendment.

SUMMARY: The Commission is amending its rules governing delegation of authority to provide the Director of the Division of Market Regulation with authority to comment to the Commodity Futures Trading Commission on whether proposals for futures contracts involving an index or group of securities meet the standards set forth under section 2(a)(1)(B)(ii) of the Commodity Exchange Act.

EFFECTIVE DATE: July 19, 1985.

FOR FURTHER INFORMATION CONTACT: Sharon Lawson, (202) 272-2825, Division of Market Regulation, Securities and Exchange Commission, Room 5032, 450 5th Street, NW., Washington, D.C. 20549.

SUPPLEMENTARY INFORMATION: The Commission is amending its rules governing delegation of authority to delegate to the Director of the Division of Market Regulation the authority to determine whether, and issue orders regarding, proposals submitted to the Commodity Futures Trading Commission ("CFTC") for designation of a contract market for futures trading on an index or group of securities meet the eligibility criteria set forth under section 2(a)(1)(B)(ii) of the Commodity Exchange Act ("CEA"), as amended by the Futures Trading Act of 1982 to reflect the terms of the SEC/CFTC Accord.[1]

The Commission finds, in accordance with the Administrative Procedure Act ("APA") [5 U.S.C. 553(b)(3)(B)], that notice is not necessary, because this amendment relates solely to agency organization, procedures, or practice. In addition, the Commission finds good cause for the amendment to become effective immediately because it will facilitate the prompt analysis of futures contracts proposals.

List of Subjects in 17 CFR Part 200

Organization and functions (government agencies).

On the basis of the above discussion, the Commission amends Part 200 of Title 17, Chapter II of the *Code of Federal Regulations* as follows:

PART 200—ORGANIZATION; CONDUCT AND ETHICS; AND INFORMATION AND REQUESTS

1. The authority citation for Part 200 continues to read:

Authority: Secs. 19, 23, 48 Stat. 85, 901, as amended, sec. 20, 49 Stat. 833, sec. 319, 53 Stat. 1173, secs. 38, 211, 54 Stat. 841, 855; 15 U.S.C. 77s, 78w, 79t, 77sss, 80a-37, 80b-11 * * *.

2. By amending § 200.30-3 by adding a new paragraph (e) and redesignating current paragraph (e) as (f) as follows:

§ 200.30-3 Delegation of authority to Director of Division of Market Regulation.

* * * * *

(e) To determine whether, and issue orders regarding, proposals for designation of a contract market for futures trading on an index or group of securities meet the eligibility criteria set forth under Section 2(a)(1)(B)(ii) of the Commodity Exchange Act, 7 U.S.C. 2(a).

* * * * *

Dated: July 12, 1985.

By the Commission.

John Wheeler,

Secretary.

Withdrawal of Quarterly Reporting Forms and Filing Obligations of Certain Registered Investment Companies; Incorporation of Quarterly Reporting Obligations in Form N-SAR; Adoption of Conforming Amendments to Registration Forms; Related Rule Amendments; Correction

AGENCY: Securities and Exchange Commission.

ACTION: Final rule; correction.

SUMMARY: On July 1, 1985, the Commission issued a release rescinding the quarterly reporting obligations of certain registered investment companies [50 FR 27937, July 9, 1985] and incorporating them into Form N-SAR, the semi-annual reporting form for such companies. At that time, the Commission withdrew the obligation to file form N-1Q [17 CFR 249.331] as required by the Securities Exchange Act of 1934 [15 U.S.C. 78a *et seq.*]. The Commission is now amending that release to withdraw the obligation to file form N-1Q [17 CFR 274.106] under the Investment Company Act of 1940 [15 U.S.C. 80a-1 *et seq.*].

EFFECTIVE DATE: August 8, 1985.

BILLING CODE 8010-01-M

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Parts 1 and 602

[T.D. 8035]

Investment Credit for Commuter Highway Vehicles

AGENCY: Internal Revenue Service, Treasury.

ACTION: Final regulations.

SUMMARY: This document contains final regulations relating to special rules for computing the investment credit for commuter highway vehicles. The Energy Tax Act of 1978 (Pub. L. 95-618, 92 Stat. 3193) enacted special rules for determining the amount of that credit and for the recapture of that credit. The regulations provide the public and Internal Revenue Service personnel with the guidance needed to comply with and administer the law.

DATES: The amendments are effective for commuter highway vehicles placed in service on or after November 9, 1978 and before January 1, 1986.

FOR FURTHER INFORMATION CONTACT: Patricia Wendlandt of the Legislation and Regulations Division, Office of Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, N.W., Washington, D.C. 20224, Attention: CC:LR:T (202-566-3458, not a toll-free call).

SUPPLEMENTARY INFORMATION:

Background

This document contains final amendments to the Income Tax Regulations (26 CFR Part 1) under sections 46(c)(6) and 47(a)(4) of the Internal Revenue Code of 1954, relating to the investment credit for commuter highway vehicles. These regulations were published in proposed form in the **Federal Register** on October 5, 1984 [49 FR 39344]. One comment was received suggesting changes to the proposed amendments to the regulations. There were no requests for a public hearing and none was held. With only minor revisions, the proposed regulations are adopted by this Treasury decision.

Commuter Use Requirement

The proposed regulations define the 80 percent commuter use requirement. To qualify for the investment credit for commuter highway vehicles, section 46(c)(6)(B)(ii) and the regulations provide that at least 80 percent of the vehicle's mileage must be for purposes of transporting the taxpayer's employees between their residences and their places of employment. The comment suggested that personal incentive mileage and mileage for maintenance and refueling be included as qualified commuter uses. Such usage is not considered to be for the purpose of transporting the taxpayer's employees between their residences and places of employment and is not properly considered a qualified commuter use of the vehicle. Although personal incentive mileage and mileage for maintenance and refueling are not includible as qualified commuter uses, such mileage will not disqualify a commuter highway vehicle provided it does not exceed 20 percent of the vehicle's total mileage. Accordingly, the final regulations adopt the proposed definition of the commuter use requirement without change.

Executive Order 12291 and Regulatory Flexibility Act

The Commissioner of Internal Revenue has determined that this final rule is not a major rule as defined in Executive Order 12291 and that a Regulatory Impact Analysis is therefore not required. Although a notice of proposed rulemaking that solicited public comment was issued, the Internal Revenue Service concluded when the notice was issued that the regulations are interpretative and that the notice and public procedure requirements of 5 U.S.C. 553 did not apply. Accordingly, the final regulations do not constitute regulations subject to the Regulatory Flexibility Act (5 U.S.C. Chapter 6).

Paperwork Reduction Act

The collection of information requirements contained in these regulations have been submitted to the Office of Management and Budget (OMB) in accordance with the requirements of the Paperwork Reduction Act of 1980. These requirements have been approved by OMB.

Drafting Information

The principal author of these final regulations is Patricia Wendlandt of the Legislation and Regulations Division of the Office of Chief Counsel, Internal Revenue Service. However, personnel from other offices of the Internal Revenue Service and Treasury Department participated in developing the regulations, both on matters of substance and style.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR Part 1 and Part 602 are amended as follows:

PART 1—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1953

Paragraph 1. The Authority citation for Part 1 is amended by adding the following citation:

Authority: 26 U.S.C. 7805 * * * § 1.47-1 also issued under 26 U.S.C. 47(a).

Par. 2. A new § 1.46-10 is added and reserved in the appropriate place.

§ 1.46-10 [Reserved].

Par. 3. A new § 1.46-11 is added in the appropriate place. As added, the new section reads as follows:

§ 1.46-11 Commuter highway vehicles.

(a) *In general.* Section 46(c)(6) provides that the applicable percentage to determine qualified investment under section 46(c)(1) for a qualifying commuter highway vehicle is 100 percent. A qualifying commuter highway vehicle is a vehicle (defined in paragraph (b) of this section)—

(1) Which is acquired by the taxpayer on or after November 9, 1978,

(2) Which is placed in service by the taxpayer before January 1, 1986, and

(3) With respect to which the taxpayer makes an election under paragraph (g) of this section.

(b) *Definition of commuter highway vehicle.* A commuter highway vehicle is a highway vehicle that meets the following requirements:

(1) The vehicle is section 38 property in the hands of the taxpayer. The rule of section 48(d), allowing a lessor to elect to treat the lessee of new section 38 property as having acquired the property, applies to commuter highway vehicles. If the vehicle is leased and that election is made, the lessee is treated as the taxpayer under this section. However, if that election is not made, the lessor, and not the lessee, is treated as the taxpayer under this section.

(2) The vehicle must meet the seating capacity requirement of paragraph (c) of this section; and

(3) The taxpayer reasonably expects to meet the commuter use requirement

of paragraph (d) of this section for at least the first 36 months after the vehicle is placed in service.

a qualifying commuter highway vehicle (as defined in paragraph (a) of § 1.46-11) which undergoes a change in use (as

vehicle was placed in service and ending before the end of the first 36

26 CFR Part 1

Under section 101 of Reorganization Plan No. 4 of 1978 (43 FR 47713), the

The regulations also provide two rules governing when a reduction in an

of paragraph (d) of this section for at least the first 36 months after the vehicle is placed in service.

(c) *Seating capacity.* A commuter highway vehicle must have a seating capacity of a least 8 adults in addition to the driver's seat.

(d) *Commuter use requirement.* A vehicle meets the commuter use requirement only if at least 80 percent of the miles the vehicle is driven are for trips to transport the taxpayer's employees between their residences and their places of employment. A trip for this purpose includes driving the vehicle before or after employees are in the vehicle, so long as the mileage driven is necessary either to pick up or drop off passengers or to park the vehicle in its regular parking space. A trip does not include miles driven solely for maintenance or to refuel the vehicle. A trip is not considered to transport the taxpayer's employees between their residences and their places of employment unless at least one-half the seating capacity (defined in paragraph (c) of this section) is used to seat employees of the taxpayer. In no event is the driver counted as an employee of the taxpayer.

(e) *Definition of employee.* An employee in this section is the same as in section 3121 (d) (definition of employee for withholding purposes).

(f) *Transportation between employee's residence and place of employment.* An employee is transported between that employee's residence and place of employment even if that place of employment is not the same as any of the other employees transported, and even if picked up or dropped off at some central point between that residence and place of employment. An employee is not transported between that employee's residence and place of employment if the transportation is of the type for which a deduction would be allowed under § 1.162–2 were the employee providing it, such as the transportation from one work site to another after beginning work for the day.

(g) *Election.* A taxpayer must elect to have the vehicle treated as a qualifying commuter highway vehicle on the return for the taxable year in which the vehicle is placed in service. The election may be made only if the vehicle actually meets the commuter use requirement under paragraph (d) of this section for that taxable year. It must be made on or before the due date (including extensions) of that return. The election is effective as of that due date.

Par. 4. Section 1.47–1 is amended by:

1. Inserting in the first sentence of paragraph (a)(1)(i) of that section, "or is a qualifying commuter highway vehicle (as defined in paragraph (a) of § 1.46–11) which undergoes a change in use (as defined in paragraph (m)(2) of this section)" immediately following "(as defined in paragraph (g) of § 1.46–3)", and

2. Adding and reserving paragraphs (i), (j), (k), and (l) and by adding a new paragraph (m) to read as follows:

§ 1.47–1 Recomputation of credit allowed by section 38.

* * * * *

(i) [Reserved].
(j) [Reserved].
(k) [Reserved].
(l) [Reserved].

(m) *Commuter highway vehicles*—(1) *Recomputed qualified investment.* (i) If a qualifying commuter highway vehicle (as defined in § 1.46–11(a) undergoes a change in use but does not cease to be section 38 property, qualified investment for that vehicle is recomputed as if the vehicle was section 38 property which is not a qualifying commuter highway vehicle for its entire useful life.

(ii) The following example illustrates this paragraph (m)(1).

Example. X Corporation, a calendar year taxpayer, acquired and placed in service on January 1, 1982, a qualifying commuter highway vehicle with a basis of $10,000 and which qualified as three year recovery property under section 168(c)(2)(A)(i). The amount of qualified investment for the vehicle under section 46(c) (1) and (6) is $10,000. For the taxable year 1982, X Corporation's credit earned was $1,000 (10 percent of $10,000) and X Corporation was allowed under section 38 a $1,000 credit against its 1982 tax liability. During the taxable year 1984, the vehicle undergoes a change in use but does not cease to be section 38 property. The vehicle is treated as section 38 property which is not a qualifying commuter highway vehicle for its entire useful life. The recomputed qualified investment for the vehicle is $6,000 (60 percent of $10,000) and X Corporation's recomputed credit earned is $600 (10 percent of $6,000). The income tax imposed by chapter 1 of the Code on X Corporation for 1984 is increased by the $400 decrease in its credit earned for 1982 ($1,000–$600).

(2) *Change in use*—(i) A qualifying commuter highway vehicle undergoes a change in use if the vehicle does not meet the commuter use requirement (as defined in § 1.46–11(d)) for each computation period.

(ii) Each of the following is a computation period:

(A) The period beginning on the date the vehicle was placed in service and ending on the last day of the taxpayer's taxable year in which the vehicle was placed in service;

(B) Each of the taxpayer's taxable years beginning after the date the vehicle was placed in service and ending before the end of the first 36 months after the vehicle was placed in service; and

(C) The period ending at the end of the first 36 months after the vehicle was placed in service and beginning on the first day of the taxpayer's taxable year in which the end of those first 36 months falls.

(iii) The following example illustrates this paragraph (m)(2).

Example. (*a*) Z Corporation, a calendar year taxpayer, acquired and placed in service a qualifying commuter highway vehicle on January 15, 1979. Z Corporation used the vehicle as set forth in the following table:

Taxable year ending	Total miles	Commuter miles	Ratio
1979	10,000	9,000	.90
1980	10,000	8,000	.80
1981	10,000	8,000	.80
1982 (1–14)	1,000	100	.10

(*b*) The first computation period begins on the date the vehicle is placed in service, in this example 1–15–79, and ends 12–31–79. In that computation period, the ratio of commuter miles to total miles is .90 (9,000 miles ÷ 10,000 miles). Therefore, the vehicle meets the commuter use requirement for that period and has not undergone a change in use. Similar calculations for the computation periods 1–1–80 to 12–31–80 and 1–1–81 to 12–31–81 produce the same result.

(*c*) As of the computation period beginning 1–1–82 and ending 1–14–82, the ratio of commuter use to total mileage is .10 (100 miles ÷ 1,000 miles). Since that ratio is less than .80, the vehicle does not meet the commuter use requirement for the period and the vehicle has undergone a change in use.

PART 602—OMB CONTROL NUMBERS UNDER THE PAPERWORK REDUCTION ACT

Par. 5. The authority citation for Part 602 continues to read as follows:

Authority: 26 U.S.C. 7805.

§ 602.101 [Amended]

Par. 6. Section 602.101(c) is amended by inserting in the appropriate place in the table "§ 1.46–11(g) . . . 1545–0155".

Roscoe L. Egger, Jr.,
Commissioner of Internal Revenue.

Approved: June 17, 1985.

[T.D. 8038]

Income Tax, Taxable Years Beginning After December 31, 1953; Effective Dates, Transitional Rules, Restrictions on Plan Distributions, and Other Issues Arising Under the Retirement Equity Act of 1984

AGENCY: Internal Revenue Service, Treasury.

ACTION: Temporary regulations.

SUMMARY: This document contains temporary regulations relating to the effective dates, transitional rules, restrictions on distributions from employee plans, and other issues arising under the Retirement Equity Act of 1984. The regulations will generally affect sponsors of, and participants in, pension, profit-sharing, and stock bonus plans, and they provide plan sponsors with guidance necessary to comply with the law.

In addition, the text of the temporary regulations set forth in this document also serves as the text of the notice of proposed rulemaking that appears in the Proposed Rules section of this issue of the **Federal Register.**

DATES: The regulations are effective July 19, 1985, and generally apply for plan years beginning after December 31, 1984, except as otherwise specified in the Retirement Equity Act of 1984.

FOR FURTHER INFORMATION CONTACT: Charles M. Watkins of the Employee Plans and Exempt Organizations Division, Office of the Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, NW., Washington, D.C. 20224 (Attention CC:LR:T) (202–566–3903, not a toll-free call).

SUPPLEMENTARY INFORMATION:

Background

This document contains temporary regulations relating to the requirements for payment of survivor annuities, to restrictions on payments under qualified employee plans, and other rules, as enacted by Titles II and III of the Retirement Equity Act of 1984 ("REA '84") (Pub. L. 98–397, 98 Stat. 1436 *et seq.*).

Taxpayers may rely on these temporary regulations for guidance pending the issuance of final regulations. These temporary regulations do not, however, address comprehensively the issues raised by Titles II and III of REA '84, and no inferences should be drawn by reason of the fact that an issue is not addressed in this Treasury decision.

Under section 101 of Reorganization Plan No. 4 of 1978 (43 FR 47713), the Secretary of the Treasury has jurisdiction over the subject matter addressed in these regulations (except the definition of a qualified domestic relations order). Therefore, under section 104 of the Reorganization Plan, these regulations apply when the Secretary of Labor exercises authority under Title I of the Employee Retirement Income Security Act of 1974 (as amended, including the amendments made by Title I of REA) ("ERISA"). Thus, the requirements also apply to employee plans subject to Title I of ERISA.

New Requirements

Sections 411(a)(11) and 417(e) of the Internal Revenue Code restrict a plan's ability to distribute benefits to participants and, when applicable, spouses. Section 411(a)(11) treats as forfeitable, for purposes of section 411(a), any accrued benefit that may be distributed to a participant without the participant's consent when the present value of the participant's nonforfeitable accrued benefit in the plan exceeds $3,500. Section 417(e) prohibits any plan subject to section 401(a)(11) from distributing any portion of a qualified joint and survivor annuity (QJSA), or a qualified preretirement survivor annuity (QPSA), if the present value of such an annuity is greater than $3,500, without the consent of the participant and the participant's spouse. Under sections 411(a)(11) and 417(e), the present value of a participant's annuity benefit in a defined benefit plan is to be determined by reference to an interest rate that is not greater than the interest rate used by the Pension Benefit Guaranty Corporation (PBGC) in valuing immediate annuities on plan termination. Plans are required to use this PBGC interest rate for both determining whether the $3,500 floor is reached and valuing the accrued benefit.

Defined contribution plans, such as money purchase, profit-sharing, and stock bonus plans, whether or not subject to section 401(a)(11), are not required to use interest rates that are not greater than the PBGC rates to calculate the amount to be distributed, even if such plans use an account balance to purchase an annuity.

The regulations provide that, for purposes of sections 401(a)(11), 411(a)(11), and 417, a participant's accrued benefit includes benefits attributable to both employer and employee contributions under the plan, excluding deductible employee contributions described in section 72(o).

The regulations also provide two rules governing when a reduction in an accrued benefit to satisfy a participant's loan obligation to the plan is treated as a distribution from the plan. Such a reduction is generally subject to the applicable consent requirements of sections 411(a)(11) and 417(e). Alternatively, a plan may obtain the consent of the participant and the participant's spouse to a subsequent reduction in accrued benefits within the 90 day period before the making of a loan secured by an accrued benefit.

The Department of Labor has jurisdiction over the prohibited transaction rules of section 4975. It has indicated that a loan secured by an accrued benefit subject to REA '84 may not be adequately secured under section 4975(d)(1) if consent to a reduction in the accrued benefit is not obtained before such a loan is made, and, therefore, may be a prohibited transaction.

Plan Amendments

Plan amendments required by the Retirement Equity Act of 1984 must, in general, be adopted not later than the end of the first plan year to which the statutory provisions generally apply.

Nonapplicability of Executive Order 12291

The Treasury Department has determined that this regulation is not subject to review under Executive Order 12291. Accordingly, a Regulatory Impact Analysis is not required.

Regulatory Flexibility Act

No general notice of proposed rulemaking is required by 5 U.S.C. 553(b) for temporary regulations. Accordingly, this regulation does not constitute a regulation subject to the Regulatory Flexibility Act (5 U.S.C. chapter 6).

Drafting Information

The principal authors of these regulations are William D. Gibbs and Charles M. Watkins, of the Employee Plans and Exempt Organizations Division of the Office of the Chief Counsel, Internal Revenue Service. Personnel from other offices of the Internal Revenue Service and Treasury Department also participated in developing the regulations, on matters of both substance and style.

Adoption of Amendments to the Regulations

PART 1—[AMENDED]

Accordingly, 26 CFR Part 1 is amended as follows:

Paragraph 1. The authority citation for Part 1 continues to read:

Authority: 26 U.S.C. 7805 * * *.

Par. 2. A new § 1.401(a)–11T is added immediately after § 1.401(a)–11 to read as follows:

§ 1.401(a)–11T Requirement of qualified joint and survivor annuity and qualified preretirement survivor annuity (temporary).

Q–1: Are there new survivor annuity requirements added to the Code by the Retirement Equity Act of 1984 (REA '84) to protect spouses?

A–1: Yes. REA '84 replaced section 401(a)(11) with a new section 491(a)(11) and added a new section 417. Plans subject to new section 401(a)(11) must comply with the requirements of section 401(a)(11) and section 417 in order to remain qualified under section 401(a) or 403(a). In general, these plans must now provide both a qualified joint and survivor annuity (QJSA) and a qualified preretirement survivor annuity (QPSA) to remain qualified. These new survivor annuity requirements are applicable to any benefit payable under a plan, including benefits payable to a participant under a contract purchased by the plan and paid by a third party. Thus, an annuity contract purchased by a plan and distributed to or owned by the participant must comply with the new survivor annuity requirements as they would apply to the plan if the benefits were paid directly by the plan.

Q–2: What plans are subject to sections 401(a)(11) and 417?

A–2: Sections 401(a)(11) and 417 apply to any defined benefit plan and to any defined contribution plan that is subject to the minimum funding standards of section 412. These sections also apply to any participant under any other defined contribution plan unless—

(a) The plan provides that the participant's nonforfeitable accrued benefit is payable in full, upon the participant's death, to the participant's surviving spouse (unless the participant has elected, with spousal consent that satisifies the requirements of section 417(a)(2), that such benefit be provided instead to a designated beneficiary);

(b) Such participant does not elect the payment of benefits in the form of a life annuity; and

(c) With respect to the participant, the plan is not a transferee plan (see Q&As–7 and 8).

Section 401(a)(11)(C) provides that, for purposes of determining whether benefits under an employee stock ownership plan are subject to sections 401(a)(11) and 417, that portion of a participant's accrued benefit that is subject to section 409(h) is to be treated as though such benefit were provided under a defined contribution plan not subject to section 412.

Q–3: May a defined contribution plan not subject to section 412 that provides that a participant's nonforfeitable accrued benefit is payable in full to a surviving spouse use the rules set forth in section 417(d) for determining whether or not the participant is married at the time of death?

A–3: Yes.

Q–4: How do the survivor annuity requirements added by REA '84 apply to married participants?

A–4: Section 401(a)(11)(A) requires that upon the death of a married participant with vested benefits attributable to employer contributions, plan benefits with respect to such participant, except plan benefits the payment of which had commenced prior to the participant's death, must be paid in the form of a QPSA. A QPSA must be provided regardless of whether the participant separated from service before the date of death. Section 401(a)(11)(A) also requires that the plan benefits of a married participant who survives until commencement of payment of such benefits be provided in the form of a QJSA. The QPSA and the QJSA may be waived if the applicable notice, election, and spousal consent requirements of section 417 are satisfied. Thus, for example, in order for a money purchase pension plan to distribute any portion of a married participant's benefit to such participant—even if the distribution is merely an ad hoc distribution after the participant has attained the normal retirement age under the plan but has not yet separated from service—the plan must distribute such portion in the form of a QJSA (unless the plan satisfies the applicable requirements of section 417(a) with respect to such portion of the participant's benefit). The plan still must satisfy the QPSA requirements with respect to any portion of the participant's benefits that has not been distributed, except any benefits the payment of which has commenced. However, if, prior to the commencement of a distribution of any benefits, the present value of such married participant's nonforefeitable accrued benefit is not more than $3,500, the requirements of section 417(a) need not be satisfied with respect to the payment of such participant's benefits. See § 1.417(e)–1T.

Q–5: Must a plan subject to sections 401(a)(11) and 417 provide an annuity to participants who are not married?

A–5: Yes. Plans subject to the requirements of sections 401(a)(11)(and 417 must satisfy those requirements with respect to participants who are not married. A QJSA for a participant who is not married is an annuity for the life of the participant, and thus, an unmarried participant must be provided such an annuity unless he elects another form of benefit.

Q–6: Must plans subject to new section 401(a)(11) meet other requirements?

A–6: Yes. Plans subject to new section 401(a)(11) must satisfy the requirements of section 417 (relating to minimum survivor annuity requirements).

Q–7: How do sections 401(a)(11) and 417 apply to transferee plans (certain defined contribution plans that are not subject to section 412)?

A–7: Although profit-sharing, stock bonus, and other defined contribution plans not subject to section 412 are generally not subject to sections 401(a)(11) and 417 with respect to their participants, these plans are subject to sections 401(a)(11) and 417 with respect to any participant if the plan is a transferee plan with respect to that participant. A defined contribution plan is a transferee plan with respect to a participant if the plan is a direct or indirect transferee, with respect to that participant, of benefits that were held, on or after January 1, 1985, by:

(a) A defined benefit plan;

(b) A defined contribution plan subject to section 412; or

(c) A defined contribution plan that is subject to sections 401(a)(11) and 417 with respect to that participant.

A transfer made before January 1, 1985, and any rollover contribution made at any time, is not a transfer that subjects a plan to the new survivor annuity rules with respect to a participant. If a plan is a transferee plan with respect to a participant, the section 417 requirements do not apply with respect to other plan participants solely because of the transfer. However, in order to prevent discrimination under section 401(a)(4), it may be necessary for the plan to provide QJSAs or QPSAs with respect to other participants.

Q–8: What benefits in a transferee plan are subject to the new survivor annuity requirements?

A–8: All accrued benefits held for a participant with respect to whom the plan is a transferee plan are subject to the new survivor annuity requirements

unless there is an acceptable separate accounting between the transferred benefits and any other benefits under the plan. A separate accounting is not acceptable unless gains, losses, withdrawals, contributions, forfeitures, and other credits or charges are allocated between the accrued benefits subject to the new survivor annuity requirements and other benefits on a reasonable and consistent basis. If there is an acceptable separate accounting between transferred benefits and any other benefits under the plan, only the transferred benefits are subject to the new survivor annuity requirements.

Q–9: Must annuity contracts purchased and distributed to a participant or spouse by a plan subject to sections 401(a)(11) and 417 satisfy the requirements of those sections?

A–9: Yes. No rights to accrued benefits, optional forms of payments, consents, or other privileges provided for by section 401(a)(11) or 417 may be eliminated or reduced because the plan uses annuity contracts to provide benefits or because such a contract is held by a participant or spouse instead of a plan trustee. Similarly, the protection provided by section 411(d)(6) may not be eliminated or reduced by the use of annuity contracts.

Q–10: If a plan would otherwise be subject to the survivor annuity requirements of new sections 401(a)(11) and 417, does the fact that it is frozen or terminated make a difference?

A–10: In general, benefits provided under a plan that is subject to the new survivor annuity requirements of sections 401(a)(11) and 417 must be provided in accordance with those requirements even if the plan is terminated or frozen. However, any plan that has a termination date prior to September 17, 1985, and that distributes all remaining assets as soon as administratively feasible after the termination date is not subject to the new survivor annuity requirements. The date of termination is determined under section 411(d)(3) and § 1.411(d)–2(c).

Q–11: If a plan would otherwise be subject to the survivor annuity requirements of new sections 401(a)(11) and 417, does it make a difference that the Pension Benefit Guaranty Corporation (PBGC) is administering the plan?

A–11: No. Participants and spouses are entitled to the same protection irrespective of whether an employer or the PBGC is administering a plan.

Q–12: Do the new survivor annuity requirements apply to benefits derived from employer and employee contributions?

A–12: Yes. The new survivor annuity benefit requirements apply to benefits derived from both employer and employee contributions.

Q–13: To what benefits do the new survivor annuity requirements apply?

A–13: (a) *Defined benefit plans.* Sections 401(a)(11) and 417 apply only to benefits in which a participant was vested immediately prior to death. They do not apply to benefits in which a participant becomes vested by reason of death or to the proceeds of a life insurance contract maintained by the plan for a participant to the extent such proceeds exceed the present value of the participant's nonforfeitable accrued benefits existing immediately prior to death.

(b) *Defined contribution plans.* Sections 401(a)(11) and 417 apply to all vested benefits, whether vested before or upon death, payable under the plan, including the proceeds of insurance contracts.

Q–14: What preretirement survivor annuity benefits must a defined contribution plan provide?

A–14: A defined contribution plan that is subject to sections 401(a)(11) and 417 must provide an annuity whose actuarial equivalent is not less than 50 percent of the nonforfeitable account balance of the participant as of the date of the participant's death. For this purpose, the nonforfeitable account balance of the participant includes amounts attributable to nonforfeitable employer contributions and amounts attributable to employee contributions.

Q–15: In determining whether amounts attributable to employer contributions to a defind contribution plan are nonforfeitable under sections 401(a)(11) and 417, does the rule of section 411(a)(3)(A) (permitting forfeitures on account of death) apply?

A–15: No. Therefore, sections 401(a)(11) and 417 apply to benefits that were nonforfeitable immediately prior to death (determined without regard to section 411(a)(3)(A)), as well as to benefits that become nonforfeitable at death.

Q–16: Do sections 401(a)(11) and 417 apply to accumulated deductible employee contributions, as defined in section 72(o)?

A–16: No. Accumulated deductible employee contributions are not subject to the new survivor annuity rules even though such contributions are made to a defined benefit or defined contribution plan that is subject to sections 401(a)(11) and 417.

Q–17: When do the new survivor annuity requirements apply to plans?

A–17: New sections 401(a)(11) and 417 generally apply to plan years beginning after December 31, 1984. Sections 302 and 303 of REA '84 provide specific effective dates and transitional rules under which the QJSA or QPSA (or pre-REA '84 section 401(a)(11)) requirements may be applicable to particular plans or with respect to benefits provided to particular participants. In general, the new section 401(a)(11) survivor annuity requirements do not apply with respect to a participant who does not have at least one hour of service or one hour of paid leave under the plan after August 22, 1984.

Q–18: Are there special effective dates for plans maintained pursuant to collective bargaining agreements?

A–18: Yes. Section 302(b) of REA '84 provides a special deferred effective date for such plans. Whether or not a plan is described in section 302(b) will be determined under the principles applied under section 1017(c) of the Employee Retirement Income Security Act of 1974. In addition, a plan will not be treated as maintained under a collective bargaining agreement unless the employee representative satisfies section 7701(a)(46) of the Internal Revenue Code after March 31, 1984. Nothing in section 302(b) shall deny a participant or spouse the rights set forth in sections 303(c)(2), 303(c)(3), 303(e)(1), and 303(e)(2) of REA '84.

Q–19: What is one hour of service or paid leave under the plan for purposes of the transition rules in section 303 of REA '84?

A–19: One hour of service or paid leave under the plan is one hour of service or paid leave recognized or required to be recognized under the plan for any purpose, *e.g.*, participation, vesting percentage, or benefit accrual purposes. For plans that do not compute hours of service, one hour of service or paid leave means any service or paid leave recognized or required to be recognized under the plan for any purpose.

Q–20: Must a plan be amended to provide for the QPSA required by section 303(c)(2) of REA '84, or for the survivor annuities required by section 303(e) of REA '84?

A–20: A plan will not fail to satisfy the qualification requirements of section 401(a) or 403(a) merely because it is not amended to provide the QPSA required by section 303(c)(2) or the survivor annuities required by section 303(e). The plan must, however, satisfy those requirements in operation. In addition, the plan must be amended to satisfy sections 401(a)(11) and 417 not later than the last day of the first plan year to which sections 401(a)(11) and 417 apply.

Q–21: Is a participant's election, or a spouse's consent to an election, with respect to a QPSA, made before August

1984. Thus, for example, assume a plan has a calendar plan year and disregarded years of service as

(b) *Example.* The rules of this section are illustrated by the following example:

present value of the nonforfeitable portion of such benefit is greater than

provided in section 401(a)(11)(C) for certain ESOP benefits. A plan does not

married at the time of the

VOL 50 ISS 139 JL 19 1985 UMI

Q-21: Is a participant's election, or a spouse's consent to an election, with respect to a QPSA, made before August 23, 1984, valid?

A-21: No.

Q-22: Is spousal consent required for certain survivor annuity elections made by the participant after December 31, 1984, and before the first plan year to which new sections 401(a)(11) and 417 apply?

A-22: Yes. Section 303(c)(3) of REA '84 provides that any election by a participant, made after December 31, 1984, and before the date sections 401(a)(11) and 417 apply to the plan, not to take a QJSA is not effective unless the spousal consent requirements of section 417 are met with respect to such election. Unless the participant's annuity starting date occurred before January 1, 1985, the spousal consent required by section 417(a)(2) and (e) must be obtained even though the participant elected the benefit prior to January 1, 1985. By the end of the first plan year to which new sections 401(a)(11) and 417 apply, the plan must be amended to comply with the QJSA requirements.

Par. 3. A new § 1.401(a)–13T is added immediately after § 1.401(a)–13 to read as follows:

§ 1.401(a)–13T Assignment or alienation of benefits; special rules for qualified domestic relations orders (temporary).

(a) *Definition.* The term qualified domestic relations order (QDRO) has the meaning set forth in section 414(p). For purposes of the Internal Revenue Code, a QDRO also includes any domestic relations order described in section 303(d) of the Retirement Equity Act of 1984, as provided in that section.

(b) *Plan amendments.* A plan will not fail to satisfy the qualification requirements of section 401(a) or 403(a) merely because it is not amended to require the plan to comply with a QDRO.

Par. 4. A new § 1.410(a)–5T is added immediately after § 1.410(a)–5 to read as follows:

§ 1.410(a)–5T Five consecutive 1-year breaks in service, transitional rules under the Retirement Equity Act of 1984 (temporary).

Sections 410(a)(5)(D) and 411(a)(6)(D), as amended by the Retirement Equity Act of 1984 (REA '84), permit a plan to disregard years of service that were disregarded under plan provisions satisfying those sections (as in effect on August 22, 1984), as of the day before the amendments apply to the plan. Under section 302(a) of REA '84, the new break in service rules generally apply to plan years beginning after December 31, 1984. Thus, for example, assume a plan has a calendar plan year and disregarded years of service as permitted by sections 410(a)(5)(D) and 411(a)(6)(D) as in effect on August 22, 1984. An employee completed two years of service in 1981 and 1982, and then incurred two consecutive 1-year breaks in service in 1983 and 1984. The plan may disregard the prior years of service, even though the employee did not incur five consecutive 1-year breaks in service. On the other hand, assume the employee completed three consecutive years of service beginning in 1980, and incurred two 1-year breaks in service in 1983 and 1984. Because, as of December 31, 1984, the years of service credited before 1983 could not be disregarded, whether the plan may subsequently disregard those years of service would be governed by the rules enacted by REA '84.

§ 1.411(a)–7 [Amended]

Par. 5. Section 1.411(a)–7(d)(4)(iv)(B) is amended by adding at the end thereof the following sentence:

* * * * *

(d) * * *

(4) * * *

(iv) * * *

(B) * * * Notwithstanding the above sentence, no defined benefit plan or defined contribution plan may require that repayments be made earlier than the end of a period of 5 consecutive one-year breaks in service.

* * * * *

Par. 6. A new § 1.410(a)–7T is added immediately after § 1.410(a)–7 to read as follows:

§ 1.410(a)–7T Elapsed time method; maternity and paternity absence (temporary).

(a) *General rule.* For purposes of applying the rules of § 1.410(a)–7 (relating to the elapsed time method of crediting service) to absences described in sections 410(a)(5)(E) and 411(a)(6)(E) (relating to maternity or paternity absence), the severance from service date of an employee who is absent from service beyond the first anniversary of the first date of absence by reason of a maternity or paternity absence described in section 410(a)(5)(E)(i) or 411(a)(6)(E)(i) is the second anniversary of the first date of such absence. The period between the first and second anniversaries of the first date of absence from work is neither a period of service nor a period of severance. This rule applies to maternity or paternity absences beginning on or after the first day of the first plan year in which the plan is required to credit service under sections 410(a)(5)(E) and 411(a)(6)(E).

(b) *Example.* The rules of this section are illustrated by the following example:

Assume an individual works until June 30, 1988; is first absent from employment on July 1, 1986, on account of maternity or paternity absence; and on July 1, 1989, performs an hour of service. The period of service must include the period from employment commencement date until June 30, 1987 (one year after the date of separation for any reason other than a quit, discharge, retirement, or death). The period from July 1, 1987, to June 30, 1988, is neither a period of service nor a period of severance. The period of severance would be from July 1, 1988 to June 30, 1989.

Par. 7. A new § 1.411(a)(11)–1T is added after § 1.411(a)–9 to read as follows:

§ 1.411(a)(11)–1T. Restrictions and valuations of distributions (temporary).

(a) *Scope.* Section 411(a)(11) restricts the ability of a plan subject to section 411 to distribute any portion of a participant's accrued benefits without the participant's consent. Section 411(a)(11) applies in determining whether a plan satisfies the nonforfeitability requirements of section 411(a).

(b) *General rules*—(1) *New requirements.* If a plan does not satisfy the participant consent requirement with respect to the immediate distribution of any participant's nonforfeitable accrued benefit with a present value in excess of $3,500, the entire accrued benefit is forfeitable for purposes of determining whether section 411(a) is satisfied.

(2) *Additional requirements.* The requirements of section 411(a)(11) and this section are in addition to the requirements of sections 401(a)(9) (relating to required distributions), 401(a)(14) (relating to benefit commencement), and 417 (relating to survivor benefits). Notwithstanding any provision to the contrary in section 401(a)(14) or § 1.401(a)–14, the failure of a participant to consent to a distribution while a benefit is immediately distributable is deemed to be an election to defer commencement of payment of any benefit sufficient to satisfy section 401(a)(14) and § 1.401(a)–14.

(c) *Consent, etc. requirements*—(1) *General rule.* Section 411(a)(11) permits plans subject to that section to provide for the distribution of any portion of a participant's nonforfeitable accrued benefits only if either the applicable consent requirements are satisfied or such distribution is not immediately distributable.

(2) *Consent.* Written consent of the participant is required before the commencement of the distribution of any part of an accrued benefit if the present value of the nonforfeitable portion of such benefit is greater than $3,500.

(3) *Accrued benefit.* The term "accrued benefit" has the same meaning as such term has under section 417(e) and the regulations thereunder.

(4) *Immediately distributable.* An accrued benefit is immediately distributable for purposes of section 411(a)(11) and this section if any part of the benefit may be distributed to the participant before the later of the normal retirement age (as defined in section 411(a)(8)) or age 62.

(5) *Death of participant.* Section 411(a)(11) does not apply after the death of the participant.

§ 1.411(d)(3) [Amended]

Par. 8. Section 1.411(d)–3 is amended by removing the second sentence of paragraph (a)(1).

Par. 9. A new § 1.411(d)–3T is added immediately after § 1.411(d)–3, to read as follows:

§ 1.411(d)–3T Class year plans; plan years beginning after 1984 (temporary).

In the case of a class year plan, the rights of an employee who separates from service prior to the time such rights become nonforfeitable may be forfeited only if there is a 5-year break-in-service. A 5-year break-in-service is a period of five consecutive plan years, beginning with the plan year in which the employee separates from service, during which the employee is not employed on the last day of each plan year. For purposes of the preceding sentence, any plan year in which an individual is absent from work on the last day of the plan year by reason of an absence described in section 411(a)(6)(E)(i) shall be disregarded.

Par. 10. A new § 1.417(e)–1T is added after § 1.416–1 to read as follows:

§ 1.417(e)–1T Restrictions and valuations of distributions from plans subject to section 401(a)(11) (temporary).

(a) *Scope*—(1) *New requirements.* Section 417(e) restricts the ability of certain qualified plans to distribute any portion of a participant's accrued benefits without the consent of the participant and the participant's spouse. It also requires the present value of accrued benefits to be calculated using specified interest rates. Section 417(e) applies in determining whether certain plans satisfy the survivor annuity requirements of sections 401(a)(11) and 417. These requirements must be satisfied by pension plans with respect to all participants, and by profit-sharing and stock bonus plans with respect to participants to whom section 401(a)(11)(B) applies. Special rules are provided in section 401(a)(11)(C) for certain ESOP benefits. A plan does not satisfy the requirements of sections 401(a)(11) and 417 unless it satisfies the consent requirements, the determination of present value requirements and the other requirements set forth in this section. This section does not apply to payments to an alternate payee, defined in section 414(p)(8), except as provided in a qualified domestic relations order pursuant to section 414(p)(5).

(2) *Additional requirements.* The requirements of section 417(e) and this section are in addition to the requirements of sections 401(a)(9) (relating to required distributions), 401(a)(14) (relating to benefit commencement), and 411(a)(11) (relating to distributions). Notwithstanding any provision to the contrary in section 401(a)(14) or § 1.401(a)–14, the failure of a participant or spouse to consent to a distribution while a benefit is immediately distributable is deemed to be an election to defer commencement of payment of any benefit sufficient to satisfy section 401(a)(14) and § 1.401(a)–14.

(3) *Accrued benefit.* For purposes of this section, accrued benefit has the same meaning as specified in section 411(a)(7). The present value of an accrued benefit or annuity includes benefits attributable to both employee and employer contributions. Because section 401(a)(11) is not applicable to accumulated deductible employee contributions described in section 72(o), such accumulated contributions are not part of the accrued benefit. The value of an accrued benefit does not include any plan subsidy included in the present value of the qualified joint and survivor annuity (QJSA) or in the present value of the qualified preretirement survivor annuity (QPSA).

(b) *Consent, etc. requirements*—(1) *General rule.* Section 417(e) prohibits plans subject to that section from permitting the commencement of any distribution of any portion of a participant's accrued benefits unless—

(i) The applicable consent requirements are satisfied; or

(ii) (A) Such distribution is provided in the form of a qualified joint and survivor annuity (QJSA) or a qualified preretirement survivor annuity (QPSA); and

(B) Such benefit is not immediately distributable as described in paragraph (b)(3) of this section.

The consent requirement is applicable to accrued benefits that are immediately distributable.

(2) *Consent.* (i) Written consent of the participant and, if the participant is married at the time of the commencement of the distribution of benefits, the participant's spouse (or, if either the participant or the spouse has died, the survivor) is required before the commencement of the distribution of any part of an accrued benefit if the present value of the nonforfeitable accrued benefit is greater than $3,500. Such present value will be treated as greater than $3,500 at all times after the commencement of a distribution of benefits that was subject to this consent requirement. No consent is required before the commencement of the distribution of benefits if the present value of the nonforfeitable accrued benefit is not more than $3,500.

(ii) In determining the present value of the nonforfeitable accrued benefit, a defined benefit plan must use an interest rate not greater than the rate used by the Pension Benefit Guaranty Corporation (PBGC) to value immediate annuities for plans terminating as of either (A) the proposed distribution (or benefit commencement) date or (B) the first day of the plan year that contains the proposed distribution (or benefit commencement) date (the PBGC rate.).

(3) *Immediately distributable.* An accrued benefit is immediately distributable if any part of the benefit could be distributed to the participant or beneficiary before that participant attains (or would have attained if not dead) the later of normal retirement age (as defined in section 411(a)(8)) or age 62.

(4) *Time of consent.* Written consent of the participant and the participant's spouse to the distribution must be obtained not more than 90 days before the commencement of the distribution of any part of an accrued benefit. See paragraph (d) of this section for a special rule for loans.

(5) *Other rules.* Except as provided in paragraphs (b)(2) and (d) of this section, the commencement of any distribution (including loans) permitted under section 417(e) and this section is subject to the election, spousal consent, and written explanation requirements of section 417(a).

(c) *Permitted distributions*—(1) *In general.* A plan may not require that a participant or surviving spouse begin to receive benefits without satisfying paragraph (b) of this section while such benefits are immediately distributable, as defined in paragraph (b)(3) of this section. Once benefits are no longer immediately distributable, all benefits must be provided in the form of a QJSA and QPSA unless the applicable written explanation, election, and consent

requirements of section 417(a) are satisfied.

violating section 417(e). Thus the plan (depending upon whether there is other

September 17, 1985, unless additional contributions are made under the plan

SUPPLEMENTARY INFORMATION:

Drafting Information

to the participant's election of a non-

requirements of section 417(a) are satisfied.

(2) *Special rule.* (i) In the case of a defined benefit plan, the plan must permit the surviving spouse to direct the commencement of payments under the QPSA no later than the month in which the participant would have attained the earliest retirement age under the plan. A plan may permit the commencement of payments at an earlier date.

(ii) In the case of a defined contribution plan, the plan must permit the surviving spouse to direct the commencement of payments under the QPSA within a reasonable time after the participant's death.

(3) *Unmarried participant.* In the case of a participant who is not married, the term "QJSA" means an annuity for the life of a participant.

(d) *Loans*—(1) *General rule.* (i) A loan from a plan to a participant shall not be treated as a distribution for purposes of this section. However, the reduction of an account balance or the present value of an accrued benefit to satisfy an obligation of a participant arising in connection with a loan from a plan to a participant is a distribution to the participant requiring the consent of the participant and spouse (if any) at the time of the reduction. The preceding sentence also applies to loans described in section 72(p)(4).

(ii) For purposes of satisfying the consent requirement with respect to a loan that is secured by a married participant's accrued benefit, a plan may require the participant and spouse to consent to the loan and the possible reduction in the accrued benefit within the 90-day period before the making of the loan. Thus, if spousal consent is obtained at the time of making a plan loan to a married participant, spousal consent is not required at the time of any setoff of the loan against the accrued benefit resulting from nonpayment, even though the participant is married to a different spouse at the time of the setoff. Similarly, in the case of an unmarried participant, the consent requirement may be satisfied by requiring the participant's consent to the loan and the possible reduction in the accrued benefit within the 90-day period before the making of the loan, even if the participant is married at the time of any setoff of the loan against the accrued benefit.

(iii) If the plan does not obtain consent of a current spouse at the time of a loan secured by some portion of the participant's accrued benefit, the plan will not be certain that it will be able to execute on the security by reducing the participant's accrued benefit without violating section 417(e). Thus the plan (depending upon whether there is other security for the loan) may have made a loan that is not adequately secured. See sections 401(a)(13) and 4975.

(2) *Renegotiation, etc.* For purposes of this paragraph (d), any renegotiation, extension, renewal, or other revision of a loan shall be treated as a new loan made on the date of the renegotiation, extension, renewal, or other revision.

(3) *Effective date.* This paragraph does not apply to loans made prior to August 19, 1985.

(e) *Present value requirement*—(1) *Interest rate.* For purposes of determining the present value of any accrued benefit and for purposes of determining the amount (subject to section 415) of any distribution, a defined benefit plan must use an interest rate not greater than the PBGC rate determined in the same manner and time as set forth in paragraph (b)(2)(ii). The same rate must be used for both purposes.

(2) *Other rules.* (i) In the case of a defined benefit plan that assumes a rate other than the PBGC rate, the rate producing the greater benefit (subject to section 415) must be used.

(ii) Any change in a rate described in subparagraph (1) is subject to section 411(d)(6).

(3) *Exceptions.* (i) Subparagraphs (1) and (2)(i) do not apply to a distribution under a non-decreasing annuity payable for a period not less than the life of the participant or, in the case of a QPSA, the life of the surviving spouse. A non-decreasing annuity includes an annuity that decreases merely because of the cessation or reduction of Social Security supplements or qualified disability payments (as defined in section 411(a)(9)).

(ii) Subparagraphs (1) and (2)(i) do not apply to any payment under a QJSA or QPSA.

(4) *Defined contribution plans.* Because the accrued benefit in a defined contribution plan equals the account balance, such plans are not subject to the interest rate requirements of this paragraph (e), even though they are subject to section 401(a)(11).

(f) *Special rules for annuity contracts*—(1) *General rule.* Any annuity contract purchased by a plan subject to section 401(a)(11) and distributed to or owned by a participant must provide that benefits under the contract are provided in accordance with the applicable consent, present value, and other requirements of this section applicable to the plan.

(2) *Effective date.* This paragraph does not apply to contracts distributed to or owned by a participant prior to September 17, 1985, unless additional contributions are made under the plan by the employer with respect to such contracts.

There is a need for immediate guidance with respect to the provisions contained in this Treasury decision. For this reason, it is found impractical to issue this Treasury decision with notice and public procedure under subsection (b) of section 553 of Title 5 of the United States Code or subject to the effective date limitation of subsection (d) of that section.

James I. Owens,

Acting Commissioner of Internal Revenue.

Approved: July 3, 1985.

Ronald A. Pearlman,

Assistant Secretary of the Treasury.

26 CFR Parts 1 and 602

[T.D. 8037]

Income Tax—Taxable Years Beginning After December 31, 1953 and OMB Control Numbers Under the Paperwork Reduction Act; Notice, Election, and Consent Rules Under the Retirement Equity Act of 1984

AGENCY: Internal Revenue Service, Treasury.

ACTION: Temporary regulations.

SUMMARY: This document provides temporary regulations relating to the notice, election and consent rules enacted by the Retirement Equity Act of 1984. The regulations will generally affect sponsors of, and participants in, pension, profit-sharing, and stock bonus plans, and they provide plan sponsors with guidance necessary to comply with the law.

In addition, the text of the temporary regulations set forth in this document also serves as the text of the notice of proposed rulemaking that appears in the Proposed Rules Section of this issue of the Federal Register.

DATES: The regulations are effective July 19, 1985, and generally apply for plan years beginning after December 31, 1984, except as otherwise specified in the Retirement Equity Act of 1984.

FOR FURTHER INFORMATION CONTACT: Charles M. Watkins of the Employee Plans and Exempt Organizations Division, Office of the Chief Counsel, Internal Revenue Service, 1111 Constitution Avenue, NW., Washington, D.C. 20224 (Attention CC:LR:T) (202-566-3903, not a toll-free call).

SUPPLEMENTARY INFORMATION:

Background

This document contains temporary regulations relating to the requirements for payment of survivor annuities and other rules relating to qualified employee plans, as enacted by Titles II and III of the Retirement Equity Act of 1984 ("REA '84") (Pub. L. 98-397, 98 Stat. 1436 et seq.).

Taxpayers may rely on these temporary regulations for guidance pending the issuance of final regulations. These temporary regulations do not, however, address comprehensively the issues raised by Titles II and III of REA '84, and no inferences should be drawn by reason of the fact that an issue is not addressed in this Treasury decision.

Under section 101 of Reorganization Plan No. 4 of 1978, (43 FR 47713), the Secretary of the Treasury has jurisdiction over the subject matter addressed in these regulations (except the definition of a qualified domestic relations order). Therefore, under section 104 of the Reorganization Plan, these regulations apply when the Secretary of Labor exercises authority under Title I of the Employee Retirement Income Security Act of 1974 (as amended, including the amendments made by Title I of REA '84).

Plan Amendments

Plan amendments required by the Retirement Equity Act of 1984 must, in general, be adopted not later than the end of the first plan year to which the statutory provisions apply.

Nonapplicability of Executive Order 12291

The Treasury Department has determined that this Regulation is not subject to review under Executive Order 12291. Accordingly, a Regulatory Impact Analysis is not required.

Regulatory Flexibility Act

No general notice of proposed rulemaking is required by 5 U.S.C. 553(b) for temporary regulations. Accordingly, this regulation does not constitute a regulation subject to the Regulatory Flexibility Act (5 U.S.C. chapter 6).

Paperwork Reduction Act

The collections of information contained in these regulations have been submitted to the Office of Management and Budget in accordance with the requirements of the Paperwork Reduction Act of 1980. These requirements have been approved by OMB under Control No. 1545-0928.

Drafting Information

The principal authors of these temporary regulations are William D. Gibbs and Charles M. Watkins, of the Employee Plans and Exempt Organizations Division of the Office of the Chief Counsel, Internal Revenue Service. Personnel from other offices of the Internal Revenue Service and Treasury Department also participated in developing the regulations, on matters of both substance and style.

Adoption of Amendments to the Regulations

PART 1—[AMENDED]

Accordingly, 26 CFR Part 1 is amended as follows:

Paragraph 1. The authority citation for Part 1 continues to read:

Authority: 26 U.S.C. 7805.

Par. 1a. Section 1.401(a)-11T is amended by adding the following Q & A's at the end thereof:

§ 1.401(a)-11T Requirement of qualified joint and survivor annuity and qualified preretirement survivor annuity (temporary).

* * * * *

Q-23: If a participant's spouse consents to the participant's waiver of a survivor annuity form of benefit under section 417(a)(2)(A), is a subsequent spouse of the same participant bound by the consent?

A-23: No. A consent under section 417(a)(2)(A) by one spouse is binding only with respect to the consenting spouse.

Q-24: Does the spousal consent requirement of section 417(a)(2)(A) require that a spouse's consent be irrevocable?

A-24: No. A plan may preclude a spouse from revoking consent once it has been given. However, a plan may also permit a spouse to revoke a consent after it has been given, and thereby to render ineffective the participant's prior election not to receive a QPSA or QJSA.

Q-25: Does the spousal consent requirement of section 417(a)(2) apply with respect to a participant's affirmative election of a non-spouse beneficiary?

A-25: Yes. The spousal consent requirement of section 417(a)(2) applies to the participant's election of a non-spouse beneficiary. Thus, for example, if spouse B consents to participants A's election not to receive a QPSA, but instead to have any benefits payable upon A's death before the annuity starting date paid to A's children, A may not subsequently change beneficiaries without the consent of B. In addition, any consent must acknowledge the specific nonspouse beneficiary, including any class of beneficiaries or any contingent beneficiaries.

Q-26: Must the notice and rights required by section 417(a) (1) and (3) be provided to nonvested participants?

A-26: Yes.

Q-27: Are there special rules for certain participants who separated from service prior to August 23, 1984?

A-27: Yes. Section 303(e) of REA '84 provides special rules for certain participants who separated from service before August 23, 1984. Section 303(e)(1), which applies only to plans subject to section 401(a)(11) of the Code (as in effect on August 22, 1984), provides that participants whose annuity starting date did not occur before August 24, 1984, and who had one hour of service on or after September 2, 1974, but not after December 31, 1975, may elect to receive the benefits required to be provided under section 401(a)(11) of the Code (as in effect on August 22, 1984). Section 303(e)(2) provides that certain participants who had one hour of service on or after January 1, 1976, but not after August 22, 1984, may elect to be provided a QPSA under new sections 401(a)(11) and 417 in plans subject to these provisions. Section 303(e)(4)(A) requires plans to notify those participants of the provisions of section 303(e).

Q-28: When must a plan provide the notice required by section 303(e)(4)(A) of REA '84?

A-28: The notice required by section 303(e)(4)(A) must be provided no later than the earlier of:

(a) The date the first summary annual report provided September 17, 1985 is distributed to participants; or

(b) *September 30, 1985.* A plan will not fail to satisfy the preceding sentence if the plan provides the notice before January 1, 1987, and provides a fully subsidized qualified preretirement survivor annuity with respect to any participant described in section 303(e) who dies on or after July 19, 1985 and before the notice is received. For this purpose, an annuity payable to a nonspouse beneficiary elected by the participant, in lieu of a spouse, shall satisfy such survivor benefit. The notice required by this paragraph must be in

writing and sent to the participant's last known address.

Q-29: Is there another time when

survivor annuity and a lump sum option, the plan does not fully subsidize the

writing and sent to the participant's last known address.

Q–29: Is there another time when plans must provide notice of the right, described in section 303(e)(1) of REA '84, to elect a pre-REA '84 qualified joint and survivor annuity?

A–29: Yes. Notice of this right must also be provided to a participant at the time the participant applies for benefit payments.

Q–30: When must a plan provide the written explanation, required by section 417(a)(3)(B), of the QPSA to an individual who becomes a participant after age 32; or who was a participant on August 23, 1984, and, as of that date, had attained age 34?

A–30: (a) In the case of an individual who becomes a participant after age 32, the plan will satisfy the time requirement of section 417(a)(3)(B) if it provides the explanation by the end of the three-year period beginning with the first day of the first plan year for which the individual is a participant.

(b) In the case of an individual who was a participant in the plan on August 23, 1984, and, as of that date, had attained age 34, the plan will satisfy the requirement of section 417(a)(3)(B) if it provides the explanation not later than December 31, 1985.

Q–31: When must a plan provide the written explanation, required by section 417(a)(3)(B), of the QPSA to a participant who separates from service before attaining age 32?

A–31: In the case of separation before age 32, a plan must provide the explanation at the time of separation or within one year after separation.

Q–32: What are the consequences of fully subsidizing the cost of either a qualified joint and survivor annuity (QJSA) or a qualified preretirement survivor annuity (QPSA), in accordance with section 417(a)(4)?

A–32: If a plan fully subsidizes a QJSA or QPSA (in accordance with section 417(a)(4)), it is not required to provide the written explanation required by section 417(a)(3)(A) or 417(a)(3)(B), respectively. Such a plan need not offer an election. However, if the plan offers an election, it must satisfy the election, consent, and notice requirements of section 417(a) (1), (2), and (3), even if it subsidizes the cost of the QJSA and QPSA in accordance with section 417(a)(4).

Q–33: What is a fully subsidized benefit?

A–33: A fully subsidized benefit is one under which no increase in cost, or decrease in benefits, to the participant may result from the participant's failure to elect another benefit. Thus, for example, if a plan provides a joint and survivor annuity and a lump sum option, the plan does not fully subsidize the joint and survivor annuity, even if the actuarial value of the joint and survivor annuity is greater than the amount of the lump sum payment, because the participant's benefit in the event of his early death would be less than the benefit that would have been received if the lump sum were elected.

Similarly, if a plan provides for a life annuity of $100 per month and a joint and 100% survivor benefit of $99 per month, the plan is not fully subsidizing the joint and survivor benefit. A QPSA would be fully subsidized if the participant's account is not reduced because of the QPSA coverage and if no charge to the participant is made for the coverage. Thus, the QPSA would be fully subsidized in a defined contribution plan because account balances are not reduced by the QPSA coverage and no charge is made against accounts for such coverage.

Par. 2. A new § 1.402(f)–1T is added after § 1.402(e)–1 to read as follows:

§ 1.402(f)–1T. Required explanation of rollovers, capital gains, and ten-year averaging tax treatment (Temporary).

(a) *General rules.* Section 402(f) requires plan administrators to give recipients of certain distributions a written explanation of the rules relating to the taxation of certain amounts as capital gains under section 402(a)(2), the separate tax on the ordinary income portion of lump-sum distributions under section 402(e), and the exclusion from gross income under section 402(a)(5) for amounts rolled over into eligible retirement plans. This notice must be provided to the recipient of any qualified total distribution or any partial distribution satisfying section 402(a)(5)(D)(i) that is made after December 31, 1984, not later than two weeks after the distribution is made.

(b) *Safe harbor notice.* The requirements of section 402(f)(1) may be satisfied by providing each recipient of a qualified total distribution or a partial distribution that satisfies the requirements of section 402(a)(5)(D)(i) a copy of the notice included in this paragraph. Additional information may be provided to distributees, except that such information may not be inconsistent with the following safe harbor notice:

Special Tax Rules

The Internal Revenue Code provides several complex rules relating to the taxation of the amounts you received in this distribution. This notice merely summarizes these rules. You should promptly consult a tax advisor in deciding what course to follow with respect to this distribution.

Rollovers

The Internal Revenue Code permits you to avoid current taxation on any portion of the taxable amount of an eligible distribution by rolling over that portion into another qualified employer retirement plan that accepts rollover contributions or into an individual retirement arrangement (IRA). A tax-free rollover is accomplished by transferring the amount you are rolling over to the new plan or IRA *not later than 60 days* after you receive the amount from this plan and notifying the trustee or issuer of the new plan or IRA that you are making a rollover contribution. If you receive a series of distributions within a single year that would be treated as a lump sum distribution, the 60-day period does not expire until 60 days after the day you receive the last distribution in the series.

Not all plan distributions are eligible to be rolled over. A distribution must be either a "qualified total distribution" or a "partial distribution" in order to be rolled over. In general, a qualified total distribution is either a lump sum distribution or a distribution because of a plan termination. A lump sum distribution is the payment of all remaining benefits under a plan because of death or other separation from service or after the employee reaches age 59½. A partial distribution is payment of 50 percent or more of plan benefits that is not of a series of periodic payments. A rollover of any portion of a partial distribution may disqualify a subsequent distribution from the same type of plan for capital gains treatment and 10-year averaging (described below). There are specific and technical qualifications and requirements set forth in section 402 of the Internal Revenue Code that must be satisfied in order for your plan distribution to be eligible to be rolled over.

Capital Gains Treatment and 10-Year Averaging

If your distribution qualifies under section 402(e) of the Internal Revenue Code as a lump sum distribution, and no part of your distribution is rolled over, you may be able to elect to have the part of the distribution attributable to your participation in the plan before 1974 (if any) taxed as a long term capital gain, and the remainder taxed as ordinary income or under special 10-year averaging rules that may reduce the amount of income tax you will be required to pay on account of this distribution. Alternatively, you may elect to have the entire amount of the distribution taxed as ordinary income or under the 10-year averaging rules. In addition, 10-year averaging may not be elected unless the employee participated in the plan making the distribution for any part of at least five years.

PART 602—[AMENDED]

Par. 2a. The authority citation for Part 602 continues to read as follows:

Authority: 26 U.S.C. 7805.

§ 602.101 [Amended]

Par. 3. Section 602.101(c) is amended by inserting in the appropriate places in the table, "§ 1.401(a)–11T . . . 1545–0928" and "§ 1.402(f)–1T . . . 1545–0928".

There is need for immediate guidance with respect to the provisions contained in this Treasury decision. For this reason, it is found impractical to issue this Treasury decision with notice and public procedure under subsection (b) of section 553 of Title 5 of the United States Code or subject to the effective date limitation of subsection (d) of that section.

This Treasury decision is issued under the authority contained in section 7805 of the Internal Revenue Code of 1954 (68A Stat. 917, 26 U.S.C. 7805).

James I. Owens,

Acting Commissioner of Internal Revenue.

Approved: July 3, 1985.

Ronald A. Pearlman,

Assistant Secretary of the Treasury.

BILLING CODE 4830–01–M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 901

Approval of Permanent Program Amendment From the State of Alabama Under the Surface Mining Control and Reclamation Act of 1977

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Final rule.

SUMMARY: The Director, OSM is announcing the approval of a program amendment submitted by Alabama to modify its approved permanent regulatory program (hereinafter referred to as the Alabama program) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The amendment establishes requirements for operations extracting coal incidental to extraction of other minerals (Sub-chapter 880–X–2E).

On May 22, 1985, Alabama submitted an amendment to its program which consisted of an emergency rule to establish requirements for operations extracting coal incidental to extraction of other minerals. After providing opportunity for public comment and conducting a thorough review of the program amendments, the Director, OSM, has determined that the amendment meets the requirements of SMCRA and the Federal regulations. Accordingly, the Director is approving the program amendment. The Federal rules at 30 CFR Part 901 codifying decisions concerning the Alabama program are being amended to implement this action.

This final rule is being made effective immediately in order to expedite the State program amendment process and encourage States to conform their programs to the Federal standards without undue delay; consistency of the State and Federal standards is required by SMCRA.

EFFECTIVE DATE: July 19, 1985.

FOR FURTHER INFORMATION CONTACT: John T. Davis, Director, Birmingham Field Office, Office of Surface Mining Reclamation and Enforcement, 228 West Valley Avenue, 3rd Floor, Homewood, Alabama 35209; Telephone: (205) 254–0890.

SUPPLEMENTARY INFORMATION:

I. Background

Information regarding the general background on the Alabama State program, including the Secretary's findings, the disposition of comments and a detailed explanation of the conditions of approval of the Alabama program can be found at 47 FR 22020–22058 (May 20, 1982) and 48 FR 34026 (July 27, 1983).

II. Proposed Amendment

On May 22, 1985, Alabama submitted a proposed amendment to its approved regulatory program to establish requirements for operations extracting coal incidental to extraction of other minerals (Sub-chapter 880–X–2E). These amended rules establish the responsibility of those persons intending to conduct operations under this exemption to apply for a determination of eligibility for the exemption prior to conducting such operations. The rules outline the informational requirements necessary for such applications and criteria to be used by the Alabama Surface Mining Commission (ASMC) to determine the eligiblity of the proposed operation for exemption and establish conditions and requirements for maintaining such eligibility during the conduct of such operations.

Section 9–16–99(d) of the Code of Alabama provides that the extraction of coal incidental to the extraction of other minerals where coal does not exceed 16⅔ percent of tonnage of minerals removed for commercial sale or use are exempt from the provisions of Act 81–435 and authorizes the regulatory authority to establish regulations for such exemption. Under existing ASMC rules, the provisions of the Act were repeated along with establishment of record keeping requirements, but guidelines were not presented establishing the means, procedure and criteria for determining eligibility for the exemption.

On June 7, 1985, OSM announced receipt of the amendments and procedures for a public comment period and for a public hearing on the substantive adequacy of the proposed amendments (50 FR 23996). Since no timely requests for a public hearing were received, the public hearing scheduled for July 2, 1985, was not held. The comment period ended on July 8, 1985.

III. Director's Findings

The Director finds, in accordance with SMCRA and 30 CFR 732.17, that the amendment submitted by Alabama on May 22, 1985, meets the requirements of SMCRA and the Federal regulations. The amended provisions are cited at the end of this notice in the amendatory language for § 901.15.

Sub-chapter 880–X–2E of the Alabama Surface Mining Commission (ASMC) rules establishes procedures for determining those surface coal mining and reclamation operations which are exempt from the Act and the ASMC rules, when the extraction of coal is incidental to extraction of other minerals. The rules require that persons who intend to extract coal incidental to extraction of other minerals shall apply for and obtain a written exemption prior to conducting operations.

The rules place the burden of establishing the qualification for the exemption upon the operator, who must show that the coal extraction is incidental to the extraction of other minerals and that it shall not exceed 16⅔ percent of the mineral tonnage removed for commercial sale or use. The rules establish specific requirements for applications for the exemption, criteria for approval of the exemption, and conditions of the exemption.

The Director finds that the Alabama amendment is no less stringent than the requirements of section 528 of SMCRA and no less effective than 30 CFR 700.11(a)(4), which provide for exemption from the requirements of SMCRA and 30 CFR Chapter VII where the extraction of coal is incidental to the extraction of other minerals and where coal does not exceed 16⅔ percent of the mineral tonnage removed for commercial use or sale.

IV. Public Comments

Two responses to the request for public comments were received on the proposed rulemaking. Both commenters requested that the public hearing be

held to answer questions. The requests for the public hearing were not received

method of determining which operations qualify for a "16⅔" exemption.

and this action does not require regulatory review by OMB.

$5 million. The Board also provides that the expenditure of any funds in excess

connection with the lease/rental agreement. The present value will be

of Air Resources, 50 Wolf Road,

held to answer questions. The requests for the public hearing were not received until July 8, which was six days after the date of the scheduled hearing. Since no request for the hearing had been received by June 24, 1985, the deadline for such requests, no public hearing was held. In any event questions would not necessarily be answered during a public hearing, which is held to provide an opportunity for the public to offer comments on proposed rules.

The commenters asked why the preamble of the rule implied that current operations extracting coal incidental to other extraction were ineligible for the exemption. The preamble does not necessarily make this implication. It states only that in certain instances coal extraction was initiated without a prior determination of eligibility by ASMC.

The commenters state that ASMC rule 880–X–2E–.02 requires that a person who intends to extract coal incidental to other mineral extraction must obtain a written determination of exemption and that the intent to extract coal incidentally cannot be determined before commencing operations. The commenters further stated that 880–X–2E–.04 also refers to the intentions of the operator, "which cannot be legally pre-determined." The commenters also objected to the rule which places the burden of establishing certain proofs for the exemption on the operator. The commenters stated that the application criteria were too vague.

Under section 880–X–2E–.05, the commenters objected to the language which requires the operator to make certain showings "to the satisfaction of the SRA (state regulatory authority)." The commenters asked for more clear standards. The commenters said that the ASMC could prolong the application period until an operator is "driven out of business" because requirements are not explicit enough. The commenters said that the term of the exemption is not defined.

The commenters wanted to know how current their records have to be to satisfy the requirement in rule 880–X–2E–.06 that the operator make the records available on request. The commenters expressed concern that records of sales may be made public under this section and could thus put the company at a competitive disadvantage. The commenters asked whether ASMC had the right to close mines other than coal mines as provided in 880–X–2E–.06(6), and whether ASMC would be liable for losses suffered by the closed mines.

OSM notes the commenters' concerns but feels that the rules adopted by Alabama provide a thorough and fair method of determining which operations qualify for a "16⅔" exemption. Operators should be aware of coal deposits present in their proposed mining operations. Operators should have the burden of establishing their rights to an exemption from an Act and rules which regulate activities associated with coal extraction, since there is no argument that some coal is being extracted.

OSM does not agree that the application criteria are vague. The criteria include a topographic map showing coal deposits and a geologic report of minerals to be removed for commercial purposes, containing information relating to extent, depth, thickness, volume, quantity, quality and commercial value of the minerals.

The regulatory authority is required to act on the application within 30 days of receipt and is required to inform the applicant of deficiencies in the application within that time period. Thus, the applicant should know within 30 days of a second application, at the latest, whether he qualifies for the exemption. The term of the exemption as indicated by 880–X–2E–.05(4) is established in the exemption. The commenters' concerns about records and potential losses from closed mines should be directed to the State. Copies of the commenters' letters will be supplied to the State for consideration.

The Director, OSM, has found the State's amendment to be no less stringent than the Federal law and no less effective than the Federal rules.

V. Director's Decision

The Director, based on the findings above, is approving the May 22, 1985 amendment to the Alabama program. The Director is amending 30 CFR Part 901 to reflect the approval of the above State program modification.

VI. Additional Determinations

1. *Compliance with the National Environmental Policy Act:* The Secretary has determined that, pursuant to section 702(d) of SMCRA, 30 U.S.C. 1292(d), no environmental impact statement need be prepared on this rulemaking.

2. *Executive Order No. 12291 and the Regulatory Flexibility Act:* On August 28, 1981, the Office of Management and Budget (OMB) granted OSM an exemption from Sections 3, 4, 7 and 8 of Executive Order 12291 for actions directly related to approval or conditional approval of State regulatory programs. Therefore, for this action OSM is exempt from the requirement to prepare a Regulatory Impact Analysis and this action does not require regulatory review by OMB.

The Department of the Interior has determined that this rule will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). This rule will not impose any new requirements; rather, it will ensure that existing requirements established by SMCRA and the Federal rules will be met by the State.

3. *Paperwork Reduction Act:* This rule does not contain information collection requirements which require approval by the Office of Management and Budget under 44 U.S.C. 3507.

BILLING CODE 4310–05–M

POSTAL SERVICE

39 CFR Part 3

Amendment to Bylaws of Board of Governors

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: This final rule amends the bylaws of the Board of Governors to add to the list of matters reserved for decision by the Board each research and development project costing more than $5 million. The Board also provides that the expenditure of any funds in excess of amounts previously authorized must be specifically approved by the Board. The purpose of these changes is to improve control of research and development spending and overruns on capital investment projects.

EFFECTIVE DATE: July 10, 1985.

FOR FURTHER INFORMATION CONTACT: Mr. David F. Harris, (202) 245–3734.

List of Subjects in 39 CFR Part 3

Administrative practice and procedure, Reporting and record keeping requirements.

For the reasons set out above, the Board amends title 39, Code of Federal Regulations, Part 3 as follows:

PART 3—BOARD OF GOVERNORS [ARTICLE III]

1. The authority citation for Part 3 is revised to read as set forth below and the authority citations following all the sections in Part 3 are removed.

Authority: 39 U.S.C. 202, 203, 205, 401(2), (10), 1003, 3013; 5 U.S.C. 552b (g), (j).

2. In § 3.4 revise paragraph (g) to read as follows:

§ 3.4 Matters reserved for decision by the Board.

* * * * *

(g) Approval of the Postal Service Five-Year Capital Investment Plans, including specific approval of each capital investment project, each new lease/rental agreement, and each research and development project exceeding $5 million total external costs. In the case of any project or agreement subject to the requirement of Board approval under this provision, the expenditure of any funds in excess of the amount previously authorized by the Board must be specifically approved by the Board. For the purpose of determining the cost of a capital investment project, lease rental agreement, or research and development project,

(1) All such projects and agreements undertaken as part of a unitary plan (either for contemporaneous or sequential development in one of several locations) shall be considered one project or agreement, and

(2) The cost of a lease/rental agreement shall be the present value of all lease payments over the term of the lease, including all periods covered by renewal options or all periods for which failure to renew imposes a penalty or a hardship such that renewal appears to be reasonably assured, plus the cost of any leasehold improvements planned in connection with the lease/rental agreement. The present value will be determined using the cost of capital of the Postal Service.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[Region II Docket No. 53 A–2–FRL–2867–1]

Approval and Promulgation of Implementation Plans; Revision to the State of New York Implementation Plan

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: This notice announces that the Environmental Protection Agency is approving a revision to the New York State Implementation Plan which concerns several revisions made by New York to its air pollution control regulations, Parts 201, 212, 223 and 224. These revisions involve the adoption of emission standards and monitoring requirements for existing sulfuric and nitric acid plants, minor corrections to existing provisions of these regulations and changes to make certain of their requirements internally consistent.

EFFECTIVE DATE: This action will be effective September 17, 1985 unless notice is received by August 19, 1985 that someone wishes to submit adverse or critical comments.

ADDRESSES: All comments should be addressed to Christopher J. Daggett, Regional Administrator, Environmental Protection Agency, Region II Office, 26 Federal Plaza, New York, New York 10278.

Copies of the SIP revision are available at the following addresses for inspection during normal business hours:

Environmental Protection Agency, Region II Office, Air Programs Branch, Room 1005, 26 Federal Plaza, New York, New York 10278

Environmental Protection Agency, Public Information Reference Unit, 401 M Street, S.W., Washington, D.C. 20460

The Office of the Federal Register, 1100 L Street, N.W.—Room 8401, Washington, D.C. 20408

New York State Department of Environmental Conservation, Division of Air Resources, 50 Wolf Road, Albany, New York 12233

FOR FURTHER INFORMATION CONTACT William S. Baker, Chief, Air Programs Branch, Environmental Protection Agency, Room 1005, 26 Federal Plaza, New York, New York 10278, (212) 264–2517.

SUPPLEMENTARY INFORMATION: On December 27, 1984 the State of New York sent to the Environmental Protection Agency (EPA) a request to revise its State Implementation Plant (SIP). The New York submission contained adopted revisions to State regulations currently contained in the SIP. These revisions to Title 6 of the New York Code of Rules and Regulations (6 NYCRR) affect the following Parts of the Code:

- Part 201—"Permits and Certificates," effective May 10, 1984,
- Part 212—"Processes and Exhaust and/or Ventilation Systems," effective May 10, 1984,
- Part 223—"Petroleum Refineries," effective August 9, 1984, and
- Part 224—"Sulfuric and Nitric Acid Plants," effective May 10, 1984.

These revisions and the results of EPA's review are summarized as follows:

Part 201—Permits and Certificates

Part 201 has been revised to exempt certain small stationary combustion sources and small gas turbines from State permit requirements. Maple syrup processes and certain food processes, which only emit carbon dioxide and water vapor, are also exempted. It should be noted that the regulation does not exempt food processes that emit substances other than carbon dioxide and water vapor. Such food processes must still comply with Part 201 permit requirements and any other applicable regulations. Open fires, small fecal incinerators, small dry cleaning facilities and petroleum liquid storage vessels that are not subject to Part 229 ("Petroleum Liquids, Storage and Transfer") or Part 230 ("Gasoline Dispensing Sites and Transport Vehicles") have also been exempted from State permit requirements.

Part 201 now requires that any source subject to State new source review or prevention of significant deterioration requirements also comply with Part 201 permit requirements.

In revising Part 201, the State inadvertently exempted some types of petroleum liquid storage tanks that are regulated by EPA's New Source Performance Standards (NSPS). This exemption will affect EPA's delegation

to the State of enforcement responsibility for Title 40 of the Code of Federal Regulations, Part 60 (40 CFR 60).

Section 224.6(b) provides a general variance mechanism for non-NSPS

requirements of section 3 of Executive Order 12291.

New York State regulation	State effective date	Latest EPA approval date	Comments

contained in this rule will now be

VOL 50 ISS 139 JL 19 1985 UMI

to the State of enforcement responsibility for Title 40 of the Code of Federal Regulations, Part 60 (40 CFR 60), Subparts K and Ka, but does not affect the ability of EPA to approve the revisions made to Part 201. Consequently, EPA is approving this revision.

Part 212—Processes and Exhaust and/or Ventilation Systems

Part 212 has been revised to exempt those sulfuric and nitric acid processes that are regulated by Part 224, "Sulfuric and Nitric Acid Plants." Any other process at a source of this type would still have to comply with Part 212 requirements. This revision serves to clarify the applicability of Parts 212 and 224 and EPA is approving it.

Part 223—Petroleum Refineries

Part 223 has been revised to correct typographical errors and make other non-substantive changes. EPA is approving this revision.

Part 224—Sulfuric and Nitric Acid Plants

Part 224 has been revised to add sulfuric acid mist limitations for existing sulfuric acid plants. Sulfuric acid mist is regulated by Section 224.2(b)(1) to 0.50 pounds per ton of sulfuric acid produced. By reference to Part 212 limitations, Part 224 has also been revised to regulate sulfur dioxide and nitrogen oxide emissions from existing sources. The visible emissions from sulfuric and nitric acid plants are now limited in Part 224 to an average 20 percent opacity for six minutes.

Part 224 has also been revised to require continuous emission monitoring (CEM) for sulfuric and nitric acid plants above a certain production capacity. Section 224.4(b) requires affected sources to install, calibrate, maintain and operate a CEM system. In addition, the source owner or operator must submit written reports, establish conversion factors to convert monitored data into units of the applicable emission standard, maintain records and make such records available for inspection. These requirements are consistent with EPA's monitoring provisions at 40 CFR 51.19(e) and Appendix P—Minimum Emission Monitoring Requirements.

It should be noted that earlier versions of Part 224 contained NSPS emission standards and CEM requirements. In this current revision, the State included additional details on the CEM requirements applicable to NSPS sources. These expanded CEM requirements are consistent with NSPS requirements.

Section 224.6(b) provides a general variance mechanism for non-NSPS affected sources. It allows for variances from the requirements of Part 224 if it can be demonstrated to the satisfaction of the Commissioner of NYSDEC that a particular source is unable to meet the required degree of control because of economic or technical reasons. EPA is approving this section, however, each variance issued by the State must be submitted to EPA for approval as a SIP revision.

The requirements for sulfuric and nitric acid plants in Part 224 are consistent with EPA policy and guidance and EPA is approving them.

Conclusion

EPA is approving the revisions made to Parts 201, 212, 223 and 224 as a part of the New York SIP. Part 224 has been found to satisfy EPA's CEM requirements for nitric and sulfuric acid plants.

This notice is issued as required by section 110 of the Clean Air Act, as amended. The Administrator's decision regarding the approval of this plan revision is based on its meeting the requirements of section 110 of the Clean Air Act and 40 CFR Part 51.

EPA is approving this SIP revision request without prior proposal because it is viewed as noncontroversial and no adverse comments are anticipated. The public should be advised that this action will be effective 60 days from the date of this **Federal Register** notice. However, if notice is received within 30 days that someone wishes to submit adverse or critical comments, this action will be withdrawn and two subsequent notices will be published before the effective date. One notice will withdraw the final action and the other will begin a new rulemaking by announcing a proposal of the action and establishing a comment period.

Under 5 U.S.C. 605(b), I certify that this SIP revision will not have a significant economic impact on a substantial number of small entities. (See 46 FR 8709.)

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Under section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit within 60 days of today. This action may not be challenged later in proceedings to enforce its requirements (See 307(b)(2).).

40 CFR Part 52

[A–4–FRL–2867–2; TN–024]

Approval and Promulgation of Implementation Plans; Tennessee, Approval of Plan Revisions

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: EPA is today approving two State Implementation Plan (SIP) revisions submitted by the State of Tennessee. These changes in the regulatory part of the Tennessee plan involve Chapter 1200–3–5 (Visible Emissions for Wood-Fired Fuel Burning Equipment) of the rules of the Tennessee Department of Public Health, Division of Air Pollution Control.

DATES: This action will be effective on September 17, 1985, unless notice is received within 30 days that someone wishes to submit adverse or critical comments.

ADDRESSES: Written comments should be addressed to Ray Gregory of EPA Region IV's Air Management Branch at 345 Courtland Street, N.E., Atlanta, GA, 30365. Copies of the materials submitted by Tennessee may be examined during normal business hours at the following locations:

Public Information Reference Unit, Library Systems Branch, Environmental Protection Agency, 401 M Street SW., Washington, D.C. 20460

Library, Office of the Federal Register, 1100 L Street NW., Room 8401, Washington, D.C.

Environmental Protection Agency, Region IV, Air Management Branch, 345 Courtland Street NE., Atlanta, Georgia 30365

Division of Air Pollution Control, Tennessee Department of Health and Environment, 150 9th Avenue North, Nashville, Tennessee 37203.

FOR FURTHER INFORMATION CONTACT: Mr. Ray Gregory, EPA Region IV, Air Management Branch, at the above address, telephone 404/881–3286 (FTS 257–3286).

SUPPLEMENTARY INFORMATION: On October 17, 1984, Tennessee submitted a revision to rule 1200–3–5–.07, Visible Emission, Certain Wood Fired Fuel Burning Equipment. On January 18, 1985, Tennessee submitted a revision to rule 1200–3–5–.06, Visible Emissions, Wood-Fired Fuel Burning Equipment. These revisions, discussed below, were adopted by the Tennessee Air Pollution Control Board and became State-effective on July 29, 1984, and January 19, 1985, respectively. Source coverage is greatly expanded by these revisions, and the compliance method is changed to a more universally accepted one. Since no relaxation of emission limits is involved, a control strategy to demonstrate compliance with the National Ambient Air Quality Standard and Prevention of Significant Deterioration increments is unnecessary.

1200–3–5–.06, Visible Emissions, Wood-Fired Fuel Burning Equipment

Tennessee has changed 1200–3–5–.06 to expand its coverage of size categories of wood-fired fuel burning equipment in certain counties in the State. Also, the method by which compliance with the visible emission limitations is determined is being changed from the aggregate method to a six-minute averaging method.

The present 1200–3–5–.06 limits wood-fired fuel burning equipment of greater than 100 million BTU per hour (MBTU/hr) heat input in all counties except Davidson, Hamilton, Knox, and Shelby to an opacity of 40%. With the revision approved in this notice, 1200–3–5–.06 will now apply to wood-fired fuel burning equipment of size categories from zero (0) to over 100 MBTU/hr heat input in certain counties. Opacity limits for sources newly covered will be either 20% or 40% (see below). Also, compliance with the opacity standards contained in this rule will now be determined using the six-minute averaging technique (average of all the readings taken in six minutes) rather than the aggregate technique (specified number of violations per specified time, i.e., only 20 readings in violation per hour).

For purposes of illustration in this notice, wood-fired burning equipment in Tennessee has been categorized, by date commenced and size, as follows:

Categorization of Wood-Fired Fuel Burning Equipment in Tennessee

I. Commenced before March 1, 1978
  A. Up to and including 50 MBTU/hr heat input
  B. Between 50 M and 100 MBTU/hr heat input
  C. Greater than or equal to 100 MBTU/hr heat input
II. Commenced on or after March 1, 1978
  A. Up to and including 25 MBTU/hr heat input
  B. Between 25 M and 100 MBTU/hr heat input
  C. Greater than or equal to 100 MBTU/hr heat input

The new requirements of 1200–3–5–.06 are now summarized.

- Category IC and IIC equipment in all counties except Davidson, Hamilton, Knox, and Shelby shall not exceed an opacity of 40% except for four six-minute periods per day not to exceed one six-minute period hour.
- Category IA and IB equipment in Madison, Bedford, Hamilton, and Coffee counties shall not exceed an opacity of 20% except for one six-minute period per hour.
- Category IA and IB equipment in Bradley, Claiborne, Cocke, Cumberland, Dickson, Fentress, Franklin, Gibson, Giles, Grainer, Greene, Henry, Jefferson, Lawrence, Loudon, Macon, Marion, Marshal, McMinn, Montgomery, Polk, Putman, Rhea, Rutherford, Scott, Sevier, Summer, Warren, Wayne, Weakley, White, Williamson, and Wilson counties shall not exceed an opacity of 40% except for one six-minute period per hour.
- Category IIA and IIB equipment in all counties except Davison, Hamilton, Knox, and Shelby shall not exceed an opacity of 20% except for one six-minute period per hour.

1200–3–5–.07, Visible Emissions, Certain Wood-Fired Fuel Burning Equipment

Tennessee has moved 1200–3–5–.07 and made it a part of 1200–3–5–.06, as 1200–3–5–.06–(3). Also, the State has

changed the technique by which compliance with the 40% opacity limit

§ 52.2220 Identification of plan.

FEDERAL COMMUNICATIONS

Adopted July 5, 1985.
Released July 12, 1985.

Fire Alarm Association's ("National Alarm") petition for reconsideration

on the serving telephone company's initiative.

VOL 50 ISS 139 JL 19 1985 UMI

changed the technique by which compliance with the 40% opacity limit will be determined from an aggregate method to the six-minute averaging method.

Final Action

EPA has reviewed these changes in the regulatory part of the Tennessee SIP and is approving them as submitted. This action is taken without prior proposal because the changes are noncontroversial and EPA anticipates no comments on them. The public should be advised that his action will be effective 60 days from the date of this **Federal Register** notice. However, if notice is received within 30 days that someone wishes to submit adverse or critical comments, this action will be withdrawn and two subsequent notices will be published before the effective date. One notice will withdraw the final action and another will begin a new rule-making by announcing a proposal of the action and establishing a comment period.

Under Section 307(b)(1) of the Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by 60 days from today. This action may not be challenged later in proceedings to enforce its requirements. (See 307(b)(2)).

Under 5 U.S.C. Section 605(b), I certify that SIP approvals do not have a significant economic impact on a substantial number of small entities. (See 46 FR 8709.)

The Office of Management and Budget has exempted this rule from the requirements of Section 3 of Executive Order 12291.

Incorporation by reference of the Tennessee State Implementation Plan was approved by the Director of the Federal Register on July 1, 1982.

PART 52—[AMENDED]

Part 52 of Chapter I, Title 40, Code of Federal Regulations, is amended as follows:

1. The authority citation for Part 52 continues to read as follows:

Authority: 42 U.S.C. 7401–7642.

Subpart RR—Tennesse

2. Section 52.2220 is amended by adding paragraph (c)(65) as follows:

§ 52.2220 Identification of plan.

* * * * *

(c) The plan revisions listed below were submitted on the dates specified. * * *

(65) Changes in visible emission limitations for wood-fired fuel burning equipment (changes in regulations 1200–3–5–.06 and 1200–3–5–.07), submitted on October 17, 1984, and January 18, 1985, by the Tennessee Department of Health and Environment. Coverage of wood-fired equipment was expanded to include units of 0 to 100 million BTU per hour heat input in certain counties; the compliance determining technique was changed from the aggregate method to the six-minute average.

Particulate Regulations for Heavy-Duty Diesel Engines Information Collection Requirements; OMB Approval

AGENCY: Environmental Protection Agency.

ACTION: Information collection requirements; OMB aproval.

SUMMARY: In the preamble to the regulations published at 50 FR 10606 on March 15, 1985, on page 10646 EPA noted that a portion of the information collection requirements relating to heavy-duty diesel particulate standards were under review at the Office of Management and Budget (OMB). In accordance with the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 *et seq.*, those provisions are not effective until OMB approval has been obtained. The Agency is announcing today the approval of these information collection requirements by OMB for §§ 86.088–23 and 86.091–23 under OMB Control Number 2060–0104.

EFFECTIVE DATE: June 13, 1985.

[CC Docket No. 81–216; RM–2845, et al; FCC 85–347]

Connection of Telephone Equipment, Systems and Protective Apparatus to the Telephone Network; Standards for Inclusion of One and Two-Line Business and Residential Premises Wiring and Party Line Service in Part 68 of the Rules

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this action the Commission rules on three petitions for reconsideration of various aspects of a previous order expanding the Part 68 registration program to allow subscribers to install their own business and residential one and two-line ("simple" or "non-system") wiring located on their premises. The Commission: (1) Denies the North American Telecommunications Association's request to amend the network demarcation point definition as it applies to multi-unit dwellings; (2) grants the alternative relief sought by National Burglar and Fire Alarm Association clarifying the right of states to permit non-telephone company entities limited access to the telephone company protector; and (3) grants U.S. West's request to amend the Part 68 rules to permit telephone companies flexibility in the ringback testing methods they make available to the public for testing subscriber wiring installations.

EFFECTIVE DATE: August 19, 1985.

FOR FURTHER INFORMATION CONTACT: Anne M. Siegel, Esq., Domestic Services Branch, Common Carrier Bureau, (202) 634–1831.

Memorandum Opinion and Order

In the matters of petitions seeking Amendment of Part 68 of the Commission's rules concerning connection of telephone equipment, systems and protective apparatus to the telephone network and notice of inquiry into standards for inclusion of one and two-line business and residential premises wiring and party line service in Part 68 of the Commission's rules, CC Docket No. 81–216, RM–2845, RM–2930, RM–3195, RM–3206, RM–3227, RM–3283, RM–3316, RM–3329, RM–3548, RM–3501, RM–3526, RM–3530, RM–4054.

Adopted July 5, 1985.
Released July 12, 1985.
By the Commission:

I. Introduction

1. Before the Commission are three petitions seeking reconsideration of various aspects of the Commission's *First Report and Order ("Order")* in CC Docket No. 81–216, FCC 84–182, released May 18, 1984, 49 FR 21719 (May 23, 1984), adopting final rules amending Part 68. Those rules went into effect on August 21, 1984.[1] The Commission's Part 68 program provides the technical and procedural standards under which telephone equipment, systems and protective apparatus may be directly connected to the nationwide telephone network without causing harm. The rules adopted in the *Order* expand Part 68 to allow subscribers to install one and two-line (non-system) business and residential customer-owned premises wiring (COPW).[2]

2. The focus of the *Order* was to extend the registration program to one- and two-line customer-owned premises wiring; no party seeks reconsideration of this aspect of the Commission's decision, though the North American Telecommunications Association ("NATA") requests that the demarcation point definition adopted in the *Order* be amended to ensure that in multi-unit buildings the demarcation point will be located on, or a reasonable distance within, the premises of each individual subscriber. The National Burglar and Fire Alarm Association's ("National Alarm") petition for reconsideration requests that the Commission amend the rules to permit, or in the alternative to authorize states to permit, qualified alarm company personnel to install demarcation jacks directly to telephone company protectors. The Mountain States Telephone and Telegraph Company, Northwestern Bell Telephone Company and Pacific Northwest Bell Telephone Company ("U.S. West") also filed a petition for partial reconsideration in which they ask the Commission to modify the *Order's* requirement that telephone companies make "ringback" facilities available to the general public for purposes of testing COPW installations.[3] For the reasons discussed below, the Commission denies NATA's petition, grants the alternative relief requested by National Alarm, and grants the U.S. West petition.

II. The Demarcation Point Definition

3. *Background.* In order to implement its program to permit customer installation of simple COPW, the *Order* adopted a definition of "demarcation point" in § 68.3(h). This definition generally identifies the point where telephone company facilities end and COPW begins:

> *Network Interface or Demarcation Point:* The point of interconnection between telephone company communications facilities and terminal equipment, protective apparatus or wiring at a subscriber's premises. The network interface or demarcation point shall be located on the subscriber's side of the telephone company's protector, or the equivalent thereof in cases where a protector is not employed, as provided under the local telephone company's reasonable and nondiscriminatory standard operating practices.

A new § 68.213(b) was also added to the rules, providing, in part, that non-system premises wiring:

> [M]ay be used to connect units of terminal equipment or protective circuitry to one another and to the network interface (or demarcation point). . . . Subsequent relocation of a demarcation point may be arranged, either at the subscriber's request or on the serving telephone company's initiative, but the serving telephone company shall not discriminate in its treatment of demarcation point location, or relocation. . . .

The demarcation point definition recognized that nearly all telephone companies utilize protectors, generally located at or near the telephone cable's point of entry into the subscriber's premises, as a means to safeguard the subscriber's premises and telephone network from atmospheric or other electrical discharges through outside telephone plant. The demarcation point definition is also intended to provide a legal boundary definition between the telephone company network and COPW for all types of wiring (including multiline wiring), and to apply to all building types (including multi-unit business and residential premises), to embedded as well as new wiring, and to apply for all regulatory purposes, *i.e.*, those relating to accounting as well as COPW installation.

4. While it establishes the basic principles for locating the network-subscriber interface, the demarcation point definition is also designed to accommodate local telephone company practices, building types and environmental factors that may be encountered nationwide. Under our demarcation point definition, which requires only that the demarcation point be somewhere on the subscriber's side of the protector, the network-subscriber interface point will typically be located between the protector and the first jack on the customer's premises. *Order*, para. 33. It need not be located adjacent or in close proximity to the protector, although that will commonly be the case. Apart from the requirement in §§ 68.3(h) and 68.213(b) that telephone company operating practices not be unreasonable or discriminatory, the location, or relocation, of the demarcation point is left to the parties involved, *i.e.*, the subscriber and telephone company, subject to any applicable state requirements. In the case of multi-unit dwellings, the Commission declined to require that the demarcation point be located inside each individual unit.[4] The Commission

1 MCI Telecommunications Corporation filed a request that the Commission stay the effective date of certain of these amendments pending decision on the petition for reconsideration filed by National Burglar and Fire Alarm Association. That motion for stay was denied. FCC 84–546, released November 20, 1984. *See infra* note 35.

2 COPW, which includes all wiring on the customer's premises that is owned by the customer, may be either complex, system (multiline) wiring, or simple, non-system (one and two-line) wiring. Part 68 has permitted customer provision of system wiring since 1978, subject to the condition that multiline premises wiring—typically the telephone wiring associated with private branch exchange (PBX) and key telephone systems—be performed under the supervision of persons with specified experience and qualifications. *See* 47 CFR 68.215. The Commission has detariffed the provision of new system wiring installed as part of a detariffed CPE system after May 2, 1984, although the maintenance of embedded system wiring is provided pursuant to tariff, unless otherwise provided by the states. Modification to the Uniform System of Accounts, CC Docket No. 82–681, paras. 56–61, FCC 83–457 (released Nov. 2, 1983), 48 FR 50534 (1983). The installation of new and maintenance of embedded non-system wiring may still be provided by the telephone company on a regulated basis. In a Further Notice of Proposed Rulemaking in CC Docket No. 79–105, released April 5, 1985, the Commission has, among other things, proposed to detariff the installation of simple inside wiring and to detariff the maintenance of all simple and complex wiring. FCC 85–148.

3 Comments in response to the three petitions were variously filed by U.S. West: the Bell Telephone Company of Pennsylvania, the Chesapeake and Potomac Telephone Companies, The Diamond State Telephone Company, Illinois Bell, Indiana Bell, Michigan Bell, Nevada Bell, New England Telephone and Telegraph, New Jersey Bell, New York Telephone, The Ohio Bell, Pacific Bell, South Central Bell, Southern Bell, Southwestern Bell and Wisconsin Bell Companies (Bell Companies); GTE Service Corporation (GTE); Southern New England Telephone Company (SNET), AT&T Technologies, Inc. (AT&T–TI); and The Independent Data Manufacturers Association, Inc. (IDCMA). Reply comments were filed by NATA, National Alarm, SNET and MCI Telecommunications (MCI).

4 Multi-unit buildings present distinct definitional problems because there is generally a network of house riser and floor distribution cables interposed between the building protector, generally located in a basement equipment room, and the individual subscribers'/tenants' premises. House risers are the vertical cables which run from the outside plant terminal up through various floors of the building. Floor distribution cables are the horizontal cables which run from the distribution box or closet on each floor to the individual units. These house risers and floor distribution cables are also known as house or building cables. *See also infra* note 13.

Continued

did not feel that the potential difficulties associated with multi-unit dwellings

NATA also requests that the Commission distinguish between new

residential buildings. Finally, in any situation where non-carrier entities such

embedded wiring would, in the view of

causative ratepayer, as opposed to all

generally accepted understanding of

did not feel that the potential difficulties associated with multi-unit dwellings warranted a departure from its definition; it therefore adhered to its flexible approach to allow the demarcation point in such dwellings to be located either near the common building protector or inside each individual unit, as agreed to by the building owner and telephone company, and in accordance with the telephone company's reasonable and non-discriminatory standard operating procedures. Para. 13. The *Order* also made clear that local or federal regulatory authority could be invoked to redress any network access problems arising in multi-unit buildings, and expressed the Commission's willingness to revisit the matter if experience proved its flexible demarcation point definition to be unworkable. Paras. 14 and 24.

5. *The Petition and Comments.* NATA's petition for partial reconsideration asks the Commission to modify its definition of demarcation point, insofar as that definition applies to multiline or system premises wiring, to require that the demarcation point on the subscriber's side of the network interface be located on the customer's premises, or within a reasonable distance thereof rather than at a common location in the basement. NATA is concerned that tenants in multi-unit buildings will not otherwise be afforded full and equitable access to the network. In support of its position, NATA points to what it regards as the inconsistency between the current demarcation point definition and the "cost-causation" rationale of earlier Commission proceedings.[6] NATA Petition at 2. NATA claims that there is a significant amount of cabling on the subscriber's side of the protector block that represents "network distribution plant" which should be capitalized and regulated.[6] NATA Petition at 3. NATA believes that, as applied to multi-tenant or multiline single tenant buildings, the Commission's demarcation point definition imposes on individual ratepayers costs that should be capitalized and borne by the general class of present and future ratepayers.[7] NATA also requests that the Commission distinguish between new and embedded inside wire, and apply its demarcation point definition only on a phased-in basis as new wire is installed. NATA's concern with respect to embedded wire seems to be that under our demarcation point definition the ownership and maintenance of the riser and floor cable between the protector block and the various premises in multi-unit buildings could be stranded by the telephone companies. NATA also asks the Commission to clarify that the demarcation point concept applies to wiring used to provide Centrex-CO service [8] as well as wiring used in conjunction with PBX or key system devices. NATA Petition at 10; Reply Comments at 10.[9] Finally, NATA claims the Commission's flexible approach to demarcation point location is both unwise, because of the time-consuming nature of the regulatory complaint processes, and illegal because it is an abdication of authority.

6. Of the parties commenting on this issue, only IDCMA supports NATA's position, though with minor modifications. IDCMA Comments at 6. IDCMA notes that although our demarcation point definition does not prohibit location of the demarcation point in the individual premises of each tenant in a multi-unit building, neither does the definition *ensure* that it will be so located. In instances where the demarcation point is located in a place out of the individual users' control, it contends network access may be restricted. IDCMA believes the demarcation point definition adopted confers unacceptably broad discretion on telephone companies, and urges the Commission to require a demarcation point within the premises of individual telephone subscribers, whether in single- or multi-unit business or residential buildings. Finally, in any situation where non-carrier entities such as landlords own or control bottleneck facilities crucial for individual network access, e.g. the riser and distribution cables, IDCMA seeks to impose on them the same obligations as imposed upon carriers to provide reasonable and nondiscriminatory interconnection for CPE at a location within the customer's control.

7. GTE, U.S. West and the Bell Companies oppose the NATA petition. They support application of the demarcation point definition to all premises wiring including embedded and new wiring, as well as to all building types. They view the flexibility incorporated in the demarcation point definition as a necessary and desirable method to deal with the variety of building types and operational and environmental conditions which must be accommodated in locating a demarcation point. They also generally regard the Commission's non-discrimination requirement and provision for state and federal regulatory oversight to be adequate safeguards against subscriber network isolation in multi-unit buildings.[10] In GTE's view, NATA's fears about subscriber network isolation are unwarranted: In old buildings network access is assured because the house and riser cables running to each unit are already in place, and in new buildings, where the demarcation point may not be near the subscriber's premises, access will be assured without direct tenant involvement in this wiring because the building owner will include the wiring connecting each unit to the network in his construction plans. U.S. West and the Bell Companies further argue that NATA's concerns regarding multi-unit dwellings have already been considered by the Commission. They claim that no new arguments warranting modification of the current flexible approach have been offered. The Bell Companies also dispute NATA's assertion that there is an inconsistency between the demarcation point definition and earlier Commission accounting decisions where an interim demarcation point concept was utilized pending completion of the instant docket. And, NATA's proposal to distinguish between new and

regarding the accounting treatment accorded house cable.

[6] NATA cites "Accounting for Station Connections", First Report and Order, CC Docket No. 79-105, 85 F.C.C.2d 818 (1981), and Deregulation of Customer Premises Inside Wiring, Further Notice of Inquiry CC Docket No. 79-105, 86 F.C.C.2d 885 (1981).

[6] *Id.*

[7] NATA cites the dilemma of a 25th floor tenant who, denied access to building cable by the landlord, will be forced to pay the cost of running building cable from the demarcation point in the building basement to his or her premises. NATA argues that this is unfair because this tenant must pay for building cable that will be available to serve successive generations of subscribers in that 25th floor unit, and the expense to the subscriber of installing such cable would be so prohibitive as to effectively preclude subscriber choice of CPE, undermining the Commission's deregulatory and procompetitive goals.

[8] Centrex-CO refers to a tariffed telephone service in which calls among a customer's internal telephone stations (intercom calls), as well as calls between the customer's stations and the rest of the world, are switched at the central office of the local exchange telephone company. Each main station in a Centrex-based system is connected by a separate loop to the central office switch providing the service. By contrast, in a PBX system the lines from each station terminate on the customer's premises in the PBX switch, which is in turn connected to the central office by a smaller number of loops than the station terminations involved.

[9] *See infra* note 18.

[10] On the Centrex CO issue, U.S. West asserts that the relief sought by NATA is already provided for by § 68.213(b) and by the Order's non-discrimination rules which would prevent the telephone company from installing customer premises riser cable for Centrex-CO customers on a more favorable basis than for other customers. U.S. West Opposition at 6; *See* Bell Companies' Opposition and Comments at 10.

embedded wiring would, in the view of these companies, introduce a lack of uniformity undermining the Commission's concept of a universally applicable demarcation point definition.[11]

8. *Discussion.* We deny NATA's petition for reconsideration of the demaraction point definition. As U.S. West and the Bell Companies correctly indicate, the arguments presented in NATA's petition concerning demarcation point location were previously raised in response to our *Second Notice of Proposed Rulemaking and Order* 92 F.C.C.2d 1 (1982). NATA has presented nothing in its reconsideration request that justifies altering the conclusions or result reached in the *Order*.[12] Nevertheless, we believe responding to some of the points made in the NATA petition is necessary to clarify certain confusion regarding the demarcation point definition and its relationship to other Commission decisions concerning inside wiring.

9. NATA's claims that the *Order's* demarcation point definition is inconsistent with the cost-causation rationale of earlier Commission decisions, and that the demarcation point decision improperly charges a single ratepayer for what is actually network plant misperceive the meaning and operation of the demarcation point concept. *In Accounting for Station Connections*, the Commission determined that in order to more fully place the burden of costs associated with station connections.[13] on the causative ratepayer, as opposed to all present and future ratepayers, the "inside wiring" portion of station connection costs should be expensed rather than capitalized, while the "other" drop and block station connection costs would continue to be capitalized.[14] This bifurcated accounting treatment was based on the differences in the physical and investment characteristics of inside wiring and drop and block wiring. For instance, the Commission found that while inside wiring is subject to frequent change and reconfiguration due to the constant churning, or movement, of station apparatus by subscribers, the drop and block portion of station connections is rarely so affected. *Accounting for Station Connections*, paras. 22–25. The Commission deferred precise identification of a demarcation point to distinguish between the capitalized and expensed components of telephone company station connection investment,[15] indicating that industry's generally accepted understanding of demarcation point location would suffice in the interim.

10. In *Accounting for Station Connections* the Commission was applying the concepts of "cost-causation", "expensing", "capitalizing" and "churning" to situations where there was telephone company plant on both sides of the demarcation point. In this environment the Commission implemented its cost-causation policy by modifying the accounting rules governing telephone company cost recovery. Recognizing the limits of accounting changes to effectuate its goal of placing all inside wiring costs on the cost-causative customer,[16] the Commission issued a *Further Notice of Inquiry* in CC Docket No. 79-105, 85 F.C.C. 2d 885 (1981), proposing to deregulate the customer premises portion of station connections altogether. This led to the detariffing in CC Docket No. 82-681 [17] of new complex wiring installed for use with detariffed CPE systems.[18] And, as a result of the *Order* here under review, subscribers can also now provide their own simple inside wiring. In instances where a premises owner provides his own simple or complex inside wiring, the demarcation point serves as the commonly referenced, *i.e.*, institutional, boundary between telephone company-provided and owned plant and facilities which are subject to the Commission's accounting rules, and customer-owned wiring and equipment which are not. Simple or complex premises wiring in single or multi-unit structures extending from the customer's side of the demarcation point and installed by the premises or building owner belongs to the customer, not the telephone company, in which case the Commission's accounting rules and concepts are inapposite, and NATA's attempts to apply these accounting

[11] In its reply comments, NATA claims that: (1) The commenting parties have failed to address the argument that the Order is inconsistent with earlier Commission accounting decisions; (2) the BOCs are inconsistent in calling for flexibility for state regulators and telephone companies on the demarcation point issue and then expressing fear of such flexibility with respect to access to the protector, *see* discussion *infra* paras. 17–19; and (3) the danger of subscriber isolation is actual and not merely speculative, contrary to the views of the commenters.

[12] While NATA may view the Commission's demarcation point approach issue as "unwise", *supra* para. 5, NATA is incorrect in concluding that it is also "illegal." It is well established that the Commission has wide discretion in fashioning the particular rules and policies to effectuate its goals and fulfill its broad statutory mandate to foster a "rapid, efficient communications system." Our decision to allow telephone companies and their customers a degree of choice and flexibility in demarcation point location, subject to the non-discrimination constraints of the Act, our rules and federal and local regulatory oversight, is an exercise of, not an abdication of, our authority.

[13] *See supra* note 5. "Station connections", recorded in Account 232, originally consisted of the cost of inside wiring and cabling and the cost of installing or connecting items of station apparatus, including the drop and block wires and the protector. "Accounting for Station Connections" required subject carriers to separate their investment in station connections into two subclasses: "Station connections-inside wiring" and "station connections-other." The "inside wiring" component is the customer premises portion of station connections and refers to telephone plant, including labor and material costs, located on the customer's side of the protector. The "other" portion consisted of the drop and block (aerial or underground) wiring costs up to and including the protector. In the Report and Order in CC Docket No. 82-679, FCC 83-456, 48 FR 49643 (Oct. 28, 1983), the existing drop and block investment was transferred from Account 232, subclass "Station Connections-Other" to Account 242:1, "Aerial Cable", and Account 242:3, "Buried Cable", as appropriate, so that Account 232 now includes only "Station Connections-inside wiring". The house cable, which runs from the outside plant terminal up through the various floors of a building and is located on the telephone company's side of the demarcation point, is included in account 242:1. *See* Report and Order in CC Docket No. 82-681, 48 FR 50534 (1983), para. 57.

[14] "Accounting for Station Connections" required that effective October 1, 1981 future carrier inside wiring costs be expensed either on a phased-in basis over a four year period with 100% expensing of these costs effective October 1, 1984, or a flash-cut (expensing immediately) basis pursuant to a state-approved plan, and that their embedded investment in inside wiring as of October 1, 1981 was to be amortized over a ten-year period resulting in full cost recovery by October 1, 1991. The Commission's Further Notice of Proposed Rulemaking in CC Docket No. 79-105, *supra* note 2, proposes that the telephone companies relinquish all claims of ownership of the inside wiring when their inside wiring costs have been fully amortized.

[15] Also, in Report and Order in CC Docket No. 82-681, 48 FR 50534 (1983), the Commission ruled that carrier costs for installing network terminating wire (that wire which runs from the house cable terminal to the demarcation point) for large PBXs should be expensed rather than continue to be capitalized because network terminating wiring more closely resembled the inside wire expensed in "Accounting for Station Connections" than the drop wire which was there required to be capitalized.

[16] While the expensing of inside wiring could ensure that future ratepayers would not pay for certain station connection expenditures which were incurred in earlier time periods, it could not insure that the particular customer occasioning an inside wiring expenditure in a particular time period separately and completely paid for those costs.

[17] *See supra* note 2.

[18] The intrasystem concept for new detariffed PBX's and key systems established by the Commission in CC Docket No. 82-681, consists of common control equipment (switchboards), station equipment (telephones or key systems) and intrasystem wiring. Intrasystem wiring would consist of all cable or wiring and associated components located on the customer's side of the demarcation point when this wiring is inside a building, or between a customer's buildings located on the same or contiguous property not separated by a public thoroughfare, which connect station components to one another or to common equipment.
